## **Publisher's Foreword**

James A. Long was leader of the Theosophical Society (Pasadena) from 1951 until his death in 1971. Born in 1898 to a poor family in York, Pennsylvania, he contracted polio as a boy and always walked with a cane. Following a career in private business, he worked during World War II as management consultant in the Office of the Quartermaster General in Washington, DC, and was later transferred to the Department of State where he assisted in the changeover to peacetime responsibilities. While there, Mr. Long was sent as an Advisor to the US Delegation to the United Nations at the opening of its Second Session in 1946.

After a long and extensive search for a satisfying philosophy of life, in 1935 he joined the Theosophical Society, then headquartered at Point Loma, California, and led by Gottfried de Purucker. He worked closely with Colonel Arthur L. Conger, who lived near Washington, DC. Colonel Conger was reelected president of the American Section in 1939, and shortly thereafter he appointed Mr. Long its business manager. Mr. Long also helped Colonel Conger with the section magazine and himself edited a pocket-sized monthly, *Theosophical Nuggets* (1940-1944).

Colonel Conger became leader of the TS in October 1945. That year Mr. Long was appointed a Cabinet member and, upon retirement from government service in 1947, he joined the staff of the international headquarters, which had relocated to Covina, California, in 1942. In December 1950, Colonel Conger sent him on a world tour in order to contact officials and members with regard to the future work of the

Society. He returned just ten days before Colonel Conger's death on February 21, 1951. (For a fuller treatment of the Society's history up to this time, readers are referred to [H. P. Blavatsky and the Theosophical Movement](#) by Charles J. Ryan and [Colonel Arthur L. Conger](#) by Alan E. Donant.)

Mr. Long frequently referred to his predecessor's administration as a transition period from the "receiving end to the giving end" of theosophy. He stated that his own would be a continuation of this transition and, "to the best of our ability, be an example of practical theosophy in action." Part of that effort from the very beginning was to keep the membership informed about the unfolding karma of the Society by issuing general letters and other reports of its progress.

The *1951 Tour Reports* comprises Mr. Long's message to the General Congress of the Theosophical Society held April 15, 1951, in Utrecht, Holland (The Netherlands), together with meetings in Holland, Sweden, Germany, England, and Wales held between April 15 and June 24. To provide historical context, the Appendix includes the reports of Cabinet meetings, general letters, and meeting transcripts issued to members between Colonel Conger's death and the General Congress. Regarding the tour reports themselves, Mr. Long wrote to members on August 10, 1951:

It seemed better to publish the transcripts of the meetings held rather than to present the activities in a formal report. It is hoped that the printed word will carry to you something of the spirit the members brought to these meetings and that the approach to our work for the future, as it is revealed here, will be of help in your own theosophic endeavors.

Originally issued only to members of the Theosophical Society, this material is being made generally available for the first time, lightly edited for publication.

*Pasadena, California*

# THE KEY TO THEOSOPHY

BY H. P. BLAVATSKY

Being a Clear Exposition, in the Form of Question and Answer, of the ETHICS, SCIENCE, AND PHILOSOPHY for the Study of which The Theosophical Society has been Founded.

---

Originally published 1889. Theosophical University Press electronic version ISBN 1-55700-046-8 (print version also available). Due to current limitations in the ASCII character set, and for ease of searching, no diacritical marks appear in this electronic version of the text.

---

Dedicated by "H. P. B." To all her Pupils that They may Learn and Teach in their turn.

## CONTENTS

### PREFACE

### SECTION 1: THEOSOPHY AND THE THEOSOPHICAL SOCIETY (28K)

- The Meaning of the Name
- The Policy of the Theosophical Society
- The Wisdom-Religion Esoteric in all Ages
- Theosophy is not Buddhism

### SECTION 2: EXOTERIC AND ESOTERIC THEOSOPHY (44K)

- What the Modern Theosophical Society is not
- Theosophists and Members of the "T. S."
- The Difference between Theosophy and Occultism
- The Difference between Theosophy and Spiritualism
- Why is Theosophy accepted?

### **SECTION 3: THE WORKING SYSTEM OF THE T. S. (22K)**

- The Objects of the Society
- The Common Origin of Man
- Our other Objects
- On the Sacredness of the Pledge

### **SECTION 4: THE RELATIONS OF THE THEOSOPHICAL SOCIETY TO THEOSOPHY (15K)**

- On Self-Improvement
- The Abstract and the Concrete

### **SECTION 5: THE FUNDAMENTAL TEACHINGS OF THEOSOPHY (39K)**

- On God and Prayer
- Is it Necessary to Pray?
- Prayer Kills Self-Reliance
- On the Source of the Human Soul
- The Buddhist Teachings on the above

### **SECTION 6: THEOSOPHICAL TEACHINGS AS TO NATURE AND MAN (33K)**

- The Unity of All in All
- Evolution and Illusion
- On the Septenary Constitution of our Planet
- The Septenary Nature of Man
- The Distinction between Soul and Spirit
- The Greek Teachings

### **SECTION 7: ON THE VARIOUS POST-MORTEM STATES (40K)**

- The Physical and the Spiritual Man
- Our Eternal Reward and Punishment; and on Nirvana
- On the Various "Principles" in Man

### **SECTION 8: ON RE-INCARNATION OR RE-BIRTH (38K)**

- What is Memory according to Theosophical Teaching?
- Why do we not Remember our Past Lives?
- On Individuality and Personality
- On the Reward and Punishment of the Ego

## **SECTION 9: ON THE KAMA-LOKA AND DEVACHAN (62K)**

- On the Fate of the Lower "Principles"
- Why Theosophists do not believe in the Return of Pure "Spirits"
- A few Words about the Skandhas
- On Post-mortem and Post-natal Consciousness
- What is really meant by Annihilation
- Definite Words for Definite Things

## **SECTION 10: ON THE NATURE OF OUR THINKING PRINCIPLE (36K)**

- The Mystery of the Ego
- The Complex Nature of Manas
- The Doctrine is Taught in St. John's Gospel

## **SECTION 11: ON THE MYSTERIES OF RE-INCARNATION (57K)**

- Periodical Re-births
- What is Karma?
- Who are Those who Know?
- The Difference between Faith and Knowledge; or, Blind and Reasoned Faith
- Has God the Right to Forgive?

## **SECTION 12: WHAT IS PRACTICAL THEOSOPHY? (52K)**

- Duty
- The Relations of the T. S. to Political Reforms
- On Self-Sacrifice
- On Charity
- Theosophy for the Masses
- How Members can Help the Society
- What a Theosophist ought not to do

## **SECTION 13: ON THE MISCONCEPTIONS ABOUT THE THEOSOPHICAL SOCIETY (51K)**

- Theosophy and Asceticism
- Theosophy and Marriage
- Theosophy and Education
- Why, then, is there so much Prejudice against the T. S.?
- Is the Theosophical Society a Money-making Concern?
- The Working Staff of the T. S.

## [SECTION 14](#): THE "THEOSOPHICAL MAHATMAS" (28K)

- Are They "Spirits of Light" or "Goblins Damn'd"?
- The Abuse of Sacred Names and Terms

## [CONCLUSION](#): The Future of the Theosophical Society (7K)

## GLOSSARY

- [A-D](#) (42K)
- [E-M](#) (51K)
- [N-Z](#) (36K)

## PREFACE

The purpose of this book is exactly expressed in its title, "THE KEY TO THEOSOPHY," and needs but few words of explanation. It is not a complete or exhaustive text-book of Theosophy, but only a key to unlock the door that leads to the deeper study. It traces the broad outlines of the Wisdom Religion, and explains its fundamental principles; meeting, at the same time, the various objections raised by the average Western enquirer, and endeavouring to present unfamiliar concepts in a form as simple and in language as clear as possible. That it should succeed in making Theosophy intelligible without mental effort on the part of the reader, would be too much to expect; but it is hoped that the obscurity still left is of the thought not of the language, is due to depth not to confusion. To the mentally lazy or obtuse, Theosophy must remain a riddle; for in the world mental as in the world spiritual each man must progress by his own efforts. The writer cannot do the reader's thinking for him, nor would the latter be any the better off if such vicarious thought were possible. The need for such an exposition as the present has long been felt among those interested in the Theosophical Society and its work, and it is hoped that it will supply information, as free as possible from technicalities, to many whose attention has been awakened, but who, as yet, are merely puzzled and not convinced.

Some care has been taken in disentangling some part of what is true from what is false in Spiritualistic teachings as to the post-mortem life, and to showing the true nature of Spiritualistic phenomena. Previous explanations of a similar kind have drawn much wrath upon the writer's devoted head; the Spiritualists, like too many others, preferring to believe what is pleasant rather than what is true, and becoming very angry with anyone who destroys an agreeable delusion. For the past year Theosophy has been the target for every poisoned arrow of Spiritualism, as though the possessors of a half truth felt more antagonism to the possessors of the whole truth than those who had no share to boast of.

Very hearty thanks are due from the author to many Theosophists who have sent suggestions and questions, or have otherwise contributed help during the writing of this book. The work will be the more useful for their aid, and that will be their best reward. -- H. P. B.

## PREFACE

THE following pages are derived from "The Book of the Golden Precepts," one of the works put into the hands of mystic students in the East. The knowledge of them is obligatory in that school, the teachings of which are accepted by many Theosophists. Therefore, as I know many of these Precepts by heart, the work of translating has been relatively an easy task for me.

It is well known that, in India, the methods of psychic development differ with the Gurus (teachers or masters), not only because of their belonging to different schools of philosophy, of which there are six, but because every Guru has his own system, which he generally keeps very secret. But beyond the Himalayas the method in the Esoteric Schools does not differ, unless the Guru is simply a Lama, but little more learned than those he teaches.

The work from which I here translate forms part of the same series as that from which the "Stanzas" of the *Book of Dzyan* were taken, on which the *Secret Doctrine* is based. Together with the great mystic work called *Paramartha*, which, the legend of *Nagarjuna* tells us, was delivered to the great Arhat by the Nagas or "Serpents" (in truth a name given to the ancient Initiates), the "Book of the Golden Precepts" claims the same origin. Yet its maxims and ideas, however noble and original, are often found under different forms in Sanskrit works, such as the *Dnyaneshwari*, that superb mystic treatise in which Krishna describes to Arjuna in glowing colours the condition of a fully illumined Yogi; and again in certain Upanishads. This is but natural, since most, if not all, of the greatest Arhats, the first followers of Gautama Buddha were Hindus and Aryans, not Mongolians, especially those who emigrated into Tibet. The works left by Aryasanga alone are very numerous.

The original *Precepts* are engraved on thin oblong squares; copies very often on discs. These discs, or plates, are generally preserved on the altars of the temples attached to centres where the so-called "contemplative" or Mahayana (Yogacharya) schools are established. They are written variously, sometimes in Tibetan but mostly in ideographs. The sacerdotal language (Senzar), besides an alphabet of its own, may be rendered in several modes of writing in cypher characters, which partake more of the nature of ideographs than of syllables. Another method (*lug*, in Tibetan) is to use the numerals and colours, each of which corresponds to a letter of the Tibetan alphabet (thirty simple and seventy-four compound letters) thus forming a complete cryptographic alphabet. When the ideographs are used there is a definite mode of reading the text; as in this case the symbols and signs used in astrology, namely the twelve zodiacal animals and the seven primary colours, each a triplet in shade, *i.e.* the light, the primary,

and the dark -- stand for the thirty-three letters of the simple alphabet, for words and sentences. For in this method, the twelve "animals" five times repeated and coupled with the five elements and the seven colours, furnish a whole alphabet composed of sixty sacred letters and twelve signs. A sign placed at the beginning of the text determines whether the reader has to spell it according to the Indian mode, when every word is simply a Sanskrit adaptation, or according to the Chinese principle of reading the ideographs. The easiest way however, is that which allows the reader to use no special, or *any* language he likes, as the signs and symbols were, like the Arabian numerals or figures, common and international property among initiated mystics and their followers. The same peculiarity is characteristic of one of the Chinese modes of writing, which can be read with equal facility by any one acquainted with the character: for instance, a Japanese can read it in his own language as readily as a Chinaman in his.

The Book of the Golden Precepts -- some of which are pre-Buddhistic while others belong to a later date -- contains about ninety distinct little treatises. Of these I learnt thirty-nine by heart, years ago. To translate the rest, I should have to resort to notes scattered among a too large number of papers and memoranda collected for the last twenty years and never put in order, to make of it by any means an easy task. Nor could they be all translated and given to a world too selfish and too much attached to objects of sense to be in any way prepared to receive such exalted ethics in the right spirit. For, unless a man perseveres seriously in the pursuit of self-knowledge, he will never lend a willing ear to advice of this nature.

And yet such ethics fill volumes upon volumes in Eastern literature, especially in the Upanishads. "Kill out all desire of life," says Krishna to Arjuna. That desire lingers only in the body, the vehicle of the embodied Self, not in the SELF which is "eternal, indestructible, which kills not nor is it killed" (*Katha Upanishad*). "Kill out sensation," teaches *Sutta Nipata*; "look alike on pleasure and pain, gain and loss, victory and defeat." Again, "Seek shelter in the eternal alone" (*ibid*). "Destroy the sense of separateness," repeats Krishna under every form. "The Mind (*Manas*) which follows the rambling senses, makes the Soul (*Buddhi*) as helpless as the boat which the wind leads astray upon the waters" (*Bhagavatgita II. 70*).

Therefore it has been thought better to make a judicious selection only from those treatises which will best suit the few real mystics in the Theosophical Society, and which are sure to answer their needs. It is only these who will appreciate these words of Krishna-Christos, the "Higher Self": --

"Sages do not grieve for the living nor the dead. Never did I not exist, nor you, nor these rulers of men; nor will any one of us ever hereafter cease to be." (*Bhagavatgita II. 27*).

In this translation, I have done my best to preserve the poetical beauty of language and imagery which characterise the original. How far this effort has been successful, is for the reader to judge. -- "H.P.B."

# The Secret Doctrine

THE SYNTHESIS OF SCIENCE, RELIGION, AND PHILOSOPHY.

By H. P. Blavatsky

---

Blavatsky's masterwork on theosophy, covering cosmic, planetary, and human evolution, as well as science, religion, and mythology. Based on the Stanzas of Dzyan, with corroborating testimony from over 1,200 sources.

Originally published 1888. Theosophical University Press electronic version ISBN 1-55700-124-3 (print version also available). Due to current limitations in the ASCII character set, and for easy in searching, no diacritical marks appear in this electronic version of the text.

This edition was corrected against the facsimile edition of 1888. Obvious errors, such as missing letters, have been corrected; otherwise it follows the facsimile edition -- material not appearing there appears in double brackets [[ ]]. Hebrew characters are inserted as illustrations, but Greek text has been transliterated into italic Latin characters in double brackets. For further explanation of the conventions used, go to the [Notes](#) file.

## Introduction

Over one hundred years ago, in 1888, H. P. Blavatsky published her *Secret Doctrine*. Indeed it *was* an event, for these volumes disclose a description, inner and outer, of the structure and operations of the cosmos and the origin and evolutionary destiny of the kingdoms of nature. Much of its content would have been considered esoteric in former eras, part of the mystery teaching of the ancient schools of both East and West.

This wisdom has been known and taught in every age, in myth and legend, symbol and glyph, and comes down to us from out of the darkness of prehistory. Its substance or truth is also embodied in the various branches of learning, ancient and modern -- religion, philosophy, science, literature, and art. Hence HPB, having stated certain principles, was able to illustrate, by referring to the world's literature, that what she was bringing forward has been part of the thought-life of all previous ages. This is no accident: every age has had its wise men, philosophers, artists, poets, who have speculated on cosmic and human life and described it in such a fashion that the universality of the secret doctrine or perennial philosophy may be seen on every hand by those who have the eyes to see it.

*The Secret Doctrine* is the most widely disseminated theosophical source book. Because of its encyclopedic range, indexing the *SD* has proved a complex and challenging task. My original instructions were: "Start by making your own index. Don't try to coalesce or combine the existing indices." Over the course of a number of years this phase of the project was completed. We then consulted an unpublished index to the *SD* compiled by Dr. Gertrude W. van Pelt -- a longtime student with a penetrating and intuitive mind -- and numerous valuable entries were gleaned. The indices prepared by Boris de Zirkoff and the United Lodge of Theosophists were also consulted, and further

useful entries included.

Our entries are designed to be as straightforward and informative as possible, considering the wide range of subjects covered. Most subentries lead off with key words which are alphabetically arranged. In the course of compiling the index, it became apparent that many of the foreign terms used so widely by HPB are no longer spelled as they were by the scholars of her time. To aid the reader we have listed all foreign terms and proper nouns as they are given by HPB, while adding modern spelling in brackets or -- when alphabetizing requires -- referring the reader to the modern spellings under which the terms are indexed. Exceptions to listing the modern spelling are Tibetan and some Egyptian terms, as well as other foreign words when there is doubt about transliteration. In subentries modern spelling is generally used, but underdots are omitted. To facilitate recognition and pronunciation of Sanskrit words, the TUP conventions are<sup>\*</sup>:

**c** is transliterated as *ch*

**r** is transliterated as *ri*

**ch** is transliterated as *chh*

**s** is transliterated as *sh*

For the convenience of the reader, many main headings, especially of foreign terms, are followed by definitions. Cited books whose titles are not given in the *SD*, are placed in brackets under the author. Also included are a list of abbreviations and an appendix of foreign phrases with translation.

A major guideline followed is that an index is *not* an interpretation. Its purpose is to point the reader to the essential material found in the book. If, for example, the word Lemuria is given, such entries are placed under that heading. The third root-race is often termed Lemurian; but where third root-race is given by HPB and not Lemuria, these references are under Root-Race-Third. In order to bring together all such similar entries or supplemental material, we have put "*See also*" after the main headings followed by one or more items. One may also consult terms in the subentries for additional references.

Many individuals have been involved in this project, and each and all have my hearty thanks and gratitude. Allow me to say in closing that I perceive the years spent on this task to have been a rare and inestimable privilege. It is still an ongoing enterprise, for I am sure that future students will revise, enlarge, clarify, and make more accurate the work already done, so that in time the index may become an increasingly useful tool for those following the ageless path of wisdom that HPB so magnificently sets forth.

## Prefatory Note

Shortly after *The Secret Doctrine* was published in November 1888, H. P. Blavatsky met with students in London to answer questions on the Stanzas of Dzyan, those esoteric verses on which the *SD* is an inspired commentary. While notes of meetings held in 1889 had been published in her lifetime as *Transactions of the Blavatsky Lodge*, apparently notes of later gatherings (1890 until her death in 1891) were not preserved. Providentially, Robert Bowen had recorded his impressions and as much as he could recall of HPB's remarks. His notes lay buried for forty years until his son, Captain P. G. B. Bowen of Dublin, Ireland, on going through his father's papers, discovered them and published extracts in *Theosophy in Ireland* under the heading "The 'Secret Doctrine' and its Study." (1)

*An Invitation to "The Secret Doctrine"* is a succinct and appealing statement of the *SD*'s principal truths in H. P. Blavatsky's own words. Rather than reading the book page by page she felt it important for the

student first to grasp the Three Fundamental Principles on which the whole of the philosophy rests; then to study her Summing Up in volume I, and in volume II her Preliminary Notes which outline three further propositions, and her Conclusion. These selections are here reproduced, and we have added HPB's Preface and the Stanzas of Dzyan, as they set the tone for the entire work. Also included are the last few pages of the *SD*, Commander Bowen's report and, for historical purposes, "The Writing of *The Secret Doctrine*" by Kirby Van Mater, revised from his essay in *Sunrise* (November 1975).

Each of us approaches the *SD* according to our temperament and background: a good many like to roam freely and pursue their own intuitive leads; others like to read it straight through before tracing down specific themes; still others feel overwhelmed by the vast scope of the work and want direction in getting started. Guidelines, however, are two-edged: they can help or they can hinder, encourage or discourage a student. They must be well thought out yet open-ended, for if they are too logically organized they stifle intuition, the faculty we most need for comprehending grand abstract truths.

"Every form, no matter how crude," HPB told her London group, "contains the image of its 'creator' concealed within it. So likewise does an author's work, no matter how obscure, contain the concealed image of the author's knowledge." Bowen was profoundly moved: to think that the *SD* contains knowledge greater even than that of HPB -- as it must if "much of it comes from men whose knowledge is immensely wider than hers"; and that anyone, even he, could find in HPB's words "knowledge of which she herself is unconscious." The thought is electric. Now, after a hundred years of the *SD*'s being in circulation, we have a growing sense of its magnitude. Instead of becoming fainter with time, its dynamism is augmented, giving dimension to the mahatmic statement that *The Secret Doctrine* was the "triple production" of her teachers and herself.

To those who are drawn to theosophy and would like to explore the *SD*, *An Invitation* should prove welcome. Longtime students may also find it useful as a refresher course on the genesis and evolutionary destiny of our solar universe and its family of planets and of human and other life-waves of monads that compose and inhabit our earth. To some it will become a faithful companion, by the bedside, on trips, and at those moments when the power and beauty of the Stanzas yield their own blessing.

## Publisher's Note

*Secret Doctrine Commentary*, originally titled *Transactions of the Blavatsky Lodge*, was originally published in two parts, the first part being issued in 1890, the second in 1891.

This edition is a faithful copy of those first printings, with very minor emendations: The quotations from *The Secret Doctrine* have been checked and in most cases corrected to conform with the original edition of H.P.B.'s masterwork. A few perfectly obvious errors in the text, perhaps a half dozen in all, have been corrected; also the American spelling of such words as "flavor," "center," etc., has been substituted for the English spelling. The passage from the *Vishnu Purana* (Wilson's translation) on page 31 has been changed to read verbatim with the original. In this electronic version, all diacritical marks have been deleted.

The following transactions are compiled from shorthand notes taken at the meetings of the Blavatsky Lodge of the Theosophical Society, from January 10th to June 20th, 1889, being somewhat condensed from the original discussions.

*The Secret Doctrine* being based upon the archaic stanzas of the "Book of Dzyan," and these being too abstruse for most of the new students of Esoteric philosophy, the members of the "B.L. of the T. S." agreed to devote the debates of the weekly meetings to each stanza and sundry other metaphysical subjects.

The questions were put by members who, for the most part, supported their objections and exceptions on modern scientific grounds, and assumed logical deductions based thereon. As such objections are generally the common property of students of *The Secret Doctrine*, it has been judged unnecessary to incorporate them in full, so that their substance alone has been retained. The answers in all cases are based on the shorthand Reports, and are those of Esoteric Philosophy as given by H. P. B. herself.

## Foreword

"Do as the gods when incarnated do. Feel yourselves the vehicles of the whole humanity, mankind as part of yourselves, and act accordingly" -- stirring words which are the keystone of a series of letters addressed by H. P. Blavatsky to the American theosophists during the last four years of her life. Scarcely known outside the theosophical world, these letters are classics in their own right; first, because of their historic value, in that they were sent during a period of intense activity when the Theosophical Society, from a mere handful in 1875, had spread from America to Europe and Asia; and secondly, though not less significant, because of their extraordinary relevance to the present cycle: as we read her words, we feel as though they had been written with this century in mind, so cogently do they respond to the need for sound guidance in the wake of today's spiritual and psychic upheaval.

H. P. Blavatsky has been called the Sphinx of the 19th century, and today is still an enigma. That she was a great deal more than she appeared to be, even to her close associates, is self-evident. This is reason enough to study her writings with the eye of intuition. The progress of her life and work had by no means been smooth; while remarkable advances were being made, grave crises both for H.P.B. and for the Society had to be met, from without as well as from within. But theosophy had sent down roots deep into the soil of human consciousness, and no slander or betrayal had power to destroy that which was destined to live.

This was a movement of the spirit, impelled in the closing decades of the 19th century by H. P. Blavatsky's teachers, Friends of humanity, whose principal concern had been to establish a viable outlet in the modern world that would have the stamina to carry over into the succeeding centuries. For this they needed an instrument, an amanuensis willing and able to transmit the wisdom-teachings of the ages in a fuller and more comprehensive form than had been possible for thousands of years. Moreover, they had to find and train someone whose love for the disinherited of soul as well as of body and mind was all-consuming.

These letters show H. P. Blavatsky in her true light -- as the voice of her teachers, the bearer of a message of supreme spiritual worth: that divinity is intrinsic to every life-spark throughout the cosmos and not an isolated phenomenon possible only to a Christ; that man and the whole of nature are *one*, in essence, origin, and goal; that in consequence all entities have the same potential for growth and unfoldment, through cyclic change and renewal of form; and, of chief import, that brotherhood is universal, and its *living* practice by all nations and races a necessity if present civilization is to fulfill its promise.

At the writing of the first letter, little more than a dozen years had gone by since 1875, yet already theosophic ideas were being picked up by writers and thinkers and effecting a marked change in the spirit of the times. Nonetheless, theosophy in its simple purity had still an "uphill battle," and the American members were reminded that the Theosophical Society, whose first principle is universal brotherhood, was founded to stimulate the spiritual awakening of mankind, and not "as a nursery for forcing a supply of Occultists." H. P. Blavatsky and her teachers had foreseen the growing force of transcendentalism, following upon the wave of mere phenomenalism, that would sweep over the coming decades and quicken a spiritual and intellectual revival. They had also recognized the hazards attendant upon its advance if the psychism now fast developing in America was allowed to run rampant and not held under the control of man's nobler faculties. It is ethics, she declared, the grand moral truths of theosophy, that are "even more necessary to mankind than the scientific aspects of the psychic facts of nature and man," since their practice penetrates to the inner reaches of the soul, to endure in the eternal essence, whereas the cultivation of the psychic alone is of transient worth.

How prophetic her words are in light of the proliferation of astral and psychic gadgetry sought today by an eager public, all of which tends to cast a shadow of mistrust on "the real students of the psychic sciences," among whom today may be found a number of well-motivated and creative researchers into the inner levels of man's consciousness. Again and again H. P. Blavatsky exhorts her American colleagues to seize the opportunities that are theirs, and to work together to help guide the rising tide of psychic sensitivity, expected at this period of our racial growth, so that "it may finally work for good and not for evil."

To read these letters, one after the other -- the last two written just three and a half weeks before she died -- is to sense something of the urgency felt by the Mahatmas in the 1870s to get these ennobling truths into circulation once again among every class of minds. They knew that time was needed for the ideals of compassion and of the *oneness* of all living beings to permeate the consciousness of the 20th century *before* the tidal wave of psychic interest and development would overwhelm humanity. We intuit also why it was that after searching for nearly a century they selected H. P. Blavatsky to be their agent for the founding of a movement whose sacred obligation would be "to change the basis of men's lives from selfishness to altruism."

In their initial choice they included as first president Henry S. Olcott. Without his executive talent and profound humanitarian spirit to create a vehicle for the dynamic genius of Helena Petrovna Blavatsky, the theosophical effort might not have had the success it did -- to become within her lifetime a thriving organization able to extend its influence to every quarter of the globe. He remained to the end of his life steadfast in devotion to the "common cause -- that of helping mankind."

When it came, however, to establishing the Esoteric Section in 1888, in response to a call from the membership and as a means of strengthening the inner core of the Theosophical Society, H. P. Blavatsky turned to her American brother and co-founder, William Q. Judge. To relate intelligently this move and others to the flow of events of the closing years of her life, and also to give background to the letters themselves, Kirby Van Mater, archivist for the Theosophical Society (Pasadena), has provided a

Historical Perspective. In presenting certain of the salient elements in the Society's experience in its formative stages, he has exercised great care in the assemblage of documents so as to allow the facts themselves to reveal the powerful current of inspiration that impuled the theosophic effort through H.P. B.

It was no small accomplishment to have launched into a dogma-ridden world the very truths for which others had died in past eras. Yet this is what H. P. Blavatsky achieved. Since her day, generations of theosophists have drawn courage from the heroism and sacrifice of Helena Blavatsky, and have voluntarily taken upon themselves to share in the responsibility of the ages: to change for the better the mental and spiritual climate of world consciousness. Through their fidelity and perceptiveness the effort initiated by the Adepts in 1875 lives on, and the life-giving truths they gave forth anew are today being sought by a growing number of seekers in quest of a philosophy that both inspires and consistently challenges.

*" . . . It was thy patience that in the waste attended still thy step, and saved MY friend for better days. What cannot patience do. . . . A great design is seldom snatched at once, 'tis PATIENCE heaves it on. . . ." -- K. H.*

## COMPILER'S PREFACE

The letters here presented to the reader, written by the Founder of the Theosophical Society between the years 1880-1888, are intended to form a companion volume to the recently published *Mahatma Letters*, and should be read in conjunction with that work. They have been transcribed direct from the originals and without omission except for the occasional deletion of a name where-ever for obvious reasons it was absolutely necessary to do so. Contrary to the method employed in *The Mahatma Letters*, the compiler

has permitted himself to correct obvious errors of spelling and punctuation, as these were too numerous to ignore, and no useful purpose could be served by leaving them unedited. Here and there in the text a word appears in square brackets. This always indicates that the word is either superfluous, or has been added by the compiler to make the sentence comprehensible. It should be understood that all footnotes are part of the original letters, unless signed "Ed.," in which case they have been added by the compiler. With these necessary exceptions the letters are presented to the reader, as already stated, unaltered.

In *Section I* are to be found exclusively the Letters of Madame Blavatsky arranged as far as possible in chronological order.

*Section II* contains all the *Miscellaneous Letters* of interest left by Mr. Sinnett, arranged under the names of the different writers in numbered sub-sections. Some of these have additional value owing to the marginal comments by the Mahatmas M. and K. H.

In Sub-section VIII are included some short notes from M. and K. H. which were overlooked in preparing *The Mahatma Letters*. They are now published not so much for their intrinsic value, but because in his Introduction to that volume the compiler stated that the *whole* of the Mahatma Letters left by Mr. Sinnett were then published, and his statement, inaccurate to this extent is hereby made good.

The Appendixes contain: I. An Article by Eliphas Levi on "Death," which is of particular value because it has comments in Master K. H.'s writing in the margin of the printed page of the magazine in which it originally appeared.

II. Cosmological Notes from Mr. Sinnett's MS. Book. One version of these notes which does not agree exactly with the MS. book from which his copies were presumably drawn, has already been published by Mr. Jinarajadasa. Although the differences may possibly not be regarded as serious, it is thought that students would be glad to have the opportunity of reading them just as they were left by Mr. Sinnett, and for that reason they are included in the present volume. The material contained in the two volumes was left all together in one box by Mr. Sinnett, and the whole of its contents are now in print with the exception of some miscellaneous correspondence by various writers which is not of sufficient interest to warrant publication. There must be, however, scattered about the world a number of H.P.B.'s letters in the keeping of different people, and it is greatly to be hoped that in the interest of the Movement steps will be taken to publish them.

The compiler takes this opportunity of acknowledging his indebtedness to several friends for painstaking and careful work in checking the originals with the printed proofs, and also for the compilation of the Index.

A. T. B.

## INTRODUCTION

Of all the problems which confront the student of Theosophy, there is none more vital in the present day than a thorough grasp and correct perspective not only of the personal character of the Founder of the Theosophical Society, but of the nature of the work she did and the true relationship it bears to the whole fabric of the Theosophical Movement. It is now beginning to be recognised that her writings contain the key to the profoundest mysteries of Man and the Universe, and those who opposed her, finding themselves unable to disprove the value and truth of her philosophy, sought by means of personal slander and vilification to prejudice public opinion, and thus divert attention from the treasure of knowledge which she was the means of giving to the world, and which, if impartially considered on its merits, must have carried with it the conviction of the integrity of the writer. In *The Secret Doctrine* Mme. Blavatsky quoted the words of Gamaliel as being particularly applicable to her own work: "If this doctrine is false it will perish of itself, but if true then it cannot be destroyed." Just as her work has stood the test of time and public criticism, so will these two volumes provide the means for the vindication of her personal character. The biassed and untrustworthy nature of the Hodgson Report of the Society of Psychological Research, which has provided the basis for so much ignorant and malicious criticism even down to the present day, is clearly revealed in these pages. Much fresh light is also thrown on the forgeries known as the Coulomb Letters, and also of her relation with the notorious Solovioff, who, in his rage and resentment at being refused the privilege of chelaship, did so much to injure her reputation. It would require a volume to deal adequately with all the evidence on these important questions; the reader is therefore left to form his own conclusions as to whether the heroic figure which stands out so vividly in these pages was the liar, the fraud, and worse than dishonest medium which the Society of Psychological Research and the Spiritualists generally would have us believe, or whether she was what she claimed to be -- no medium indeed, but the conscious Agent of the Masters who sent her forth, performing her prodigious task under conditions which would make the bravest halt; an occultist pledged to silence as to the true reasons for most of her actions, ever fearful of giving out too much, but yet through it all labouring so fiercely and whole-heartedly for the sake of the few who were entitled to her Master's thanks. She wrote herself in Letter No. XLV -- "Those who see no discrepancy in the idea of filthy lying and fraud even for the *good of the Cause* -- being associated with work done for the Masters -- are congenital Jesuits . . . or natural born fools. Had I been guilty *once only* -- of a deliberately, purposely concocted fraud, especially when those deceived were my best, my truest friends, no 'love' for such one as I! At best, *pity* or eternal contempt. Pity if proved I was an irresponsible lunatic, a hallucinated *medium*, made to trick by my 'guides' whom I was representing as *Mahatmas*; contempt -- if a conscious fraud." Let those who are so limited as to believe that the Masters and their teaching are the invention of H. P. Blavatsky read the account of her journey into the wilds of Sikkim, in which she describes her meeting *in propria persona* with the Mahatmas M. and K. H. The real nature of these Adepts as *living men*, or, as H. P. B. called them, "superior mortals, not ignorant flapdoodle gods," is here placed beyond the realm of speculation.

There is hardly one of these pages that does not throw some unexpected light on the mysteries of the relationship between Adept and chela, and it is thus possible to gain some comprehension of the life of those who, while living in the world, serve the purposes of the Great Lodge of Adepts whose headquarters are beyond the Himalayas of Northern India. Wherever those chelas may be, their hearts

will give a warmer and quicker throb as they read the story of H. P. B.'s intimate association with her teachers. As they read further of the trials and torments which inevitably befell those other chelas of forty years ago, it is not they who will be tempted to condemn those who fell from their high estate, dragged into the mire by one or other of the weaknesses of human nature. But while there should be nothing but pity and compassion for the failures, let no student of the Sacred Science fall into the blunder of seeking in the name of "Brotherhood" to justify their indulgences, either ethically or morally.

There are several references to the writing of *The Secret Doctrine* which show to how great an extent the Masters were themselves responsible for that work. That is why the teaching of H. P. B. "remains for us the test and criterion of Theosophy," by which all other teaching on the subject must be judged. After all, if the Masters do not know what Theosophy is, no one does, because in its essence, purity and completeness it is alone contained in the secret teaching of which the Guardians are the Masters Themselves. That teaching, as stated by H. P. B., "is not the fancy of one or several isolated individuals, but the fruit of the work of thousands of generations of Adept Seers," ["That is to say, men who have perfected their physical, mental, psychic. and spiritual organisations to the *utmost* possible degree."] through whom it was handed down from the first Divine Instructors of our Humanity. It is the substratum and basis of all the world-religions and philosophies, but its doctrines are the exclusive possession of none of them. It was the mission of Madame Blavatsky, under the instructions of those Adepts, to give to the world selected portions of that archaic teaching. It should be remembered that an Adept -- a Master, is one who has achieved immortality, and therefore has the power to perceive truth as it is and *at will* to reflect it without distortion. It is because no one of lesser degree can claim that power always and with certainty that Their testimony must be regarded as the highest authority on all matters of occult doctrine and practice. And here it must be stated unequivocally that from the point of view of the "original programme" of the Society, no theosophical association has any *raison d'etre* if it does not remain true to the Masters and their teaching. There are some who seem to believe that it is possible to be faithful to the Masters while denying even the theoretical truth of their teaching. This is where the responsibility of the old Theosophical Society is so grave. In his Introduction to *The Mahatma Letters* the writer had occasion to point out in what important particulars that Society showed by its actions a serious divergence from the spirit and letter of the original teaching. That volume proves beyond question that H. P. B.'s writings are absolutely consistent with the Masters' teachings, and in nothing is this more clearly discernible than in her exposition of the doctrines relating to the Life after Death. It is not the least serious aspect of the situation that the Theosophical Society bases its propaganda on this important subject not, as the public has a right to expect, on the message of H. P. B. and the Masters, but on the personal investigation of later students, whose views, for example, on the *post-mortem* survival of personal consciousness are so different as to represent the direct *antithesis* of the original teaching.

No serious students of H. P. B. will deny the force or the truth of these arguments, but there are many such who conceive it to be their duty to remain in the old Theosophical Society and at the same time to stand by the original teaching. They are at once faced with certain difficulties which have to be experienced to be understood, but which, fortunately, the constitution of the Society does not make it impossible to solve. Let the reader turn to Letter No. C in this volume, and he will there see how H. P. B. was faced with a very similar situation and of the measures she recommended to deal with it. She lays stress on the fact that the Society was founded as a Universal Brotherhood, in which no one has the right

to force his own views on another, but each must be allowed free expression of opinion. She defines what a nucleus of Brotherhood is by quoting Master K. H. almost word for word: "A group or branch, however small, cannot be a *theosophical society* unless the members in it are magnetically bound to each other by the same way of thinking, at least *in some one* direction." She urges that those who intend at all costs to remain true to the original programme of the Society -- i.e. *to the Masters and their teaching* -- should found Lodges devoted to that purpose alone. Exactly the same should be done in our own day as a solution of present difficulties.

Therefore, all the world over, let the lovers of the Wisdom of H. P. B. unite, whether they be in or out of the Theosophical Society; let them found Lodges which shall be places apart, sanctified by devotion to the Truth and the Cause of the Brotherhood of Humanity, while seeking their knowledge from her writings, [that is to say, *The Secret Doctrine, Isis Unveiled, The Key to Theosophy, The Voice of the Silence*, and her numerous magazine articles in *Lucifer* and *The Theosophist*; care should be taken to study these works wherever possible in the *original editions* or exact reprints of them -- the later Revised Editions have been considerably altered and, in the opinion of many students, quite unwarrantably] which contain all and far more than is necessary for the instruction of Theosophists, until the promised hour strikes at the beginning of the last quarter of this century, when another Messenger from the Great Lodge may be expected to appear and carry forward the work of H. P. Blavatsky to the next stage of unfolding.

A Typical Specimen of Mme. Blavatsky's Handwriting

just a rot. Ashwin never  
said to Bergen anything of the  
kind about myself or Master  
Bergen has confessed that he  
misunderstood him; and then  
accused Ashwin of having told  
him about me the same!!  
Ashwin is just the same, I find;

them about me the same.  
Stobins' is just the same, I find,  
only he is raised one step higher.  
And now he will never speak  
openly about the charter. He is  
very much against Bowyer, who  
is creating mischief at Oxford  
to every square inch.

Tom Ford wants to come & see  
me & please keep it confidential  
Mr. Anna Kingsford!! Wants to  
come & see me & asks me more at least  
to place her in communication with  
the masters!!!!!!!

I feel unable to do justice to my  
feelings! Love to Tom & truly  
yours

**PREFACE.**

Few words will be needed by way of preface to these "Gems from the East."

At a time when Western minds are occupied in the study of Oriental Literature, attracted possibly by its richness of expression and marvelous imagery, but no less by the broad yet deep philosophy of life, and the sweet altruistic doctrines contained therein, it is thought seasonable to present the public with a useful and attractive little volume such as this.

The Precepts and Aphorisms, compiled by "H.P.B.," are culled chiefly from Oriental writings considered to embody, in part, teachings which are now attracting so much attention in the West, and for the diffusion of which the Theosophical Society is mainly responsible.

As far as possible we have endeavoured to make the volume attractive, handy, and useful to all.

It contains a Precept or an Axiom for every day in the year; lines of a Theosophical nature, selected from sources not invariably Oriental, preface each month; and the whole is embellished with drawings from the pen of F. W., a lady Theosophist.

It is hoped that our efforts will meet with approval from all lovers of the good and beautiful, and that they may not be without effect in the cause of TRUTH.

W.R.O.

"THERE IS NO RELIGION HIGHER THAN TRUTH"

---

## **JANUARY.**

"UTTISHAT! -- Rise! Awake!  
Seek the great Teachers, and attend! The road  
Is narrow as a knife-edge! Hard to tread!"  
"But whoso once perceiveth HIM that IS; --  
Without a name, Unseen, Impalpable,  
Bodiless, Undiminished, Unenlarged,  
To senses undeclared, without an end,  
Without beginning, Timeless, Higher than height,  
Deeper than depth! Lo! Such an one is saved!  
Death hath not power upon him!"

-- THE SECRET OF DEATH (*fr. The Katha Upanishad*).

---

- 1 The first duty taught in Theosophy, is to do one's duty unflinchingly by every duty.
- 2 The heart which follows the rambling senses leads away his judgment as the wind leads a boat astray upon the waters.
- 3 He who casts off all desires, living free from attachments, and free from egoism, obtains bliss.
- 4 To every man that is born, an axe is born in his mouth, by which the fool cuts himself, when speaking bad language.
- 5 As all earthen vessels made by the potter end in being broken, so is the life of mortals.
- 6 Wise men are light-bringers.
- 7 A just life, a religious life, this is the best gem.
- 8 Having tasted the sweetness of illusion and tranquillity, one becomes free from fear, and free from sin, drinking in the sweetness of Dhamma (law).
- 9 False friendship is like a parasitic plant, it kills the tree it embraces.
- 10 Cut out the love of self, like an autumn lotus, with thy hand! Cherish the road of peace.
- 11 Men who have not observed proper discipline, and have not gained treasure in their youth, perish like old herons in a lake without fish.
- 12 As the bee collects nectar, and departs without injuring the flower, or its color or scent, so let a Sage dwell in his village.
- 13 As rain does not break through a well-thatched house, passion will not break through a well-reflecting mind.
- 14 He who hath too many friends, hath as many candidates for enemies.
- 15 That man alone is wise, who keeps the mastery of himself.
- 16 Seek refuge in thy soul; have there thy Heaven! Scorn them that follow virtue for her gifts!
- 17 All our dignity consists in thought, therefore let us contrive to think well; for that is the principle of

morals.

18 Flattery is a false coin which circulates only because of our vanity.

19 Narrowness of mind causes stubbornness; we do not easily believe what is beyond that which we see.

20 The soul ripens in tears.

21 This is truth the poet sings -- That a sorrow's crown of sorrows / Is remembering happier things.

22 Musk is musk because of its own fragrance, and not from being called a perfume by the druggist.

23 Not every one ready for a dispute is as quick in transacting business.

24 It is not every graceful form that contains as graceful a disposition.

25 If every pebble became a priceless ruby, then pebble and ruby would become equal in value.

26 Every man thinks his own wisdom faultless, and every mother her own child beautiful.

27 If wisdom were to vanish suddenly from the universe, no one yet would suspect himself a fool.

28 A narrow stomach may be filled to its satisfaction, but a narrow mind will never be satisfied, not even with all the riches of the world.

29 He who neglects his duty to his conscience, will neglect to pay his debt to his neighbor.

30 Mite added to mite becomes a great heap; the heap in the barn consists of small grains.

31 He who tasteth not thy bread during thy lifetime, will not mention thy name when thou art dead.

---

## **FEBRUARY.**

"Behold, we know not anything;  
I can but trust that good shall fall  
At last -- far off -- at last, to all,  
And every winter change to spring.

"So runs my dream: but what am I?  
An infant crying in the night:  
An infant crying for the light:  
And with no language but a cry."

-- TENNYSON (*In Memoriam*)

---

- 1 Two things are impossible in this world of Maya: to enjoy more than Karma hath allotted; to die before one's hour hath struck.
- 2 A student without inclination for work is like a squirrel on its wheel; he makes no progress.
- 3 A traveller without observation is a bird without wings.
- 4 A learned man without pupils, is a tree which bears no fruit; a devotee without good works, is a dwelling without a door.
- 5 When Fate overtakes us, the eye of Wisdom becomes blind.
- 6 Keep thine eyes open, or Fate will open them for thee.
- 7 He who kisses the hand he cannot cut off, will have his head cut off by the hand he now kisses in the next rebirth.
- 8 He who keeps to his business, he who loves his companions, he who does his duty, will never be poor.
- 9 A thousand regrets will not pay thy debts.
- 10 Fallen flowers do not return to their stems, nor departed friends to their houses.
- 11 To feel one's ignorance is to be wise; to feel sure of one's wisdom is to be a fool.
- 12 One proof is better than ten arguments.
- 13 Rain in the morn brings the sun after noon. He who weeps today, may laugh tomorrow.
- 14 The soothsayer for evil never knows his own fate.
- 15 Like oil, truth often floats on the surface of the lie. Like clear water, truth often underlies the seeming

falsehood.

16 Often vinegar got for nothing, is sweeter to the poor man than honey bought.

17 Every tree hath its shadow, every sorrow its joy.

18 The fields are damaged by weeds, mankind by passion. Blessed are the patient, and the passionless.

19 The virtuous man who is happy in this life, is sure to be still happier in his next.

20 What ought to be done is neglected, what ought not to be done is done. The sins of the unruly are ever increasing.

21 Without Karma, no fisherman could catch a fish; outside of Karma, no fish would die on dry land, or in boiling water.

22 Let every man first become himself that which he teaches others to be.

23 He who hath subdued himself, may hope to subdue others. One's own self is the most difficult to master.

24 Hatred is never quenched by hatred; hatred ceases by showing love; this is an old rule.

25 The path of virtue lies in the renunciation of the seven great sins.

26 The best possession of the man of clay is health; the highest virtue of the man of spirit is truthfulness.

27 Man walks on, and Karma follows him along with his shadow.

28 Daily practical wisdom consists of four things: -- To know the root of Truth, the branches of Truth, the limit of Truth, and the opposite of Truth.

---

## **MARCH.**

"Say not 'I am,' 'I was,' or 'I shall be,'  
Think not ye pass from house to house of flesh  
Like travellers who remember and forget,  
Ill-lodged or well-lodged. Fresh  
Issues upon the universe that sum

Which is the lattermost of lives. It makes  
Its habitation as the worm spins silk  
And dwells therein."

-- LIGHT OF ASIA, *Bk. 8.*

---

- 1 Four things increase by use: -- Health, wealth, perseverance, and credulity.
- 2 To enjoy the day of plenty, you must be patient in the day of want.
- 3 Expel avarice from your heart, so shall you loosen the chains from off your neck.
- 4 Let a man overcome anger by love, evil by good, greediness by liberality, lie by truth.
- 5 Do not speak harshly to anybody; those who are so spoken to will answer thee in the same way.
- 6 This life is in the world of work and retributive justice; the life that follows is in the world of great reward.
- 7 Excuse is better than disputation; delay is better than rashness; unwillingness of strife is better than eagerness in seeking it.
- 8 Cut down the whole forest of lust, not the tree. When thou hast cut down every tree and every shrub, then thou wilt be free.
- 9 The avaricious go not to the world of the gods (Devas), for the fool commands no charity.
- 10 He who holds back rising anger like a rolling chariot, is called a real driver; other people are but holders of the reins.
- 11 The fool who is angered, and who thinks to triumph by using abusive language, is always vanquished by him whose words are patient.
- 12 The best of medicines is death; the worst of diseases is vain anticipation.
- 13 An easy temper is a good counsellor, and a pleasant tongue is an excellent leader.
- 14 A good word in time is better than a sweet pie after meals.

- 15 Foolish pride is an incurable malady; a bad wife is a chronic disease; and a wrathful disposition is a life-long burden.
- 16 Truth is brighter than the sun; truth is the sunny day of Reason, and falsehood the mind's dark night.
- 17 All has an end, and will away. Truth alone is immortal, and lives for ever.
- 18 The light of all flesh is the sun; the light of the soul -- truth everlasting.
- 19 The road to sin is a wide highway; the way out of it, a steep and rugged hill.
- 20 The fault of others is easily perceived, but that of oneself is difficult to perceive.
- 21 Good people shine from afar like the snowy mountains; bad people are not seen, like arrows shot at night.
- 22 Where two women meet, there a market springs; where three congregate, a bazaar is opened; and where seven talk, there begins a fair.
- 23 Extensive knowledge and science, well-regulated discipline and well-spoken speech, this is the greatest blessing.
- 24 The subtle self is to be known by thought alone; for every thought of men is interwoven with the senses, and when thought is purified, then the self arises.
- 25 Lead me from the unreal to the real! Lead me from darkness to light! Lead me from death to immortality!
- 26 The Sage who knows Brahman moves on; on the small, old path that stretches far away, rests in the heavenly place, and thence moves higher on.
- 27 Neither by the eyes, nor by spirit, nor by the sensuous organs, nor by austerity, nor by sacrifices, can we see Brahma. Only the pure, by the light of wisdom and meditation, can see the pure Deity.
- 28 By perfection in study and meditation the Supreme Spirit becomes manifest; study is one eye to behold it, and meditation is the other.
- 29 Alas! We reap what seed we sow; the hands that smite us are our own.
- 30 Thoughts alone cause the round of rebirths in this world; let a man strive to purify his thoughts, what a man thinks, that he is: this is the old secret.

31 "My sons are mine; this wealth is mine": with such thoughts is a fool tormented. He himself does not belong to himself, much less sons and wealth.

---

## APRIL.

"The untouched soul,  
Greater than all the worlds (because the worlds  
By it subsist); smaller than subtleties  
Of things minutest; last of ultimates;  
Sits in the hollow heart of all that lives!  
Whoso hath laid aside desire and fear,  
His senses mastered, and his spirit still,  
Sees in the quiet light of verity  
Eternal, safe, majestic -- HIS SOUL!"

-- THE SECRET OF DEATH (*fr. The Katha Upanishad*).

---

1 He who leaves the society of fools, cleaves unto the wise.

2 The self is hidden in all beings, and does not shine forth; but it is seen by subtle seers, through their sharp and subtle intellect.

3 Patience leads to power; but eagerness in greed leads to loss.

4 Three things make a poor man rich: courtesy, consideration for others, and the avoidance of suspicion.

5 When trust is gone, misfortune comes in; when confidence is dead, revenge is born; and when treachery appears, all blessings fly away.

6 The world exists by cause; all things exist by cause; and beings are bound by cause, even as the rolling cart-wheel by the pin of an axle-tree.

7 The living soul is not woman, nor man, nor neuter; whatever body it takes, with that it is joined only.

8 He who wishes to reach Buddhahood, and aspires to the knowledge of the Self-born, must honor those who keep this doctrine.

9 As the spider moving upward by his thread gains free space, thus also he who undertakes moving upward by the known word OM, gains independence.

10 The wheel of sacrifice has Love for its nave, Action for its tire, and Brotherhood for its spokes.

11 Man consists of desires. And as is his desire, so is his will; and as is his ill, so is his deed; and whatever deed he does, that he will reap.

12 A stone becomes a plant; a plant a beast; the beast a man; a man a Spirit; and the Spirit -- GOD.

13 There exists no spot on the earth, or in the sky, or in the sea, neither is there any in the mountain-clefts, where an evil deed does not bring trouble to the doer.

14 Whoever, not being a sanctified person, pretends to be a Saint, he is indeed the lowest of all men, the thief in all worlds, including that of Brahma.

15 If a man consorting with me (Buddha) does not conform his life to my commandments, what benefit will ten thousand precepts be to him?

16 He who smites will be smitten; he who shows rancor will find rancor; so, from reviling cometh reviling, and to him who is angered comes anger.

17 "He abused me, he reviled me, he beat me, he subdued me"; he who keeps this in mind, and who feels resentment, will find no peace.

18 Like a beautiful flower, full of color, but without scent, are the fine but fruitless words of him who does not act accordingly.

19 When your mind shall have crossed beyond the taint of delusion, then will you become indifferent to all that you have heard or will hear.

20 The wise guard the home of nature's order; they assume excellent forms in secret.

21 If thou lovest all, and gettest wisdom by it, thy loss is thy gain.

22 Empty thy mind of evil, but fill it with good.

23 Great works need no great strength, but perseverance.

24 Sleep is but birth into the land of Memory; birth but a sleep in the oblivion of the Past.

25 To forgive without forgetting, is again to reproach the wrong-doer every time the act comes back to us.

26 Every man contains within himself the potentiality of immortality, equilibrated by the power of choice.

27 He who lives in one color of the rainbow is blind to the rest. Live in the light diffused through the entire arc, and you will know it all.

28 Every time the believer pronounces the word OM, he renews the allegiance to the divine potentiality enshrined within the Soul.

29 People talk of the Devil. Every man has seen him; he is in every sinful heart.

30 The Higher Self knows that highest home of Brahman, which contains all and shines so bright. The wise who without desiring happiness worship that SELF, are not born again.

---

## **MAY.**

I'm weary of conjectures, -- this must end 'em.  
Thus am I doubly armed: my death and life,  
My bane and antidote, are both before me:  
This in a moment brings me to an end;  
But this informs me I shall never die.  
The Soul, secured in her existence, smiles  
At the drawn dagger, and defies its point.  
The stars shall fade away, the sun himself  
Grow dim with age, and nature sink in years;  
But thou shalt flourish in immortal youth,  
Unhurt amidst the war of elements,  
The wrecks of matter, and the crush of worlds.

-- ADDISON.

---

1 The eternal Spirit is everywhere. It stands encompassing the whole world.

2 He who feeds the hungry before he has assuaged his own hunger, prepares for himself eternal food. He

who renounces that food for the sake of a weaker brother is -- a god.

3 The altar on which the sacrifice is offered is Man; the fuel is speech itself, the smoke the breath, the light the tongue, the coals the eye, the sparks the ear.

4 One moment in eternity is as important as another moment, for eternity changeth not, neither is one part better than another part.

5 Better it would be that a man should eat a lump of flaming iron than that one should break his vows.

6 Even a good man sees evil days, as long as his good deeds have not ripened; but when they have ripened, then does the good man see happy days.

7 By oneself the evil is done, by oneself one suffers; by oneself the evil is left undone, by oneself one is purified.

8 Purity and impurity belong to oneself; no one can purify another.

9 Self is the lord of Self: who else could be the lord! With self well subdued, a man finds a master such as few can find.

10 If one man conquer in battle a thousand times a thousand men, and if another conquer himself, he is the greater of the two conquerors.

11 Who is the great man? He who is strongest in patience. He who patiently endures injury, and maintains a blameless life -- he is a man indeed!

12 If thou hast done evil deeds, or if thou wouldst do them, thou mayest arise and run where'er thou wilt, but thou canst not free thyself of thy suffering.

13 There is a road that leads to Wealth; there is another road that leads to Nirvana.

14 An evil deed does not turn on a sudden like curdling milk; it is like fire smoldering in the ashes, which burns the fool.

15 An evil deed kills not instantly, as does a sword, but it follows the evil-doer into his next and still next rebirth.

16 The calumniator is like one who flings dirt at another when the wind is contrary, the dirt does but return on him who threw it.

- 17 The virtuous man cannot be hurt, the misery that his enemy would inflict comes back on himself.
- 18 Nature is upheld by antagonism. Passions, resistance, danger, are educators. We acquire the strength we have overcome.
- 19 If a man understands the self saying "I am He," what could he wish or desire that he should pine after the body?
- 20 That word which all the Vedas record, which all penances proclaim, which men desire when they live as religious disciples, that word I tell thee briefly, it is OM.
- 21 As a person having seen one in a dream, recognizes him afterwards; so does one who has achieved proper concentration of mind perceive the SELF.
- 22 It is better to do one's own duty, even though imperfectly, than to perform another's duty well.
- 23 The wise who knows the Self as bodiless within the bodies, as unchanging among changing things, as great and omnipresent, does never grieve.
- 24 The path of virtue lies in the renunciation of arrogance and pride.
- 25 He who wrongs another unjustly will regret it, though men may applaud him; but he who is wronged is safe from regret, though the world may blame him.
- 26 There is more courage in facing the world with undisguised truth, than in descending into a wild beast's den.
- 27 True clemency is in foregoing revenge, when it is in one's power; true patience is in bearing up against disappointments.
- 28 The happy man must prepare ere the evil day comes; and when it does, let the thought that every good and great man has been made to suffer at some time console him.
- 29 Wealth in the hands of one who thinks not of helping mankind with it, is sure to turn one day into dry leaves.
- 30 Like as the night follows the day, so misfortune is the shadow of joy; Karma bestowing her lots with both hands.
- 31 The eagle catcheth not flies; but even the eagle is disturbed by them.
-

---

# JUNE.

"There is 'true' Knowledge. Learn thou it is this:

To see one Changeless Life in all that lives,  
And in the Separate, One Inseparable.  
There is imperfect Knowledge: that which sees  
The separate existences apart,  
And, being separated, holds them real.  
There is false Knowledge: that which blindly clings  
To one as if 'twere all, seeking no cause,  
Deprived of light, narrow, and dull, and 'dark.' "

-- SONG CELESTIAL, Bk. 18 (*fr. The Bhagavad-Gita*)

---

1 Judge the tree by its fruits, man by his deeds.

2 Theosophy is not the acquirement of powers, whether psychic or intellectual, though both are its servants.

3 Neither is Theosophy the pursuit of happiness, as men understand the word; for the first step is sacrifice, the second, renunciation.

4 Life is built up by the sacrifice of the individual to the whole. Each cell in the living body must sacrifice itself to the perfection of the whole; when it is otherwise, disease and death enforce the lesson.

5 Theosophy is the science of life, the art of living.

6 Harmony is the law of life, discord its shadow; whence springs suffering, the teacher, the awakener of consciousness.

7 Through joy and sorrow, pain and pleasure, the soul comes to a knowledge of itself.

8 The eyes of wisdom are like the ocean depths; there is neither joy nor sorrow in them. Therefore the soul of the disciple must become stronger than joy, and greater than sorrow.

9 We hate but those whom we envy or fear.

- 10 Self-knowledge is unattainable by what men usually call "self-analysis." It is not reached by reasoning or any brain-powers.
- 11 Real self-knowledge is the awakening to consciousness of the divine nature of man.
- 12 Will is the offspring of the Divine, the God in man; Desire, the motive power of the animal life.
- 13 Will is the exclusive possession of man. It divides him from the brute, in whom instinctive desire only is active.
- 14 To obtain the knowledge of self, is a greater achievement than to command the elements or to know the future.
- 15 The great watchword of the True is this -- in last analysis all things are divine.
- 16 Fear is the slave of Pain, and Rebellion her captive.
- 17 Endurance is the free companion of Sorrow, and Patience her master.
- 18 The husband of Pain is Rapture, but the souls are few in whom that marriage is consummated.
- 19 Spirituality is not what we understand by the words "virtue" and "goodness." It is the power of perceiving formless, spiritual essences.
- 20 The discovery and right use of the true essence of Being -- this is the whole secret of life.
- 21 When desire is for the purely abstract -- when it has lost all trace or tinge of "self" -- then it has become pure.
- 22 Adepts are rare as the blossom of the Udumbara tree.
- 23 The one eternal, immutable law of life alone can judge and condemn man absolutely.
- 24 Will and Desire are both absolute *creators*, forming the man himself and his surroundings.
- 25 Will creates intelligently; Desire blindly and unconsciously.
- 26 Man makes himself in the image of his desires, unless he creates himself in the likeness of the Divine, through his will, the child of the light.
- 27 Theosophy is the vehicle of the spirit that giveth life; consequently, nothing *dogmatic* can be

*Theosophical.*

28 Some pluck the fruits of the tree of knowledge to crown themselves therewith, instead of plucking them to eat.

29 It is not necessary for truth to put on boxing-gloves.

30 You cannot build a temple of truth by hammering dead stones. Its foundations must precipitate themselves like crystals from the solution of life.

---

## **JULY.**

"The mind, enlightened, casts its grief away!" --

"It is not to be known by knowledge! man  
Wotteth it not by wisdom! learning vast  
Halts short of it! Only by soul itself  
Is soul perceived -- when the soul wills it so!  
There shines no light save its own light to show  
Itself unto itself!"

-- THE SECRET OF DEATH (*fr. The Katha Upanishad*).

---

1 One cannot fill a vacuum from within itself.

2 When a certain point is reached, pain becomes its own anodyne.

3 Many a man will follow a mis-leader. Few will recognize truth at a glance.

4 Esteem that to be eminently good, which, when communicated to another, will be increased to yourself.

5 Be persuaded that those things are not your riches which you do not possess in the penetralia of the reasoning power.

6 As many passions of the soul, so many fierce and savage despots.

- 7 No one is free who has not obtained the empire of himself.
- 8 It is the business of a musician to harmonize every instrument, but of a well-educated man to adapt himself harmoniously to every fortune.
- 9 It is excellent to impede an unjust man; but if this be not possible, it is excellent not to act in conjunction with him.
- 10 Sin should be abstained from, not through fear, but for the sake of the becoming.
- 11 Vehement desires about any one thing render the soul blind with respect to other things.
- 12 Many men who have not learnt to argue rationally, still live according to reason.
- 13 The equal is beautiful in everything, but excess and defect do not appear so.
- 14 It is the property of a divine intellect to be always intently thinking about the beautiful.
- 15 As two pieces of wood may come together in the ocean, and having met, may separate again; like this is the meeting of mortals.
- 16 Youth is like a mountain-torrent; wealth is like the dust on one's feet; manhood is fugitive as a water-drop; life is like foam.
- 17 Who fulfills not duty with steadfast mind, duty which opens the portals of bliss, surprised by old age and remorse, he is burned by the fire of grief.
- 18 Even in a forest hermitage, sin prevails over the unholy; the restraint of the senses in one's own house, this is asceticism.
- 19 Who performs a right action, free from impurity, the house of that man is a forest hermitage.
- 20 As the streams of a river flow on, and return not, so pass away the days and nights, taking away the lives of men.
- 21 Unenduring are youth, beauty, life, wealth, lordship, the society of the beloved; let not the wise be deluded by these.
- 22 In this world, fugitive as tempest-driven waves, death for another is a rich prize earned by virtue in a former birth.

23 The shadows of a cloud, the favor of the base, new corn, a flower, these last only a little time; so it is with youth and riches.

24 Let the wise think on wisdom as unfading and immortal; let him fulfill his duty as though Death grasped him by the hair.

25 If evil be said of thee, and if it be true, correct thyself; if it be a lie, laugh at it.

26 Pagodas are measured by their shadows, and great men by their enviers.

27 The sage does not say what he does; but he does nothing that cannot be said.

28 The man who finds pleasure in vice, and pain in virtue, is still a novice in both.

29 The wise man does good as naturally as he breathes.

30 He is a man who does not turn away from what he has said.

31 The heart of the fool is in his tongue; the tongue of the wise is in his heart.

---

## AUGUST.

"Death has no power th' immortal soul to slay,  
That, when its present body turns to clay  
Seeks a fresh home, and with unlesened might  
Inspires another frame with life and light.  
So I myself (well I the past recall),  
When the fierce Greeks begirt Troy's holy wall,  
Was brave Euphorbus: and in conflict drear  
Poured forth my blood beneath Atrides' spear.  
The shield this arm did bear I lately saw  
In Juno's shrine, a trophy of that war."

-- DRYDEN'S OVID

---

1 The man who neglects the truth he finds in his soul, in order to follow its dead-letter, is a time-server.

2 He who does not recognize the bread and salt is worse than a wild wolf.

3 Man who has not hesitated to project his image in space and call it the Creator, sculpted not to endow God with his own vices.

4 He who has been once deceived, dreads evil, and suspects it even in truth.

5 Krishna, the golden-haired god, replied not to the reviling of the King of Chedi. To the roar of the tempest, and not to the jackal's howl, the elephant trumpets a reply.

6 Not the tender pliant grass is uprooted by the storm, but the lofty trees. The mighty war only with the mighty.

7 The sandal tree has snakes; the lotus tank, alligators; in happiness there is envy. There are no unmixed pleasures.

8 No creature, no thing is free from evil. The sandal tree has its roots sapped by snakes, its blossoms attacked by bees, its branches broken by monkeys, its top eaten by bears. No part of it is secure from pain.

9 Grieve not about thy sustenance; nature will supply it. When a creature is born, the mother's breast supplies milk.

10 Who gave the swan his whiteness, the parrot his wings of golden green, the peacock his iris-hues? Will not that which provided for them provide for thee?

11 All good fortune belongs to him of contented mind. Is not the whole earth leather-covered for him who wears shoes?

12 This world is a venomous tree, bearing two honey-sweet fruits: the divine essence of poetry and the friendship of the noble.

13 By the fall of water-drops the pitcher is gradually filled; this is the cause of wisdom, of virtue, and of wealth.

14 Let one who would live in the memory of his fellow men, make every day fruitful by generosity, study, and noble arts.

15 No plunge in clear cool water delights so much the heat-oppressed, no pearl necklace the maiden, as the words of the good delight the good.

- 16 Good men vary. Some are like cocoanuts, full of sweet milk; others, like the jujube, externally pleasing.
- 17 Like an earthen vessel, easy to break, hard to reunite, are the wicked; the good are like vessels of gold, hard to break and quickly united.
- 18 Be not a friend to the wicked -- charcoal when hot, burns; when cold, it blackens the fingers.
- 19 Shun him who secretly slanders, and praises openly; he is like a cup of poison, with cream on the surface.
- 20 A chariot cannot go on one wheel alone; so destiny fails unless men's acts co-operate.
- 21 The noble delight in the noble; the base do not; the bee goes to the lotus from the wood; not so the frog, though living in the same lake.
- 22 Like moonbeams trembling on water, truly such is the life of mortals. Knowing this, let duty be performed.
- 23 Bathe in the river of the soul, O man, for not with water is the soul washed clean.
- 24 The pure soul is a river whose holy source is self-control, whose water is truth, whose bank is righteousness, whose waves are compassion.
- 25 Of a gift to be received or given, of an act to be done, time drinks up the flavor, unless it be quickly performed.
- 26 When the weak-minded is deprived of wealth, his actions are destroyed, like rivulets dried up in hot seasons.
- 27 He who wants a faultless friend, must remain friendless.
- 28 Eat and drink with your friends, but do not trade with them.
- 29 Without trouble one gets no honey. Without grief and sorrow no one passes his life.
- 30 Vinegar does not catch a fly, but honey. A sweet tongue draweth the snake forth from the earth.
- 31 What good is advice to a fool?
-

# SEPTEMBER.

"Shall there not be as good a 'then' as 'now'?  
Haply much better. . . Therefore fear I not;  
And therefore, Holy Sir! my life is glad,  
Nowise forgetting yet those other lives  
Painful and poor, wicked and miserable,  
Whereon the Gods grant pity! But for me,  
What good I see, humbly I seek to do,  
And live obedient to the law, in trust  
That what will come, and must come, shall come well."

-- LIGHT OF ASIA, *Bk. 6.*

---

- 1 To him who has subdued self by SELF, his self is a friend; but to him who has not subdued senses by mind, that self is an enemy.
- 2 The eye is a window which looks into the heart. The brain is a door through which heart escapes.
- 3 Devotion and clear vision are not his who eats too much, nor his who eats not at all; not his who sleeps too much, nor his who is too awake.
- 4 At the end of a life of study, the man possessed of knowledge approaches Deity; and at the end of many lives, the wise man becomes one with the ALL.
- 5 Grief and wrath, avarice and desire, delusion and laziness, vindictiveness and vanity, envy and hatred, censoriousness and slander -- are the twelve sins destructive of man's bliss.
- 6 The wolf changes his coat, and the serpent his skin, but not their nature.
- 7 The young of the raven appears to it a nightingale.
- 8 The dog howls at the moon, but the moon heeds it not; be like the moon.
- 9 Let your soul work in harmony with the universal intelligence, as your breath does with the air.
- 10 Let no bitterness find entrance into the heart of a mother.

11 Pervert not the heart of a man who is pure, for he will turn thine own first enemy.

12 Do not make a wicked man thy companion, or act on the advice of a fool.

13 Save not thy life at the expense of another's, as he will take two of thy lives in future births.

14 Mock not the deformed; assume not a proud demeanor with thy inferiors; hurt not the feelings of the poor; be kind to those weaker than thyself, and charitable to all beings.

15 Sacrifice not thy weaker child to the stronger, but protect him.

16 Amuse not thyself at the expense of those who depend on thee. Mock not a venerable man, for he is thy superior.

17 Death is a black camel that kneels at everybody's door. Death is a friend and a deliverer.

18 A little hill in a low place thinks itself a great mountain.

19 Men are gnomes condemned to forced toils in the kingdom of darkness (or ignorance).

20 We are the true troglodytes, cave-dwellers, though we call our cavern the world.

21 Living for ages in the night-realm, we dream that our darkness is full day.

22 All life is but a perpetual promise; an engagement renewed, but never fulfilled.

23 Man is a king, dethroned, and cast out from his kingdom; in chains and in a dungeon.

24 The heart of a beggar will not be content with half the universe; he is not born to a part, but to the whole.

25 Our life is the ante-room of the palace where our true treasure lies -- immortality.

26 Useless to seek to seize the ocean-echo, by clasping the shell in which it lies hid; as useless to try to seize this essence, by grasping the form in which for a moment it shone.

27 When the leaden clouds clash together, the fair glimpse of heaven is shut out.

28 When the silence falls upon us, we can hear the voices of the gods, pointing out in the quiet light of divine law the true path for us to follow.

29 All the air resounds with the presence of spirit and spiritual laws.

30 The spirit it is, that, under the myriad illusions of life, works steadily towards its goal; silently, imperceptibly, irresistibly, moving on to divinity.

---

## OCTOBER.

The consciousness of good, which neither gold,  
Nor sordid fame, nor hope of heavenly bliss,  
Can purchase; but a life of resolute good,  
Unalterable will, quenchless desire  
Of universal happiness; the heart  
That beats with it in unison; the brain  
Whose ever-wakeful wisdom toils to change  
Reason's rich stores for its eternal weal.  
This "commerce" of sincerest virtue needs  
No mediative signs of selfishness,  
No jealous intercourse of wretched gain,  
No balancings of prudence, cold and long: --  
In just and equal measure all is weighed;  
One scale contains the sum of human weal,  
And one, THE GOOD MAN'S HEART!

-- SHELLEY.

---

1 The glamour of Time conceals from the weak souls of men the dark abysses around them, the terrible and mighty laws which incessantly direct their lives.

2 There is no death without sin, and no affliction without transgression.

3 Man's actions are divided, as regards their object, into four classes; they are either *purposeless*, *unimportant*, or *vain*, or *good*.

4 The sun causes day and night, divine and human. Night is for the sleep of beings, day for the performance of their duty.

5 If we were convinced that we could never make our crooked ways straight, we should for ever

continue in our errors.

6 Where there are not virtue and discrimination, learning is not to be sown there, no more than good seed in barren soil.

7 A teacher is more venerable than ten sub-teachers; a father, than one hundred teachers; a mother, than a thousand fathers.

8 Let not a man, even though pained, be sour-tempered, nor devise a deed of mischief to another.

9 One is not aged because his head is grey: whoever, although a youth, has wisdom, him the gods consider an elder.

10 A wise man should ever shrink from honor as from poison, and should always be desirous of disrespect as if of ambrosia.

11 Though despised, one sleeps with comfort, with comfort awakes, with comfort lives in this world; but the scorner perisheth.

12 Trust not in business one ever caught asleep by the sun rising or setting, for thereby he incurs great sin.

13 Those who prefer to swim in the waters of their ignorance, and to go down very low, need not exert the body or heart; they need only cease to move, and they will surely sink.

14 As a man digging comes to water, so a zealous student attains unto knowledge.

15 A good man may receive pure knowledge even from an inferior; the highest virtue from the lowest.

16 Ambrosia may be extracted even from poison; elegant speech even from a fool; virtue even from an enemy; and gold from dross.

17 Whoever offers not food to the poor, raiment to the naked, and consolation to the afflicted, is reborn poor, naked, and suffering.

18 As a sower gets not his harvest if he sow seed in salt soil, so the giver gets no fruit by bestowing on the unworthy.

19 There are three things of which one never tires: health, life and wealth.

20 A misfortune that cometh from on high cannot be averted; caution is useless against the decrees of

Fate.

21 The worst of maladies is envy; the best of medicines is health.

22 Three things can never be got with three things: wealth, with wishing for it; youth, with cosmetics; health, with medicine.

23 Trifling ruins earnestness, lying is the enemy of truth, and oppression perverts justice.

24 Caution can never incur disgrace; imbecility can never bring honor with it.

25 Whomsoever riches do not exalt, poverty will not abase, nor calamity cast him down.

26 Night and day are the steeds of man; they hurry him on, not he them.

27 Whoso heeds not a plaint, confesses his own meanness; and whoso makes a merit of his charity, incurs reproach.

28 There are four things of which a little goes on a long way: pain, poverty, error, and enmity.

29 He who knows not his own worth, will never appreciate the worth of others.

30 Whosoever is ashamed of his father and mother, is excluded from the ranks of the wise.

31 He who is not lowly in his own sight, will never be exalted in the sight of others.

---

## **NOVEMBER.**

"As large as is the unbounded Universe,  
So large that little, hidden Spirit is!  
The Heavens and Earths are in it! Fire and air,  
And sun and moon and stars; darkness and light,  
It comprehends! Whatever maketh Man,  
The present of him, and the past of him,  
And what shall be of him; -- all thoughts and things  
Lie folded in the eternal vast of It!"

-- THE SECRET OF DEATH (*fr. The Katha Upanishad*).

- 
- 1 In every blessing think of its end, in every misfortune think of its removal.
  - 2 If justice predominates not over injustice in a man, he will speedily fall into ruin.
  - 3 Vain hopes cut man off from every good; but the renunciation of avarice prevents every ill.
  - 4 Patience leads to power, but lust leads to loss.
  - 5 By wisdom is the gift of knowledge displayed; by knowledge are high things obtained.
  - 6 In calamity are men's virtues proved, and by long absence is their friendship tested.
  - 7 That man who accurately understands the movement and the cause of the revolutions of the wheel of life is never deluded.
  - 8 Days end with sunset, nights with the rising of the sun; the end of pleasure is ever grief, the end of grief ever pleasure.
  - 9 All action ends in destruction; death is certain for whatever is born; everything in this world is transient.
  - 10 In information is shown the wit of man, and in travel is his temper tried.
  - 11 In poverty is benevolence assayed, and in the moment of anger is a man's truthfulness displayed.
  - 12 By truth alone is man's mind purified, and by right discipline it doth become inspired.
  - 13 By shaking hands with deceit, one is tossed on the billows of toil.
  - 14 Fear of judgment will deter from wrong, but trifling with it leads to destruction.
  - 15 An act may seem right, but it is by its results that its purpose is shown.
  - 16 Intelligence is shown by good judgment.
  - 17 Learning clears the mind, and ignorance cobwebs it.
  - 18 Whoso takes good advice is secure from falling; but whoso rejects it, falleth into the pit of his own conceit.

- 19 By a trusty friend is man supported in life, and by reward are friendships increased.
- 20 Whoso cannot forgive wrong done to him shall learn to know how his good deeds are undone by himself.
- 21 He who bestows bounty on mankind, makes of mankind his debtor in a future birth.
- 22 The envious man is never satisfied, nor can he ever hope to become great.
- 23 The more a man clothes himself in modesty, the better does he conceal his faults.
- 24 The best policy for a man is not to boast of his virtues.
- 25 The kindest policy for a strong man is not to flourish his power in the sight of a weaker man.
- 26 The contentious man induces antagonism; people cannot often repress anger when contending with fools.
- 27 Intelligence is not shown by witty words, but by wise actions.
- 28 Of the eloquence of the pleasant speaker all men are enamored.
- 29 Craft has the best of men; boldness conquers cities; the first is despised, the last admired.
- 30 The brave man of whose prowess all men stand in need, will never be distressed by adversaries.
- 

## **DECEMBER.**

"Ring out the old, ring in the new,  
Ring, happy bells, across the snow:  
The year is going, let him go;  
Ring out the false, ring in the true.

"Ring out the grief that saps the mind,  
For those that here we see no more;  
Ring out the feud of rich and poor,  
Ring in redress to all mankind."

1 The most precious gift received by man on earth is desire for wisdom.

2 In health and wealth man is never in want of friends. True friends, however, are those who remain when they are needed.

3 Of all the animals on earth, man alone has the faculty of causing moral trouble.

4 Man contains three kinds of evil: the evil caused by his (lower) nature; the evil done by man to man; and the evil caused by man to himself.

5 A great man is he who is proof against flattery, vanity, injustice, and the love of pomp and power.

6 The wise man is he who can either take or leave those so-called necessities of life with which other people are intemperate.

7 To hold on with fortitude in one condition, and sobriety in the other, is a proof of a great soul and an impregnable virtue.

8 Let every action be done with perfect gravity, humanity, freedom, and justice, and perform it as though that action were your last.

9 A man can rarely be unhappy by being ignorant of another's thoughts; but he that does not attend to the motions of his own is certainly unhappy.

10 Do not let accidents disturb, or outward objects engross your thoughts; but keep your mind quiet and disengaged, to be ready to learn something good.

11 Manage all your actions, words, and thoughts accordingly, since you can at any moment quit life.

12 What matters dying? If the gods are in being, you can suffer nothing, for they will do you no harm.

13 And if the gods are not, or take no care of mortals -- why, then, a world without gods is not worth a man's while to live in.

14 The being of the gods, and their concern in human affairs, is beyond dispute.

15 Remember that life is wearing off, and a smaller part of it is left daily.

- 16 Depend not upon external supports, nor beg your tranquillity of another. In a word, never throw away your legs to stand upon crutches.
- 17 If you examine a man that has been well-disciplined and purified by philosophy, you will find nothing that is unsound, false, or foul in him.
- 18 Life moves in a very narrow compass; yes, and men live in a small corner of the world too.
- 19 Poor transitory mortals know little even of themselves, much less of those who died long before their time.
- 20 Death and generation are both mysteries of nature, and resemble each other; the first does but dissolve those elements the latter had combined.
- 21 Do not suppose you are hurt, and your complaint ceases. Cease your complaint, and you are not hurt.
- 22 That which does not make man worse, does not make his life worse; as a result, he hath no harm either within or without.
- 23 At present your nature is distinct; but ere long you will vanish into the whole: you will be returned into that universal reason which gave you your being.
- 24 Do but return to the principles of wisdom, and those who take you now for a monkey or a wild beast will make a god of you.
- 25 Do not act as if you had ten thousand years to throw away. Death stands at your elbow. Be good for something, while you live, and it is in your power.
- 26 He that is so anxious about being talked of when he is dead, does not consider that all who knew him will quickly be gone.
- 27 If you depend too servilely upon the good word of other people, you will be unworthy of your own nature.
- 28 Whatever is good has that quality from itself; it is finished by its own nature, and commendation is no part of it.
- 29 Do not run riot; keep your intentions honest, and your convictions sure.
- 30 He that does a memorable action, and those who report it, are all but short-lived things.

31 Put yourself frankly into the hands of Fate, and let her spin you out what fortune she pleases.

## **Prefactory Note to the Second and Revised Edition**

**By Grace F. Knoche**

"Time discovers truth," wrote Seneca as the Graeco-Roman influence, spiritual and political, was ebbing under the influx of the new cycle of thought taking hold. Who and what H. P. Blavatsky was and the purport of her teaching have been the earnest concern of thinkers and writers for a hundred years now, and while the public in general comprehends neither the fullness nor the majesty of her sacrifice, time is her advocate.

To attempt to chronicle the life story of H.P.B. and of the Society she founded in 1875 demands a rare combination of qualities: perception of values, devotion to the theosophic ideals, a sense of history and,

above all, an identification with the ageless purpose behind the sending of a messenger. For this is just what H.P.B. was, the sower of the messianic seed for the coming age (the Aquarian) and the restorer of confidence in the validity of the Way.

Charles J. Ryan's *H. P. Blavatsky and the Theosophical Movement* makes no pretense to being a definitive biography of H. P. Blavatsky -- much less of H.P.B. -- or of the movement she inspired. Nonetheless, it is a product of exhaustive research into the early history and documents of the Society, hostile and friendly, so that the end result is a faithful portrait of the Founder and her life work. The narrative is disarming in its simplicity, but one soon becomes aware of the author's rich reserve of knowledge and grasp of essentials.

Yet why reissue a book, however authentic, that was written back in 1937, now that fuller archival and biographic material is to hand? Data alone do not suffice. The history of any movement, especially one of spiritual origin, is best authored by a protagonist, by one who is convinced of the worthiness of his theme. Unless the writer himself has profoundly experienced the reality of its inner purpose, how can he render a verdict that will pass the test of time?

Not only did Charles J. Ryan have the advantage of having been deeply committed since youth to the cause of human betterment, but he likewise lived close to the flame; he himself never met Madame Blavatsky, but he had as life-long friends and associates some of her pupils who carried with them until their death the atmosphere of their teacher's heroic dedication. A near eyewitness, and one who during the stormy years of the '90s staunchly defended the principles for which she had given her life, may have something to offer that later historians cannot so easily provide, however much they may benefit from the perspective of years.

A native of Halifax, England, Charles James was born on August 31, 1865, to an English mother from Manchester and an Irish father, descended from the Ryans of Idrone, Tipperary. An artist by profession, he served as principal of the government School of Art in Ventnor, Isle of Wight, succeeding to the post after the death of his father, also an artist, with whom he exhibited at the Royal Academy in London. But C.J.R. was more than an artist and headmaster. A wide reader with an insatiable curiosity, there was no subject in astronomy, archaeology, philosophy or the arts to which he was a stranger. When rather suddenly he was called to California in 1900, to help with Katherine Tingley's new school just opened at the Point Loma theosophical headquarters, his colleagues were at a loss how to do honor to this quiet, self-effacing yet industrious gentleman who not only had exercised a power for good on the several institutions which he had served, but had touched each of their lives in a most intimate way.

Professor Ryan had joined the theosophic scene several years earlier, in January 1894, when the Society was in the throes of controversy and divided loyalties. He himself had been reared in the rationalistic Free-thought atmosphere of the day when anything approaching dogma or authoritarianism in religious matters was suspect. His first exposure to theosophy, he tells us, was "somewhat unpromising," this being the spate of articles that appeared in the British press after H.P.B.'s death in 1891, most of them uncomplimentary, but he had been repelled by the prejudice and ignorance of the "self-styled judges" of

the Society for Psychological Research. When later he read A. P. Sinnett's books, he "found his sincerity impressive"; he was not averse to believing there were great teachers who possessed "a more profound knowledge of spiritual and even physico-intellectual man than our modern psychologists, anatomists or theologians." Still, he held back, until one day he met a devoted pupil and friend of H.P.B., a member of the London headquarters staff. "I immediately joined the Theosophical Society -- the wisest act of my life" -- and helped found the Portsmouth Lodge. In the fateful division of the Parent Society in April 1895, he chose to support William Q. Judge -- a decision that was personally painful to him, for it had been Annie Besant's conversion from rank materialism to theosophy that had strongly affected him.

For fifty-five years, Charles J. Ryan gave unqualified devotion to Masters' work, and from 1900 until his death in Covina on December 24, 1949, contributed his remarkable literary and scientific talents to the theosophical world.

The careful student will be grateful for the inclusion in this second and revised edition of precise references to quotations cited in the text where these were lacking, and for the correction and clarification of a considerable number of minor but significant points of fact. For these we are indebted, first to the author whose personal copy turned over by him to Arthur Conger in 1946 is marked throughout with his editorial changes, omissions and additions; second, to those who worked with me in preparing this edition; and third, to Kirby Van Mater, archivist, for his tireless labor in searching out obscure sources of historic data in the early letters, pamphlets, and original documents preserved in the Archives of the Theosophical Society (Pasadena) -- sources which were not readily available to the author at the time of writing. Moreover, Professor Ryan had extended his chronological listing of developments up to 1946, but there seems no call to continue the record beyond that year, over and above the notation (in square brackets) of the sequential changes in administrative responsibility respectively of the two main branches of the movement. Also included are a new bibliography and enlarged index.

Assuredly, the author has accomplished his objective: to give a concise outline of theosophic history and, more importantly, to present H. P. Blavatsky "in such a true light that the reader will see that it was impossible for such a being -- the *real* H.P.B. -- to be anything but genuine."

## **Foreword to the First Edition**

**By Charles J. Ryan**

Running through the record of the Theosophical Society from its inception to the present day is one unbroken line of underlying purpose to provide a rational solution for the great problems which face

humanity. From the first the Society stated that its main object was to disseminate Ideas which would, if put into practice, change the hearts and minds of men to better and higher things. Theosophy, the philosophy of life that has come down the ages, can do this work of spiritual and intellectual alchemy by giving light by which the peoples of the earth can live as high-minded and large-hearted men and women.

Theosophy can set a new current of thought in the world so that brotherhood in thought and act will bring peace on earth and heaven into our midst. This is no visionary dream, it is intensely practical, but we must begin upon ourselves, we must correct ourselves, we must live what we preach. No readjustments of conditions, however drastic, can ever permanently do away with our troubles; we must readjust ourselves and cease to identify ourselves with the material body -- we must explore within and find what true living means.

The Theosophical Movement had, and has, if it live true to its purposes and ideals, the backing of certain wise men of the East who possess the light and who are ever ready to help. But even they must abide the time when men are seeking for more light. So in 1875 they sent their messenger, H. P. Blavatsky, that "strange woman" whose occasional unparliamentary language and outward uncouthness in manner were deliberately assumed to shock men out of their conventional judgments and to arouse their intuition.

Strange indeed she was, but true as steel, and by far the best qualified then available to "break the molds of mind," and to sow the seeds which would germinate in the coming centuries. She began in America, with the simplest teaching about the ethereal forces behind the veil of matter, using the only convenient tool at hand, the well-known phenomena of spiritualism. She discountenanced mediumship, but proclaimed the existence of great Adepts in wisdom and trained knowledge of nature's hidden laws -- Rosicrucians, as she called them among other names -- and of the lofty possibilities of adeptship latent in every man, a startling concept in the Western world. To scholars she interpreted the deeper meaning of the traditional Qabbalah in its bearing upon the Christian scriptures, and showed that the Qabbalah, freed from its corruptions, contained the secret wisdom possessed by the true Rosicrucian or Theosophical societies in past ages under whatever name these societies were called. In her first book, *Isis Unveiled*, she touched on the so-called magical forces in nature and man, repudiated in the nineteenth century, and yet so perfectly natural to those who were spiritually qualified to use them wisely.

H. P. Blavatsky also indicated to a limited degree the other features of her later teachings, such as reincarnation, karma, the complex nature of man, and the cycles of evolution.

Leaving the seeds of the Great Purpose to germinate in the West, she turned toward the Orient, one of the ancient fountains of inner knowledge still existing. Here she strove to arouse the "dreamy Aryans" to study and profit by the unique treasures of truth in their keeping, the wisdom which would not only reflect honor upon India in the critical eyes of the restless West but bring the whole world much needed help. In spite of age-long and ingrained conservatism, proud Brahmans of high caste recognized the authenticity of the messenger and of her message, and joined hands with the theosophists.

H. P. Blavatsky saw that the essential truths in all the great religions had been deeply honeycombed with error, and that for this reason religion had become an element of contention and division in the world. A return to an understanding of the ancient wisdom-religion -- theosophy -- the spiritual center from which the rival faiths all diverged, is the only way to produce harmony among their followers, and thereby to take an immense step toward universal brotherhood. In the words of G. de Purucker:

She saw how humanity had been drifting through the ages unaware of its birthright and unconscious of its dignity; how the indefiniteness of modern ideas had confused the minds of the people and engendered everywhere uncertainty and helpless doubt . . . and she left for posterity a body of teachings with power in them to change the whole world, and as it were to raise from the dead the Immortal Part of man. -- *The Theosophical Path*, XXXVI, 398, Aug. 1929

The underlying current of the original purpose having reached the Orient, its real birthplace, the messenger moved to Europe where she finished her masterpiece, *The Secret Doctrine*, and wrote other theosophical classics. Though an intellectual response came from matter-of-fact Europe, its almost complete failure to understand the "chela-spirit" of devotion was disappointing. Nevertheless, the lionhearted Blavatsky never gave up and, at last, against all odds, she aroused in "the few" a deeper comprehension of her mission. She was then able to take the first steps in the revival of the forgotten schools of the Mysteries, and at the opportune moment she produced a devotional gem from the Orient in an exquisite Western setting of her fashioning, *The Voice of the Silence*, a guide for students who aspire to tread the path of spiritual wisdom.

When the time came for the teacher to depart, no crisis occurred, although the cynics vainly imagined that the Movement would perish forthwith. On the contrary, its influence has increased and widened steadily, in spite of external opposition and internal difficulties in some quarters. It is now the privilege as well as the duty of devoted theosophists to keep alive the torch she placed in their hands, but it can burn brightly only in an atmosphere of kindness, brotherhood, and magnanimity. If some reasonable cooperation is not established between the groups which claim to follow the precepts and the example of the founder of their movement, the progress of theosophy and the world's advancement on spiritual lines will be far more seriously delayed than by all the attacks of the detractors.

While assuredly the best way to understand the heart and mind of Helena P. Blavatsky is to study her writings, yet there is much of great value to learn from the story of her life of toil and renunciation, of self-sacrifice and voluntary martyrdom, for she was in essentials a lofty example of what she taught. So many attempts have been made by misguided persons to misrepresent her in the eyes of the ill-informed that a brief but authentic account in handy form of the chief incidents of her life, her ideals, and her methods, such as has not hitherto been available, may not be out of place at this time when recent attacks have aroused widespread attention to theosophy, and when world conditions demonstrate the crying need for its constructive ideas.

This book also presents an outline of the more striking landmarks in the historical background of the

Theosophical Society during the lifetime of its chief founder, and touches more lightly upon some of the outstanding events that have occurred since her passing, especially in regard to the protective and sustaining efforts of her most trusted friend and disciple, William Q. Judge, to carry the work and teaching on in accordance with what H. P. Blavatsky called the "Original Plan of the Masters."

The limited space at disposal has compelled the omission of much interesting matter, and the selection of the most important highlights has been no easy task. The administrative affairs of the Society, the establishment of lodges and national sections, the erection or purchase of buildings, the numerous conventions, and the details about the rise of theosophy into the "luminous zone" and its wide recognition by thinkers, while interesting to close students of theosophical history, can only be referred to in general terms. Even the numerous confirmations of H. P. Blavatsky's scientific teachings now being made, and her time-honored methods of training aspirants to chelaship, important as they are, demand far more room than can be spared for adequate treatment.

It is to be regretted that owing to lack of space it is impossible to do justice to, or even mention, most of the devoted Fellows of the Theosophical Society who have unselfishly given their time, money, and work to the Movement, often under very trying conditions, and at great personal sacrifice. If a small number of the more prominent were named the selection might be considered inadequate or ill-advised by some, and so only those persons who have a special relationship with H. P. Blavatsky or with important events in later history have been mentioned.

While it is the duty and the privilege of theosophists to express their gratitude for the spiritual and intellectual illumination received from their teacher by defending her honor and exposing the falsity and hollowness of the foolish and malevolent charges from which she suffered, the aim of this volume is not controversial per se, though it contains information useful in her defense. The writer, who has never hesitated to break a lance with her critics when the opportunity offered, feels that a fair and dispassionate statement of the facts of her career and of the motives underlying her actions is sufficient to satisfy any unprejudiced mind that she was justified in her claim that she was sent by her Masters to bring the ancient wisdom, theosophy, once more to the world at a critical period in its history.

To regard her as a charlatan is to reduce her life history to an incomprehensible jumble of absurdities. One or two controversial matters in regard to theosophical events about which there may still be differences of opinion have had to be discussed because they touch very closely on fundamentals, but they have been treated as impersonally as possible and we hope in such a way as not to give offense.

## **Prefatory Note**

The publication of private letters which were never meant for publication, and which it was never imagined would reach the public, demands an explanation if not an apology. In these days of many books, when the intimate lives of noted characters are scrutinized and dissected for every bit of information to satisfy a public more eager, apparently, to discover the sins and frailties of the great than to form a just appreciation of their genius and finer qualities, one may well pause before adding to this great mass of literature.

If, on the contrary, the publication of this private material may throw some light on certain mooted points of value, clear the air of scandal or unjust criticism, or even of violent abuse, no apology is called for. The world seems ever ready to magnify the evil and minimize the good in human nature, especially in those who have attained greatness, as we understand the word, or at least a certain prominence from public office and public trust. The finer Christian charity which is never blind to the sins and follies and weaknesses of human nature, yet treats them with gentleness, a gentleness ever ready to pardon, as though conscious that the human spirit has in it ever the promise and potency of ultimate redemption and glorification. This is, of course, the Christ-spirit, and when the world fails to recognize it or forgets it, distrust and dread and pessimism prevail, and the general outlook on life presents a very dreary picture.

Fortunately a trend towards a healthy optimism prevails, and there is no better index of an advancing and higher civilization than the larger scope of this optimism.

In John Forster's *Decision of Character* he stressed the importance for the young man to meet the world with trust rather than distrust, and I am quite sure that this rule of life is the proper one. Confidence belongs to the higher attributes of man, and suspicion to the lower nature; truth is born of faith, while error is the child of distrust and suspicion.

This seems to apply with special aptness to the writer of these letters: adored by her followers and by those who understood her, no term of abuse seemed too severe for those who called her a charlatan.

Had I not thought that these letters would help to clear up certain mooted questions, and vindicate her against certain charges of duplicity and lack of good faith, and even against more serious charges, I should not have published them.

## About This Book

BLAVATSKY, HELENA PETROVNA, born Helena Petrovna Hahn, 1831-1891, Russian theosophist. She . . . founded the Theosophical Society in New York [in 1875]. Her demonstrations of supernormal phenomena were declared fraudulent by the London Society for Psychical Research (1885). -- *Reader's Digest Universal Dictionary*, reprinted with amendments, 1994

This statement, typical of many, is factually correct -- as far as it goes. The damage done lies not in what is said, but in what is left unsaid. As Patience Worth aptly has it:

Half-Truth is Lie's brother.

The "*Report of the Committee Appointed to Investigate Phenomena Connected with the Theosophical Society*" appeared in 1885 in the *Proceedings of the Society for Psychical Research*, Vol. 3 (December 1885), pp. 201-400. It is commonly called the Hodgson Report since the bulk of it was written by R. Hodgson; but his opinions were endorsed by E. Gurney, F. W. H. Myers, F. Podmore, H. Sidgwick, Mrs. Sidgwick and J. H. Stack. It branded Madame H. P. Blavatsky, founder of the Theosophical Society, as "one of the most accomplished, ingenious, and interesting impostors in history." This view is still widely accepted, although it is probable that few have ever read the Hodgson Report critically and in detail, and fewer still have attempted to check his findings. Among many other accusations, the Hodgson Report claims that Madame Blavatsky herself wrote in a disguised hand certain letters commonly called the Mahatma Letters, and that she was engaged in forgery and deception on an impressive scale.

Although much of the evidence relating to this case has been lost and all the witnesses are long since dead, many of the Mahatma Letters to A. P. Sinnett are preserved in the British Library where they are available for inspection. *These letters make Primary Evidence*. A study of these originals, supplemented by a detailed examination of an authentic set of 1,323 color slides prepared from them and supplied by the British Library, has shown that there are serious flaws in Hodgson's methods, observation, reasoning, and conclusions.

This book is divided into two parts. Part 1 reprints my earlier paper entitled "J'Accuse," published in the *Journal of the Society for Psychical Research*, Vol. 53, No. 803 (April 1986), pp. 286-310, plus a few footnotes for clarity's sake. This is, in the main, a study of the Hodgson Report itself, supplemented by as detailed a study of the Mahatma Letters as time and opportunity to visit the British Library permitted. It is reproduced here because the *Journal of the Society for Psychical Research* does not circulate widely outside the SPR and some libraries.

Part 2 describes work done after 1986 and records the findings of a line-by-line microscopical examination of each and every one of the 1,323 color slides in the British Library set. Several pages of these documents are reproduced in this book. Hodgson gave no illustration whatever of the alleged incriminating Blavatsky-Coulomb letters, of which he made much; and the only illustrations of the Mahatma Letters given in his Report are fragments, mostly isolated characters torn from their context and from documents which, for the most part, can neither be identified nor accurately dated.

In "J'Accuse" I wrote: "whereas Hodgson was prepared to use any evidence, however trivial or questionable, to implicate HPB, he ignored all evidence that could be used in her favor. His report is riddled with slanted statements, conjectures advanced as fact or probable fact, uncorroborated testimony of unnamed witnesses, selection of evidence and downright falsity." If this seem hyperbole, I reply that now that I have had the opportunity of re-reading the Hodgson Report in the light of the hard evidence that still remains to us (i.e., the Mahatma Letters preserved in the British Library), the Hodgson Report is even worse than I had thought. The Hodgson Report is not, as has been widely believed for more than a century, a model of what impartial and painstaking research should be: it is the work of a man who has reached his conclusions early on in his investigation and thereafter, selecting and distorting evidence, did not hesitate to adopt flawed arguments to support his thesis.

My conclusions from this examination are:

**FIRST:** The Hodgson Report is not a scientific study. It is more like the address of a counsel for the prosecution who is interested only in evidence, however dubious, which can be made to support his views. Hodgson shows that he was either ignorant or contemptuous of the basic principles of English justice -- and the rest of the Committee seemed little better. As said, he quotes verbal and uncorroborated statements of unnamed witnesses; he cites documents which are neither reproduced in his report nor identifiable; he advances conjecture as established fact; and he makes his handwriting experts change their minds until they give him the answers he wants. The possibility that someone other than HPB could have written the Mahatma Letters was never considered. This list of misdemeanors alone would render the Hodgson Report inadmissible in a court of law.

**SECOND:** In cases where it has been possible to check Hodgson's statements against the direct testimony of the Letters preserved in the British Library, his statements are found to be either false or of no significance in the context. He makes three cardinal statements on which hangs his whole contention that Madame Blavatsky wrote the Mahatma Letters herself with intent to deceive. These I summarize as follows:

(i) That there are clear signs of development in the KH handwriting, various strong resemblances to Madame Blavatsky's ordinary handwriting having been gradually eliminated;

(ii) That special forms of letters proper to Madame Blavatsky's ordinary writing, and not proper to the KH writing, occasionally appear in the latter;

(iii) That there are certain very marked peculiarities of Madame Blavatsky's ordinary writing which appear throughout the KH writing.

The first two are demonstrably false; the third could apply to many other writers and does not pinpoint HPB as the writer to the exclusion of all other possible writers. These downright falsities coupled with the procedural errors, make it impossible for me to accept as a fair, impartial statement of fact those parts of the Hodgson Report that I *can* verify from primary evidence. This being so, I may perhaps be pardoned for regarding with suspicion the remainder of the Hodgson Report for which supporting firsthand evidence is no longer extant.

THIRD: The KH and M scripts raise unanswered questions about whether they were written by pen and ink (or blue pencil) on paper in the ordinary way. These questions relate to

(i) The extraordinary striations, made with engineering precision, in some of the Letters apparently written in blue pencil;

(ii) The small amount of ink penetration even with the thinnest papers;

(iii) Erasures that seem to have been made with ink eradicator, but which have left neither stain nor roughening of the paper;

(iv) The distortions in some pages of writing which otherwise bear all the marks of genuine KH writing. Of these, the most conspicuous are the exaggerated t-bars which are seen in some of the later KH Letters.

All of these points suggest that the Letters we have are copies, made by some unknown process, rather than original documents, but only laboratory investigation can provide an answer. I have long sought to have some nondestructive laboratory tests made, but without success; and I fear that it is unlikely that permission to do such work will be forthcoming.

LAST: I find *no evidence of common origin* of the KH and M scripts and HPB's ordinary, consciously-made handwriting. That is to say, I find no evidence that the Mahatma Letters were written by Madame Blavatsky in a disguised form of her ordinary writing made for fraudulent purposes. What may have come through her hand in trance, dislocation, or other forms of altered consciousness is another matter;

but writing so made cannot be classed as either fraud or imposture.

If there is insufficient evidence in the legal sense, a case must be dropped; for in English law a person is innocent until he is proved guilty and a "not proven" verdict is not allowed. Remember that the charge against HPB made by Hodgson was that she was an accomplished but nevertheless common fraudster and impostor.

I have done this work impelled by a strong feeling of the need for JUSTICE. This is a concept that seems beyond the grasp of some para-psychologists and psychical researchers. Mediumistic people are not just objects that can be used for "experiments." The lasting damage that can be done to their lives by a hasty or erroneous judgment must always be considered.

In the course of my practical work I am often called upon to advise in the defense of dubious characters, some of whom may have served prison sentences. The fact that they have a "record" does not mean they can, ipso facto, be convicted of each and every charge that may subsequently be brought against them. They cannot be condemned "on suspicion." Each verdict must be based upon the available evidence pertaining to that case and not on previous history.

H. P. Blavatsky was not a known criminal and had not served a prison sentence. Yet Hodgson was allowed to act as both Expert Witness and Public Prosecutor. There was no Counsel for the Defense, no cross-examination of Hodgson's favored witnesses or recall of witnesses whom he had rejected, no Judge and no Jury. The meanest criminal in the courts can expect fairer treatment than was ever accorded Madame Blavatsky at the hands of the SPR; and the Hodgson Report has been allowed to become one of the most sacred of all the SPR's sacred cows, as I have discovered.

I joined the SPR in 1937 and have been in continuous membership ever since. This must make me one of the Society's most senior members. In recent years I have contributed on a regular basis to the Society's *Journal* and one volume of *Proceedings*. I joined the SPR as a young man hoping that it could answer for me those age-old problems: the Whence, the Whither, the Why. I have come to share the experience of Omar Khayyam, as related in Fitzgerald's famous lines:

And this was all the Harvest that I reap'd --  
Myself when young did eagerly frequent  
Doctor and Saint, and heard great Argument  
About it and about: but evermore  
Came out by the same Door as in I went.

With them the Seed of Wisdom did I sow  
And with my own hand labour'd it to grow:  
And this was all the Harvest that I reap'd --  
"I came like Water, and like Wind I go."

And yet, with all the aridity of so many of the SPR's publications, the Society has provided me with four fine tutors who have influenced my development greatly. They never knew me, but I remember them with affection and gratitude: C. D. Broad, H. H. Price, R. H. Thouless, and G. N. M. Tyrrell.

I am not a member of the Theosophical Society, though I can subscribe to the three principles on which it was founded. (1) I have read much of Theosophical literature, in its several brands, but I do not know how much of it may be true. However, I have found some Theosophical teaching useful in explaining facts that I cannot otherwise account for. Ideas which I have borrowed include: the sevenfold nature of man; the difference between individuality and personality; the persistence and reactivation of kama-manasic shells; and karma and rebirth. H. P. Blavatsky for me is a writer and source of ideas; and she takes her place with George Berkeley, Bishop of Cloyne; Swedenborg; Swedenborg's irreverent disciple, William Blake; and Carl Jung.

H. P. Blavatsky wrote: "he who hears an innocent person slandered, whether a brother theosophist or not, and does not undertake his defense as he would undertake his own -- is no Theosophist" (*Lucifer*, November 1887). Maybe, on this criterion, I am a theosophist.

The results of the present investigation, which has been extended over a fifteen-year period, are now presented in the hope that future biographers of Madame H. P. Blavatsky, the compilers of reference books, encyclopedias and dictionaries, as well as the general public, will come to realize that the Hodgson Report is not the model of impartial investigation so often claimed for it over the past century. It is flawed and untrustworthy; and Hodgson's observations and conclusions need to be taken with a considerable portion of salt.

The case of Helena Petrovna Blavatsky needs re-examination in this light. She deserves no less.

-- VERNON HARRISON

21 March 1997

---

## About the Author

Vernon George Wentworth Harrison was born in Sutton Coldfield, Warwickshire, England, in March 1912. His father was a schoolteacher specializing in French. Vernon was educated at Bishop Vesey's Grammar School, Sutton Coldfield, and at the University of Birmingham where he read physics, chemistry, and mathematics. After graduation he undertook three years of postgraduate study and research in the Department of Physics. In this study the use of photography and photomicrography as recording media played a prominent role.

After obtaining his Ph.D. he found employment as a research physicist in the Printing & Allied Trades Research Association (PATRA) with laboratories then located in London. His work at PATRA had

hardly started when war broke out and he was put on to war work for the Ministry of Supply. PATRA lost all its records and scientific equipment in the last big fire raid on London, and it was not until 1947 that the staff was able to move into new laboratories at Leatherhead, about twenty miles south of London. Here he was able at last to start work on the optical properties of paper, color printing, and the quality of halftone reproduction. In 1957 he was appointed Director of Research of PATRA and was responsible for the administration of a staff which by then had grown to around 120.

In 1967 he moved to Thos. De La Rue & Co. in the capacity of Research Manager of their research center then located at Maidenhead. De La Rue prints banknotes (bills), postage stamps, stock certificates, passports, and other types of security documents; and an important part of the work of the research center was to study the methods of counterfeiters and forgers and to devise methods of improving the security of the Company's products.

This work aroused an interest in forged printed and written matter generally, so that on retirement in 1977 he was able to set up in private practice as an examiner of questioned documents. Being independent, he can work for either prosecution or defense. He is used to giving evidence in Court and submitting to cross-examination. His work of recent years has covered a wide range of subjects from disputed Elizabethan documents to graffiti on walls, dubious wills, forged mortgage agreements and financial documents in profusion, anonymous and poison-pen letters, threatening notes, a spy case, examination of counterfeit currency and illicit printing plates, identification of banknote paper recovered from drains, and the evidential value of photographs. He considers this period to be the most interesting and, maybe, the most useful of his life.

He has had a lifelong interest in photography and from 1974 to 1976 he was President of the Royal Photographic Society of Great Britain. He has also had a lifelong interest in the music of Franz Liszt, and is the surviving co-founder and a past Chairman of the (English) Liszt Society.

The author describes himself as "reading the equations of Schrodinger and Dirac through the eyes of Francis Thompson."

---

## Acknowledgments

- Grateful acknowledgment goes to the Society for Psychical Research for permission to reproduce "J'Accuse" as Part 1 of the present study; and to the British Library for permission to reproduce full color photographs of the Mahatma Letters (Additional MSS 45284, 45285, 45286).
- Figures 5 and 8 are reproduced by permission from *You Are What You Write* by Huntington Hartford, published by Peter Owen Limited, London, 1975.
- I am indebted to the Trustees of the British Museum for permission to quote the information provided by the Archivist about Mr. Richard Sims, formerly on the staff of the Museum.
- I am obliged to Ambassador John S. D. Eisenhower for kindly lending me a fine specimen of the

late President Eisenhower's handwriting.

- I have received valuable information in private letters from Anita Atkins, the late Walter A. Carrithers, Jr., and Michael Gomes. Their contributions are referred to in the text.
- Michael Gomes has searched independently for the originals of the Blavatsky-Coulomb letters and confirms that they were never used by Coues in his defense and are now lost. The evidence that these letters were indeed forgeries -- and that in consequence the testimony of the Coulombs was quite unreliable -- is now very strong. Hodgson accepts the Coulombs' testimony almost without question, and if this has to be discounted, much of his case collapses.
- Walter Carrithers has examined in great detail the contradictory statements made by Hodgson and Madame Coulomb in connection with the "shrine" and other apparatus alleged to have been used in the production of phenomena, but I have not attempted to examine this aspect of the case in the present work.
- I thank the Archivist of the Theosophical Society, Pasadena, for the extended loan of the set of 1,323 color slides of the Mahatma Letters first published by A. Trevor Barker in the 1920s, and Theosophical University Press for undertaking the publication of my findings.

Last, but not least, I am ever grateful to Elsie, my wife and constant companion of nearly fifty years, without whose support and understanding it is unlikely that these monographs would ever have been written.

FOOTNOTE:

1. (1) To form a nucleus of a Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste or color;
- (2) To study ancient and modern religions, philosophies, and sciences, and to demonstrate the importance of such study; and
- (3) To investigate the unexplained laws of Nature and the powers latent in man. ([return to text](#))

## Helena Petrovna Blavatsky

[An Editorial published in the *New-York Daily Tribune* (founded by Horace Greeley), Sunday, May 10, 1891, two days after H. P. Blavatsky's death. -- Ed.]

Few women in our time have been more persistently misrepresented, slandered and defamed than Madame Blavatsky, but though malice and ignorance did their worst upon her there are abundant indications that her life-work will vindicate itself; that it will endure; and that it will operate for good. She was the founder of the Theosophical Society, an organization now fully and firmly established, which has branches in many countries, East and West, and which is devoted to studies and practices the innocence and the elevating character of which are becoming more generally recognized continually. The life of Madame Blavatsky was a remarkable one, but this is not the place or time to speak of its vicissitudes. It must suffice to say that for nearly twenty years she had devoted herself to the dissemination of doctrines the fundamental principles of which are of the loftiest ethical character. However Utopian may appear to some minds an attempt in the nineteenth century to break down the barriers of race, nationality, caste and class prejudice, and to inculcate that spirit of brotherly love which the greatest of all Teachers enjoined in the first century, the nobility of the aim can only be impeached by those who repudiate Christianity. Madame Blavatsky held that the regeneration of mankind must be based upon the development of altruism. In this she was at one with the greatest thinkers, not alone of the present day, but of all time; and at one, it is becoming more and more apparent, with the strongest spiritual tendencies of the age. This alone would entitle her teachings to the candid and serious consideration of all who respect the influences that make for righteousness.

In another direction, though in close association with the cult of universal fraternity, she did important work. No one in the present generation, it may be said, has done more toward reopening the long-sealed treasures of Eastern thought, wisdom, and philosophy. No one certainly has done so much toward elucidating that profound wisdom-religion wrought out by the ever-cogitating Orient, and bringing into the light those ancient literary works whose scope and depth have so astonished the Western world, brought up in the insular belief that the East had produced only crudities and puerilities in the domain of speculative thought. Her own knowledge of Oriental philosophy and esotericism was comprehensive. No candid mind can doubt this after reading her two principal works. Her steps often led, indeed, where only a few initiates could follow, but the tone and tendency of all her writings were healthful, bracing and stimulating. The lesson which was constantly impressed by her was assuredly that which the world most needs, and has always needed, namely, the necessity of subduing self and of working for others. Doubtless such a doctrine is distasteful to the ego-worshippers, and perhaps it has little chance of anything like general acceptance, to say nothing of general application. But the man or woman who deliberately renounces all personal aims and ambitions in order to forward such beliefs is certainly entitled to respect, even from such as feel least capable of obeying the call to a higher life.

The work of Madame Blavatsky has already borne fruit, and is destined, apparently, to produce still more marked and salutary effects in the future. Careful observers of the time long since discerned that

the tone of current thought in many directions was being affected by it. A broader humanity, a more liberal speculation, a disposition to investigate ancient philosophies from a higher point of view, have no indirect association with the teachings referred to. Thus Madame Blavatsky has made her mark upon the time, and thus, too, her works will follow her. She herself has finished the course, and after a strenuous life she rests. But her personal influence is not necessary to the continuance of the great work to which she put her hand. That will go on with the impulse it has received, and some day, if not at once, the loftiness and purity of her aims, the wisdom and scope of her teachings, will be recognized more fully, and her memory will be accorded the honor to which it is justly entitled.

# The MAHATMA LETTERS to A. P. SINNETT

from the Mahatmas M. & K. H.

Transcribed, Compiled, and with an Introduction by A. T. BARKER

---

Facsimile of the Second Edition, 1926; published by Theosophical University Press (print version also available). Electronic version ISBN 1-55700-086-7. This edition may be downloaded for off-line viewing without charge. Due to current limitations in the ASCII character set, and for ease of searching, no diacritical marks appear in this electronic version of the text.

NOTE: This edition incorporates material from the *Combined Chronology for use with The Mahatma Letters to A. P. Sinnett and The Letters of H. P. Blavatsky to A. P. Sinnett* by Margaret Conger (copyright &copy; 1973 by Theosophical University Press; available in print edition). The letters are linked both by numerical order according to Barker's original numbering, and also by chronological order according to the above book when this differs from the numerical order. The data given for the letters in the *Combined Chronology* is included in brackets { } if not included in the 2nd edition of *The Mahatma Letters*.

## Compiler's Preface

It will be seen, if reference is made to the "Contents" that the letters have been arranged in 7 Sections and an Appendix. The former contain nothing but Mahatma letters, while in the latter some letters have been added from three pupils of The Mahatmas M. and K.H. --: H. P. Blavatsky, T. Subba Row, and Damodar K. Mavalankar, not only for their intrinsic merit, but because they help to make clear questions arising in the main part of the book which would otherwise be left obscure.

The seven Sections suggest themselves as more or less natural divisions, but it should be remembered that as letters in one section often contain matter which also relates to the other Sections, considerable overlapping is unavoidable. However, an attempt has been made and that is the best that can be said.

The contents of each Section are arranged where possible chronologically, in the order of their receipt. The reader must bear in mind that with only one or two exceptions none of the letters were dated by the

writers thereof. On many of them, however, the dates and places of receipt have been noted in Mr. Sinnett's handwriting, and these appear in small type immediately under the Letter Numbers.

It should be understood clearly that *unless otherwise stated*:

1. Each letter has been transcribed direct from the original.
2. Every letter was written to A. P. Sinnett.
3. All footnotes are copies of notes which appear in and belong to the letters themselves, unless signed (Ed.) in which case they have been added by the compiler.

Throughout this volume there are a great many words used which belong to Buddhist, Hindu, and Theosophical terminology. Those who are unfamiliar with such terms are referred to the excellent glossary in H. P. Blavatsky's "*Key to Theosophy*" and also to "*The Theosophical Glossary*," a separate publication by the same author. The reader is asked to believe that the greatest care has been taken in the work of transcription; the whole MS. has been checked word for word with the originals, and everything possible done to prevent errors. It is however probably too much to expect that the printed book will contain no mistakes, they are almost inevitable. In case any doubt should arise in the reader's mind as to whether any particular passage has been correctly copied from the original, the compiler wishes to intimate, that he will be happy to deal with any correspondence on the subject addressed to him care of the Publishers.

In conclusion the compiler's thanks are due and most gratefully acknowledged to those who by their assistance have made his task possible of accomplishment. -- A. T. B.

## **PREFACE TO THE SECOND EDITION**

Some explanation is due to the reader as to why a revised edition of this book has been considered necessary, and also as to the nature and extent of the corrections made in the text of the original edition. The book was offered to the public in good faith as an accurate transcription of the original documents, *verbatim* and without omission. Having had occasion recently to check certain letters with the originals, the Compiler made the discovery that an unduly large number of errors had somehow crept in, so many in fact as to necessitate a complete and thorough revision of the whole work from beginning to end.

The result of rechecking the text with the originals has disclosed the following: --

I. The majority of the differences are petty and trifling, affecting in no way the sense of the passages concerned -- i.e., a question of capitals, punctuation, etc. Abbreviations are sometimes written out in full, e.g., "through" instead of "thro"; and words sometimes take the place of numerals, e.g., fourth instead of 4th. There are also five or six instances of mistakes in paragraphing.

II. On the other hand there is a long list of corrections which unfortunately do affect the meaning: -- (a) words wrongly italicised; (b) words omitted or wrongly transcribed, and (c) most serious of all, Letter No. 13, in which one page of the original was transcribed out of its proper position, necessitating the rearrangement of Answers 4 and 6.

The original intention was to present the letters in print *exactly* as in the originals, and the present Edition is an attempt to realize the original intention as far as it is practically possible. But it must be borne in mind that the material has to be arranged for the Press, for which the originals were not written -- and a minimum amount of editing is essential to make the volume readable. The corrections made in the Revised Edition as compared with the first edition are therefore as follows: --

(a) *Punctuation*. Where the printed text differs from the originals to the detriment of the latter, correction has been made in accordance with the originals. In a few sentences, otherwise devoid of it, punctuation has been added to make the passage more easily comprehensible.

*Capitals* have been altered in accordance with originals as far as possible, but it is frequently difficult to determine whether a capital was intended or not, and the Compiler has used his discretion in this particular.

*Abbreviations*. Where these have been written out in full they have not been changed.

*Numerals*. Where the text has the exact equivalent in words no change has been made.

*Paragraphs* have been altered in two or three places where it could be done without affecting the pagination.

*Spelling*. Where a word is correctly spelt in the text and obviously misspelt in the original no change has been made.

(b) *Omissions and Italics*. All words previously omitted have been inserted and all mistakes in italics and words wrongly transcribed have been corrected.

Occasionally a word will be found in small square brackets; this always indicates that the word is not in the original but is necessary to the comprehension of the passage.

*Notes*. Where a note on the envelope or cover of a letter has been omitted, this has been included either under the Letter No. or as a footnote.

*Sanskrit*. In Letters No. 1, 4, 132, and 87, a phrase in Sanskrit or oriental characters occurs under the signatures.

In Letter No. 59, the Sanskrit equivalents of the words "Mahakasha" and "gunas" have been added as in the originals and also a word in Letter No. 85.

*Letter No. 13.* Answers 4 and 6 have been re-arranged in accordance with the original.

*Appendix.* Three fragments in K.H.'s writing inadvertently omitted in the first edition have been added, and the treatment of the Mars and Mercury controversy has been slightly changed.

*Index.* This has been revised in accordance with the corrected text.

It is with the greatest regret and concern that the Compiler has to confess that the inefficiency of his work has rendered the revised edition necessary, and in extenuation it can only be said that the difficulties of transcription were very great. He alone is to blame for the mistakes made, and considers that his action in revising the whole work is the only one consistent with his duty and responsibility. -- A. T.B.

January, 1926.

## In Memoriam

True Theosophists the world over will grieve at the passing of our brother -- and their brother -- A. Trevor Barker, on 17th July, 1941, in Torquay, Devon, England. A deep and very simple character, he lived and worked through an unusually complex personality; and because of this few really understood him; but the few who did understand him loved him. Spirit, mind, and soul in him were dedicate to Theosophy; and from the beginning of his awakening in this life to Theosophical work until the day of his passing, Trevor Barker, as far as I know, had but one thought, one objective, one aim: the delivery of our Masters' Teaching to mankind -- as is evidenced by the articles and lectures printed in the present volume.

I knew him well and loved him because he was he; and I know that many, many thousands of others who perhaps never met him love him also for his work for Theosophy, and in particular perhaps for his giving to the world the most noteworthy standard Theosophical book we have, *The Mahatma Letters to A. P. Sinnett*.

I understand that Trevor had intended to issue a last edition of this greatest Theosophical work, which would have allowed him to correct a very few errors arising in faulty transcription of sometimes almost illegible manuscript, and of a few other typographical errors; but it was not to be. One of Trevor's last actions was arranging for the depositing of the MSS. of *The Mahatma Letters to A. P. Sinnett* in the British Museum, where these papers are now held in the Department of Select Manuscripts.

Trevor's last official Theosophical act, just a short time before he passed, was making arrangements, as far as he could do so, for the safe continuance of the English Section of the Theosophical Society, of which Section he was for a number of years a most efficient, devoted, and enthusiastic Head. Our deeply earnest sympathy goes to his faithful wife, Virginia, as good and true a Theosophist as he himself was, and to his children. His great love for his fellow-men in connexion with his Theosophical work, should operate powerfully in bringing him back again into Theosophical duty as quickly as karman permits.

*Dormit in pace stellisque.*

International Theosophical Headquarters,  
Point Loma, California, U. S. A.  
21st September, 1941.

---

## Compilers' Preface

With the death of A. Trevor Barker on July 17th of this year, the spontaneous wish was expressed by his many friends all over the world that his lectures and writings might be gathered together for publication in some permanent form. The present work, *The Hill of Discernment*, is an answer to this widespread desire. It contains in large part all the available addresses given in various parts of England, mainly to Theosophical groups and lodges, to European Conventions of the Theosophical Society, and to various 'fraternization' meetings with the Phoenix Lodge and other Lodges of the Adyar T. S. in England. At the end of this volume is a Memorandum which gives as far as possible the original source of each lecture.

It should be noted that Dr. Barker, save in a few instances, had no opportunity himself of editing his work, and the Compilers in all cases have felt it best, except for obvious slips and inaccuracies, to leave his words as given under the urge of his ardent and sincere conviction.

To Miss Margaret Jamieson, who was for many years Dr. Barker's private secretary as well as secretary for the English Section of the T. S., special thanks are given. Without her devotion and her industry in reporting and transcription, the publication of this book would have been impossible.

The Compilers are grateful to Mrs. A. Trevor Barker for the permission she has kindly granted them to use the material which this book contains.

# The Ocean of Theosophy

By William Q. Judge

---

Originally published 1893. Theosophical University Press electronic version ISBN 1-55700-034-4 (print version also available). Due to current limitations in the ASCII character set, and for ease of searching, no diacritical marks appear in this electronic version of the text. Corrections made by Mr. Judge after the first edition are incorporated in the text.

The text of this edition is verbatim with the 1893 Second Edition revised by William Q. Judge. Quotations and typographical errors have been corrected.

---

## Contents

[Preface](#)

[Chapter 1: THEOSOPHY AND THE MASTERS \(25K\)](#)

Theosophy generally defined. The existence of highly developed men in the Universe. These men are the Mahatmas, Initiates, Brothers, Adepts. How they work and why they remain now concealed. Their Lodge. They are perfected men from other periods of evolution. They have had various names in history. Apollonius, Moses, Solomon, and others were members of this fraternity. They had one single doctrine. They are possible because man may at last be as they are. They keep the true doctrine and cause it to reappear at the right time.

[Chapter 2: GENERAL PRINCIPLES \(17K\)](#)

A view of the general laws governing the Cosmos. The sevenfold division in the system. Real Matter not visible and this always known to the Lodge. Mind the intelligent portion of the Cosmos. In the universal Mind the sevenfold plan of the Cosmos is contained. Evolution proceeds upon the plan in the universal Mind. Periods of Evolution come to an end; this is the Night of Brahma. The Mosaic account of Cosmogogenesis has dwarfed

modern conceptions. The Jews had merely one part of the doctrine taken from the ancient Egyptians. The doctrine accords with the inner meaning of Genesis. The general length of periods of Evolution. Same doctrine as Herbert Spencer's. The old Hindu chronology gives the details. The story of Solomon's Temple is that of the evolution of man. The doctrine far older than the Christian one. The real age of the world. Man is over 18,000,000 years old. Evolution is accomplished solely by the Egos within that at last become the users of human forms. Each of the seven principles of man is derived from one of the seven great divisions of the Universe.

### [Chapter 3: THE EARTH CHAIN \(12K\)](#)

The doctrine respecting the Earth. It is sevenfold also. It is one of a chain of seven corresponding to man. The whole seven are not in a chain separated as to members, but they interpenetrate each other. The Earth chain is the reincarnation of a former old and now dead chain. This old chain was one of which our moon is the visible representative. Moon now dead and contracting. Venus, Mars, etc., are living members of other similar chains to ours. A mass of Egos for each chain. The number, though incalculable, is definite. Their course of evolution through the seven globes. In each a certain part of our nature is developed. At the fourth globe the process of condensation is begun and reaches its limit.

### [Chapter 4: SEPTENARY CONSTITUTION OF MAN \(12K\)](#)

The constitution of man. How the doctrine differs from the ordinary Christian one. The real doctrine known in the first centuries of this era, but purposely withdrawn from a nation not able to bear it. The danger if the doctrine had not been withdrawn. The sevenfold division. The principles classified. The divisions agree with the chain of seven globes. The lower man is a composite being. His higher trinity. The lower four principles transitory and perishable. Death leaves the trinity as the only persistent part of us. What the physical man is, and what the other unseen mortal man is. A second physical man not seen but still mortal. The senses pertain to the unseen man and not to the visible one.

### [Chapter 5: BODY AND ASTRAL BODY \(21K\)](#)

The body and life principle. The mystery of life. Sleep and death are due to excess of life not bearable by the organism. The body an illusion. What is the cell. Life is universal. It is not the result of the organism. The Astral Body. What it is made of. Its powers and functions. As a model for the body. It is possessed by all kingdoms of nature. Its power to travel. The real sense organs are in the astral body. The place the astral body has at spiritualistic *seances*. The astral body accounts for telepathy, clairvoyance, clairaudience, and all such psychical phenomena.

## [Chapter 6: KAMA -- DESIRE \(13K\)](#)

The fourth principle. Kama Rupa. In English, the Passions and Desires. Kama Rupa is not produced by the body but is the cause for body. This is the balance principle of the seven. It is the basis of action and mover of the will. Right desire leads to right act. This principle has a higher and a lower aspect. The principle is in the astral body. At death it coalesces with the astral body and makes of it a shell of the man. It has powers of its own of an automatic nature. This shell is the so-called "spirit" of *seances*. It is a danger to the race. Elementals help this shell at *seances*. No soul or conscience present. Suicides and executed criminals leave very coherent shells. The principle of desire is common to all the organized kingdoms. It is the brute part of man. Man is now a fully developed quaternary with the higher principles partially developed.

## [Chapter 7: MANAS \(17K\)](#)

Manas the fifth principle. The first of the real man. This is the thinking principle and is not the product of brain. Brain is only its instrument. How the light of mind was given to mindless men. Perfected men from older systems gave it to us as they got it from their predecessors. Manas is the storehouse of all thoughts. Manas is the seer. If the connection between Manas and brain is broken the person is not able to cognize. The organs of the body cognize nothing. Manas is divided into upper and lower. Its four peculiarities. Buddha, Jesus, and others had Manas fully developed. Atma the Divine Ego. The permanent individuality. This permanent individuality has been through every sort of experience in many bodies. Manas and matter have now a greater facility of action than in former times. Manas is bound by desire, and this makes reincarnation a necessity.

## [Chapter 8: OF REINCARNATION \(19K\)](#)

Why is man as he is, and how did he come. What the Universe is for. Spiritual and physical evolution demand reincarnation. Reincarnation on the physical plane is reimbodiment or alteration of form. The whole mass of matter of the globe will one day be men in a period far distant. The doctrine ancient. Held by the early Christians. Taught by Jesus. What reincarnates. Life's mysteries arise from incomplete incarnation of the higher principles. It is not transmigration to lower forms. Explanation of Manu on this.

## [Chapter 9: REINCARNATION CONTINUED \(17K\)](#)

Objections urged. Desire cannot alter law. Early arrivals in heaven. Must they wait for us. Recognition of the soul not dependent on objectivity. Heredity not an objection. What heredity does. Divergences in heredity not recognized. History goes against heredity. Reincarnation not unjust. What is justice. We do not suffer for another's but for our own deeds. Memory. Why we do not remember other lives. Who does? How to account for

increase of population.

## [Chapter 10: ARGUMENTS SUPPORTING REINCARNATION \(19K\)](#)

From the nature of the soul. From the laws of mind and soul. From differences in character. From the necessity for discipline and evolution. From differences of capacity and start in life at the cradle. Individual identity proves it. The probable object of life makes it necessary. One life not enough to carry out Nature's purposes. Mere death confers no advance. A school after death is illogical. The persistence of savagery and the decay of nations give support to it. The appearance of geniuses is due to reincarnation. Inherent ideas common to man show it. Opposition to the doctrine based solely on prejudice.

## [Chapter 11: KARMA \(21K\)](#)

Definition of the word. An unfamiliar term. A beneficent law. How present life is affected by past acts of other lives. Each act has a thought at its root. Through Manas they react on each personal life. Why people are born deformed or in bad circumstances. The three classes of Karma and its three fields of operation. National and Racial Karma. Individual unhappiness and happiness. The Master's words on Karma.

## [Chapter 12: KAMA LOKA \(20K\)](#)

The first state after death. Where and what are heaven and hell? Death of the body only the first step of death. A second death after that. Separation of the seven principles into three classes. What is *Kama Loka*? Origin of Christian purgatory. It is an astral sphere with numerous degrees. The *Skandhas*. The astral shell of man in *Kama Loka*. It is devoid of soul, mind, and conscience. It is the "spirit" of the *seance* rooms. Classification of shells in *Kama Loka*. Black magicians there. Fate of suicides and others. Pre-devachanic unconsciousness.

## [Chapter 13: DEVACHAN \(17K\)](#)

The meaning of the term. A state of *Atma-Buddhi-Manas*. Operation of Karma on Devachan. The necessity for Devachan. It is another sort of thinking with no physical body to clog it. Only two fields for operation of causes -- subjective and objective. Devachan is one. No time there for the soul. Length of stay therein. Mathematics of the soul. Average stay therein is 1500 mortal years. Depends on psychic impulses of life. Its use and purpose. On the last thoughts at death the devachanic state is fashioned. Devachan not meaningless. Do we see those left behind? We bring their images before us. Entities in Devachan have a power to help those they love. Mediums cannot go to those in Devachan except in rare cases and when the person is pure. Adepts only can help those in Devachan.

## [Chapter 14: CYCLES \(20K\)](#)

One of the most important doctrines. Corresponding words in the Sanskrit. Few cycles known to the West. They cause the reappearance of former living personages. They affect life and evolution. When did the first moment come. The first rate of vibration determines the subsequent ones. When man leaves the globe the forces die. Convulsions and cataclysms. Reincarnation and karma intermixed with cyclic law. Civilizations cycle back. The cycle of Avatars. Krishna, Buddha, and others come under cycles. Minor personages and great leaders. Intersection of cycles causes convulsions. The Moon, Sun, and Sidereal cycles. Individual cycles and that of reincarnation. The motion through the constellations, and the meaning of the story of Jonah. The Zodiacal clock. How the ideas are impressed and preserved by nations. Cause for earthquakes, Cosmic Fire, Glaciation, and Floods. The Brahmanical Cycles.

## [Chapter 15: DIFFERENTIATION OF SPECIES -- MISSING LINKS \(15K\)](#)

Ultimate origin of man not discoverable. Man not derived from a single pair, nor from the animals. Seven races of men appeared simultaneously on the globe. They are now amalgamated and will differentiate. The Anthropoid Apes. Their origin. They came from man. They are the descendants of offspring from unnatural union in the third and fourth races. The Delayed Races. The secret books on the question. Human features of apes accounted for. The lower kingdoms from other planets. Their differentiation by intelligent interference by the Dhyanis. The midway point of evolution. Astral forms of old rounds solidified in physical rounds. Missing links, what they are and why Science cannot discover them. The aim of Nature in all this work.

## [Chapter 16: PSYCHIC LAWS, FORCES, AND PHENOMENA \(23K\)](#)

No true psychology in the West. It exists in the Orient. Man the mirror of all forces. Gravitation only a half law. Importance of polarity and cohesion. Rendering objects invisible. Imagination all powerful. Mental telegraphy. Reading minds is burglary. Apportation, clairvoyance, clairaudience, and second-sight. Pictures in the Astral Light. Dreams and visions. Apparitions. Real clairvoyance. Inner stimulus makes outer impression. Astral Light the Register of everything.

## [Chapter 17: PSYCHIC PHENOMENA AND SPIRITUALISM \(15K\)](#)

Spiritualism wrongly named. Should be called necromancy and the worship of the dead. This cult did not originate in America. The practice long known in India. The facts recorded deserve examination. Theosophists admit the facts but interpret them differently from the "spiritualist." The examination confined to the question of whether the dead

return. The dead do not return thus. The mass of communications are from the astral shell of man. Objections stated to the claims made by mediums. The record justifies the ridicule of science. Materialization and what it is. A mass of electric magnetic matter with a picture upon it from the astral light. Or it is the astral body of the medium extruded from the living body. Analysis of the laws to be known before the phenomena can be understood. The *timbre* of the "independent voice." Importance of the astral realm. The Dangers of mediumship. Attempt to get these powers for money or selfish ends also dangerous. Cyclic law ordains the slackening of the force at this time. The purpose of the Lodge.

## PREFACE

An attempt is made in the pages of this book to write of theosophy in such a manner as to be understood by the ordinary reader. Bold statements are made in it upon the knowledge of the writer, but at the same time it is distinctly to be understood that he alone is responsible for what is therein written: the Theosophical Society is not involved in nor bound by anything said in the book, nor are any of its members any the less good Theosophists because they may not accept what I have set down. The tone of settled conviction which may be thought to pervade the chapters is not the result of dogmatism or conceit, but flows from knowledge based upon evidence and experience.

Members of the Theosophical Society will notice that certain theories or doctrines have not been gone into. That is because they could not be treated without unduly extending the book and arousing needless controversy.

The subject of the Will has received no treatment, inasmuch as that power or faculty is hidden, subtle, undiscoverable as to essence, and only visible in effect. As it is absolutely colorless and varies in moral quality in accordance with the desire behind it, as also it acts frequently without our knowledge, and as it operates in all the kingdoms below man, there could be nothing gained by attempting to enquire into it apart from the Spirit and the desire.

I claim no originality for this book. I invented none of it, discovered none of it, but have simply written

that which I have been taught and which has been proved to me. It therefore is only a handing on of what has been known before.

WILLIAM Q. JUDGE

To Z. L. Z., the Greatest of the Exiles, and Friend of all Creatures; from his Younger Brother, the Compiler. -- Jasper Niemand, 1891

## **Preface to Volume 1**

"Seeking for freedom I go to that God who is the light of his own thoughts. A man who knows him truly passes over death; there is no other path to go." -- *Upanishads*

In the *Path* for May, 1887, we find these words:

"We need a literature, not solely for highly intellectual persons, but of a more simple character, which attempts to appeal to ordinary common-sense minds who are really fainting for such moral and mental assistance as is not reached by the more pretentious works."

The experience of one student is, on the whole, the experience of all. Details differ, however. Some are made more instantly rich than others: they are those who put forth more vigorous and generous effort; or they have a Karmic store which brings aid. What Theosophists know as Karma, or the law of spiritual action and reaction, decided this, as it works on all the planes, physical, moral, mental, psychical, and spiritual alike. Our Karma may be worked out on any one of these planes when our life is chiefly concentrated upon it, no matter upon what other plane any special initiative impulse or branch of it originated.

The writer, when first he became a theosophical student, had the aid of an advanced occultist in his studies. This friend sent him, among others, the letters which, in the hope that they may assist others as they have the original recipient, are here published. They are not exhaustive treatises; they are hints given by one who knew that the first need of a student is to learn *how to think*. The true direction is pointed out, and the student is left to clarify his own perceptions, to draw upon and enlarge his own intuitions, and to develop, as every created thing must at last develop, by his own inward exertions. Such students have passed the point where their external environment can affect their growth favorably. They may learn from it, but the time has also come to resist it and turn to the internal adjustment to higher

relations only.

The brevity of these letters should not mislead the reader. Every statement in them is a statement of law. They point to causes of which life is an effect; that life arising from the action of Spirit in Nature, and which we must understand as it is manifested within us before we can advance on the Path. There is a scientific meaning within all these devotional or ethical injunctions, for the Wisdom-Religion never relaxes her hold upon Science or attempts to dissever an effect from its cause. Most of these admonitions have their base in the constitution of the Archæus, or World-Soul, and the correlation of its energies; others, still, adhere in the Eternal.

No less should the reader guard himself against a slight estimate arising from the exquisite modesty of Z. An occultist is never so truly a man of power as when he has wholly learned and exhibits this truth:

"And the power the disciple shall desire is that which shall make him appear as nothing *in the eyes of men.*"

The inner eye, *the power of seeing*, looks deeper into the source of a man's knowledge and takes it at its true value. Those men who are sharers in the Divine, whose first office is to give, are often protected from the demands and curiosity of the careless by a simple exterior which deceives the worldly sense. Some men are great because of the Power which stands behind them, the divine energies which flow through them; they are great through having learned how to receive this celestial influx from higher spheres of Being; they are the appointed ministrants, the true servitors of the Law and pupils of Masters whose office is humanitarian and universal.

Such aid is never volunteered; it follows the Karmic behest, and, when given, leaves the student free to follow it or not, as his intuitions may direct. There is not a shadow or vestige of *authority* in the matter, as the world understands the word *authority*. Those who travel the unknown way send messages back, and he who can receives them. Only a few of the first steps are here recorded and the first impediments surmounted. No hints of magic lore are to be found; no formulas of creed or occult powers; the questions of an awakening soul are answered, and the pilgrim is shown where lies the entrance to the Path. The world at large seeks the facts of occult science, but the student who has resolved to attain desires to find the true road. What may seem to others as mere ethics is to him practical instruction, for as he follows it he soon perceives its relation to facts and laws which he is enabled to verify, and what seemed to him the language of devotion merely, is found to be that of science; but the science is spiritual, for the Great Cause is pure Spirit.

Many students must at some time stand where the writer then stood, at the beginning of the way. For all these this correspondence is made public, and they are urged to look within the printed words for their imperishable meaning. They may be cheered to find the footprints of a comrade upon the rugged Path, above which the light of Truth ever shines. Yet even this light is not always a clear splendor. It may seem "in the daytime a cloud, and by night a pillar of fire." We must question every external aspect, even that of Faith itself, for the secret and germ of things lies at their core. Let us purify even our Faith;

let us seek Truth herself, and not our preconceptions of Truth. In her mirror we shall never see our own familiar face: that which we see is still ourselves, because our real self is truth.

As the Theosophical movement gathers new momentum, fresh recruits may be aided by those letters which so greatly sustained me, or encouraged by some co-partnership of thought, and that, too, in the real issue confronting them. We first take this issue to be the acquirement of occult knowledge. Soon we find that the meaning of all really informed occult writers eludes us. We find that books only serve to remind us of what we knew in the long past, perhaps when "journeying with Deity," and the echoes awakened within us are so faint that they are rarely to be caught. Whether we study philosophies, metaphysics, physics, ethics, harmony, astrology, natural sciences, astralism, magnetism, or what not, we meet with endless contradiction and differentiation; we forever require to strike the balance of our own intuition. We discover that the final word has not yet been *written down* upon any of the higher subjects (unless it be on mathematics, and scarcely on that), and that all our learning is but a finger-post to that supreme knowledge of Truth which is only found and closely guarded within the human heart. Thrown back upon our inner perceptions for continual readjustment, on every side of experience this warning confronts us: *Stand ready to abandon all thou hast learned!* Not knowing the one center, we cannot thoroughly know any sub-center. The cause unknown, effects mislead us. Then we turn to that mysterious center whereby the One is manifest in man, and we begin the study of the heart, both in itself and in the life it has instituted about us.

To be put into more direct communication with the world of cause is now the student's most pressing need. One thing alone prevents this -- himself. He is of such gross fibre that he cannot be "porous to thought, bibulous of the sea of light." To the refinement and dispersal of this lower self -- of the man he now takes himself to be -- he then directs his will. Each man has a different mode of doing this, but each who advances at all finds that with every new period of his inner life a new self rises before him. Looking back over a group of weeks or months, he is amazed to see what manner of man he was then, and smiles that pitying smile which we bestow upon the faded letters of our youth.

Yet some there be who ossify there in their rut; let them struggle mightily to break up the mass which has resisted all environment, all change, all the conditions of progressive life. They have done for themselves what the enemy strives to do for others; they are the rock in their own path.

What our Eastern brothers call "the sheaths of the heart" fall away one by one; when the last bursts open there is a silence, the silence of the mystic death. But "the dead shall arise," and from that death springs up the first tender growth of eternal life.

Up to this point we shall not travel in the ensuing pages. Yet having realized the real issue so forcibly that his whole strength was at the start directed towards self-knowledge and the right use of Thought, the writer offers a part of his first instructions to those of his comrades who, single-hearted and of royal Faith, hold Truth to be dearer than all material life and seek it on the hidden way. There is no tie in the universe equal to that which binds such comrades together. It has been forged in the fires of unspeakable anguish; it has been riveted by a dauntless purpose and a unique, because Divine, Love. The fierce

hatred of seen and unseen worlds cannot tamper with it so long as a man remains true to himself, for this larger life is himself, and as he grows towards it his self-imposed fetters fall away and he stands, at last, a free soul, in the celestial Light which is Freedom itself, obedient only to the Law of its own divine Being. To reach it, let us obey the law of our own Being, for, truly, *Being is One*.

My comrades, wherever you are, I salute you.

-- Jasper Niemand, F. T. S.

In Devotion TO THE IMMORTALS and in the Service of Humanity this little book is laid  
Upon the Altar -- *June*, 1905

## Foreword to Volume 2

THE MASTER'S LOVE IS BOUNTIFUL; ITS LIGHT SHINES UPON THY FACE  
AND SHALL MAKE ALL THE CROOKED WAYS STRAIGHT FOR THEE. --

*Farewell Book*

One marked difference will be noticed between this, the second volume of *Letters That Have Helped Me*, and the earlier volume. That first volume had a unity of purpose and development, setting forth, as it did, in due sequence, the salient points of the eastern teaching. This unity palpably arose from the fact that the series of letters was written to one individual, and thus followed along a line suited to the unfolding needs and the studies of that individual, as to those of all fellow students pursuing an identical line of thought.

The present volume, on the contrary, consists of letters, and extracts from letters, written to a number of people in different parts of the world. In many instances, an extract only was sent to the compilers by individuals appealed to, that of their store something might be given to their fellowmen. In other instances, the entire letter was sent, but contained personal or other matter, which could not be published. In still other instances, the entire letter is given. It has been thought best to omit all headings and endings to these letters, in order that no discrimination shall be made in respect of the recipients, thus leaving the truths which the letters embody to stand out in their own relief, unmarred by a label and a name. Many of the extracts were published in *The Irish Theosophist*, and others still in the "Tea-Table" of *The Path*, where "Quickly" stood for Mr. Judge. It was the wish of Mr. Judge, expressed in writing to one of the compilers, that the series should be re-published (with the addition of other matter) as a second volume of the earlier work. The compilers are thus carrying out the direct wishes of Mr. Judge.

During the lifetime of Mr. Judge, it was possible to rearrange, to suggest excision or amplification, or the grouping of various extracts as one letter; and it was possible as well to annotate, since Mr. Judge read all proof, and was always ready to consider any suggestions, while he was also pleased to see that

his annotator had grasped his meaning, or to correct errors in this respect. It is evident that such rearrangement, adding as it would to the completeness and the unity of a series, is much to be desired. It was hoped to continue this method with the present volume; but the death of the writer has made it impossible. We can only publish some letters completely, as they stand, and group together such extracts as remain.

One point more. A great number of letters have thus come up. One compiler alone has many score, all written since the publication of the first volume, and ranging over that period of years in which the trials of Mr. Judge became increasingly heavy, a period to which his unexpected death set a term. How great were these trials, none well knew except the Master Whom he so devotedly served. The last letter of all was written but a very short while before his death. In no single letter out of all these numbers -- in no letters that the compilers have seen -- is there a harsh or condemnatory word said of the authors of his trials. He accepts the bitter, the profound injustice done him without one word which could impugn the faith he held, the teachings he gave out. Surprise there is; annoyance once or twice at the waste of time, the irrational deeds and words. And then he turns him to that wise compassion which knows that it is not he who is wronged who is in truth the sufferer, but he who inflicts a wrong.

Mr. Judge always taught the truest Occultism, the highest path. When his hour of trial struck, step by step he followed along that path. In the destiny of the crucified, whether Christs, or Christ-disciples, it is always seen that the loudest denial comes from those most helped, most served. It is he who sits "at meat" with them who betrays them. And of all the long line of martyrs, never one has been exonerated to his era, justified to his age. This fact alone should make thinking men pause, remembering further that the crowd always prefers that Barabbas should be released unto them.

The great drama ever follows the same lines. The initiate, be he disciple or be he adept, cannot defend himself: this is the inexorable law. But he has all the tenderest support that his great predecessors along the path of thorns can bestow: all the joy of a battle nobly fought; all the gratitude of those among his fellows whose intuition can follow him behind the veil which screens the initiate from our sight.

So it comes about that these letters breathe the compassion, the patience, the brotherliness their author lived to inculcate. Sorrow, indeed, he felt; but he put it bravely by. His great and kind heart remained sound to the core. He sweetened the hours of bitterness by profound resignation to The Law. He was one of those of whom it is written: "He that loseth his life for My sake shall find it."

For the helping of mankind we publish these letters. To the judgment of posterity we commit them, knowing well that in the eternal spaces the Truth alone prevails. He who is here seen sustaining and consoling his fellows during the saddest hours of his life and down to the doors of the tomb, was in his turn upheld -- not alone by a great faith and by an All-Compassionate Hand -- but also by the Love enshrined in his own quiet heart. To the Master he left the rest.

## ANTECEDENT WORDS

The title for these article was chosen by Miss Kate Field when they were first sent for publication in her new paper, *Kate Field's Washington*, in January, 1890, and to her belongs all the credit for an

appropriate name. The use of the *nom de plume* "Occultus" was also the suggestion of Miss Field, since it was intended that the personality of the author should be hidden until the series was completed.

The restrictions upon the treatment of the subject growing out of the popular character of the paper in which they were published precluded the detail and elaboration that would have been possible in a philosophical or religious periodical. No pretense is made that the subject of Theosophy as understood in the Orient has been exhaustively treated, for, believing that millions of years have been devoted by the sages who are the guardians of Theosophical truth to its investigation, I think no one writer could do more than to repeat some of the echoes reaching his ears.

William Q. Judge

## **FOREWORD**

Nearly two hundred years ago the first English translation of the *Bhagavad-Gita* was issued in London. This work by the distinguished Orientalist, Sir Charles Wilkins, was published under the authority of the Court of Directors of the East India Company of which he was Senior Merchant, at the recommendation of Warren Hastings, then Governor General of India. The latter during his tenure of office was indefatigable in encouraging all public servants to master the native languages, including Sanskrit, in order that they might better understand the sacred literature of the Hindus.

Subsequently, through a number of translations, chiefly in Latin, French and German, the *Gita* became known to the scholars of Europe and America. Transcendentalists on both sides of the Atlantic considered it a philosophical masterpiece. Valuable as these early publications were in introducing the Eastern philosophy to the West, they were for the most part limited to the few.

William Quan Judge, recognizing the need for a non-academic exposition of its doctrines, began a series of studies in his monthly magazine *The Path* -- not as a formal commentary on the scripture, but as a means of pursuing, with his readers, an inquiry into its philosophy. These articles, under the penname William Brehon, appeared during 1887-88 and 1895-96, and now for the first time are included with Judge's own Recension of the *Gita*, both of which are here faithfully reproduced except that obvious typographical errors have been corrected, Sanskrit spelling systematized and the few purely organizational references omitted.

The quotations from the *Gita* used in the articles do not conform verbally with the text of his Recension as Judge did not prepare the latter for publication until 1890. Thus he drew largely upon the available English translations, notably the Wilkins edition of 1785, the 1855 edition of J. Cockburn Thomson, and Sir Edwin Arnold's poetic rendering, "The Song Celestial." This should cause no real difficulty, however, for the merit of these studies lies in Judge's exceptional ability to interpret by the light of the "perennial philosophy" the many obscure passages that had defied most 19th century scholars.

The author's sound practical advice to students in search of a broader spiritual perspective is perhaps of even greater value today than it was during his lifetime. While his death at the age of 44 left the work of commentary unfinished, chapter seven being the last covered, we can apply to it Judge's own statement about the *Bhagavad-Gita*, that if but "the first two chapters were preserved, and the others lost, we would still have enough."

JAMES A. LONG

Pasadena, California, June 21, 1969

---

## ANTECEDENT WORDS

The *Bhagavad-Gita* is an episode of the *Mahabharata*, which is said to have been written by Vyasa. Who this Vyasa is and when he lived is not known.

J. Cockburn Thomson, in his translation of the *Bhagavad-Gita*, says:

"The *Mahabharata*, as all students of Sanskrit well know, is the great epic of India, which, from its popularity and extent, would seem to correspond with the *Iliad* among the Greeks. The theme of the whole work is a certain war which was carried on between two branches of one tribe, the descendants of Kuru, for the sovereignty of Hastinapura, commonly supposed to be the same as the modern Delhi. The elder branch is called by the general name of the whole tribe, Kurus; the younger goes by the patronymic from Pandu, the father of its five principal leaders.

"This war between the Kurus and Pandavas occupies about twenty thousand slokas, or a quarter of the

whole work, as we now possess it. . . . In order to understand the allusions there made [in the *Bhagavad-Gita*], a knowledge is requisite of the preceding history of the tribe, which will now be given as follows.

"Of the name Kuru we know but little, but that little is sufficient to prove that it is one of great importance. We have no means of deriving it from any Sanskrit root, nor has it, like too many of the old Indian names, the appearance of being explanatory of the peculiarities of the person or persons whom it designates. It is, therefore, in all probability, a name of considerable antiquity, brought by the Aryan race from their first seat in Central Asia. Its use in Sanskrit is fourfold. It is the name of the northern quarter, or Dwipa, of the world, and is described as lying between the most northern range of snowy mountains and the polar sea. It is, further, the name of the most northern of the nine *Varshas* of the known world. Among the long genealogies of the tribe itself, it is found as the name of an ancient king, to whom the foundation of the tribe is attributed. Lastly, it designates an Aryan tribe of sufficient importance to disturb the whole of northern India with its factions, and to make its battles the theme of the longest epic of olden time.

"Viewing these facts together, we should be inclined to draw the conclusion that the name was originally that of a race inhabiting Central Asia beyond the Himalaya, who emigrated with other races into the northwest of the Peninsula, and with them formed the great people who styled themselves unitedly *Arya*, or the Noble, to distinguish them from the aborigines whom they subdued, and on whose territories they eventually settled. . . .

"At the time when the plot of the *Mahabharata* was enacted, this tribe was situated in the plain of the Doab, and their particular region, lying between the Junna and Sursooty rivers, was called Kurukshetra, or the plain of the Kurus. The capital of this country was Hastinapura, and here reigned, at a period of which we cannot give the exact date, a king named Vichitravirya. He was the son of Santanu and Satyawati; and Bhishma and Krishna Dwaipayana, the Vyasa, were his half-brothers; the former being his father's, the latter his mother's son. He married two sisters -- Amba and Ambalika -- but dying shortly after his marriage . . . he left no progeny; and his half-brother, the Vyasa, instigated by divine command, married his widows and begot two sons, Dhritarashtra and Pandu. The former had one hundred sons, the eldest of whom was Duryodhana. The latter married firstly Pritha, or Kunti, the daughter of Sura, and secondly Madri. The children of these wives were the five Pandava princes; but as their mortal father had been cursed by a deer while hunting to be childless all his life, these children were mystically begotten by different deities. Thus Yudhishtira, Bhima, and Arjuna, were the sons of Pritha by Dharmma, Vayu, and Indra, respectively. Nakula was the son of Madri by Nasatya the elder, and Sahadeva, by Dasra the younger of the twin Asvinau, the physicians of the gods. This story would seem to be a fiction, invented to give a divine origin to the five heroes of the poem: but, however this may be, Duryodhana and his brothers are the leaders of the Kuru, or elder branch of the tribe; and the five Pandava princes those of the Pandava or younger branch.

"Dhritarashtra was blind, but although thus incapacitated for governing, he retained the throne, while his son Duryodhana really directed the affairs of the State. . . . he prevailed on his father to banish his cousins, the Pandava princes, from the country. After long wanderings and varied hardships, these princes collected their friends around them, formed by the help of many neighboring kings a vast army,

and prepared to attack their unjust oppressor, who had, in like manner, assembled his forces.

"The hostile armies meet on the plain of the Kurus. Bhishma, the half-brother of Vichitravirya, being the oldest warrior among them, has the command of the Kuru faction; Bhima, the second son of Pandu, noted for his strength and prowess, is the general of the other party [Arjuna's]. The scene of our poem now opens, and remains throughout the same -- the field of battle. In order to introduce to the reader the names of the principal chieftains in each army, Duryodhana is made to approach Drona, his military preceptor, and name them one by one. The challenge is then suddenly given by Bhishma, the Kuru general, by blowing his conch; and he is seconded by all his followers. It is returned by Arjuna, who is in the same chariot with the god Krishna, who, in compassion for the persecution he suffered, had become his intimate friend, and was now acting the part of a charioteer to him. He is followed by all the generals of the Pandavas. The fight then begins with a volley of arrows from both sides; but when Arjuna perceives it, he begs Krishna to draw up the chariot in the space between the two armies, while he examines the lines of the enemy. The god does so, and points out in those lines the numerous relatives of his friend. Arjuna is horror-struck at the idea of committing fratricide by slaying his near relations, and throws down his bow and arrow, declaring that he would rather be killed without defending himself, than fight against them. Krishna replies with the arguments which form the didactic and philosophical doctrines of the work, and endeavors to persuade him that he is mistaken in forming such a resolution. Arjuna is eventually overruled. The fight goes on, and the Pandavas defeat their opponents. . . ."

This quotation from Thomson's edition gives the student a brief statement of what is more or less mythological and allegorical, but if the story of the *Mahabharata* be taken as that of Man in his evolutionary development, as I think it ought to be, the whole can be raised from the plane of fable, and the student will then have before him an account, to some extent, of that evolution.

Thus looking at it from the theosophical point of view, the king Dhritarashtra is the human body which is acquired by the immortal monad in order to go through the evolutionary journey; the mortal envelope is brought into existence by means of Tanha, or thirst for life. He is blind because the body without the faculties within is merely senseless matter, and thus is "incapacitated for governing," and some other person is represented in the *Mahabharata* as being the governor of the state, the nominal king being the body -- Dhritarashtra. As the theosophical scheme holds that there is a double line of evolution within us, we find that the Kurus spoken of in the poem represent the more material side of those two lines, and the Pandava princes, of whom Arjuna is one, stand for the spiritual side of the stream -- that is, Arjuna represents the immortal Spark.

The learned Brahmin theosophist, Subba Row, says in his *Notes on the Bhagavad-Gita*:

Krishna was intended to represent the Logos, . . . and Arjuna, who was called Nara, was intended to represent the human monad. -- *The Theosophist*, VIII, 299

Nara also means Man. The alleged celestial origin for the two branches of the family, the Kurus and

Pandavas, is in perfect consonance with this, for the body, or Dhritarashtra, being solely material and the lower plane in which the development takes place, the Kurus and Pandavas are our inheritance from the celestial beings often referred to in Mme. Blavatsky's *Secret Doctrine*, the one tending towards materiality, the other being spiritual. The Kurus, then, the lower portion of our nature earliest developed, obtain the power on this plane for the time being, and one of them, Duryodhana, "prevails," so that the Pandavas, or the more spiritual parts of our nature, are banished temporarily from the country, that is, from governing Man. "The long wanderings and varied hardships" of the Pandavas are wanderings caused by the necessities of evolution before these better parts are able to make a stand for the purpose of gaining the control in man's evolutionary struggle. This also has reference to the cyclic rise and fall of nations and the race.

The hostile armies, then, who meet on the plain of the Kurus are these two collections of the human faculties and powers, those on one side tending to drag us down, those on the other aspiring towards spiritual illumination. The battle refers not only to the great warfare that mankind as a whole carries on, but also to the struggle which is inevitable as soon as any one unit in the human family resolves to allow his higher nature to govern him in his life. Hence, bearing in mind the suggestion made by Subba Row, we see that Arjuna, called Nara, represents not only Man as a race, but also any individual who resolves upon the task of developing his better nature. What is described as happening in the poem to him will come to every such individual. Opposition from friends and from all the habits he has acquired, and also that which naturally arises from hereditary tendencies, will confront him, and then it will depend upon how he listens to Krishna, who is the Logos shining within and speaking within, whether he will succeed or fail.

With these suggestions the student will find that the mythology and allegory spoken of by Thomson and others are useful instead of being merely ornamental, or, as some think, superfluous and misleading.

The only cheap edition of the *Bhagavad-Gita* hitherto within the reach of theosophical students of limited means has been one which was published in Bombay by Brother Tookeram Tatya, F.T.S., whose efforts in that direction are entitled to the highest praise. But that one was simply a reprint of the first English translation made one hundred years ago by Wilkins. The great attention of late bestowed on the poem . . . in America has created an imperative demand for an edition which shall be at least free from some of the glaring typographical mistakes and blind renderings so frequent in the Wilkins reprint. To meet this demand the present has been made up. It is the result of a careful comparison of all the English editions and of a complete retranslation from the original wherever any obscurity or omission was evident in the various renderings consulted.

The making of a commentary has not been essayed, because it is believed that the *Bhagavad-Gita* should stand on its own merits without comments, each student being left to himself to see deeper as he advances. The publisher of this edition holds that the poem can be read in many different ways, each depending on the viewpoint taken, *e.g.*, whether it is considered in its application to the individual, or to cosmogenesis, or to the evolution of the astral world, or the hierarchies in nature, or to the moral nature, and so on. To attach a commentary, except such an one as only a sage like Sankaracharya could write, would be audacious, and therefore the poem is given undisfigured.

The *Bhagavad-Gita* tends to impress upon the individual two things: first, selflessness, and second, action; the studying of and living by it will arouse the belief that there is but one Spirit and not several, that we cannot live for ourselves alone, but must come to realize that there is no such thing as separateness, and no possibility of escaping from the collective karma of the race to which one belongs, and then, that we must think and act in accordance with such belief.

The poem is held in the highest esteem by all sects in Hindustan except the Mohammedan and Christian. It has been translated into many languages, both Asiatic and European; it is being read today . . . in every part of the world. To those and to all others who truly love their fellowmen, and who aspire to learn and teach the science of devotion, this edition of the *Bhagavad-Gita* is offered.

## PREFACE TO THE FIRST EDITION

This edition of Patanjali's Yoga Aphorisms is not put forth as a new translation, nor as a literal rendering into English of the original.

In the year 1885 an edition was printed at Bombay by Mr. Tookeram Tatya, a Fellow of the Theosophical Society, which has been since widely circulated among its members in all parts of the world. But it has been of use only to those who had enough acquaintance with the Indian system of philosophy to enable them to grasp the real meaning of the Aphorisms notwithstanding the great and peculiar obstacles due to the numberless brackets and interpolated sentences with which not only are the Aphorisms crowded, but the so-called explanatory notes as well. For the greater number of readers these difficulties have been an almost insurmountable barrier; and such is the consideration that has led to the preparation of this edition, which attempts to clear up a work that is thought to be of great value to earnest students.

It may be said by some captious critics that liberties have been taken with the text, and if this were emitted as a textual translation the charge would be true. Instead of this being a translation, it is offered as an interpretation, as the thought of Patanjali clothed in our language. No liberties have been taken with the system of the great Sage, but the endeavor has been faithfully to interpret it to Western minds unfamiliar with the Hindu modes of expression, and equally unaccustomed to their philosophy and logic.

About Patanjali's life very little, if anything, can be said. In the *Rudra Jamala*, the *Vrihannandikes'wara* and the *Padma-Purana* are some meager statements, more or less legendary, relating to his birth. Ilavrita-Varsha is said to have been his birthplace, his mother being Sati the wife of Angiras. The tradition runs that upon his birth he made known things past, present and future, showing the intellect and penetration of a sage while yet an infant. He is said to have married one Lolupa, whom he found in the hollow of a tree on the north of Sumeru, and thereafter to have lived to a great age. On one occasion, being insulted by the inhabitants of Bhotabhandra while he was engaged in religious austerities, he reduced them to ashes by fire from his mouth.

That these accounts are legendary and symbolical can be easily seen. Ilavrita-Varsha is no part of India, but is some celestial abode. The name of India proper is Bharata Varsha. "In it and nowhere else do the four ages or Yugas -- Krita, Treta, Dwapara and Kali -- exist. Here devotees perform austerities and

priests sacrifice. In this respect Bharata is the most excellent division; for this is the land of works, while the others are places of enjoyment." In the Bhagavat-Purana it is said: "Of the Varshas, Bharata alone is the land of works; the other eight (including Ilavrita-Varsha) are places where the celestials enjoy the remaining rewards of their works." As Bharata-Varsha is a division of Jambudwipa, and known as India, and the other Varshas are for celestials, it follows that the account of Patanjali's birthplace cannot be relied upon in a material sense. It may be the ancient method of showing how great sages now and then descend from other spheres to aid and benefit man. But there is also another Patanjali mentioned in the Indian books. He was born in India at Gonarda, in the east, and from there he went to reside temporarily in Kashmir. Prof. Goldstucker has concluded that this later Patanjali wrote about 140 B.C. His writings were commentaries upon the great grammarian Panini, and it is in respect to the Sanskrit language that he is regarded as an authority. He must not be confounded with our Patanjali; of the latter all that we have is the Philosophy set forth in the Aphorisms.

In regard to the systems of Yoga, the following by a writer on the subject will be of interest:

"The Yoga system is divided into two principal parts -- Hatha and Raja Yoga. There are many minor divisions which can be brought under either of these heads. Hatha Yoga was promoted and practised by Matsendra Nath and Goraksh Nath and their followers, and by many sects of ascetics in this country (India). This system deals principally with the physiological part of man with a view to establish his health and train his will. The processes prescribed to arrive at this end are so difficult that only a few resolute souls go through all the stages of its practice, while many have failed and died in the attempt. It is therefore strongly denounced by all the philosophers. The most illustrious S'ankaracharya has remarked in his treatise called Aparokshanubhuti that 'the system of Hatha Yoga was intended for those whose worldly desires are not pacified or uprooted.' He has strongly spoken elsewhere against this practice.

"On the other hand, the Raja Yogis try to control the mind itself by following the rules laid down by the greatest of adepts."

Patanjali's rules compel the student not only to acquire a right knowledge of what is and what is not real, but also to practice all virtues, and while results in the way of psychic development are not so immediately seen as in the case of the successful practitioner of Hatha Yoga, it is infinitely safer and is certainly spiritual, which Hatha Yoga is not. In Patanjali's Aphorisms there is some slight allusion to the practices of Hatha Yoga, such as "postures," each of which is more difficult than those preceding, and "retention of the breath," but he distinctly says that mortification and other practices are either for the purpose of extenuating certain mental afflictions or for the more easy attainment of concentration of mind.

In Hatha Yoga practice, on the contrary, the result is psychic development at the delay or expense of the spiritual nature. These last named practices and results may allure the Western student, but from our knowledge of inherent racial difficulties there is not much fear that many will persist in them.

This book is meant for sincere students, and especially for those who have some glimmering of what Krishna meant, when in *Bhagavad-Gita* he said, that after a while spiritual knowledge grows up within and illuminates with its rays all subjects and objects. Students of the mere forms of Sanskrit who look for new renderings or laborious attempts at altering the meaning of words and sentences will find nothing between these covers.

It should be ever borne in mind that Patanjali had no need to assert or enforce the doctrine of reincarnation. That is assumed all through the Aphorisms. That it could be doubted, or need any restatement, never occurred to him, and by us it is alluded to, not because we have the smallest doubt of its truth, but only because we see about us those who never heard of such a doctrine, who, educated under the frightful dogmas of Christian priestcraft, imagine that upon quitting this life they will enjoy heaven or be damned eternally, and who not once pause to ask where was their soul before it came into the present body.

Without Reincarnation Patanjali's Aphorisms are worthless. Take No. 18, Book III, which declares that the ascetic can know what were his previous incarnations with all their circumstances; or No. 13, Book II, that while there is a root of works there is fructification in rank and years and experience. Both of these infer reincarnation. In Aphorism 8, Book IV, reincarnation is a necessity. The manifestation, in any incarnation, of the effects of mental deposits made in previous lives, is declared to ensue upon the obtaining of just the kind of bodily and mental frame, constitution and environment as will bring them out. Where were these deposits received if not in preceding lives on earth -- or even if on other planets, it is still reincarnation. And so on all through the Aphorisms this law is tacitly admitted.

In order to understand the system expounded in this book it is also necessary to admit the existence of soul, and the comparative unimportance of the body in which it dwells. For Patanjali holds that Nature exists for the soul's sake, taking it for granted that the student believes in the existence of soul. Hence he does not go into proof of that which in his day was admitted on every hand. And, as he lays down that the real experiencer and knower is the soul and not the mind, it follows that the Mind, designated either as "internal organ," or "thinking principle," while higher and more subtle than the body, is yet only an instrument used by the Soul in gaining experience, just in the same way as an astronomer uses his telescope for acquiring information respecting the heavens. But the Mind is a most important factor in the pursuit of concentration; one indeed without which concentration cannot be obtained, and therefore we see in the first book that to this subject Patanjali devotes attention. He shows that the mind is, as he terms it, "modified" by any object or subject brought before it, or to which it is directed. This may be well illustrated by quoting a passage from the commentator, who says: "The internal organ is there" -- in the *Vedanta Paribhasha* -- "compared to water in respect of its readiness to adapt itself to the form of whatever mold it may enter. 'As the waters of a reservoir, having issued from an aperture, having entered by a channel the basins, become four-cornered or otherwise shaped, just like them; so the manifesting internal organ having gone through the sight, or other channel, to where there is one object, for instance a jar, becomes modified by the form of the jar or other object. It is this altered state of the internal organ -- or mind -- that is called its modification.'" While the internal organ thus molds itself upon the object it at the same time reflects it and its properties to the soul. The channels by which the mind is held to go

out to an object or subject, are the organs of sight, touch, taste, hearing, and so on. Hence by means of hearing it shapes itself into the form of the idea which may be given in speech, or by means of the eye in reading, it is molded into the form of that which is read; again, sensations such as heat and cold modify it directly and indirectly by association and by recollection, and similarly in the case of all senses and sensations.

It is further held that this internal organ, while having an innate disposition to assume some modification or other depending upon constantly recurring objects -- whether directly present or only such as arise from the power of reproducing thoughts, whether by association or otherwise, may be controlled and stilled into a state of absolute calmness. This is what he means by "hindering the modifications." And just here it is seen that the theory of the soul's being the real experiencer and knower is necessary. For if we are but mind, or slaves of mind, we never can attain real knowledge because the incessant panorama of objects eternally modifies that mind which is uncontrolled by the soul, always preventing real knowledge from being acquired. But as the Soul is held to be superior to Mind, it has the power to grasp and hold the latter if we but use the will to aid it in the work, and then only the real end and purpose of mind is brought about.

These propositions imply that the will is not wholly dependent on the mind, but is separable from it; and, further, that knowledge exists as an abstraction. The will and mind are only servants for the soul's use, but so long as we are wrapped up in material life and do not admit that the real knower and only experiencer is the soul, just so long do these servants remain usurpers of the soul's sovereignty. Hence it is stated in old Hindu works, that "the Soul is the friend of Self and also its enemy; and, that a man should raise the self by the self."

In other words there is a constant struggle between the lower and the Higher Self, in which the illusions of matter always wage war against the Soul, tending ever to draw downward the inner principles which, lying midway between the upper and the lower, are capable of reaching either salvation or damnation.

There is no reference in the Aphorisms to the will. It seems to be inferred, either as well understood and admitted, or as being one of the powers of soul itself and not to be discussed. Many old Hindu writers hold, and we incline to the same view, that Will is a spiritual power, function or attribute constantly present in every portion of the Universe. It is a colorless power, to which no quality of goodness or badness is to be assigned, but which may be used in whatever way man pleases. When considered as that which in ordinary life is called "will," we see its operation only in connexion with the material body and mind guided by desire; looked at in respect to the hold by man upon life it is more recondite, because its operation is beyond the ken of the mind; analyzed as connected with reincarnation of man or with the persistence of the manifested universe throughout a Manvantara, it is found to be still more removed from our comprehension and vast in its scope.

In ordinary life it is not man's servant, but, being then guided solely by desire, it makes man a slave to his desires. Hence the old cabalistic maxim, "Behind Will stands Desire." The desires always drawing the man hither and thither, cause him to commit such actions and have such thoughts as form the cause

and mold for numerous reincarnations, enslaving him to a destiny against which he rebels, and that constantly destroys and re-creates his mortal body. It is an error to say of those who are known as strong-willed men, that their wills are wholly their servants, for they are so bound in desire that it, being strong, moves the will into action for the consummation of wished for ends. Every day we see good and evil men prevailing in their several spheres. To say that in one there is good, and in the other evil will is manifestly erroneous and due to mistaking will, the instrument or force, for desire that sets it in motion toward a good or bad purpose. But Patanjali and his school well knew that the secret of directing the will with ten times the ordinary force might be discovered if they outlined the method, and then bad men whose desires were strong and conscience wanting, would use it with impunity against their fellows; or that even sincere students might be carried away from spirituality when dazzled by the wonderful results flowing from a training of the will alone. Patanjali is silent upon the subject for this reason among others.

The system postulates that *I's'wara*, the spirit in man, is untouched by any troubles, works, fruit of works, or desires, and when a firm position is assumed with the end in view of reaching union with spirit through concentration, He comes to the aid of the lower self and raises it gradually to higher planes. In this process the Will by degrees is given a stronger and stronger tendency to act upon a different line from that indicated by passion and desire. Thus it is freed from the domination of desire and at last subdues the mind itself. But before the perfection of the practice is arrived at the will still acts according to desire, only that the desire is for higher things and away from those of the material life. Book III is for the purpose of defining the nature of the perfected state, which is therein denominated *Isolation*.

*Isolation of the Soul* in this philosophy does not mean that a man is isolated from his fellows, becoming cold and dead, but only that the Soul is isolated or freed from the bondage of matter and desire, being thereby able to act for the accomplishing of the aim of Nature and Soul, including all souls of all men. Such, in the Aphorisms, is clearly stated to be the purpose. It has become the habit of many superficial readers and thinkers, to say nothing of those who oppose the Hindu philosophy, to assert that Jivanmuktas or Adepts remove themselves from all life of men, from all activity, and any participation in human affairs, isolating themselves on inaccessible mountains where no human cry can reach their ears. Such a charge is directly contrary to the tenets of the philosophy which prescribes the method and means for reaching such a state. These Beings are certainly removed from human observation, but, as the philosophy clearly states, they have the whole of nature for their object, and this will include all living men. They may not appear to take any interest in transitory improvements or ameliorations, but they work behind the scenes of true enlightenment until such times as men shall be able to endure their appearance in mortal guise.

The term "knowledge" as used here has a greater meaning than we are accustomed to giving it. It implies full identification of the mind, for any length of time, with whatever object or subject it is directed to. Modern science and metaphysics do not admit that the mind can cognize outside of certain given methods and distances, and in most quarters the existence of soul is denied or ignored. It is held, for instance, that one cannot know the constituents and properties of a piece of stone without mechanical or chemical aids applied directly to the object; and that nothing can be known of the thoughts or feelings of another person unless they are expressed in words or acts. Where metaphysicians deal with soul they are

vague and appear to be afraid of science, because it is not possible to analyse it and weigh its parts in a balance. Soul and Mind are reduced to the condition of limited instruments which take note of certain physical facts spread before them through mechanical aids. Or, in ethnological investigation, it is held that we can know such and such things about classes of men from observations made through sight, touch, sense of smell and hearing, in which case mind and soul are still mere recorders. But this system declares that the practicer who has reached certain stages, can direct his mind to a piece of stone, whether at a distance or near by, or to a man or class of men, and by means of concentration, cognize all the inherent qualities of the objects as well as accidental peculiarities, and know all about the subject. Thus, in the instance of, say, one of the Easter Islanders, the ascetic will cognize not only that which is visible to the senses or to be known from long observation, or that has been recorded, but also deeply seated qualities, and the exact line of descent and evolution of the particular human specimen under examination. Modern science can know nothing of the Easter Islanders and only makes wild guesses as to what they are; nor can it with any certainty tell what is and from what came a nation so long before the eye of science as the Irish. In the ease of the Yoga practitioner he becomes, through the power of concentration, completely identified with the thing considered, and so in fact experiences in himself all the phenomena exhibited by the object as well as all its qualities.

To make it possible to admit all this, it is first required that the existence, use and function of an ethereal medium penetrating everywhere, called Astral Light or A'kas'a by the Hindus, should be admitted. The Universal distribution of this as a fact in nature is metaphysically expressed in the terms "Universal Brotherhood" and "Spiritual Identity." In it, through its aid, and by its use, the qualities and motions of all objects are universally cognizable. It is the surface, so to say, upon which all human actions and all things, thoughts and circumstances are fixed. The Easter Islander comes of a stock which has left its imprint in this Astral Light, and carries with him in indelible writing the history of his race. The ascetic in concentration fixes his attention upon this, and then reads the record lost to Science. Every thought of Herbert Spencer, Mill, Bain, or Huxley is fastened in the Astral Light together with the respective systems of Philosophy formulated by them, and all that the ascetic has to do is to obtain a single point of departure connected with either of these thinkers, and then to read in the Astral Light all that they have thought out. By Patanjali and his school, such feats as these relate to matter and not to spirit, although to Western ears they will sound either absurd, or if believed in, as relating to spirit.

In the things of the spirit and of the mind, the modern schools seem, to the sincere student of this Philosophy, to be woefully ignorant. What spirit may be is absolutely unknown, and indeed, it cannot yet be stated what it is not. Equally so with mental phenomena. As to the latter there is nothing but a medley of systems. No one knows what mind is. One says it is brain and another denies it; another declares it to be a function, which a fourth refuses to admit. As to memory, its place, nature and essential property, there is nothing offered but empiric deductions. To explain the simple fact of a man remembering a circumstance of his early youth, all that is said is, that it made an impression on his mind or brain, with no reasonable statement of what is the mind nor how or where the brain retains such vast quantities of impressions.

With such a chaos in modern psychological systems, the student of Patanjali feels justified in adopting something which will, at least, explain and embrace the greater number of facts, and it is to be found in

the doctrines again brought forward by the Theosophical Society, relating to man as a Spirit; to a Spirit in nature: to the identity of all spiritual beings, and to all phenomena presented for our consideration.

## PREFACE

As co-founder of the Theosophical Society -- and successor to its first Head, H. P. Blavatsky -- William Q. Judge sacrificed himself to the cause of those Masters whom he served that Their message find a rooting place in the West. There he felt the foundations of an active Universal Brotherhood must be laid for the preservation and growth of future generations.

Not content with spreading the message his constant counsel to all was to "live the life" for only thus

could the message be fully understood. He was a living expression of practical occultism. This is apparent nowhere better than in his private correspondence in which he constantly referred the student to fundamental rules of esotericism, firm adherence to which was essential for the would-be disciple.

The letters in this volume were taken from his *Letterbooks* and other private files. It was recognized from the start that the editorial problem was one of peculiar difficulty. Not only was the material in many instances almost indecipherable, but the matter of appropriate selection of the main extracts demanded strict discrimination.

The committee which effectively worked on this assignment consisted of Hazel Minot, Grace Frances Knoche, A. Studley Hart, Lawrence Merkel and James A. Long. Kirby Van Mater rendered aid in making available this material from the Archives of the Theosophical Society.

## Foreword

Who was Katherine Tingley? The truly faithful evaluation of a life is not easily come by, for who can know the inner motivation of another, the wellspring of aspiration that moves to thought and deed? That Katherine Tingley was a "lover of mankind," a philanthropist in the most profound meaning of the word, is without question, for her entire life was an outpouring of compassion for all who suffer.

Born in 1847 in Newbury, Massachusetts, close to the Merrimac she loved so well, Catharine Augusta Westcott was reared in an atmosphere of culture. But even as a child she was haunted by the poverty and misery of the immigrants who came to work the land, by the gaunt and hopeless faces of prisoners and, in her early teens, by the "vileness and terror of war." In 1861, shortly after the outbreak of hostilities between the States, her father's regiment was stationed in Virginia, and the conditions she and her brother witnessed day after day so affected the sensitive girl that one night she could stand it no longer and stole out with her old nurse to tend the wounds of the returning soldiers, giving what comfort she could.

A lonely child, she would spend long hours under the giant oaks and pines on the river's edge, dreaming dreams. Though her family loved her, they did not understand her -- with the exception of her maternal grandfather, a mystic and Freemason. Always he listened, confident that one day she would realize her vision of building a "city" in the Golden West.

The years were to bring much personal sorrow, but this only deepened her sympathies for the downtrodden, and strengthened her determination to do something practical, something that would eradicate the *causes* of their appalling plight. As she had no explanation for the cruel inequities she met with at every turn, she worked all the harder to relieve what distress she could. In the early 1890s she organized a Women's Emergency Relief Association in New York and also, in one of the worst slum areas on the Eastside of the city, a Do-Good Mission.

One morning, when she had turned the Mission into a temporary relief station for feeding and clothing the families of destitute strikers, she noticed on the far edge of the crowd a gentleman observing her. When she tried to contact him, thinking that possibly he also was in need, he was gone. A day or so later, he presented his card at her home: William Q. Judge. They talked, and when he told her, "your work is Theosophy," she replied that the word meant little to her -- "I only know that humanity needs broader views of life." She was cautious, as too many times she had been disappointed. But the

teachings of reincarnation and karma, and that man is inherently divine and not "born in sin," had taken hold, and soon she knew that here was the hope and promise she had longed for; here was a philosophy which, if practiced, could lighten the burdens of "poor, storm-tossed humanity."

Katherine Tingley and William Q. Judge became co-workers, and upon his death in March, 1896, she succeeded him as head of the Theosophical Society. The next month at the Annual Convention of American theosophists held at Madison Square Garden, New York, her intent to establish an educational center that would restore a knowledge of the sacred mysteries of antiquity was revealed. By June, capacity crowds at Boston and New York learned of her world-tour to bring the message of theosophy to all classes: a message of hope, of another chance, of the dignity of every human being, and of brotherhood and peace. These were the themes she would reiterate in nearly every public lecture until her passing in Sweden thirty-three years later.

The Raja-Yoga School, Academy and College at Point Loma, California, was Katherine Tingley's most noted humanitarian achievement. This was the fulfillment of her long-held dream of children, almost from infancy, being taught music, drama, and the arts as an intrinsic part of character building. A life of service and sharing was regarded as the natural expression of the balanced individual.

In retrospect, while her school no longer exists, the ideals she projected with incredible genius live into the future -- seeding the thought-consciousness of the world with the vision of a new type of civilization in which all the faculties, physical, mental-emotional, and spiritual, would develop in harmony.

Far-reaching and significant as Katherine Tingley's educational activities were, in Cuba, Britain, Sweden and America, they constituted only a portion of the responsibilities she carried as international leader of a worldwide Theosophical Society. Not least of these was the expansion of the printing and publishing facilities to meet the growing demand for theosophical books and magazines. To her, theosophy never became a "system of sterile thought," but remained always "a light, a teacher, a companion, ever calling to compassionate action, ever urging to higher things." This was the keynote of her life mission, as it is of the present volume.

*Theosophy: The Path of the Mystic* is the quintessence of the theosophic wisdom that Katherine Tingley embodied in letters, private group sessions, in talks with prisoners, students and faculty, as well as in public lectures delivered all across America and throughout the world. The book is not a text; rather it is a mosaic of suggestions and hints for daily living, with the appeal always to the higher, altruistic side of the nature, never to the lower, personal self. In the words of the compiler, Grace Knoche (1871-1962), a long-time student under Katherine Tingley it is "for the seeker, the inquirer, the mystic; for those who have touched the great problem of sorrow and would gladly make their lives count in service to their fellows if they could only find the way."

Originally published in 1922, *Theosophy: The Path of the Mystic* was well received, and also appeared in several European languages, but for years it has been unavailable. It is now reissued with minimal editing in the conviction that the message of this great esotericist speaks directly to the soul, to the

inward yearning of every man and woman for assurance that there is a compassionate purpose to life; that there *is* a path, and that all of us can find it in our everyday lives if we dare to bring forth the divinely human qualities that are innately ours.

**ABOUT THE AUTHOR:** Katherine Tingley was born on July 6, 1847, in Newbury, Massachusetts. In 1894, while working at her relief mission in New York City, she met William Q. Judge who introduced her to theosophy. Upon Judge's death in 1896 she succeeded him as head of the Theosophical Society. In 1900 she moved its international headquarters to Point Loma, California, where she founded the Raja-Yoga School, Academy, and College, and in 1919 Theosophical University. Her other major activities included prison reform, work for international peace, musical and dramatic productions, and the publication of theosophical books and magazines. Throughout her administration she lectured extensively in the United States and abroad until shortly before her death in 1929.

## Foreword

Too long have we been thrall to the "blinding and crippling tyranny of creeds and dogmas." It's time to step out of the shadow of fear and self-doubt and claim "the freedom to breathe the broad sweet air of life and find infinity within ourselves; . . . we are immortal, inheritors of all the good in the universe" (pp. 12-13). *The Gods Await* by Katherine Tingley is an urgent call to all of us to do just this. Wrung from the compassionate heart of one who worked tirelessly to restore dignity and hope to the

disinherited of soul and of body, her plea is for recognition that every human being -- no matter what his circumstances or how he may have stumbled and fallen -- is of divine lineage, capable of untold possibilities of attainment if his finer impulses are encouraged and his baser instincts gentled and controlled.

The material here is drawn from extemporaneous talks to capacity audiences in Europe and America and to her students. An inspired speaker, Katherine Tingley challenged her listeners to heights of nobility they had never imagined they could achieve. Riffle the pages at random and you'll find glints of pure inspiration, practical wisdom, straight-from-the-shoulder commentary, understanding, largeness of vision and, running throughout, a profound identity with those who suffer.

An altruist by nature and by deed, in the early 1890s on New York City's East Side she set up soup kitchens and emergency relief missions, and later she established philanthropic organizations for orphaned children, unwed mothers, and destitute families. Years of ministering to the poor and disadvantaged found her increasingly disheartened by the enormity of the task to relieve the frightful burden of those trapped in circumstances over which they had no control. "I felt my heart almost at breaking-point to see so much keen misery and to know that all I could do was so wretchedly little, so ineffectual to lift them out of their present trouble and keep them secure against as bad or worse tomorrow or the next day" (pp. 63-4).

One day during the 1892-3 cloakmakers' strike in New York City William Q. Judge [Co-Founder of The Theosophical Society and General Secretary of its American Section.] called at her home. A silent witness to her relief efforts, he had intuited her longing for some satisfying explanation of the cruel injustices she daily encountered, for a philosophy not only broad and compassionate enough to allow for independent thinking but also practical enough to strike at *causes* rather than merely at effects. He told her of theosophy with its comprehensive worldview; that a spark of the Divine resides in the least as well as the greatest, in every life form of all of nature's kingdoms. This caught her interest, for to her nature was a sacred temple, every part a living god incarnate on earth for a divine purpose. She embraced the idea of reincarnation as a just and compassionate means of giving everyone a chance, not only to rebuild his character but also to right wrongs done to himself and against others; and of karma -- as ye sow, so shall ye reap -- as a universal law that acts on every plane, whether the god realms or the world of molecules and cells. As for the beleaguered of soul, everyone, no matter how degraded he may have become, has within him a divine spark and the god-given power to learn from his mistakes and change himself. We need no intercessor to save our soul: we are our own destroyer, our own savior.

With such a philosophy to live by, her outlook and life underwent a profound change. She joined The Theosophical Society and became closely associated with Judge. When he died in March 1896, Katherine Tingley succeeded him as the leading theosophical official. Within a few months she embarked upon a world tour, holding "brotherhood suppers" en route wherever possible; her moving account of her meeting with H. P. Blavatsky's teacher in India "placed a talisman in our hands" (p. 129). She took note of those whom she might later on invite to help her build not only an international center of theosophic light, but also the school for children she had long dreamed of. On her return to New York -- via Point Loma, California, where she had purchased land for future use -- she founded the

International Brotherhood League to consolidate and expand her philanthropic activities, reorganized the Society under the name "Universal Brotherhood and Theosophical Society," all the while continuing rescue work where disaster had struck.

In 1900, with the removal of the Society's international headquarters from New York City to Point Loma, her childhood vision of a city in the Golden West slowly and steadily was realized. Here she would rear a citizenry in the atmosphere of the Mysteries of ancient Greece, where music, drama, and the arts would be an essential part of the scholastic curriculum and where high ethics would be instilled. To this center poets, writers, educators, businessmen, ministers, physicians, and skilled and unskilled workers were invited -- they came as "students" to learn and to offer their devotion and talents to building a center of education for children and adults that would develop all the faculties, spiritual, mental, moral, and physical. Imbodying the noblest ideals of manhood and womanhood, the school, it was hoped, would herald the day when wars and their progeny of evils would be unthinkable, and peace and brotherhood universally practiced.

Chief among her philanthropies was prison work-- the cause and cure of crime and the rehabilitation of inmates were an absorbing concern. From 1911 to 1929 *The New Way*, an eight-page folio-size magazine, was produced and circulated free "for prisoners and others whether behind the bars or not." Its editors gave theosophical ideas in a variety of forms, stressing individual responsibility and that regeneration was always possible, regardless how horrendous the crime, if one had the will and desire to change one's thinking and attitudes.

Probably no cause was closer to Katherine Tingley than peace, for without it there can be no stability; without stability, the home life and children suffer. Everything is interlinked. Her personal encounters at a very young age with the "vileness of war" and its heartless and maiming fallout, had left permanent scars on her sensitive nature. The horror and pain she witnessed among soldiers on both sides in the Civil War had transformed her into a fervent advocate of peace and brotherhood among all nations and races, reinforcing her conviction that children at an early age should learn of the beauty and promise of peace *before* they are tainted with the "glory" of battle. Notable among her peace efforts was a series of Peace Congresses and Parliaments from 1913 through the '20s.

Tingley's benevolent causes were legion, her way of making theosophy "immensely serviceable," wherever it was needed most: against vivisection and its devastating abuses; against the death penalty -- not only to allow the prisoners on Death Row an opportunity to live and reshape their lives, but also because of its degrading and sometimes disastrous influence on humanity, even at times on the unborn; and against the prevailing war syndrome that every conflict of wills has in the end to be solved by violence. No detail was too small for her to check, no idea too grandiose for her to attempt to implement if the timing was right.

In 1926 when *The Gods Await* was first published, it was warmly received and translated into several languages, but within three years the author died and her books gradually went out of print. Today, six decades later, many are looking to Katherine Tingley for a practical presentation of basic theosophic

ideas in clear, inspirational language, and for fresh leads in the areas of home life and education. To help meet the need, Theosophical University Press has issued a revised edition of *The Gods Await* as a companion volume to the author's first book, *Theosophy: The Path of the Mystic* (3rd edition 1977). The revision was done with perceptive skill by Sarah Belle Dougherty and TUP's editorial and printing staffs. Both books carry forward the salient message that we human beings are *not* sinners, doomed to failure, but beings of light, kin to the immortals, capable of royal conquests of the soul if we but dare to believe in our god-selves.

**Special Issue: Katherine Tingley: 1847-1929**

A vow is an action rising like a star high above the level of the common deeds of life. It is a witness that the outer man has at that moment realized its union with the inner, and the purpose of its existence, registering a great resolve to become one with the Father in Heaven.

At that moment the radiant path of light is seen with the eye of pure vision, the disciple is reborn, the old life is left behind, he enters a new way. For a moment he feels the touch of a guiding hand ever stretched out to him from the inner chamber. For a moment his ear catches the harmonies of the soul.

All this and more is the experience of those who make this vow with their whole hearts, and as they constantly renew it, and constantly renew their endeavor, the harmonies come again and again, and the clear path is once more beheld.

They carry the inspiration into outer life, and energize with it their common duties, high and low: gain from it strength for self-sacrifice, and thus bringing the inner into the outer, pouring forth in deeds that wine of divine life of which they have learned to partake, they achieve, little by little, the harmony of perfect life. Each effort carves the path of the next, and in no long time one single moment's silence will bring forth to the disciple's aid the strength of his soul. -- Katherine Tingley

\*\*\*\*\*

After eighty years, Katherine Tingley was honored on the island of Visingsö, Sweden. On May 20, 1993, a passenger boat plying the waters of Lake Vattern between Visingsö and Granna was named Madame Tingley. For the launching notables on the island were present, musicians entertained while Rune Backlund, Member of Parliament, "told about the theosophists' fantastic Madame Tingley who introduced not only electricity to Visingsö, but also art, music, literature, and theater."

Yet when Katherine Tingley came to Visingso in 1913 to hold her International Theosophical Peace Congress, she had rough sailing. While she had staunch support from theosophists of high standing and from many islanders, the clergy held a meeting on June 13 for people in neighboring congregations "interested in God's word and the Christian faith," and concluded with a "Resolution of Protest against the theosophists' plan to build 'a heathen school and cult'." A few days later, Katherine Tingley met the clergy's accusations of being heathens by saying that "if it is heathen to live a pure, noble, temperate, and self-sacrificing life for humanity, then let it be heathen."

Undaunted, her International Theosophical Peace Congress was held on schedule from June 22-29, and was a grand success, attended by members and admirers from all over Sweden and abroad. A lengthy, well-researched article in the July 2, 1993, issue of *Grenna Posten* recognized that Katherine Tingley had left an indelible impress on the island. It is heartening that this honor was accorded one who gave unstintingly for humanity and for Visingso. -- G.F.K.

## Foreword

"THE WIND OF THE SPIRIT that is blowing over the world, tumultuous, cold and biting as it seems to our sensitive lives, is nevertheless the *wind of the spirit*" -- this is the theme of an address given by Gottfried de Purucker in 1940 and used as the title and opening chapter of the present book. He urges us to penetrate appearances and discern the eternal beyond the temporal, for behind and within the current turmoil there is "power, spiritual power."

In the near-half century since these words were spoken the winds of destiny have been blowing hard, at times with gale force. Certainly not a nation or race, not a single human being, not Mother Earth herself

with her families of lives, has been untouched by karmic change. Yet out of the pain and disruption a new worldview and a new and grander vision of humanity's role in the cosmic drama are coming into focus. Despite the prevailing self-seeking in subtle and gross forms, the practice of altruism is on the rise as the counter-impulse toward spirit gains momentum.

During his leadership of the Theosophical Society (1929-1942) Dr. de Purucker lectured constantly on the manifold aspects of theosophy, both in Europe and in the United States, and these addresses form the basis of his larger works. *Wind of the Spirit* is different. In this seemingly random collection of remarks made spontaneously at public and private gatherings and drawn from letters and notes to students, we rediscover how immensely practical theosophy is. Of course there is teaching aplenty -- it could scarcely be otherwise, so profound was his knowledge of the world's spiritual and literary heritage; but it is de Purucker's lucid and direct response to human need that constitutes the book's appeal: always compassionate of human frailty yet ever challenging the nobility within each of us to shine forth. Understandably, when *Wind of the Spirit* first came out in 1944, within two years of the author's death, it was an instant favorite.

In the present edition the eight formal lectures included in the first edition are omitted as the subject matter is amply treated elsewhere by the author. Outside of this, only minor editing of the text has been done so as to preserve the vitality of the spoken word; and, as an aid to the reader, an index and glossary of philosophical terms, prepared by Ingrid Van Mater, have been added.

*Wind of the Spirit* concludes with the talk given by Dr. de Purucker a week before he died: "Aham Asmi Parabrahma" -- I am Parabrahma, the Boundless. This was the alpha and omega of his teaching mission: to remind us again and again that at the core of every human being, indeed of every atom in the cosmos, is a living divinity. "Think if every man and woman on earth were thoroughly convinced of the utter reality of this cosmic truth! Never again would the hand of man be raised against man. Always it would be the extended hands of succor and brotherhood. For I am my brother -- in our inmost *we are one.*"

## Contents

### [Foreword](#)

#### PART ONE

- [Chapter 1](#). The Three Fundamental Propositions. The Self: Man's Inmost Link with the Unutterable. The Esoteric Philosophy: Taught in all the Ancient Religions. (41K)
- [Chapter 2](#). Where is Reality? Truth can be Known. Man's Composite Nature according to Different Systems: Threefold, Fourfold, Fivefold, or Sevenfold. (25K)
- [Chapter 3](#). The Doctrine of Maya; Objective Idealism the Basis of Morals: Rooted in the Spiritual Unity -- the Divinity -- of the All. The Self and the "Selves." (24K)
- [Chapter 4](#). From Primordial Point to Universe and Man. How does Manifestation Arise? Manvantara and Pralaya. (28K)
- [Chapter 5](#). The Esoteric Teachings and the Nebular Theory. Gods behind the Kosmos: Why Nature is Imperfect. (30K)

- [Chapter 6](#). The Dawn of Manifestation: Laya-centers. A Conscious Universe -- Spiritually Purposeful. Stoic Doctrine of the Intermingling of All Beings: "Laws of Nature." Philosophical Polytheism and the Doctrine of Hierarchies. (32K)
- [Chapter 7](#). Hierarchies: One of the Lost Keys of the Esoteric Philosophy. The Pythagorean Sacred Tetraktys. The Ladder of Life: The Legend of Padmapani. (35K)
- [Chapter 8](#). Traces of the Esoteric Philosophy in Genesis. (34K)
- [Chapter 9](#). Outline of Esoteric Cosmogony. Globes, Rounds and Races: Cosmic Time Periods. (33K)
- [Chapter 10](#). The Doctrine of Swabhava -- Self-becoming -- Characteristic Individuality. Man, Self-evolved, his own Creator. *Monadologie* of Leibniz contrasted with Teachings of the Esoteric Philosophy. (34K)
- [Chapter 11](#). The Cosmic Pilgrimage. From Unself-conscious God-spark to Fully Self-conscious God. (33K)
- [Chapter 12](#). Psychology: According to the Esoteric Philosophy. Immortality is Conditional: the Loss of the Soul. (20K)
- [Chapter 13](#). The Process of Evolution. Self, Ego, and Soul: "I Am" and "I am I." (27K)
- [Chapter 14](#). "Heavens" and "Hells": Teachings of the Esoteric Philosophy and of the Exoteric Religions. (27K)
- [Chapter 15](#). The Evolution of the "Absolute." Generalized Plan of Evolution on all Planes. Seven Keys to Wisdom and Future Initiations. (33K)
- [Chapter 16](#). Atma-vidya: How the One Becomes the Many. "Lost Souls" and "Soulless Beings." Man, a Composite Being: No Abiding Principle in Man. (51K)
- [Chapter 17](#). The Silent Watcher. (37K)
- [Chapter 18](#). The Spiritual-Psychological Hierarchy of Adepts. The Wondrous Being, the Buddhas, Nirmanakayas, Dhyan-chohans. (59K)
- [Chapter 19](#). The Seven Jewels and the Seven Stages of Initiation. (43K)
- [Chapter 20](#). The Higher Aspect of Human Psychology. Initiation and the Mysteries: Avatars, Buddhas, and Bodhisattvas. Their Relation to Globes, Rounds, and Races. (37K)
- [Chapter 21](#). Initiations and the Ancient Mysteries. Root-races and Their Subdivisions. Globe Rounds. Planetary Rounds. Solar Kalpas: How Calculated. Racial Cataclysms. (28K)
- [Chapter 22](#). The Hierarchy of Compassion. The Incarnation of the Manasaputras. (49K)
- [Chapter 23](#). The Sun and the Planets. Their Role in the Evolutionary Drama. (32K)

## PART TWO

- [Chapter 24](#). The Ten Stages of Being according to the Syrian System. Esoteric Method of Teaching: Paradoxes, Intuition. (25K)
- [Chapter 25](#). The Mysteries of Septenary Nature. Correspondences: Globes, Elements, Human Principles. The Seven Sacred Planets of the Ancients. Racial Time Periods and Catastrophes. (26K)

- [Chapter 26](#). The Microcosm, a Mirror of the Macrocosm. Elements, Principles, Manifestations of the One Life. Relativity: a Fundamental Conception of the Ancient Wisdom. (20K)
- [Chapter 27](#). The Two Fundamental Kosmical Hierarchies: Matter and Spirit-Consciousness. Chaos-Theos-Kosmos: Gods-Monads-Atoms. (24K)
- [Chapter 28](#). The Adventure of an Atom. Laya-centers: Sun, Comets, and Planets; Soul and Monad. The Keynote of Occultism. (18K)
- [Chapter 29](#). Space: the Boundless All. Infilled with Interlocking, Interpenetrating Universes. One Action, One Hierarchical Intelligence, One Course of Operation throughout Nature: One Organism, One Universal Life. (20K)
- [Chapter 30](#). The Interrelation of Gods, Monads, Atoms -- a Key to the Doctrine of Evolution. Successive Emanations: Sheaths. Higher Beings Emanating and Clothing Themselves in Hosts of Lower Beings. Morality Based on the Structure of the Universe. (21K)
- [Chapter 31](#). The Building of the Kosmos. The Same Fundamental Law throughout Life and Being: an Endless Ladder of Progress. Analogical Processes of Kosmical and Psychological Development. The River of Life. (33K)
- [Chapter 32](#). Out of the Invisible into the Visible. From the Visible into the Invisible. The Magnum Opus. (24K)
- [Chapter 33](#). The Life-wave and the Seven Elements. The Esoteric Philosophy as Taught by the Stoics. (24K)
- [Chapter 34](#). The Spaces of Space. The Secret Doctrine, a Unifier: Universal Keys. Doctrines of the Void and of the Fullness Contrasted. (34K)
- [Chapter 35](#). Occultism and the Mystery Schools. Seven Degrees of Initiation: Man Becomes a God. Seven Kosmic Planes: our Planetary Chain of Seven Globes on the Four Lower Planes -- the Passage of the Life-wave therethrough. (30K)
- [Chapter 36](#). Interpenetrating Spheres of Being. Lokas and Talas: Bipolar Kosmical Principles and Elements. The "Heresy of Separateness." (36K)
- [Chapter 37](#). The Framework of the Kosmos. Lokas and Talas: Principles and Elements, Worlds -- Not States Merely. Space the Ultimate Reality. (23K)
- [Chapter 38](#). Degeneration and Closing of the Schools of the Mysteries. Neopythagorean and Neoplatonic Systems: Main Sources of Christian Theology. Esoteric and Exoteric Teachings: Symbolism. (30K)
- [Chapter 39](#). Theosophy and Occultism. Occultism: the Quintessence of Truth, Reality; a Complete Whole. Occultism and Moral Responsibility. Our Solar System: a Kosmic Atom, Egg of Brahma. (17K)
- [Chapter 40](#). Definitions of Deity: Atheism; Pantheism. Is there a Supreme Personal God? Kosmic Architects and Builders. Really to Know, One Must Become. (31K)
- [Chapter 41](#). The Doctrine of the Spheres. The Universal Solar System and Our Solar System. The Seven Sacred Planets: Why "Sacred"? (31K)
- [Chapter 42](#). The Doctrine of the Spheres in its Four Aspects. The Seven Sacred Planets and their Rectors: their Relation to our Earth-chain. The Circulations of the Kosmos: Outer Rounds and Inner Rounds; Sistas. One Universal Basic Law: As Above, So Below. The Eye and the Heart

Doctrines. (34K)

- [Chapter 43](#). Analogy: the Life of Man and the Life of a Planetary Chain. Occultism and Ethics: "Live the Life if Thou Wouldst Know the Doctrine. (25K)
  - [Chapter 44](#). Principles of Thought and Study: can Occultism be Taught? Ancient Astrology a True Science. Our Earth-chain of Globes, the Seven Sacred Planets, and the Twelve Zodiacal Signs. Life-Atoms: the Building Blocks of the Universe. (36K)
  - [Chapter 45](#). Physiology, Psychology, and Pneumatology of the Universe. Ten and Twelve Planes of the Universal Solar System: Intermediate Critical Planes. All Manifested Being a Graded Continuum of Interrelated, Interlocked Hierarchies: Each with its own Beginning and End. Sishtas and the Surplus of Life. (46K)
  - [Chapter 46](#). The Chela Life. Seven and Ten Life-waves: the Course of the Monads around the Seven Globes; Laws of Acceleration on the Downward and of Retardation on the Upward Arc. Fifth and Sixth Rounders. The Sacred Word. (32K)
  - [Chapter 47](#). Teacher and Pupil. Requisites of Chelaship. (24K)
  - [Chapter 48](#). The Heart of the Universe. The Way to Peace, Bliss, Understanding, is Within. The Great Quest -- Know Thyself -- the Whole Secret of Initiation. Our Responsibility: Ethical Values and the Laws of the Universe; Harmony. (31K)

## Foreword

In 1924 Katherine Tingley inaugurated within the esoteric body of the Theosophical Society a series of studies in *The Secret Doctrine* by H. P. Blavatsky, with Gottfried de Purucker as lecturer. In spite of the fact that he had not studied under Mme. Blavatsky, as had several among those present, she knew of none better prepared than he to interpret this work "from the esoteric standpoint." Moreover, she felt assured that after she was gone he would be there to "carry on these lessons," which ultimately would be published "for later generations."

At the first meeting on January 4th, Katherine Tingley set the tone of the gatherings by appealing to all present to cast aside everything of a personal and limiting nature and "get more in harmony with our higher self -- with that part that is eternal and that is trying to open the way for us." Those attending should enter, "as did the neophytes of ancient days, in the spirit of self-forgetfulness," remembering that

these studies were not being held primarily to enlarge the intellectual understanding of the student, but rather as an "earnest spiritual effort" to open the heart to the higher consciousness and stimulate the intuition for service in the daily life. After the lectures Katherine Tingley spoke for a few minutes and usually called upon different ones for their comments, herself giving the closing remarks. The members then left as they had come, in silence, which to her had marvelous potency for inner growth.

It was in this atmosphere of reverence for truth and for the lightbringers of mankind that G. de Purucker elucidated the spiritual principles upon which the "secret doctrine" of the ages rests. *Fundamentals of the Esoteric Philosophy* represents the stenographic record of those lectures given from 1924 to 1927, with periodic interruptions during Katherine Tingley's absence on lecture tours in the United States or Europe. In 1931 the transcripts were turned over to A. Trevor Barker for editing prior to publication in London, the quotations heading the chapters having been selected by Joseph H. Fussell, friend and colleague of the author.

What makes this book significant among the many expositions of *The Secret Doctrine* that have appeared since 1888? Not least, perhaps, is the inspired treatment of the vast evolutionary process that encompasses the rhythmic rebirth of worlds, of humans, and of every living being, for the purpose of bringing into actuality the fullness of godhood infolded within every god-spark. Propelled by ancient habit we too, in our cyclic descent into earthly life, follow the same cosmic routes traveled by all monads until, the lessons of planetary experience mastered, we graduate as self-evolved divinities. How the One becomes the many, how spirit irradiates every particle of matter, is the old story -- now retold with a wondrous clarity so that the reader discovers he has at hand those key-teachings that will enable him to test for himself whether or not any religious or philosophic concept, ancient or modern, is in harmony with "that primeval spiritual and natural revelation" accorded the first thinking humans on earth. Throughout, like a golden sheen on the far horizon of time, he perceives the oneness of humanity's spiritual inheritance and our commonality of divine origin and goal. Further, there is wide scholarship here: not only are the terms from the Sanskrit, Hebrew, and other ancient literatures explained etymologically, but they are given richer interpretation in the light of Dr. de Purucker's knowledge of our early racial history and of the traditional lore and sacred scriptures of Orient and Occident.

For many, however, the greatest gift of all is his restorative trust in the dignity and nobility of man. We are indeed knights errant of eternity, bent on the ancient quest for a wisdom we know exists but which seems ever to elude our grasp. In being reminded of that quest, there is generated a devotion to truth and to the compassionate line of teachers -- a devotion that has power to move the soul, to lead us life after life toward those encounters that will purify and strengthen the character and fit us better to serve humanity's cause.

The revision of this second edition has been undertaken with exceeding care and, while the few passages that pertained strictly to the esoteric nature of the sessions have been deleted as have some of the repetitions that are inevitable when a series of addresses is published almost verbatim, the lecture material has been left practically intact.

To have condensed and systematized the presentation would have foiled the intent of the author. Intangibly, yet step by step, he builds atmosphere as he touches on this teaching or that, carries the thought for a distance and then turns to another teaching, seemingly different, yet relevant to the larger picture he is unfolding. In a later chapter or two he may return to the earlier themes, develop them for a time, then again move on to other doctrines. Dr. de Purucker remarks more than once that in this he is deliberately following the ancient esoteric method of imparting sacred truths: repetition of the salient thought, but always with sufficient variation and enlargement of vision to draw the student on so that the mind will not set itself in molds. The mind that remains fluid is more responsive to intuition and the flow of light that may spontaneously illumine the soul when the inner nature is attuned.

It is of interest that the original edition of *Fundamentals of the Esoteric Philosophy* published in 1932 did not include the first two lectures, but began with the third one. Their omission no doubt was inadvertent; but, providentially, a few years after the author's death Kirby Van Mater, archivist for the Society, turned up the two missing lectures among papers which presumably had been returned with other material to headquarters from the European centers to which Katherine Tingley had sent them in 1924, to be shared with "appreciative minds." The pertinent portions of these meetings are now incorporated as sections i and ii of chapter 1, preceding section iii which originally appeared as the first chapter of the 1932 edition. The present volume is enhanced by their inclusion, for they amplify and deepen Dr. de Purucker's interpretation of the three fundamental propositions with which H. P. Blavatsky opens her magnum opus and which "pervade the entire system of thought" she proceeds to outline.

We acknowledge with gratitude the efficient help of all in our printing and editorial departments, with a special word of commendation to Raymond Rugland for his meticulous care in resetting the entire book in a more readable typeface; to James T. Belderis for redrawing the many diagrams; and to William T. S. Thackara for maintaining excellence in every phase of the book's physical production; for the several proofreadings required, deep appreciation to Elsa-Brita Titchenell, Manuel Oderberg, Ingrid Van Mater, and A. Studley and Eloise Hart; likewise to John P. Van Mater, librarian, for assistance to Mrs. Titchenell and Mr. Oderberg in checking the numerous quotations and references from original sources. It goes without saying that the close cooperation of the editorial committee, A. Studley Hart, Ida P. Moffett, and Sarah Belle Dougherty (who also prepared the enlarged index), made the task of editing the text for publication incomparably lighter.

After a near half-century, *Fundamentals of the Esoteric Philosophy* remains an excellent introductory study of theosophy for today's readers in search of the very truths that disciples of olden times, holding the fuel of devotion in their hands, sought to learn of sages and rishis.

## **Publisher's Note**

Every branch of study has its own special terminology, and the esoteric philosophies are no exception. This compendium not only clarifies the significance of the terms most frequently found in such literature, but offers a comprehensive outline of the scope and principles underlying an age-old tradition respecting the constitution of man and the universe in which he lives.

This Second and Revised Edition is faithful to the original 1933 edition. Changes include modernizing capitalization, spelling, and punctuation, and amending a few foreign terms (with appreciation to Dr. Bruce C. Hall and Mr. David Reigle for their respective contributions).

**Introduction**

Ever since the early days of the Theosophical Society there has been a call for a comprehensive glossary that would define and explain the thousands of philosophical and mystical terms found in *The Secret Doctrine* and *The Mahatma Letters to A. P. Sinnett*. H. P. Blavatsky's *Theosophical Glossary*, posthumously issued in 1892, while containing valuable material, is inadequate and cannot be said to bear the stamp of HPB's careful eye, for she had seen only the first thirty-two pages in proof and thus had been unable to clarify and expand the definitions. As G. R. S. Mead wrote in the Preface: "This is all the more regrettable, for H. P. B., as was her wont, was adding considerably to her original copy, and would no doubt have increased the volume far beyond its present limits."

In 1930, within a year after succeeding Katherine Tingley to the leadership of the Theosophical Society with international headquarters at Point Loma, California, Gottfried de Purucker proposed to his Literary Committee that work begin on an enlarged glossary which must pass the test of scholarship and also meet the exacting test of fidelity to the universal wisdom-teaching as restated by H. P. Blavatsky. The proposal was received enthusiastically. Professor Charles J. Ryan was appointed to spearhead the project, assisted by Drs. Lydia Ross, Grace Knoche (Sr.) and, briefly, Gertrude W. van Pelt, all long-time students of *The Secret Doctrine*. In the beginning, as material was collected, Dr. de Purucker dictated emendations and/or additions to his private secretary, Elsie Savage, and, as convenient, to Helen Savage, Irene Ponsonby, and Margherita Siren. Progress, though steady, was slow, and to respond in part to the immediate demand for a handbook of frequently used theosophical and oriental terms, Dr. de Purucker, with the aid of Geoffrey Barborca, issued his *Occult Glossary* in 1933.

By the spring of 1934 it was clear that someone was required to coordinate the growing file of manuscripts received from the contributors who by then also included Drs. Henry T. Edge and Joseph H. Fussell, joined later, for the Sanskrit terms, by Judith Tyberg. So, on March 23, G. de Purucker appointed Geoffrey Barborca chairman of the Glossary Committee, a post he filled with unremitting diligence, following the ground rules laid down by Dr. de Purucker in his March 16, 1934, letter to Professor Ryan:

- 1) Aim to produce a *Theosophical Glossary* only, not merely an encyclopedic Glossary of every term used by Tom, Dick, or Harry during past centuries.
- 2) Make your Glossary not a mere definition of terms, but a true Glossary, to wit, the word itself, and then a brief article upon it, said article running from two or three lines to half a page, but hardly longer. I use the word "article" not to mean an essay, but a glossarial explanation of the word, somewhat more elaborate and extended than a mere dictionary-definition is.
- 3) I would limit the Glossary to all the Theosophical, occult, and mystical words found in our Theosophical literature. This would of course include words from other religions and philosophies which our writers have used, but not necessarily words from religions and philosophies which we do not need to use, or our writers have not used.

4) Have a simple system of cross-reference. . . . by the simple device of saying "See . . ." or "Cf. . . ." and then write the other word.

It is not necessary to bother with Sanskrit or Hebrew words unless they are found in our literature. Then they should be explained in the regular way adopted.

. . . The book really will be for Theosophical and occult students, and we cannot afford to waste our time in merely getting out a tremendous and elaborate book such as some literary crank might issue in his spare hours for the sake of explaining, or trying to explain, every term he might find in a lifetime of reading.

Dr. de Purucker further recommended that all quotations be taken from original sources, wherever possible, and rendered verbatim et literatim even when the terms cited therein are incorrectly given; but terms in the body of the text should be spelled accurately.

Inevitably when several people contribute to a work of this kind, there is bound to be unevenness of quality due to differences of educational background and temperament. The editor's role, as G. de Purucker conceived it, was not to bring the whole into a unity of style, but rather to examine every term and make corrections and additions as required. This he did until May 1941; thereafter, for another year, he continued to clarify moot questions, and also saw to it that Masoretic points were added to the Hebrew characters on all Qabbalistic terms.

This project has always been close to my heart, for I was privileged to take Dr. de Purucker's dictation on all Glossary material from 1935 to 1942. In the 1980s an editorial team composed of A. Studley Hart, Sarah Belle Dougherty, Elsa-Brita Titchenell, and myself began a careful review of the Glossary. While it was possible to make editorial changes to modernize the text, improve the style, and remove obviously dated material, much work remains to be done: the extraordinary advances that have revolutionized our thinking in every branch of learning since Dr. de Purucker's death in September 1942 -- in the proliferating scientific disciplines, in psychology and parapsychology, in Tibetan and Egyptian language studies and Gnosticism, for example -- make it imperative that the content of the manuscript be updated. Furthermore, several important theosophical books -- including several books by G. de Purucker and H. P. Blavatsky's *Collected Writings* in 14 volumes -- have been published since the glossary was originally written, containing terms that need to be reviewed for inclusion.

Much of the material, however, is of value in its present edited form, particularly that dealing with theosophical and philosophical concepts. To make this resource available to the public, Theosophical University Press is issuing the *Encyclopedic Theosophical Glossary* online as a work in progress: editorial and scholarly review of the Glossary will proceed, and changes will continue to be made. We hope that those using it will send in to the Editorial Committee any errors of fact or typography that they find in this online edition. Readers' comments and suggestions are also welcome.

We believe this glossary will prove an effective and convenient reference for students of theosophical

literature, and that its value will continue to grow as specific areas are enriched by the findings of modern scholarship.

## NOTES ON THE ONLINE ENCYCLOPEDIA THEOSOPHICAL GLOSSARY

This edition contains some differences from a final edition. Due to the current limitations of the ASCII character font -- particularly when dealing with transliterations of Sanskrit and Hebrew words -- as well as for ease of searching, we are not including diacritical marks in this online edition. The backward apostrophe, used in Greek and Hebrew transliteration, is indicated by a grave accent ( ` ). Any term marked with curly brackets { } at the end of its entry, or surrounding a reference citation, was not included in the original glossary material, is merely suggested for inclusion, and its definition (if any) has not been checked for accuracy.

## Foreword

Recognizing that the "need for esoteric devotional works is probably as great today as it has ever been in the past," G. de Purucker published *Golden Precepts of Esotericism*. This is a small book, yet it deals with large and compelling themes: the path inward to the heart of being; thoughts and their influence on character; how to meet suffering, old age, and death; the potency of love, self-forgetful love, that encompasses the whole of mankind; and, lastly, the choice that every aspirant faces; whether to undergo the higher discipline and training for self-benefit alone, or for the sake of bringing light and wisdom to every living being on earth.

The first edition, issued in 1931, comprised excerpts taken from public lectures and private talks given by Dr. de Purucker during the first two years of his leadership of the Theosophical Society (1929-42) and arranged in dialogue form by G. B., a friend and student of the author. In 1935, in response to requests from readers abroad and in the United States, Dr. de Purucker brought out a second edition in which the questions were omitted and the teaching presented in narrative form. The book went through numerous reprintings and was translated into several European languages. The present volume follows closely this second edition as revised by the author.

It was Dr. de Purucker's hope that others would be "illuminated with the same light and receive the same inspiration" that he himself had received from a lifelong absorption in the ideals and teachings of the Mystery Schools.

Theosophical University Press, publishing and distributing quality theosophical literature since 1886:

## Foreward

Since its publication in 1941, *Man in Evolution* has had a particular appeal for students seeking to relate the theosophic approach to evolution -- seen as a cosmic process reflecting itself in the human sphere -- to the theories propounded in the main by Charles Darwin and his followers. Today, archaeologists and paleontologists are daring to take a fresh look at fossil findings, so that firmly-established views as to our human origins are undergoing radical change. Those in the vanguard of evolutionary thought no longer look upon man as the descendant of monkey and ape but, on the contrary, as their antecedent, if not their half-parent.

This is calling for a total reversal of psychological outlook for a great many of us, so conditioned have we been from childhood to think of ourselves as having evolved solely through physical mutations which, by some unexplained random leap of consciousness, metamorphosed us from a witless, arboreal creature into the thinking, artistic and creative entity we know as Man.

Not so for the writer of the present volume. Gottfried de Purucker, author and educator, had since youth been a dedicated student of both modern theosophic thought and the traditional wisdom of ancient peoples concerning the origin and destiny of worlds and of the human species -- teachings which confirm man as a divine being of immense antiquity, rather than as a recent emergence from lower stocks.

"Man is his own history," says the author, meaning by this that he carries within him the entirety of an aeons-long past. A cosmic entity, he enters earth as a returning pilgrim in process of *becoming*, of bringing into actuality that which is potential, hidden within his inmost essence, and which, given time and the appropriate environment, will flower into fullness. For evolution is no chance happening, but an orderly manifestation of the spiritual-intelligent drive inherent in the universe and therefore intrinsic to all life-particles. Not an atom, cell, human being or sun, could exist unless at the core of each were divinity.

With this as background and foreground of his thought, Dr. de Purucker examines critically one after another the various evolutionary hypotheses, to see where theory merges into fantasy, where concepts still unproven have hardened into "facts" without adequate basis in nature. Rigorous analysis, cogent argumentation, supported by clear-cut testimony of anatomical structure, bring conviction that the human line is of extremely ancient origin, the most primitive of all the mammalian stocks and hence must have preceded, not followed, the more specialized apes and monkeys.

With all his knowledge of biological fact, the author regards man primarily as a god, a divine spark

seeking imbodiment in ever-fitter instruments through each of nature's kingdoms. The dignity of humanhood is thus enhanced, giving our lives here on earth majesty and purpose.

The material in the present volume originally stems from a series of lectures titled "Theosophy and Modern Science" given by Dr. de Purucker at the Theosophical Society's headquarters at Point Loma, California, from June through December 1927, and broadcast live over San Diego radio station KFSD. In 1929 these lectures were published, without editing, under the above title. The edition soon sold out, and the book remained out of print for several years.

In 1941 the author issued a somewhat condensed version as *Man in Evolution*, the work of rearrangement having been in large part due to the labors of Helen Savage Todd, whose editorial assistance Dr. de Purucker acknowledged with "grateful and genuine appreciation." For that edition, however, he saw no reason to bring forth "newer and later scientific arguments in favor of the theosophical doctrines," as he regarded those he had drawn upon for his lectures a decade earlier mainly as background for the "theosophical picture" he wanted to portray. To him, the principles upon which theosophy is founded are rooted in the structure of nature herself and therefore are ever-enduring. In an Appendix he did incorporate certain forward-looking statements from noted anthropologists and anatomists of the period (1930-1940), but in view of the greatly extended time span now afforded man by paleoanthropology, reaching back into the millions of years instead of a mere few hundreds of thousands, this material has been replaced in the present volume with two new entries:

- Appendix I: "The Antiquity of Man and the Geological Ages" by Charles J. Ryan, which provides a succinct and easily understandable explanation of the geological ages in relation to the "rounds" or cycles and the various "root-races" traversed by humanity. Also included is H. P. Blavatsky's table of approximate time periods placed alongside the contemporary time scale of eras and epochs as generally agreed upon by geologists.
- Appendix II: "Theosophy and the New Science" by Blair A. Moffett, which assembles current findings in physics and the life sciences, supplying valuable scientific data for comparison with and analysis of Dr. de Purucker's presentation of man's spiritual and racial origins.

*Man in Evolution* offers a unique approach: it treats of evolution from within and above, rather than from without and below. Instead of relying on missing links among fossil remains, it provides the one valid missing link in the entire spectrum of evolutionary theories: that of the spiritual or dynamic factor, the divinely impulsed intelligent entity at work in, through and behind all processes of birth, growth, maturation, decline and death. To the author, man's place in the cosmos is axiomatic, not something in need of proof.

The editor of the present revision of this important volume acknowledges with gratitude the assistance rendered by all who helped in its preparation, with a special word of appreciation due those who undertook the exhaustive research required to check all quotations from original sources. Where emendations of fact or reference were called for these have been made; and the works cited by G. de Purucker are listed in the bibliography.

## VOLUME 1

[To the Reader](#)

[Introduction:](#)

Reality or Truth, and Relative Truth. Dogma defined. The nature of Seership. What is proof? Is it infallible? Faith, true and blind. THE ESOTERIC TRADITION. Religion, Philosophy, and Science as distinguished from religions, philosophies, and sciences. Theosophy the universal 'touchstone.' *The Mahatma Letters to A. P. Sinnett* and *The Secret Doctrine*.

## [Chapter 1](#): Theosophy: The Mother of Religions, Philosophies, and Esoteric Sciences

Intimations of existence of Wisdom-Religion universal. The Esoteric Philosophy re-stated by H. P. Blavatsky. Intuition as source of human understanding of Truth. What Theosophy is and what it is not. The Guardians of the Wisdom-Religion and the methods of its dissemination. Esotericism and exotericism -- the Mystery-Schools, and the 'Mysteries.' Early Christian, Neo-Platonic, and Neo-Pythagorean teachers and their teachings. Anathematized teachings of Origen. The Qabbalah ('the Tradition'), and Theosophy. The Esoteric Doctrine, its relation to human mentality and man's conception of Truth. What we owe to ancient civilizations.

## [Chapter 2](#): Allegory and Mystical Symbolism

Why the Esoteric keys are safeguarded. Karman and Reimbodiment once held secret but now clearly expounded. The universal Mysteries the source of symbolic imagery. Intuition, its value in the study of symbolism. Theosophical interpretation of: "It (the Kingdom of God) will come when two and two make one; when the outside is like the inside; and when there is neither male nor female." The Story of the Vine and Grapes explained. The 'Cry from the Cross,' its correct translation and esoteric significance. A comprehensive survey of symbolism and mysticism as used by all great Teachers. The symbol of the Serpent or Snake.

## [Chapter 3](#): The Secret Doctrine of Gautama the Buddha, Part I

Evidence of existence of a system of esoteric teaching in Buddhism. The Buddha-Gautama. The Buddhist 'Confession of Faith': its esoteric meaning. Samskaras and Nirvana explained. The Eye-Doctrine and the Heart-Doctrine. The injunction of the Lord Buddha to his disciples as found in the *Maha-Parinibbana-Sutta*. Esoteric Buddhism and the existence of a succession of Teachers in the history of Buddhism. The Hinayana and the Mahayana Schools defined and described. Sakyamuni and the non-existence of a static 'soul' in man. Occidental Orientalists have need of greater intuition and common sense in the study of Buddhism.

## [Chapter 4](#): The Secret Doctrine of Gautama the Buddha , Part II

The Doctrine of Becoming. The Pali scriptures and the teaching of 'survival.' What is it

that survives? Karman, Rebirth, and the Jataka-tales. Fundamental doctrines of Buddhism: The Eightfold Path and the Four Noble Verities. The Paramitas as given by H. P. Blavatsky in *The Voice of the Silence* and in Buddhist literature. Meanings of the terms Samskaras, Skandhas, Karman, and Evolution. Discussion concerning the x-quantity in man. Symbolism in the life-story of the Buddha. The Buddha's teachings on union with the Divine.

## [Chapter 5: Worlds Visible and Invisible, Part I](#)

The Universe a septempartite or decempartite organism. Who and what are the Devas? Knowing the Universe by *becoming*. Scientists dream dreams of truth and see visions of reality. 'Dimensions,' 'singular points,' 'spheres,' and 'planes.' Natural phenomena and the invisible causal realms. The 'law of probability,' 'indeterminacy,' 'chance.' Early Christian, 'pagan,' and ancient, occult teachings about man and the Universe compared with those of modern science. Universal Consciousness-substance and the causal realms. God, or gods? Radiation, light, consciousnesses. Where are the invisible worlds and what are their inhabitants?

## [Chapter 6: Worlds Visible and Invisible, Part II](#)

Universes, Hierarchies, and Logoi. Man and Universe six-sevenths or seven-tenths occult. The lokas and talas explained. Rupa-lokas and Earth's sevenfold Planetary Chain compared. The Seven Sacred Planets. Globe-bodies and planes. 'Conservation of energy.' Who are the Kosmokratores? The Moon and moons. Reimbodiment of globe-chain. Entire Solar System interblended and interactive. Modern astrology and the ancient Wisdom-Astrology. Captures, galactic and electronic. Classes of Monadic Life-Waves. Kosmic Space, Hierarchs, and Wondrous Beings. Archaic Pantheism. Christian God and the Unknowable Principle. Space a container of Divine Atoms.

## [Chapter 7: Evolving Souls, Part I](#)

Evolution and Revolution. No absolute endings in evolution. 'Soul' and souls explained. Evolution and emanation: an analysis. Infinite hosts of souls: numerous illustrations. What are 'group-souls' and what constitutes 'grouping'? Enduring Consciousness and fugitive 'events.' The eternal and the evanescent in all beings. What is immortality? The 'losing' of the self in the SELF. 'As a man thinks, so is he.' The difference between man and beast. Solomon and *Ecclesiastes*. Man, a microcosm in the Macrocosm is yet One with the All.

## [Chapter 8: Evolving Souls, Part II](#)

The four planes of Universal Being. Nature and evolution of elementals defined. Man his own architect. Our source and the origin of our life-atoms. Dual aspect of life-atoms. One

Law but countless ramifications of detail and repetition. The heresy of Separateness. The rupa-planes and the Sephiroth of the Qabbalah. Every being a well-spring of 'creative' activity. What part of an ever-changing entity endures? Monadic generation of elementals continuous. Climbing the Ladder of Life.

## [Chapter 9](#): The Evolutionary Pathway to the Gods

Monadism and Atomism: the essential carpentry of the manifested Universe. Druidic and other ancient teachings. Self-expression eternal and universal. Evolution and involution. Possibility of understanding states of consciousness during pralaya of a planetary chain or solar system. The Garden of Eden, and Man a 'fallen angel,' theosophically explained. The War in Heaven. Teleologic element in evolution and the evils of Darwinism. The great evolutionary Drama of Life. The Rivers of Lives and geologic Ages in the light of Theosophy. Evolution entirely a spiritual process.

## [Chapter 10](#): Esoteric Teachings on the Evolution of Human and Animal Beings

H. P. Blavatsky, *The Secret Doctrine*, and Esoteric Evolution. Teachings of modern science, and the difficulties of expounding the Wisdom-teachings. Human development during past ages. Whence came the beasts and reptiles? Man, his physical structure during the First and Second Races, and physical modes of propagation. The human embryo and its prenatal development in relation to physical structure of early Man. Androgyne and unisexual development. Evolution and involution and the 'closing of the door' into the Human Kingdom. What are the anthropoid apes? Destiny of the beasts. Emanation of Mammalia from the human stock. What is a 'type'? Time periods, geologic ages, and radio-activity. Specialization. Spiritual, intellectual, and psycho-mental evolution. Consolidation and size of early root-race types. Man, a vast treasury. Embryology, the touchstone. Geological remains.

## [Chapter 11](#): The Turning of the Wheel -- The Past

Civilization and civilizations. Periods of transition illustrated by time of downfall of the Roman Empire. Divination, soothsayers, etc., then and now. Oracles and the Wisdom of the Ages. The closing of the Mystery-Schools and the age of spiritual barrenness in the Occident. Astronomical teachings of early Mesopotamia. Claudius Ptolemy and his legacy to the Dark Ages. Graeco-Roman world the alembic of religions and philosophies two thousand years ago. Pioneers of the Renaissance: their interpretations of Truth and the reception they received. The significance of the founding of the Theosophical Society. Mutability of Science and permanence of the Ancient Wisdom. The scientific attitude fifty years ago and now.

## [Chapter 12](#): The Turning of the Wheel -- The Present

Intellectual conditions of 1875. H. P. Blavatsky, her life-work, the Message she brought, and her Teachers. Responsibility of the Sages and Seers, and the 'law' of Karman. The quickening of Science, Philosophy, and Religion. The Atomistic School of the Greeks and its influence on Newton and Huxley. 'Modes of Motion,' 'absolute time,' and 'absolute space.' Einstein's 'space-time continuum.' Relativity and Maya. Seven points wherein the modern relativity-theory approaches the Esoteric Tradition. Vision versus dogmatism in Science: some examples. Modern Science becoming metaphysical and mystical. The promise of the future.

### [Chapter 13](#): Behind the Veils with Science, Part I

Modern Science elucidating some of the teachings of the great Sages. The true status of ancient civilizations. Are the present 'primitive' people representatives of degenerate or of embryo-races? The Negro Race. What is science? Modern scientific conceptions of consciousness. Some conceptions of the atom and atomic space and time. What animates an atom? Illusions of 'matter'; the ether, and the Void. 'Density' of the ether, and Maya. Akasa, spirit-substance-force, or Life. The Galaxy, its form, size, and some of its suns. Fallacy of the theory of the 'expanding universe.'

### [Chapter 14](#): Behind the Veils with Science, Part II

A Universe of Consciousness: a most important postulate. Consciousness the root of force or energy. Explanation of Gravitation and the Forces of Nature. Newton's conception of same. Empedocles on Cosmic 'Love' and 'Hate.' 'Space-curvature' and the 'Cosmic Rays.' Pralayas and Manvantaras. Spencer and a 'running down' Universe. Outworn terminology hampers scientific expression. 'Creation.' Hydrogen and helium and the processes of integration and disintegration. Laya-centers, 'singular points,' and 'dimensions.' All matter concreted light. The 'Quantum Theory.' Prout's Hypothesis and 'isotopes.' No limits to the divisibility of matter. The inner god in man and the forces of the invisible realms of Nature. Our five senses and the Root-Races.

### [Chapter 15](#): Webs of Destiny, Part I

The Cosmic Web, a Universe of Law infilled by *willing* agents. Fatalism, Karman, and Free Will. 'Unmerited suffering' and Karman. What is Karman? The web, the causal forces, and man himself. Laws and law-givers. The conflict of wills in evolving entities. Good and Evil, 'spiritual wickedness,' and the 'forces of evil.' Past and present ideas of divinity, and certain Articles of Faith. Webs in the weaving, and the human and cosmic weavers. Schools of Fatalism. 'Determinacy' and 'indeterminacy.' What originates causes? Man the Actor. Unfolding will as the impulse to evolutionary ascent. Explanation of the phrase 'above Karman.'

## [Chapter 16](#): Webs of Destiny, Part II

Essential unity and identity of all Beings, and the Great Heresy. Individual and universal contributors to the Manvantaric Web of Cosmos. Psychological influence of Maya. Karman and the Mahamaya. "As ye sow, so shall ye also reap." Destiny and the Greek teachings. Ethical responsibility and Karman. 'Sins' of commission and 'sins' of omission. Karman and 'unmerited suffering.' Classes of Karman. The Reincarnating Ego and the choice before Rebirth. The Insane and Karman. Great world-catastrophes. The Immanent Christ and the intricacies of individual Karman. The Buddhist teaching of Karman.

## [Chapter 17](#): Heavens and Hells, Part I

Pure and perverted teachings of the post-mortem states. Similarities and variances in the conceptions of 'heaven' and 'hell,' and the orthodox ideas. Superstition. Mansions of experience in the Universe. "In my Father's house are many mansions." Lokas and talas. Attractions and repulsions of peregrinating beings. Nirvana, Devachan, Avichi, Nirvana-Avichi and Kama-loka. Our Earth a Myalba. Post-mortem destiny of the human soul. Pantheism and evolution. Emanational evolution as distinct from Darwinism. What is retribution? Heavens and hells both manifold and temporary. Earth but one of many Cosmic Inns of Life.

## [Chapter 18](#): Heavens and Hells, Part II

'Heavens' and 'hells' in myth and legend and ancient literature. The 'paths to the gods' and the 'paths to the fathers.' Evolution in process throughout the composite organism of the Universe. 'Death,' the human soul, and the Reincarnating Ego. What happens to the evil man after death? Relative and intermediate states of bliss and misery. The Tattwas defined and described. Nirvana, identity or nonentity. Plotinus 'On the Problem of the Soul.' The Inner God and the personality. The Nirvani, the Devachani and the state of Avichi. The 'lost soul' and the future of its Monad. Man carves his own destiny. The grand vision of endless growth.

## **VOLUME 2**

## [Chapter 19](#): Reimbodiment as Taught through the Ages, Part I

Pre-existence, Reimbodiment, Rebirth, Palingenesis, Transmigration, Metempsychosis, Reincarnation, and Metensomatosis, defined and described. The relation of the Reimbodiment Ego to the above. 'Coming anew into life,' a universal teaching. Skeptics powerless to disprove Rebirth. The Egyptians, metempsychosal reincarnation, and Herodotus. Why did the Egyptians mummify their dead? The origin of the Egyptians. *The*

*Encyclopaedia Britannica* and Metempsychosis: a correction. Josephus, the Pharisees, and Reincarnation. The Universal System and Philo Judaeus.

## [Chapter 20](#): Reimbodiment as Taught through the Ages, Part II

Disappearance of the doctrine of Reimbodiment in the sixth century. Scattered groups who retained it: Albigenses, Cathari, Bogomils. Doctrine taught among earliest Christians as illustrated by citations from Origen, Jerome, and Clement. Hints as to the doctrine of Reimbodiment found in the Bible. Later believers in some form of metempsychosal reimbodiment: Giordano Bruno, van Helmont, Swedenborg, Goethe, Lessing, Herder. Illustrations of modern conceptions and misconceptions of the doctrine. The doctrine of Reimbodiment as given in the Orphic teachings.

## [Chapter 21](#): How Man Is Born and Reborn, Part I

The causes of rebirth. Love, a great re-uniting power from life to life. The impersonal Eros of the Cosmos. The greater reunion at the end of the Manvantara. The power of thought in building our future destiny on Earth. Reincarnation explains what becomes of unexhausted energies generated in earth-life. What is heredity? Sex not a radical thing. Explanation of the ego's entrance into male or female body. The Theosophical conception of marriage. Hate as well as love, a great magnetic power. 'Not remembering past lives' no argument against Reincarnation.

## [Chapter 22](#): How Man Is Born and Reborn, Part II

How character is builded. Sorrow and suffering, proofs of Nature's compassionate heart. What it is that reincarnates. Law concerning length of devachanic period. Why we need a devachanic rest. Renunciation of the devachanic rest and shortening of that period possible. The devachanic type of character here on Earth. Unusual cases considered: death of small children; premature death in adult life: by disease, by violence; suicides, congenital idiots. Reincarnation of animals. Man becomes whatever he longs for. Reimbodiment, the doctrine of another chance.

## [Chapter 23](#): 'Life,' in Fact and in Theory, Part I

Nineteenth century materialism: an era of contradictions. *The Mahatma Letters to A. P. Sinnett* gives insight into the nature of that era. Twentieth century has seen a change in outlook. Western theological and scientific meaning of 'life.' 'Life' and 'death' are two processes. The doctrine of Swabhava. Explanation of the term 'Monadic Ray.' The 'new man' the karman of the 'old man.' 'Life' and 'death' inextricably interwoven.

## [Chapter 24: 'Life' in Fact and in Theory, Part II](#)

Life not an 'entity' separate from matter. Theories of the Mechanists and Vitalists. Animism. No gulf between matter and spirit. Table of radiations of various frequencies illustrating gradual mergence of ethereal substance into material substance. What is Life *per se*? Beginnings and endings are dreams of illusion. Nature in continual birth. Death merely a sloughing off of vehicles. What death will be for us in the future. Death and sleep are one. The source of our essential life is the Divine Monad.

## [Chapter 25: The Astral Light and the Life-Atoms, Part I](#)

Immobility impossible in the Universe. Dissolution inevitable to all compounded beings. No permanent individuals to be found in bodies. The astral worlds. The nature of the physical body. Explanation of radioactivity in the mineral world. The constitution of Globe D, our Earth. Peregrinations of the life-atoms in a human physical body during earth-life. Analogy of this process with the after-death peregrinations of the life-atoms. Death and other subjects as taught in the Mystery-Schools. The Seven Principles of Man as taught by the Romans and by the Greeks. The relation of the Seven Principles of Man to the Cosmic Principles. Greek and Roman teachings regarding the Underworld.

## [Chapter 26: The Astral Light and the Life-Atoms, Part II](#)

Cause of death from the vehicular standpoint. Peregrination of the physical life-atoms after death. Life-atoms on every plane of man's being. Journeys of the astral life-atoms after death. Difference between the Linga-sarira and the Kama-rupa. Fate of the Kama-rupa of man after death. Our responsibility in connexion with the life-atoms of our various bodies. Description of the picking up of bodies on return of Ego into earth-life. Explanation of the Christian dogma of the 'resurrection of the body.' Every vehicle a 'mode' of consciousness. Circulations of the life-atoms in the Cosmos.

## [Chapter 27: Death -- And After: A Study of Consciousness, Part I](#)

The consciousness-side of the after-death states. A discussion of the subject of consciousness. The 'I am' consciousness and the 'I am I' consciousness in man. The Sutratman or Thread-Self. Plato's teaching of Anamnesis. The unfolding of consciousness in earth-life. The cause of physical death from the standpoint of consciousness. The 'dreams' of the Devachan. The panoramic view of the past life at the moment of death. Description of the destiny of the intermediate nature after death. Description of the Kama-loka. The opportunities which old age brings.

## [Chapter 28: Death -- And After: A Study of Consciousness, Part II](#)

The Radiance of the Reincarnating Ego: what it is and its destiny after the death of the body. The identity of sleep and death. The nature of dreams. Study of consciousness. The seven states of human consciousness: four main divisions defined. Advice to those who watch at a deathbed.

#### [Chapter 29](#): The Circulations of the Cosmos

The ancient science of Astrology: what its teachings comprised. The status of modern Astrology. The mystic numbers 4, 3, 2. Esoteric hints in lines from Vergil's *Georgics*. Ranges of consciousness of the various monads in man. The eternal peregrinations of the Monad. The Seven Sacred Planets in relation to the peregrinations of the Monad. The vital currents in the cosmic organism. Facts about the Mithraic teachings. Explanations of the two kinds of Outer Rounds. Trishna or 'thirst' for earth-life. Deductions to be drawn from the Theosophical teachings about death and the after-death states.

#### [Chapter 30](#): Birth and Before Birth

The garments or veils evolved by the Monad. The relation of a human parent to the genealogical stream which follows him. Relation between the peregrinations of the Monad and the stay of the Reincarnating Ego in the Devachan. More detailed description of the return of the Reincarnating Ego into earth-life. The inter-atomic and intra-atomic ethers. The sacred mystery of birth. What is protoplasm? The constitution of the germ-cell. The aura: a psycho-magnetic-electric atmosphere. Kinetic and dormant life-atoms. More about the mysteries of birth.

#### [Chapter 31](#): Great Sages and Their Place in the Cosmic Hierarchy

Who and what the great Sages are. Guides and protectors of the human race. Explanation of various names given to them. Legends concerning them. Their natural 'powers.' The true nature of 'miracles.' The rationale of human perfectibility. The graduated scale of beings from elementals to gods. The fundamental unity of all classes of beings. The doctrine of the Silent Watcher, the spiritual Hierarchy of our Globe.

#### [Chapter 32](#): Pneumatology and Psychology: Mysteries of Man's Inner Nature, Part I

The Christian doctrine of spirit, soul, and body. Esoteric teaching of man as sevenfold (or tenfold) being. The sevenfold division of the Universe. Man builded of elements drawn from the cosmic reservoir. Man as a host of monads. Man as a threefold entity. The nature of true psychology and of pneumatology. The 'I am' and the 'I am I' in man. The normal and abnormal interactive functioning of 'spirit,' 'soul,' and 'body.' Cases of supernormal activity of the Upper Duad. The great Teachers as willing human instruments of a spiritual

Essence.

### [Chapter 33: Pneumatology and Psychology: Mysteries of Man's Inner Nature, Part II](#)

Human beings divisible into three general classes. The status of the intermediate or psychological part of the constitution in these three classes. The 'Voice of Conscience.' Intuition, Inspiration, and Genius, explained. Avataras and the mystery of their existence. Connexion between Jesus, Sankaracharya, and the Buddha. Minor Avataras. The Messenger an Avatara of a kind: H. P. Blavatsky an instance. The destiny of the 'I am I' consciousness. The emanational unfolding of man's sevenfold being follows universal plan. How union with the divinity within may be begun and continued to a glorious consummation.

### [Chapter 34: Great Seers Versus Visionaries](#)

What constitutes a *Seer*? The status of the visionary or semi-mystic. The source of his 'visions.' The Astral Light: its characteristics, its illusions, its dangers. Denizens of the astral world. The spiritual Seer and the Akasa. Why visionaries often mislead. Where the Masters of Wisdom live and why there. How one may distinguish between the Seer and the visionary. Two main tests of the true Teacher: universality of teaching, and inner virtue. Some visionaries of superior type. Why the Seer is a spiritual Teacher. The purpose of training and initiation. Minor initiations. Explanations of 'angels' and other 'visitants' from higher realms. Two authentic sources of knowledge available to the spiritual Teacher.

### [Chapter 35: The Esoteric Schools](#)

The age of the Mystery-Schools. The nature of the Atlantean Race. The Mystery-Schools as the seats of learning in ancient times. The degeneration of the Mystery-Schools. Initiated Roman Emperors. Training in chelaship. Prophetic writings depicting the approach of spiritual darkness: Second Epistle of Peter, *Vishnu-Purana*, Hermetic writings. Cyclic appearances of Teachers or their Messengers. How the Teachers of mankind work. The present existence of the Mystery-Schools. The Occult Succession or Hermetic Chain of Teachers. The stuff of which disciples are made.

### [Chapter 36: Postscript: Some Misunderstood Teachings of the Mysteries](#)

Mystery-Schools the foci of spiritual light. Intimate connexion between the cosmic cycles and man's life on Earth. The story of Jesus a mystery-tale. Interpretation of the story of Jesus' entering Jerusalem on an ass and the foal of an ass. Meaning of the Epiphany. When did Jesus really live? The aureole, nimbus, aura, etc. Christianity a syncretistic system. Early identity of Jesus with the 'Sol Invictus.' Ancient customs and beliefs in regard to the

Winter-Solstice festival. Interpretation of the dogma of the Virgin Birth. Significance of the legend of the Three Magi.

## To The Reader

(Reprinted from the First Edition)

The writing of these volumes has not been an easy task, and this for a number of reasons, first and foremost among which has been the lack of leisure-hours to devote to it. Dictation proceeded from the first page to the last in a hurry and often at high speed, for it was the only way of producing this work within a reasonable time after its forthcoming publication had first been mentioned by the author in the summer of 1934. Had time been taken to prepare the manuscript in a manner pleasing to the author himself and his co-workers, its appearance might have been delayed for a year or two, or possibly longer. In that event the author would have been able to follow the most excellent advice offered by the genial Horace, the Latin poet, in his *Satires*, I, x, 73: *Saepe stilum vertas, iterum quae digna legi sint scripturus*. However, there has been no time to "reverse the pencil" for the purpose of erasing, nor has there been any leisure for revision and for the polishing of phrases.

It is due in large part to the devotion and enthusiasm of a number of friends and students attached to the different departments at the International Theosophical Headquarters at Point Loma, that *The Esoteric Tradition* now at last is given to its readers. To Dr. Joseph H. Fussell, who read the proof-sheets and offered valuable suggestions; Miss Helen Savage, who did the secretarial work; Mrs. Hazel Minot, responsible for checking and verifying of quotations; Mrs. Guy Ponsonby and Mr. S. Hecht, who prepared the copious index; Miss Elizabeth Schenck, Miss Grace Knoche, and Mr. W. E. Small, who read proof: to these and to all others who have helped in any way whatsoever to forward the publication of this book, the author gives his grateful thanks.

Special mention should be made of the Theosophical University Press, where everyone, the Manager and the Assistant Manager and all others composing the staff, co-operated to devote what time could be set aside from the regular issuing of our various magazines and other routine press-work, to the composition and later printing of these volumes.

As regards a number of citations appearing in this work and taken from books written in languages other than English, mostly in ancient tongues, it may be as well to say that wherever possible the author has used standard or popular translations, but in certain cases where he felt better satisfied with his own renderings, he has done the work of translation himself.

-----

One cannot too often repeat what H. P. Blavatsky pointed out in her 'Introductory' to *The Secret Doctrine*, Vol. I, p. xix:

It is above everything important to keep in mind that no theosophical book acquires the least additional value from pretended authority.

Every Theosophical book must stand on its own ground of merit, and if it have demerit greater than its merit, by that demerit it will fall -- and the sooner it falls the better for all concerned. The present writer feels this fact very strongly in connexion with these volumes, his own latest contribution to Theosophical literature; and, although they are for him and his co-workers a labor of pure theosophical devotion and love, he not only expects but desires that these volumes shall speak solely for themselves, and shall stand upon their own grounds of appeal. What is good in them will endure: if there is anything that is not good, let it perish and perish rapidly.

Works like this present literary venture are badly needed in the world today. The dissemination of Theosophical thought among men can be aided greatly by new presentations of the age-old verities preserved by the Masters of Wisdom and of Compassion from immemorial ages in the past.

One is reminded in this connexion of an important letter written by the Master Kuthumi, dated December 10, 1880, and found in the memorable volume entitled *The Mahatma Letters to A. P. Sinnett*, transcribed and compiled by A. T. Barker. The following extract from this letter is found on pages 23 and 24, as changed, however, by the exalted writer's own corrections to be found on pages 425 and 426 of the same book:

The truths and mysteries of occultism constitute, indeed, a body of the highest spiritual importance, at once profound and practical for the world at large. Yet, it is not as a mere addition to the tangled mass of theory or speculation in the world of science that they are being given to you, but for their practical bearing on the interests of mankind. The terms "unscientific," "impossible," "hallucination," "impostor," have hitherto been used in a very loose, careless way, as implying in the occult phenomena something either mysterious and abnormal, or a premeditated imposture. And this is why our chiefs have determined to shed upon a few recipient minds more light upon the subject, . . . The wiseacres say: "The age of miracles is past," but we answer, "it never existed!" . . . [These truths] *have* to prove both destructive and constructive -- *destructive* in the pernicious errors of the past, in the old creeds and superstitions which suffocate in their poisonous embrace like the

Mexican weed nigh all mankind; but *constructive* of new institutions of a genuine, practical Brotherhood of Humanity where all will become co-workers of nature, will work for the good of mankind *with* and *through* the higher *planetary Spirits* -- the only "Spirits" we believe in. [From here on the italics represent the 'corrections' above referred to.] Phenomenal elements previously unthought of, . . . will disclose at last the secrets of their mysterious workings. Plato was right *to readmit every element of speculation which Socrates had discarded. The problems of universal being are not unattainable or worthless if attained.* . . . "Ideas rule the world"; and as men's minds receive new ideas, laying aside the old and effete the world (*will*) advance; mighty revolutions (*will*) spring from them; *institutions (aye, and even creeds and powers, they may add)* -- WILL crumble before their onward march. . . . It will be just as impossible to resist their influence when the time comes as to stay the progress of the tide. . . . *all this* will come gradually on; and . . . before it comes *they as well as ourselves*, have all a duty *to perform, a task* set before us: that of sweeping away as much as possible the dross left to us by our pious forefathers. New ideas have to be planted on clean places, for these ideas touch upon the most momentous subjects. It is not physical phenomena . . . but these universal ideas that *we have precisely to study: the noumenon not the phenomenon*, for, to comprehend the LATTER we have first to understand the FORMER. They *do* touch man's true position in the Universe, . . . *It is not physical phenomena however wonderful that can ever explain to man his origin let alone his ultimate destiny, . . . -- the relation of the mortal to the immortal, of the temporary to the eternal, of the finite to the Infinite, etc., etc.*

Verily, it is these "universal ideas" that all should study, and which by their influence over human minds will bring about the change in human consciousness that all true Theosophists work for and aspire towards, thus helping in the bringing about of that which the Theosophical Society was originally founded in 1875 to introduce.

Let it be remembered that there exists a universal and really infallible test or touchstone by which any new increments of Theosophical teaching may be tried, and this test or touchstone is UNIVERSALITY. Universality here is equivalent to spirituality; and any teaching which can be proved to be universal, in the sense of being accordant with and in concord with all other great teachings of the past -- or of the present -- has high probability of being a true Theosophical verity; and contrariwise, any teaching which cannot be proved to be inherent in and a part of the great deliveries of Theosophical truths in the past, may by the same token be safely rejected as being new in the sense of different and more or less spurious, because failing to withstand successfully the test just mentioned.

In the future, it is the present writer's hope, if he can find the time and strength so to do, to publish another volume or two containing Theosophical teaching which up to the present time has been kept strictly private. The reason for this decision is the great, indeed enormous, advance in thought that has taken place since the days when H. P. Blavatsky labored in her Herculean fashion to break what she called the "molds of mind." What then was esoteric, at least in certain measure -- esoteric simply because it was truly impossible then to state it openly, for it infallibly would have been misunderstood and misused -- would in moderate degree be understood today by the more awakened intelligence of

modern men; and the consequent larger measure of generous receptivity to new ideas has created an entirely different and indeed fallow field of consciousness, in which it has become the duty of Theosophists to plant seeds of truth. We shall see.

Meanwhile, the two volumes of the present work go to the reading public, whose verdict upon them the author will await with feelings composite of a sense of humor and a great deal of human interest. Nothing in either volume is the offspring of his own brain. His position in this respect is precisely identical with that of every Theosophical writer who is a true Theosophist at heart and who knows what he writes about: *Iti maya srutam* -- "Thus have I heard." "I pass on what has been given to me and in the manner in which I have received it. Not otherwise." Hence the author refuses to clothe himself in the skin of an ass, or -- in that of a lion!

-- G. de P.

*International Theosophical Headquarters

## Contents

[Foreword](#)

### [Section 1. The Primeval Wisdom-Teaching \(65K\)](#)

- Passing on the Light
- Spiritual Illumination vs. Psychic Illusions
- The Still, Small Path
- Pledge-Fever and the Spiritual Will

### [Section 2. Discipline precedes the Mysteries \(90K\)](#)

- Esoteric Discipline
- Meditation and Yoga
- The Paramitas and the Exalted Eightfold Path
- The Initiatory Cycle

NOTE: Sections 1 and 2 have also been issued together as the book, *The Path of Compassion*.

## Section 3. Space and the Doctrine of Maya

### [Part 1](#) (58K)

- The Void and the Fullness
- The Boundless in Ancient Cosmogonies
- Spaces of Space
- Space, Time and Duration
- Cosmic Reality and Mahamaya

### [Part 2](#) (63K)

- Parabrahman-Mulaprakriti
- Manvantara: a Dream, a Maya
- Hindu Conceptions of Maya
- Spiritual Reality and Mind-Born Illusion

## Section 4. Galaxies and Solar Systems: their Genesis, Structure, and Destiny

### [Part 1](#) (75K)

- The Universe: a Living Organism
- Days and Nights of Brahma
- Genesis of a Universal Solar System
- The Celestial Zodiac and the Birth of a Solar System
- Raja Suns and the Cosmic Egg of Brahma
- Reimbodiment of a Planetary Chain

### [Part 2](#) (77K)

- The Twelve Fohatic Magnetisms
- The Globe Zodiac
- Auric Egg: Cosmic and Microcosmic
- The Astro-Theogonical Aspect of the Cosmos
- Occult Physiological Structure of the Solar System
- Causative Nature of Cycles
- Cyclical Time Periods
- Racial Cycles and Yugas

## Section 5. Hierarchies and the Doctrine of Emanations

## [Part 1](#) (66K)

- Out of Paranirvana into Manvantara
- The Cosmic Spirit in Pralaya and Manvantara
- The Three Logoi
- Fohat, the Dynamic Energy of Cosmic Ideation
- On the Gnostic Aeons

## [Part 2](#) (58K)

- The Doctrine of Swabhava
- Sound, Color and Number
- Architects and Builders
- The Lipikas

## **Section 6. Invisible Worlds and their Inhabitants**

### [Part 1](#) (83K)

- Pattern of the World Structure
- The Unrolling of the Cosmic Elements
- Elementals, Offspring of the Cosmic Elements
- Tattwas and the Seven Senses of Man
- The Birth of a Globe
- Planes and States of Consciousness

### [Part 2](#) (87K)

- Lokas and Talas
- The Human Life-Wave in the Loka-Talas
- Interwebbing of Lokas and Talas
- Monads, Centers of Consciousness
- The Monadic Classes
- The Triple Evolutionary Scheme

## **Section 7. The Doctrine of the Spheres**

### [Part 1](#) (67K)

- The Heart of the Sun -- a Divinity
- Sunspots and the Circulations of the Solar System

- Solar and Terrestrial Magnetism
- The Triadic Life of Father Sun

## [Part 2](#) (78K)

- Nature and Characteristics of the Planets
- Asteroids, Meteors, and Cosmic Dust
- The Moon

## [Part 3](#) (78K)

- The Planet of Death
- Life-Waves and the Inner Rounds
- Interplanetary and Interglobal Nirvana
- Sishtas and Manus

## **Section 8. Gods -- Monads -- Life-Atoms**

### [Part 1](#) (61K)

- Who are the Gods?
- Evolutionary Journey of the Monads
- Life-Atoms, their Origin and Destiny
- Heredity and the Life-Atoms
- The Doctrine of Transmigration

### [Part 2](#) (59K)

- The Cause of Disease
- Man is his own Karma
- Is Karma Ever Unmerited?
- Good and Evil

## **[Section 9. Correlations of Cosmic and Human Constitutions](#) (90K)**

- The Auric Egg, its Nature and Function
- Monads, Egos and Souls
- The Auric Egg and Man's Principles
- Many Monads in Man
- Lost Souls and the Left-hand Path

- Occult Physiology

## **Section 10. The Hierarchy of Compassion**

### [Part 1](#) (90K)

- The Silent Watchers
- The Three Vestures
- The Dhyani-chohanic Host
- The Avatara -- a Spiritual Event
- Upapadaka and Anupapadaka Avataras
- Avataras of Maha-Vishnu and Maha-Siva
- Jesus the Avatara

### [Part 2](#) (84K)

- The Power of Avesa
- The Tibetan Lamaistic Hierarchy
- Fifth and Sixth Rounders
- Buddhas and Bodhisattvas
- Gautama the Buddha
- Our Spiritual Home

## **Section 11. Death and the Circulations of the Cosmos -- I**

### [Part 1](#) (64K)

- The Oneness of all Life
- The Causal Aspects of Death
- The Process of Disimbodiment
- The Panoramic Vision
- The Pranas or Vital Essences

### [Part 2](#) (68K)

- Physical Death -- an Electromagnetic Phenomenon
- Kama-loka and the Second Death
- The Four States of Consciousness
- Ancient and Modern Spiritualism Contrasted
- The Nature of the Kama-rupa

## Section 12. Death and the Circulations of the Cosmos -- II

### [Part 1](#) (80K)

- Nature and Characteristics of the Devachan
- Length of the Devachanic Period
- Devachan and the Globes of the Planetary Chain
- Nirvana
- Sleep and Death are Brothers

### [Part 2](#) (67K)

- Through the Portals of Death
- The Process of Reimbodiment
- Inner and Outer Rounds
- Interplanetary Peregrinations
- Return Journey of the Reimbodying Ego

### [Appendices](#) (60K)

- The Precessional Cycle
- The Potency of Sound
- The Four Sacred Seasons
- H.P.B.
- Messengers from the Lodge -- the Insignia Majestatis
- Narada

## Foreword

A work of art stands or falls by its power to inspire. With a book such as *Fountain-Source of Occultism*, which treats of cosmic truths and man's timeless search for answers, all the more must its message stand

or fall on worth alone. Of this G. de Purucker is pre-eminently aware; he does not profess to provide the definitive statement, the final word of truth. What he does offer is an illumined interpretation of the universal wisdom on which the Secret Doctrine of the ages -- and of H. P. Blavatsky's masterpiece of that name -- is founded.

Born on January 15, 1874 in Suffern, Rockland County, New York, de Purucker lived in the United States until the late '80's when the family moved to Geneva, Switzerland. His father, an Episcopal minister, had been appointed chaplain of the American Church there; a learned man and utterly committed, his inmost wish was to have his son ordained in the Anglican Communion. So he personally taught the boy Latin, Greek and Hebrew, had him tutored in modern European languages, as well as in the history and literature of Biblical peoples and of ancient Greece and Rome.

The youth applied himself with assiduity, but his was a profoundly inquiring mind, with a natural intuitive sense of what was spiritually true and what was counterfeit. Before he reached eighteen, he knew with certainty that he could not enter the church; that, in fact, no formal religion could ever bind him. The quest for the gnosis, the living wisdom behind the externals of rite and dogma, had taken powerful hold.

The shock to the parents was grievous: here was their son, destined from childhood for the ministry, able to read the Holy Scriptures in their original tongues, and trained in the functions and responsibilities of a pastor -- turned agnostic.

Deeply troubled, the young man left his home and studies in Geneva, sailed for America and, after spending a few months in New York, came to California where he worked on various ranches in San Diego County. All the while he continued his search, "looking around me, right and left, trying to find the clue to the mysteries of life and death which were bothering me so badly." He bought books on the Tarot as well as on mind-healing, to find they did not satisfy. When he came across a translation of one of the Upanishads, he set to work to master Sanskrit, just as he had earlier perfected himself in Anglo-Saxon, believing with Heine, the poet, that "with every new language, one wins a new soul."

Then one day, he tells us, a small book on Theosophy fell into his hands, and "it startled me":

I saw high thinking! I felt that there was more in this book than what an agnostic had seen. My years of study and reading of the literatures of the world -- ancient literatures especially -- had taught me to recognize ancient truth when I saw it. I was fascinated with something that I had always known in my heart; and it was this, that there has always existed, and that there exists today, a band, a company, a society, an association, of noble Sages, great Seers, "Wise Men of the East," as this book called them.

We do not know the name of the book, but we do know that on August 16, 1893, Hobart Lorenz Gottfried de Purucker (later known as G. de P. to his associates) joined the Theosophical Society then headed in America by William Q. Judge, co-founder in 1875 with H. P. Blavatsky and H. S. Olcott of

the modern theosophical movement. As a member of the San Diego Lodge and a regular user of their library, de Purucker helped organize a *Secret Doctrine* Class, and though only nineteen soon was appointed "permanent reader," moderating and guiding the studies of the members, most of whom were considerably older than he. For the next 49 years, to the day of his death on September 27, 1942, G. de P. gave of the fullness of himself in the service of his fellow men -- a service which was to find magnificent expression in his elucidation of the spiritual principles of theosophy.

Everything he said, in private or in public print, was an amplification of his youthful vision of the Oneness of the divine impress, and of the experiencibility of that Oneness by every human being. *Fountain-Source of Occultism* is no exception.

In July 1929, when Gottfried de Purucker succeeded Katherine Tingley to the leadership of the Theosophical Society with international headquarters then at Point Loma, California, he initiated a series of esoteric studies for the purpose of stimulating the seeds of altruism as well as of giving instruction in the deeper aspects of theosophy. No question was too simple, none too complex, for careful examination. He insisted, however, that always the 'scientific-philosophical' points of doctrine be infused with the 'ethical-mystical': only as one lived the teaching he learned about would it yield its esoteric content.

The present volume derives from twelve booklets of instruction privately printed in 1936. These had been compiled by a small committee under Dr. de Purucker's general supervision from the stenographic reports of esoteric meetings held by him from 1929 to 1933, to which he added certain relevant passages from his published works, as well as a copious amount of fresh material on a wide variety of subjects.

Of particular interest is the order of presentation, as he had himself arranged this with exceeding care. His primary concern, he explained, was to allow the student at the outset -- before he might be caught up by the fascination of the highly philosophical teachings later developed -- full opportunity to absorb the ideal of unselfish service, which marks the path of compassion chosen by mankind's spiritual Mentors. Moreover, when asked why he had started off the strictly doctrinal portion of the series with an abstruse treatise on Space and Maya, instead of with the practical themes of karma and rebirth which are easily grasped, he countered that those ideas were already dealt with abundantly in the published literature of the Society. His whole endeavor was to raise the student's consciousness out of the narrow confines of the purely personal into cosmic reaches where even the knottiest of human problems could be seen in truer proportion.

Obviously, then, the book presupposes some knowledge of basic theosophical thought. But does this mean it has little to offer those to whom these ideas may be new? Quite the contrary, for here is food for reflection for all seekers, whatever their spiritual or religious leanings; and equally for those who have broken away from their credal moorings and are seeking a philosophy of meaning to which they can anchor. In brief, it addresses itself to all who recognize the interrelatedness of human destiny to the cosmic design; who intuitively sense that the pilgrimage of man spans a multiplicity of lives on earth so that the soul in the course of ages can bring forth its latent godhood. Above all, it speaks to those who in

their most private moments feel the call of the inward way, to find the still, small path and take the ancient vow of self-dedication to the service of mankind.

There may be some, perhaps, who might wish that Dr. de Purucker had limited his use of foreign terms to the minimum, and presented the theosophical viewpoint simply, with a clear-cut exposition of theme. For in *Fountain-Source*, in tracing the descent of spirit into matter and its reascent to its pristine source, we read of lokas and talas, of planes and dhatus, of monads and sheaths.

There is sound reason for the use of so rich a terminology, drawn from the religious and philosophic treasuries of Orient and Occident. The root ideas are identic, but each lightbringer transmits his vision of Reality through the lens of his own initiatory experience. Consequently, every spiritual seer gives what appears to be a unique presentation, when actually he is simply clothing in different outer form the same occult verity. It was not only to enrich the understanding of those attached to a particular faith, but likewise to aid students of comparative religion, philosophy and mythology that Dr. de Purucker exhaustively demonstrates that the many and various names in the ancient literatures for God and the gods and their manifold functions are but variant manners of describing the *one* evolutionary process.

But the book is more than an orderly treatment of doctrine; rather is it a quickener of the intuition. If the reader can follow the author's sometimes tenuous yet always unbreakable sequence of thought, he may discover, in a sudden flash of insight, what H.P.B. was actually saying in this or that "difficult" passage. What was formerly baffling even to the very astute, may become, often without his brain-mind being aware of it, luminous with practical wisdom.

However, just because the volume before us consistently delineates this and that teaching in *The Secret Doctrine* or *The Mahatma Letters*, let it not be thought that the author regards the writings of H.P.B. or her teachers as "a final test of infallible authority, the way the Christians have set up their Bible and then worshiped it" -- to quote from a letter G. de P. wrote on June 14, 1932 to A. Trevor Barker. "If that were the case, we would never evolve. H.P.B.'s books would be sacrosanct. . . . We must stand for the principles of things. It is very important."

Time and again the author reminds us that the only authority, the only real initiator, for each individual is his own higher self. The paradox is that Dr. de Purucker does speak "as one with authority," the authority of profound spiritual experience. Because of this many, many doors are opened wide, although as many remain closed or only slightly ajar, awaiting the moment when the reader himself will give the knock that will open for him the doorway to the light of his own inner god. To place reliance solely on head learning, the eye doctrine, is to gain but little of permanent worth. It is the heart doctrine that should claim our allegiance, the heart wisdom that makes the impress on the soul.

Significantly, G. de Purucker, as early as 1935, publicly expressed the hope, if he could find "the time and strength so to do, to publish another volume or two containing Theosophical teaching" which up to then had been privately circulated. What had formerly been held as esoteric, he believed would even then be understood in greater measure, due to the "more awakened intelligence of modern men," as well

as to the increased "receptivity to new ideas [which] has created an entirely different and indeed fallow field of consciousness" (*The Esoteric Tradition*, p. x). While he himself was unable to accomplish this, one of these projected works, *The Dialogues of G. de Purucker*, representing the meetings of the Katherine Tingley Memorial Group, was issued in 1948 by Arthur L. Conger. Now with the publication of *Fountain-Source of Occultism*, both of these hoped-for volumes of hitherto esoteric material are available for students everywhere.

It is our deep regret that James A. Long, leader of the Theosophical Society from 1951 to 1971, did not live to see this work in finished form. But the guidelines he laid down in 1966 for the editing and preparation of the manuscript have been faithfully followed: to preserve the integrity of the teaching, both in atmosphere and content; to eliminate unnecessary repetitions; delete any purely organizational matters relating to the Theosophical Society or Esoteric Section; anglicize the spelling of those Sanskrit and other foreign terms now in current usage, such as karma, mahatma, etc.; and, where advisable, lift the presentation out of its private esoteric setting into a form suitable to public print. In brief, to condense and distill from the twelve booklets the marvelous treasury of wisdom contained therein so that the world may benefit.

As Mr. Long conceived Dr. de Purucker's intent:

All of this doctrinal esotericism is for one purpose, and one purpose only -- not merely to satisfy the intellect of the reader, but to lay the groundwork for the development of the compassionate side of our nature in order that we may better serve our fellow men.

That is the basic value of the book: to see beyond the spacial and cosmic presentation to the wellspring of compassion flowing from the heart of cosmos, to the galaxy, the solar system, our globe earth, to man. It is all a manifestation of a compassion beyond our ken.

Mention must here be made of the tireless and painstaking efforts of every member of the editorial and printing staff: Kirby Van Mater, archivist; John P. Van Mater, who checked the manuscript prior to typesetting and prepared the Index; to Dorothy LeGros and Eloise Hart for the several typings required; to Madeline Clark, Manuel Oderberg, Ingrid Van Mater, Elsa-Brita Titchenell, Sarah B. Van Mater, and Lawrence Merkel, for the arduous task of proofreading; and not least, to the editorial committee, A. Studley Hart, the late Willy Ph. Felthuis, and Ida Postma, all of whom worked with me long and diligently to make this book a reality.

On this Centenary of Gottfried de Purucker's birth, we gratefully acknowledge our spiritual indebtedness to one who kindled anew the fires of aspiration, believing that *Fountain-Source of Occultism* has power to inspire every earnest seeker for ages to come.

## Preface

"Live the life and ye shall know the doctrine" say the wise of all cultures and eras. If we were consistently to live the higher life we would experience the reality of the spiritual realms. Being in communion with one's higher self, one's inner master or guru, one is privy to its wisdom garnered through many lives of learning and evolving. Every human being is a child, a disciple, of his higher self, his inner monitor. Sooner or later he will come to realize that "living the life" means living in consonance with his noblest ideals. But how achieve this? How bridge the chasm between our aspirations and the pull of material interests that hold us in bondage?

In 1974 on the centenary of G. de Purucker's birth, Theosophical University Press published *Fountain-Source of Occultism*, a vast panorama of teaching about man and cosmos based upon *The Secret Doctrine* of H. P. Blavatsky. Preceding the philosophic discourses which form the greater part of the work, Dr. de Purucker inserted two sections he hoped would create in the reader the proper atmosphere for the doctrinal studies that would follow. Unless one approaches the temple of nature with a reverent heart, any knowledge gleaned along the way could in the end imprison the soul.

Since then, the demand for guidelines has intensified, with all types of minds seeking personal transformation by any means that will help them break through their limitations. As a result, brilliant insights are coming to the fore in several disciplines; at the same time, human nature being in the main unruly, acquisitive, and unthinking, the marketplace of ideas is a jungle of discordant claims. The hunger for experiential knowledge, whether earned or not, is proving a mixed blessing.

To answer the urgent call for guidance, for an Ariadne thread out of the labyrinth of psychic and mental confusion, we have reproduced in the present booklet these first sections of *Fountain-Source* so that the seeker may have readily to hand an inspired vision of the path before him. Time-honored rules of ethical and spiritual conduct are illumined, along with warnings against quick and easy methods. There is no shortcut to wisdom, no instant enlightenment, for inner unfolding takes place only from within; it cannot be induced artificially. And while the path to the gods, to conscious awareness of and union with our

inner divinity is long and often arduous, demanding our utmost in devotion, fidelity, and perseverance, it is also "bright with joy, and lighted with the fires of the spirit."

We are sustained by the knowledge that we and the whole of humanity are linked with the Hierarchy of Compassion: the Brotherhood of advanced human beings whose lives are consecrated to quickening and nurturing the seeds of altruism in the awakening soul.

### **Foreword to *Fountain-Source of Occultism***

A work of art stands or falls by its power to inspire. With a book such as *Fountain-Source of Occultism*, which treats of cosmic truths and man's timeless search for answers, all the more must its message stand or fall on worth alone. Of this G. de Purucker is pre-eminently aware; he does not profess to provide the definitive statement, the final word of truth. What he does offer is an illumined interpretation of the universal wisdom on which the Secret Doctrine of the ages -- and of H. P. Blavatsky's masterpiece of that name -- is founded.

Born on January 15, 1874 in Suffern, Rockland County, New York, de Purucker lived in the United States until the late '80's when the family moved to Geneva, Switzerland. His father, an Episcopal minister, had been appointed chaplain of the American Church there; a learned man and utterly committed, his inmost wish was to have his son ordained in the Anglican Communion. So he personally taught the boy Latin, Greek and Hebrew, had him tutored in modern European languages, as well as in the history and literature of Biblical peoples and of ancient Greece and Rome.

The youth applied himself with assiduity, but his was a profoundly inquiring mind, with a natural intuitive sense of what was spiritually true and what was counterfeit. Before he reached eighteen, he knew with certainty that he could not enter the church; that, in fact, no formal religion could ever bind him. The quest for the gnosis, the living wisdom behind the externals of rite and dogma, had taken powerful hold.

The shock to the parents was grievous: here was their son, destined from childhood for the ministry, able to read the Holy Scriptures in their original tongues, and trained in the functions and responsibilities of a pastor -- turned agnostic.

Deeply troubled, the young man left his home and studies in Geneva, sailed for America and, after spending a few months in New York, came to California where he worked on various ranches in San

Diego County. All the while he continued his search, "looking around me, right and left, trying to find the clue to the mysteries of life and death which were bothering me so badly." He bought books on the Tarot as well as on mind-healing, to find they did not satisfy. When he came across a translation of one of the Upanishads, he set to work to master Sanskrit, just as he had earlier perfected himself in Anglo-Saxon, believing with Heine, the poet, that "with every new language, one wins a new soul."

Then one day, he tells us, a small book on Theosophy fell into his hands, and "it startled me":

I saw high thinking! I felt that there was more in this book than what an agnostic had seen. My years of study and reading of the literatures of the world -- ancient literatures especially -- had taught me to recognize ancient truth when I saw it. I was fascinated with something that I had always known in my heart; and it was this, that there has always existed, and that there exists today, a band, a company, a society, an association, of noble Sages, great Seers, "Wise Men of the East," as this book called them.

We do not know the name of the book, but we do know that on August 16, 1893, Hobart Lorenz Gottfried de Purucker (later known as G. de P. to his associates) joined the Theosophical Society then headed in America by William Q. Judge, co-founder in 1875 with H. P. Blavatsky and H. S. Olcott of the modern theosophical movement. As a member of the San Diego Lodge and a regular user of their library, de Purucker helped organize a *Secret Doctrine* Class, and though only nineteen soon was appointed "permanent reader," moderating and guiding the studies of the members, most of whom were considerably older than he. For the next 49 years, to the day of his death on September 27, 1942, G. de P. gave of the fullness of himself in the service of his fellow men -- a service which was to find magnificent expression in his elucidation of the spiritual principles of theosophy.

Everything he said, in private or in public print, was an amplification of his youthful vision of the Oneness of the divine impress, and of the experiencibility of that Oneness by every human being. *Fountain-Source of Occultism* is no exception.

In July 1929, when Gottfried de Purucker succeeded Katherine Tingley to the leadership of the Theosophical Society with international headquarters then at Point Loma, California, he initiated a series of esoteric studies for the purpose of stimulating the seeds of altruism as well as of giving instruction in the deeper aspects of theosophy. No question was too simple, none too complex, for careful examination. He insisted, however, that always the 'scientific-philosophical' points of doctrine be infused with the 'ethical-mystical': only as one lived the teaching he learned about would it yield its esoteric content.

The present volume derives from twelve booklets of instruction privately printed in 1936. These had been compiled by a small committee under Dr. de Purucker's general supervision from the stenographic reports of esoteric meetings held by him from 1929 to 1933, to which he added certain relevant passages from his published works, as well as a copious amount of fresh material on a wide variety of subjects.

Of particular interest is the order of presentation, as he had himself arranged this with exceeding care. His primary concern, he explained, was to allow the student at the outset -- before he might be caught up by the fascination of the highly philosophical teachings later developed -- full opportunity to absorb the ideal of unselfish service, which marks the path of compassion chosen by mankind's spiritual Mentors. Moreover, when asked why he had started off the strictly doctrinal portion of the series with an abstruse treatise on Space and Maya, instead of with the practical themes of karma and rebirth which are easily grasped, he countered that those ideas were already dealt with abundantly in the published literature of the Society. His whole endeavor was to raise the student's consciousness out of the narrow confines of the purely personal into cosmic reaches where even the knottiest of human problems could be seen in truer proportion.

Obviously, then, the book presupposes some knowledge of basic theosophical thought. But does this mean it has little to offer those to whom these ideas may be new? Quite the contrary, for here is food for reflection for all seekers, whatever their spiritual or religious leanings; and equally for those who have broken away from their credal moorings and are seeking a philosophy of meaning to which they can anchor. In brief, it addresses itself to all who recognize the interrelatedness of human destiny to the cosmic design; who intuitively sense that the pilgrimage of man spans a multiplicity of lives on earth so that the soul in the course of ages can bring forth its latent godhood. Above all, it speaks to those who in their most private moments feel the call of the inward way, to find the still, small path and take the ancient vow of self-dedication to the service of mankind.

There may be some, perhaps, who might wish that Dr. de Purucker had limited his use of foreign terms to the minimum, and presented the theosophical viewpoint simply, with a clear-cut exposition of theme. For in *Fountain-Source*, in tracing the descent of spirit into matter and its reascent to its pristine source, we read of lokas and talas, of planes and dhatus, of monads and sheaths.

There is sound reason for the use of so rich a terminology, drawn from the religious and philosophic treasuries of Orient and Occident. The root ideas are identic, but each lightbringer transmits his vision of Reality through the lens of his own initiatory experience. Consequently, every spiritual seer gives what appears to be a unique presentation, when actually he is simply clothing in different outer form the same occult verity. It was not only to enrich the understanding of those attached to a particular faith, but likewise to aid students of comparative religion, philosophy and mythology that Dr. de Purucker exhaustively demonstrates that the many and various names in the ancient literatures for God and the gods and their manifold functions are but variant manners of describing the *one* evolutionary process.

But the book is more than an orderly treatment of doctrine; rather is it a quickener of the intuition. If the reader can follow the author's sometimes tenuous yet always unbreakable sequence of thought, he may discover, in a sudden flash of insight, what H.P.B. was actually saying in this or that "difficult" passage. What was formerly baffling even to the very astute, may become, often without his brain-mind being aware of it, luminous with practical wisdom.

However, just because the volume before us consistently delineates this and that teaching in *The Secret*

*Doctrine or The Mahatma Letters*, let it not be thought that the author regards the writings of H.P.B. or her teachers as "a final test of infallible authority, the way the Christians have set up their Bible and then worshiped it" -- to quote from a letter G. de P. wrote on June 14, 1932 to A. Trevor Barker. "If that were the case, we would never evolve. H.P.B.'s books would be sacrosanct. . . . We must stand for the principles of things. It is very important."

Time and again the author reminds us that the only authority, the only real initiator, for each individual is his own higher self. The paradox is that Dr. de Purucker does speak "as one with authority," the authority of profound spiritual experience. Because of this many, many doors are opened wide, although as many remain closed or only slightly ajar, awaiting the moment when the reader himself will give the knock that will open for him the doorway to the light of his own inner god. To place reliance solely on head learning, the eye doctrine, is to gain but little of permanent worth. It is the heart doctrine that should claim our allegiance, the heart wisdom that makes the impress on the soul.

Significantly, G. de Purucker, as early as 1935, publicly expressed the hope, if he could find "the time and strength so to do, to publish another volume or two containing Theosophical teaching" which up to then had been privately circulated. What had formerly been held as esoteric, he believed would even then be understood in greater measure, due to the "more awakened intelligence of modern men," as well as to the increased "receptivity to new ideas [which] has created an entirely different and indeed fallow field of consciousness" (*The Esoteric Tradition*, p. x). While he himself was unable to accomplish this, one of these projected works, *The Dialogues of G. de Purucker*, representing the meetings of the Katherine Tingley Memorial Group, was issued in 1948 by Arthur L. Conger. Now with the publication of *Fountain-Source of Occultism*, both of these hoped-for volumes of hitherto esoteric material are available for students everywhere.

It is our deep regret that James A. Long, leader of the Theosophical Society from 1951 to 1971, did not live to see this work in finished form. But the guidelines he laid down in 1966 for the editing and preparation of the manuscript have been faithfully followed: to preserve the integrity of the teaching, both in atmosphere and content; to eliminate unnecessary repetitions; delete any purely organizational matters relating to the Theosophical Society or Esoteric Section; anglicize the spelling of those Sanskrit and other foreign terms now in current usage, such as karma, mahatma, etc.; and, where advisable, lift the presentation out of its private esoteric setting into a form suitable to public print. In brief, to condense and distill from the twelve booklets the marvelous treasury of wisdom contained therein so that the world may benefit.

As Mr. Long conceived Dr. de Purucker's intent:

All of this doctrinal esotericism is for one purpose, and one purpose only -- not merely to satisfy the intellect of the reader, but to lay the groundwork for the development of the compassionate side of our nature in order that we may better serve our fellow men.

That is the basic value of the book: to see beyond the spacial and cosmic presentation to

the wellspring of compassion flowing from the heart of cosmos, to the galaxy, the solar system, our globe earth, to man. It is all a manifestation of a compassion beyond our ken.

Mention must here be made of the tireless and painstaking efforts of every member of the editorial and printing staff: Kirby Van Mater, archivist; John P. Van Mater, who checked the manuscript prior to typesetting and prepared the Index; to Dorothy LeGros and Eloise Hart for the several typings required; to Madeline Clark, Manuel Oderberg, Ingrid Van Mater, Elsa-Brita Titchenell, Sarah B. Van Mater, and Lawrence Merkel, for the arduous task of proofreading; and not least, to the editorial committee, A. Studley Hart, the late Willy Ph. Felthuis, and Ida Postma, all of whom worked with me long and diligently to make this book a reality.

On this Centenary of Gottfried de Purucker's birth, we gratefully acknowledge our spiritual indebtedness to one who kindled anew the fires of aspiration, believing that *Fountain-Source of Occultism* has power to inspire every earnest seeker for ages to come.

## Foreword

"Born of the moon, children of the sun, offspring of the stars, and inheritors of the cosmic spaces . . . we and the Boundless are in essence not twain but one." Truly, we humans are wondrously fashioned of the elements of the universe, but we have lost touch with our ancestral heritage and know not where to turn.

Fifty years ago Gottfried de Purucker succeeded Katherine Tingley as international leader of the Theosophical Society, and shortly thereafter instituted regular esoteric studies in order to strengthen the understanding of the members as to the basic goals of the Society, and to awaken them to the deeper dimensions of the spiritual life. These studies were pursued not only by the resident staff, but also by the membership throughout the world.

Two years later, while on his 1931 lecture tour in Europe, Dr. de Purucker announced that henceforth, commencing with the forthcoming Winter Solstice, special quarterly gatherings would be held at headquarters in recognition of the "great spiritual and psychical events" that take place, if the karma is propitious, at the four sacred seasons of the year, namely, the Winter Solstice, Spring Equinox, Summer Solstice, and Autumnal Equinox. The seasonal meetings were subsequently also held in various national centers until World War II. In 1945 they were again held, both at headquarters and abroad, until they were discontinued after the Autumn Equinox of 1950.

For these occasions, Dr. de Purucker gave teachings relevant to the respective season, so that the sublime experiences that the prepared candidate for initiation would one day undergo might, even now, become a living ideal. Key lines of teaching, already treated of in the published literature, on Buddhas and Avatars and their close relationship to mankind, the circulatory routes of the solar system followed automatically in sleep and death and with full awareness in initiation -- these and other salient doctrines are here brought together into an illumined synthesis.

As we read and reflect on the panorama of thought that is opened before our consciousness, we are profoundly moved: we intuitively respond to the stream of altruism flowing in unbroken continuity from the Silent Watcher of our Earth, through the Bodhisattvas and the Christs, on down to us ordinary human beings. And we are assured that if there is the merest stirring in the soul to bend one's energies of heart and head toward lifting the weight of human sorrow, then one already, however unknowingly, places himself in alignment with the beneficent currents of nature. Ultimately, if the aspiration is pure and the will sustained, he may become a conscious helper of the Great Ones in their self-sacrificing labors for mankind.

These seasonal readings, now made public for the first time, are reproduced in toto from the original manuscripts with minimal editing. They are shared after a near half-century in response to the increasing demand for a lucid and informed presentation of what initiation really is.

## Compilers' Preface

Since Dr. de Purucker's death two collections of writings left by him have been published. *Messages to Conventions* appeared in 1943. That was a manual of inspired advice to all Fellows of the Theosophical Society interested in the policies, work and purposes of the Theosophical Movement. *Wind of the Spirit* was published in 1944. This presented the devotional and practical aspect of Theosophy, illuminating the Way for each individual as he tries to live the life. *STUDIES IN OCCULT PHILOSOPHY* now presents the deep philosophical and mystical reaches of theosophical doctrine. Very fittingly then, these three volumes cover the organizational, the devotional, and the scientific-philosophical -- the triangle of Wisdom which gives power, understanding and vision to the aspirant, lacking any one of which he is as a disciple incomplete.

In this present volume are found no new and fanciful bypaths beaten out and attractively advertised. Its metes and bounds are always the original doctrines presented by H. P. Blavatsky and the Masters. But

within these bounds the drilling and the boring sinks deep, and therefore it would be a mistake to consider it a primer in occultism or a simple introduction to Theosophy. Its appeal is to the mind already bound to Theosophy, already dedicated to a constant and determined search for truth. It needs no apologia, no special championing from those already persuaded of its inherent value to the theosophical cause. But the gauge by which it should be measured is broader than this. Acceptance or rejection must in the last analysis come from all students of H. P. B.'s writings, to whatever branch of the great Movement they belong. They must be willing, however, to bring to its consideration minds frankly and openly impartial. This at least is to be expected of those who claim to have placed Truth above all lesser objectives, that Truth which H. P. B. described as "high-seated upon its rock of adamant, alone eternal and supreme."

Surely the time has passed in the slow onward moving of Theosophical activity when the craze for signs and wonders holds attraction. Such are for the fainthearted, as H. P. B. says. What we look for in all Theosophical writing is an explanation of life and its multitudinous mysteries, the presentation of a "philosophy of the rational explanation of things."

A few words may be necessary about the contents of the book itself. The "Transactions of the Headquarters Lodge," which include *The Secret Doctrine* and *The Mahatma Letters* series, were talks given at the regular lodge study-evenings at International Headquarters. At these meetings Theosophical books were studied, the topic being presented by some speaker and followed by general discussion. Then it was G. de P.'s custom to pick up the threads of the ideas brought up and to weave them into a coherent picture, correcting misconceptions of teaching, strengthening weak points of logic, explaining seeming contradiction or paradox. It was not his effort to give an exhaustive treatise on any subject, nor do the Compilers feel that this present collation presents the complete philosophy. Its value lies in the richness of hints thrown out, and as a record of what was actually for over a dozen years studied by the group at Headquarters. It likewise shows the wide range of theosophical doctrine with which G. de P. was conversant, his grasp of fundamentals and of details, as well as his manner of teaching, which was not labored or planned, but given extemporaneously and with no attempt to parade a finished style.

In the Question-and-Answer Section the questions for the most part have been left as originally formulated by the questioner. They include inquiries from students scattered all over the world, many of which appeared currently in *The Theosophical Forum*, and many others of which have been gathered since G. de P.'s death from letters he wrote to students. The Compilers are particularly indebted to scholars at Theosophical University for material thus made available -- C. J. Ryan, Judith Tyberg, Emma D. Wilcox, A. J. Stover, L. G. Plummer, Grace F. Knoche.

The longer articles are from varied sources. 'The Doctrine of Tulku' was written for the Encyclopedic Theosophical Glossary, edited by G. de P., still in manuscript; 'Buddhas and Bodhisattvas' appeared in *The English Theosophical Forum*; 'Occultism and Psychic Phenomena' and 'Immortality and Continuity' are reprints from *The Occult Review* (London); 'Is it Right to Practise Hypnotism?' is condensed from *The Occult Review*; 'Survey of the Teachings on the Planetary Chains' is from a letter to a student.

With full appreciation of their responsibility in the preparation of this material, the Compilers, as in the two preceding books, have avoided anything but the most necessary editing and therefore have refrained from even such documentation as might by some be considered helpful in a work of this recondite nature.

For invaluable help in checking certain scientific data the Compilers have had the assistance of Dr. Charles J. Ryan and Dr. Henry T. Edge.

Finally, it should be on record that there are certain articles which G. de P. never saw in transcription. These are listed at the end of this volume.

## **PREFACE (to Volume 1)**

Shortly after assuming the Leadership of the Theosophical Society on July 11, 1929, Dr. G. de Purucker formed the Katherine Tingley Memorial Group in commemoration of the lifework of his predecessor, Katherine Tingley.

For thirteen years this group, composed of members of the Esoteric School, held regular meetings at the International Headquarters -- formerly located at Point Loma, but in June 1942, removed by Dr. de Purucker to Covina, California. During this period stenographic reports of these sessions were privately printed and distributed to the group, whose membership had extended throughout the United States, Europe and Asia. Unless specifically stated, as in the case of the few KTMG meetings held in Europe while G. de P. was on lecture tours, it is to be understood that the meetings were held at the international headquarters.

The time has come when that which has "been kept secret from the foundation of the world" should be made public. Authorized now to do this, I but fulfill G. de P.'s prophecy when he said:

I can see very clearly that the time will probably come when what we now call esoteric we shall publish broadcast, because the time will have come to do so. But that does not mean, if you please, Companions, that any one of you is entitled to break his oath of secrecy. It is not for me to say when. It is for Those who know more than any one of us here. But I can feel that it is coming. -- *Meeting of May 26, 1942*, pp. 177-8.

Especial thanks are given to the members of the committee who have worked daily with me for the past several months. They are Mary W. Peyton, Martha R. Franklin, A. Studley Hart, Hazel Minot, Grace Frances Knoche, and James A. Long. Because of their close association at the Headquarters with the KTMG activities since their inception, Mrs. Minot and Miss Knoche contributed valuable aid in the preparation of the manuscript.

The present volume comprises papers One to Ten, plus additional material given by G. de P. while the Headquarters Group was studying Papers One to Four. These supplements will be of interest, not only

for the richer light thrown on the subjects handled by G. de P. during the early years of his teaching, but also because they have not hitherto been circulated outside the Headquarters Group. Volumes Two and Three, to be printed subsequently, will complete the series of 36 papers plus supplements, with index in the third volume.

This has been a labor of fidelity and love, and it is my belief that the earnest student whose resolve equals his aspiration will find in these *Dialogues* between teacher and pupil that path leading him to the "terrace of enlightenment."

A. L. CONGER. *International Theosophical Headquarters,*  
*Covina, California,*  
*January 15, 1948.*

## Conclusion

September 26, 1933

### ***Consummatum Est***

Companions, I have on a few occasions received word from members of the ES and from a few members of the KTMG throughout the world, asking for directions in training. The phrase ran in substance in one communication: "Dear G. de P., cannot you give us some esoteric training in the ES and the KTMG so that we can *live* by it? The teachings themselves are beautiful and helpful, but I would like to know a few rules showing me how to *live*."

Companions, you know me well enough to realize that I would not say an unkind word about anyone, yet I will tell you frankly that I was hurt, and have been hurt, when receiving these communications, which although not numerous yet do reach me from time to time. They have amounted all told to about ten, possibly twelve; and I will now tell you why I have been somewhat distressed. What these dear people were really after was instructions in what they thought was yoga training. What they really craved was hatha yoga exercises. They wanted instructions as to concentrating the mind at certain hours, and to be shown the best way of doing it, and to be told what positions the body should take, and to be given astrological instructions as to concentrating in the proper planetary positions, and so forth.

Now I will tell you something really important, and I ask your most earnest attention. Your pledge, if you will only *live* it, and not merely talk about it, will be all the training that your mind and heart and imagination can possibly understand and follow. "Live the life and you will know the doctrine." Live the life and you will achieve masterhood. The whole effort in our ES today is exactly the same as what it was in HPB's Esoteric School, for hers and ours are one and have always been the same. The ES is a distinct school of training in chelaship and is an attempt to develop our students so that by living the life

they may grow inwardly, so that they may develop their spiritual and intellectual and psychical faculties and powers. I will tell you frankly and once and for all that you will never develop these powers by any yoga practices whatsoever -- never! It simply cannot be done. It is a running after will-o'-the-wisps of faulty imagination. This is my only objection, as it was KT's, to these itinerant yogis from the East traveling around and teaching yoga -- usually for a price. The doctrines of the Vedanta that they teach are usually beautiful as doctrines; and if they are the teachings of the genuine Vedanta these teachings are unquestionably fine. If they are of the genuine Vedanta of the adwaita cycle, they are mostly our own doctrines; but these doctrines by themselves and without the esoteric keys that are given in the ES do not emphasize the need of ethical living, of noble thinking translated into noble action. And I will tell you that if you follow the pledge which HPB gave to us, and which we now have, you will have all the yoga exercise that you can possibly manage to take care of. Certain ones of the higher yoga exercises are good and are occasionally followed by our Masters' own chelas for specific and particular reasons; but usually, if not always, they are followed in the cases of less advanced chelas whose lower principles are so strong that they need particular subjugation.

There is no true school of occultism outside our Masters' own circles which is known to me, except our own; and we in the ES follow the age-old precepts of the Masters of wisdom and compassion, as they have been handed down to us from immemorial time: live nobly, think nobly, feel nobly, do your duty to all at all times and in all places, and by all men. Speak the truth, fear naught, stand up for others when they are unjustly attacked; never add your voice to the burden of condemnation of others. Rules like these are the rules that our chelas follow; and I tell you truly that you will have your hands full and your mind full and your heart full in following them. And, in addition, if you wish to undertake another aspect of the chela training, one which is the invariable practice in our own School, then follow the teaching of the ten paramitas of Buddhism, which are always followed in the true schools of esoteric training, and which we attempt to follow in our ES. The paramitas are ten, sometimes they are enumerated as seven, sometimes as six. The six are the easier; the seven are a little more difficult; and the ten are for those who intend to devote all their life, and the next life perhaps, and possibly the next life after that, to that resigning of the lower self to the higher in service to the world.

There, in these rules, is the whole path of achievement. The Masters have no other training than what I have told you, and it is the same that their chelas invariably follow; only the Masters follow this training more grandly, and on a scale which is wider, and with reaches which are much more extended than their chelas can comprehend. I might say without feeling that I am wandering into hyperbole, that the very gods follow the same thing, inasmuch as they live for the universe; and I trust that the day will never come when our School will see the introduction of hatha yoga practices of any kind! Should it so happen, it will mean that our School has broken the link and is on the way to mere quasi-secret, sectarian degeneration.

Please close the meeting.

[The sounding of the gong. Silence.]

## **Compilers' Preface**

This book is published in commemoration of the passing of Dr. G. de Purucker on September 27, 1942. Since that memorable date the fellowship of the Theosophical Society (Covina) will have been expecting some such recognition of their late Leader, knowing that in his many still unpublished addresses and official pronouncements there was a wealth of Theosophical teaching that would sooner or later be compiled into one or more books. Sharing the thought of the general fellowship, the Cabinet of the Society and the Literary Department at Headquarters have given the matter thoughtful consideration, and this first book, posthumously issued, is the result.

But it is not a book of technical teaching. It is a book stating the policies of the T. S. In the light of G. de P.'s years of leadership it is interesting to have these policies, as presented at various places and times and covering a period of thirteen years, gathered together for study and reflexion. Open to the obvious criticism of some repetition, the articles and addresses have been left by the compilers as originally given, without doctoring, in order to show the consistency of aim and objective which stamped G. de P.'s work and achievement; and in order to emphasize the fact that his words in this book with an almost dogged and urgent persistence hammer home the same traditional and wise policy first inaugurated for the T. S. by H. P. Blavatsky.

It should not, however, be merely interesting to note this. It is vital. If the T. S. is to live and to thrive, this same policy as given by H. P. B. must be part of the blood and tissue of each of the component parts of the wide-spread Theosophical Movement, that is, it must be known, understood, studied and practised

by every F. T. S. in all of the various Theosophical Societies. That way alone can life be assured them. Otherwise they die. This recognition of the original policy is far more important than an outer unification of these Societies, for in effect it would be the most radical step in that direction. If we fail to be thus guided the T. S. will perish either from cancerous growths or from gradual but none the less certain atrophy.

"The Theosophical Movement today," writes G. de P. in this book (*vide* the article, "Back to Brotherhood," p. 195), "is reaping the karmic consequences of past errors, and, alas, in many cases, of mistaken views. But this very fact makes it incumbent upon all those possessed of some Theosophical influence, however small, to aid in guiding our common ship towards the spiritual North Pole towards which in the beginning its course was set by the Masters of Wisdom and Compassion and Peace."

To aid us steer our course by the light of that Star is why this book is now published.

In several more months, if present plans mature, a book on Theosophical teaching will follow, possibly two books. In the meantime it is not perhaps more teaching that we all need, but application in daily life of what we have learned.

\* \* \* \*

Only a brief word is needed about the arrangement of this volume. The first section includes Dr. de Purucker's Letters and Addresses to Conventions between the years 1931-1939. For historical purposes the date and place of each Convention are given.

The second section contains editorials. These were published in THE THEOSOPHICAL FORUM between the years 1937-1942. Exceptions to this are the articles "Back to Brotherhood," which first appeared in *The Occult Review*, London, July 1932, and the article "What is Technical Theosophy?", which was an answer given to a question asked at the Convention of the American Section, Boston, on October 15, 1933.

The third section contains extracts from general letters to the membership and personal letters to F. T. S. In the latter case these are reproduced with the permission of the recipients.

References to Point Loma, California, as the International Headquarters of the T. S. are of course left as historically correct, as the moving of the Headquarters to its present location near Covina, California, did not take place until June 2, 1942. This move marked in a very definite way the last important official act of Dr. de Purucker's life.

*About the Author:* James A. Long was born on August 27, 1898, at York, Pennsylvania. Following a career in private business, he worked during WWII as a management consultant in the office of the Quartermaster General in Washington, DC, and was later transferred to the Department of State where he assisted in the change over to peacetime responsibilities. While there he was sent as an Advisor to the US Delegation to the United Nations at the opening of the Second Session in 1946.

Mr. Long joined the Theosophical Society in 1935 and was appointed business manager of its American Section in 1939. Upon retirement from government service in 1947, he moved to the Society's headquarters in California where he continued to work closely with Colonel Arthur L. Conger whom he succeeded as international head in 1951. That same year he founded *Sunrise* magazine and in 1965 the Sunrise Library series of books as vehicles for better understanding among all peoples. Mr. Long led the Theosophical Society until his death on July 19, 1971.

## Foreword

Following in the footprints of sages of a hundred past generation, I sow the beautiful seed for thousands of years to come. -- I-tsing, 7th-century Chinese Buddhist Scholar

Legendary and written tradition testify to the presence throughout time of a brotherhood of men and women scattered over the face of the globe who resonate with the spiritualizing impulses reaching earth from higher regions. Their recognition of one another is not dependent on outer insignia but on inner communion. Such was the case with I-tsing, translator into Chinese of hundreds of Buddhist Sanskrit texts, and his assistant, Cheng-ku. When they met it was as though they had known each other "from former days," and after becoming conversant with the largeness of their mission Cheng-ku said to I-tsing:

When Virtue wishes to meet Virtue, they unite themselves without any medium, and when the time is about ripe, no one can stay it even if they wanted.

Shall I then sincerely *propose* to propagate our Tripitaka [the "Three Baskets" or major divisions of the Pali Canon] together with you, and to help you in lighting a thousand lamps? -- *A Record of The Buddhist Religion as Practised in India and The Malay Archipelago (A.D. 671-695)* >, I-tsing, p. xxxvi.

When virtue meets virtue -- how better describe the experience of intuitive recognition? Perhaps this may explain, in part at least, the global awakening now taking place, where thousands of men and women of varying interests and backgrounds, knowingly or unknowingly, are on the same wavelength: they are fired with the urgency to do all in their power to help turn humanity from senseless self-destruction to thoughtful self-regeneration. They labor for the safeguarding of human dignity and self-worth, for the protection of our planet, and for the building of a new type of civilization founded on the brotherhood of all life and the joyous collaboration of peoples and races for the benefit of the whole of humanity.

At the same time, this is a period of great uncertainty, when all that human beings most value is being weighed in the balance. Will we individually and collectively have the insight and courage to make the transformation from egocentricity to a perspective of planetary and solar dimension? In fact, this is already happening in the quiet, like the seed germinating under the snows of winter. So, rather than concentrate on the ugly and poisonous in human relationships, let us celebrate the joy of life. From the wonder of birth to the still beauty of death -- both phases of *life* -- all is transformation, change, flux, ebb, and reflux. The outbreathing of divinity brings worlds, humans, atoms, and suns out of the Unknown into visibility, enabling each to express a little more of its potential. The cycle completed, the inbreathing, inrolling, or withdrawal of the life energy follows, the shedding of forms releasing consciousness once again into realms vastly ethereal.

There is never a poison but nature has an antidote. Just as scientific ingenuity has provided us with the means of race suicide, so current efforts to synthesize Western scientific intuitions with Eastern mystical thought are furnishing us with tools for our emancipation -- *if* we have the heart and the will to utilize them for beneficent ends. Take, for instance, the concept that the physical universe is analogous to a hologram, where the three-dimensional image may be projected from any portion of the negative: this is extremely suggestive, especially if applied to the human being as a spiritual intelligence. Moreover, it is a striking parallel to the wisdom-teaching once held worldwide that every life-spark comprehends the

whole.

By various metaphors an ancient Buddhist sutra brings the point home that every being and thing partakes of buddha-essence. In one example, it envisions the Primal Buddha (Adi-Buddha) on a thousand-petaled throne, each petal a universe which comprises a hundred million worlds, each of which in turn has its own suns and moons and minor buddhas of the stature of Gautama, who himself is "a minute portion" of the original essence of Buddha. So likewise every particle of dust contains "Buddhas without number." (*Avatamsaka-sutra* (Flower Garland Sutra, *Kegon-sutra* in Japan). Cf. *Japanese Buddhism* by Sir Charles Eliot, pp. 108-10)

Small wonder that people through the ages have venerated gods as races of beings whose obligations toward their earth children -- immature gods -- impelled them to remain among the young humanities until they were off to a sound start. Their protection will never cease: karmic links of compassion and responsibility were forged in long-ago world cycles of evolution. We too are bound by unbreakable ties with the kingdoms younger than our own, and in like manner by karmic necessity in future cycles will aid them by stimulus and love.

Pursuing the thought further, we intuit something of what the sacrifice of a Gautama or a Jesus means to us today. The Christian dogma of Vicarious Atonement hides a profound esoteric fact: the divine concern that prompts a bodhisattva or christos to embody on earth is, in very truth, a continuing benediction. This means that humanity is now, as it ever was, the beneficiary of the ongoing altruistic labor, not only of enlightened ones who periodically embody among us, but also of the acts of love of unnumbered people who, consciously or unconsciously, inspire others to light their own lamp of compassion.

In every age and among every people are born those to whom matters of the mind and spirit are of paramount importance. Almost from birth they seem guided by an inner compass to search out the hidden, causal springs of human existence and learn how they might effectively help ease the burden of human sorrow. Perhaps they are revivifying a quest anciently begun in former lives. Certainly there is a mystic knowledge that speaks to the soul, a boon granted those who qualify by lives of dedication to truth and to humanity's need. Known by many names in different eras, this god-wisdom has been handed down through the millennia as a sacred trust by generations of sages who through initiatory experience have verified the facts of Being. Pivotal in the current awakening was Helena Petrovna Blavatsky who inspired all who were receptive to "sow the beautiful seed" of theosophic wisdom far and wide for succeeding generations.

At the onset of a new century and a new millennium, this study is offered in profound gratitude to HPB and what her sacrifice and magnificent philosophy have meant to the world and to the writer. -- G.F.K.

## Acknowledgments

Every book represents the efforts of many people, and I wish to express my gratitude to each and every member of the editorial and printing staff. More particularly, I thank Eloise Hart for bringing together the initial material, much of it originally having appeared in *Sunrise* magazine, Sarah Belle Dougherty for her editorial assistance and for the index, Jean B. Crabbendam for checking the index, Elsa-Brita Titchenell for invaluable help in the revision process, Jim and Ina Belderis for checking the quotations, Randell Grubb for his assistance throughout and for assembling the references, and Will Thackara for his valued critique and for supervising the book's production.-- G.F.K.

Seek this wisdom by doing service, by strong search, by questions, and by humility; the wise who see the truth will communicate it unto thee, and knowing which thou shalt never

again fall into error. . . . There is no purifier in this world to be compared to spiritual knowledge; and he who is perfected in devotion findeth spiritual knowledge springing up spontaneously in himself in the progress of time. -- *Bhagavad-Gita* 4:34-5, 38 (Judge Recension)

## Foreword

A Mystery school is a university of the soul, a school for the study of the mysteries of the inner nature of man and of surrounding nature. By understanding these mysteries, the student perceives his intimate relationship with divinity, and strives through self-discipline and devotion to become at one with his inner god.

This book attempts to present certain fundamental lines of teaching which it is hoped will give a more or less clear picture of what a Mystery school really is. Full and specific knowledge of the Mystery schools -- where they have been, where now they function, what are their chief characteristics -- has not been given out. Modern historians of the Greek mystery centers, for example, marvel at how well the rule of secrecy imposed upon the candidates was kept. This does not pertain to the public aspect, such as the fourteen-mile procession along the Sacred Way from Athens to Eleusis in which men, women, and children participated. But "the rites of the Greater Mysteries . . . the true secrets of the *teletai* [initiation proper] and the *epopteia* [the culminating vision] have never been divulged."

The student can find, however, a generous amount of information scattered here and there in the literatures of the past and can build up for himself a coherent picture of the pageantry of the Mystery schools, a picture which will turn into the reality of experience only as he becomes inwardly prepared through lifetimes of dedication and the study and practice of the ancient wisdom.

That which can be discovered by the sincere student may be likened to our knowledge of the atom. Who, for example, has ever seen the *real* atom? What microscope has penetrated the secret of its existence? Yet today we know more about the atom with its electrons than has been revealed for centuries. Although invisible to both eye and lens, scientists have detected the *flash of its track*, its "way of light"; through diligent and painstaking labor they have studied this way of light until, through inference and evidence, the structure of the atom and its components, its almost spiritual origin, has been revealed.

Thus with the Mysteries: as we look at the pages of history, and further into the mist of unrecorded time, we do not see the schools themselves, but through study and devotion we may glimpse the flash of their track, their way of light. From inference and spiritual testimony we can trace the pageantry of the light-bearers as they have passed from age to age, inaugurating the grand religions and philosophies of the human race. Some of these lights shine with immense glory, others with less strength, while still others are but fitful gleams of half-understood truth.

The physicist cannot point to the physical atom, yet he knows it exists as the basis, the foundation, of all matter; the student of theosophy cannot show you a Mystery school, yet he knows it exists as the heart

or atomic center of the spiritual and intellectual life of the planet. Who then would dare assert the non-existence of the Mysteries, of this potent atom of esotericism, when luminous traces of spiritual power are seen scattered all over the world? If our physical bodies are rooted in invisible fiery lives, why should not our human spiritual, intellectual, and moral bodies likewise have their origin in the spiritual and intellectual fire-mist of the planet?

An uninterrupted history of the occult network of the human race is not available to us today, for such records are the guerdon of the pledged disciple, but with the powerful lens of the ancient wisdom we can study the way of light flashed forth by each lightbearer over the centuries; can recapture the atmosphere of the ancient temples; can discern the purpose of the schools, their methods of teaching; and, last but not least, can learn of the strong discipline imposed upon the candidates seeking initiation into the knowledge of their secret origin and their still more secret destiny.

The author's debt to theosophy as presented by H. P. Blavatsky cannot be measured. One can only hope that the present study will encourage those new to her writings to drink deep of the springs at their source.-- G.F.K.

Knoche, Grace F. (1909 - 2006)

Grace F. Knoche died peacefully at her home in Altadena, California, on February 18, 2006. As editorial assistant to James A. Long, founder of Sunrise, Grace was central to the magazine from its inception in 1951 and became editor on Mr. Long's death in 1971. For 55 years Sunrise has been shaped by her intelligence, wide-ranging interests, feeling for language, and desire to promote universal brotherhood as a practical reality in human life. Grace was born February 15, 1909 at the international headquarters of the Theosophical Society, then at Point Loma, California. There she attended the schools founded by Katherine Tingley, receiving a PhD from Theosophical University in 1944. In the 1930s and '40s she worked on the headquarters staff in the Press and in the secretarial and editorial departments. She also taught violin, Greek, Sanskrit, and Hebrew at Theosophical University, and painting and sculpture to younger students at the Lomaland School. After serving as private secretary to two leaders of the Theosophical Society, Colonel Arthur Conger and James A. Long, she became leader herself in 1971. Besides her many magazine articles, she authored three books: *The Mystery Schools*, *To Light a Thousand Lamps*, and the forthcoming *Theosophy in the Qabbalah*.

# Does Chance or Justice Rule Our Lives?

Essay by

**NILS A. AMNEUS**

Author of LIFE'S RIDDLE

---

Originally published by Thomas Amneus, Los Angeles, CA. Theosophical University Press electronic version ISBN 1-55700-156-1.

In the following discussion the "Law of Cause and Effect" refers to the orderly processes which operate in nature according to which the same cause always produces the same effect. If this law operates in human affairs and we reap the effects of our own acts, our lives are governed by justice; if not, they are governed by chance.

## **A VITAL PROBLEM**

### **Conflict of Facts and Ideas**

Our observations of everyday life show that there is a great deal of injustice and a great deal of chance in the world. We see many instances where the innocent suffer while the guilty escape; where the honest fail while the dishonest prosper. We see many cases where the carelessness of some will cause accidents that may bring misfortune and death to innocent victims. We see a great injustice in the uneven distribution of wealth and the opportunities of life. We see some children born healthy while others are born invalids, some born to the most favorable circumstances, while others are born into wretched conditions. Is it any wonder, then, that we should ask ourselves the question: "Does Chance or justice rule our lives?"

If we turn to the Christian scriptures for an answer we find such statements as the following: "Judge not that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measures ye mete, it shall be measured to you again." (*Matt.* vii, 1, 2.) and ". . . all they that take the sword shall perish with the sword." (*Matt.* xxvi, 52.) In *Galatians* vi, 7, St. Paul says: "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap." Similar statements are also found in

other great religions of the world. From such statements we are led to believe that men's lives are governed by justice. Man's intuitions and his sense of moral values also tell him that justice must rule, but our observations of life do not bear this out. On the contrary we see a contradiction, a clash, an unbridgeable gap between the reign of law and justice that *ought to be* on the one hand and the facts and experiences of every-day life on the other. This glaring contradiction of *what is* and *what ought to be* presents a problem that has puzzled thoughtful people in all ages, and many have dropped it, despairing of ever finding a solution.

Man's failure to demonstrate that justice rules in human affairs has led to very serious consequences. It has undermined man's faith in religion and removed an important incentive to right action: the assurance of reward. A disbelief in justice is a belief in chance and this gives encouragement to selfishness and all kinds of wrongdoing by holding out hope that the wrongdoer may escape the effect of his evil deeds.

The selfishness of the individual, reinforced by the belief that he may escape the effect of his evil doing, is the main cause of the disharmony, strife and warfare in the world today, for the action of the nation, the party, the small group is simply the collective action of individuals. The ideas that govern individual action will eventually govern national action, and as nations act they determine the fate of civilization. We see the truth of Plato's statement: "Ideas rule the world." The idea that we can escape the consequences of our acts has given free rein to selfishness, brutality and international lawlessness, which threaten to destroy our Western civilization. A solution of the problem of injustice, then, is vital to the world's welfare. As conditions in the world ultimately can be traced back to the thoughts and actions of individuals, let us study the effect that the unsolved problem of injustice has produced on the individual.

### **The Individual Looks at Life**

Let us take, for example, a young man who has finished his education and enters business life. We will assume that he has had a good home, where high ideals, right action and nobility of character have been emphasized. He has been told that honesty is the best policy and that it is more profitable than dishonesty. He has been taught to follow the Golden Rule in all his undertakings.

He now enters business life and tries to put his ideals into practice. He finds that in the world about him most people are striving to accumulate money as a means of satisfying their various needs and desires. After the necessities are supplied the surplus goes to secure various pleasures and comforts, leisure, travel, social position, power, etc. The more money, the more of these desires can be satisfied, hence everybody is working at top speed with this aim in view. It is a race to get rich and the quicker one reaches the goal, the better.

There are certain ethical principles that are supposed to govern in business as elsewhere, but as he looks about he finds that very few people follow a strict moral code; in fact, he has to compete with others who are tricky and dishonest. He also finds that selfishness and dishonesty often pay more than right action. He frequently sees the unscrupulous prosper while the honest man fails. In brief, he sees numberless instances where honesty does not pay while dishonesty does.

There is law and order throughout nature; his education has shown him that, and his sense of the "fitness of things" tells him that the same law and order should apply to all human dealings also. But he sees many instances where this is not the case. The facts and experiences of everyday life do not always bear out the teachings of religion. He recognizes the beautiful sentiment of the Golden Rule and other ethical teachings, but, also, that there are no means for enforcing these. He knows that man-made laws cannot be enforced unless they have "teeth"; that is, unless a violation of the law will be followed by a suitable punishment. But ethical laws evidently have no "teeth." We may follow these laws if we choose to, but there is nothing to compel us to follow them if we do not want to do so. The realization that honesty does not always pay, and sometimes may even be a hindrance to worldly success, is a handicap in his honest endeavors and may in time lead him into dishonesty.

There is in man an innate sense of right, a moral force that urges him to do his duty by his fellows, and it is indeed fortunate that so many follow this urge. Under normal conditions this may be sufficient to influence men to right action, but occasionally temptations will present themselves which may prove too strong. We know the old saying: "Everyone has his price," and while the price varies with different individuals, if it is really great enough we know that many would yield. There are those who would not lower their standards under any circumstances, but even these will pause and wonder why it is that justice often is so imperfect and how it can happen that the dishonesty of their competitor may bring him prosperity, while their own honesty actually retards their success. Is it strange, then, that many such good people in time give up their ideals and become cynical and indifferent and perhaps lower their standards and become dishonest?

The selfish man is found in all pursuits: in business, in politics, in finance, and in common crime. His methods may vary according to his situation, but his objective is the same in every case, namely to gain advantages for himself with little or no regard for the rights of others. How is such a man, who is not restrained by any moral considerations, affected by the apparent prevalence of chance in human life? He sees instances where others of his kind have enriched themselves by dishonest means without suffering any apparent evil consequences as a result. He figures that where they succeeded he can succeed. To him this seeming absence of justice is an invitation to try his luck. The usual aim is to get rich. If he could do this honestly it would be preferable, for it would involve less risk. But honest methods are often slow and require hard work. A dishonest method may offer a short-cut to wealth and require less labor. The only objection to the latter method is that he might get caught and punished. He knows the law will reach out its arm and try to get him, but he also knows that it is possible to "beat the law" and that this depends on good planning, luck, cleverness, daring, a position of power, money for bribery, etc. If he succeeds in beating the Law, he may win a great stake, and he will not have to suffer any evil effects. He weighs his chances of success and if they look favorable he goes ahead.

We see from the above how the unsolved problem of injustice has had an undermining influence on the individual's behavior and how it has encouraged selfishness and a disregard for the rights of others. Naturally, the effect will be the same on the social body and the various groups within it, and the same applies to whole nations. The motives, the ideologies of thousands and millions of individuals become the factors that determine the acts of nations. Is it any wonder, then, that selfishness and aggressiveness

have become so powerful in the world that they threaten the existence of our entire civilization?

## **Vain Appeals to Practice Ethics**

The seriousness of this situation is well recognized by leaders of church and state. We hear appeals from the pulpit, the lecture platform, from educators and from public officials. Here are a few taken at random from the public press:

"Put Christ in the marketplace." "How are we to evangelize economics?"

"Application of the Golden Rule would give the world international peace and individual well being. What a sad commentary on our rationality, that we have not attained the wit to apply the principle!"

A member of the British Parliament once said: "I believe that the British Parliament and the British nation, if they really believe in the Gospel and in doing to others as they would be done unto, could lead the world in a new campaign."

A ruler in India says: "Scientists, doctors, engineers, social reformers, religious seers, all are making things new, but selfishness, race hatred, narrow nationalism, and greed have thrown all into chaos. . . . Our economic and political problems are ethical and spiritual problems."

One churchman says: "Application of the principles of Christ by 'civilized' nations would end the existence of struggles with which we are now confronted." And another writes: "Until business is converted and conducted in the sight of God, . . . no change in technique will be of paramount value. . . . Moral standards everywhere have been challenged and sometimes discredited."

And what is the effect of these appeals?

We read on other pages of the same publications that crime is increasing. In the early thirties, the total cost of crime in the United States was estimated at 13 billion dollars per year. In 1940 the figure had risen to 15 billion. By way of contrast, the estimated total cost of all education from kindergarten through college, public and private, reported to the United States Office of Education in 1931-32 was approximately 3 billion. The cost of crime was five times that of education.

The means used to reform criminals have not been successful. A large percentage return to crime after release. One investigator reports that out of 923 boys, who had been given various kinds of reform treatment by juvenile courts, 88% had continued their delinquency during the first five years after treatment. In another case 510 men who had spent time in a reformatory were investigated and it was found that 80% of them were still continuing their criminal careers.

A professor of pediatrics at one of our large universities expresses the opinion that a criminal is very much like an ordinary individual, who strives to satisfy his comforts and desires, but, failing to achieve

his purpose or to accept his limited circumstances, he resorts to aggressive methods. Many persons who are situated in high places would do the same were it not for their favored position which gives them, without the need for aggression, the comforts and pleasures that they desire.

It has been suggested that more education would solve our problems. Our public schools and colleges are making great efforts to prepare youth for honest and useful lives and if it were not for these efforts conditions in the world would undoubtedly be much worse than they are. But education has not solved our ethical problems and has not proved a guarantee against wrong action. The knowledge acquired through education can be used to promote selfishness as well as human welfare. The wrongdoer is not always stupid or ignorant; he often shows a great deal of intelligence and in some cases he has had a good education.

The appeal to follow religion, to apply the Golden Rule in daily life may have some effect on those who are naturally inclined to right action, but it is evident that it has little or no effect on the selfish type.

If these teachings had been effective, we would not have had a world war followed after a brief period by a second one.

Why then do ethical teachings have so little effect in the world? Surely, the fault cannot lie in the doctrines themselves for almost anyone will admit that the "Sermon on the Mount" and the "Golden Rule" contain teachings which would transform this earth into a paradise if they were only applied in daily life. Even a depraved nature would probably agree to this. Why is it, then, that in spite of the efforts continued throughout the centuries they are no nearer to a realization than they were 2000 years ago? Is it not precisely because of the unsolved problem of injustice? Is it not because men feel, when they notice the injustice in human life, that the ethical teachings of religion, although beautiful, are not true since they fail to work in practice? If a good man has the courage to apply them, a selfish man will take advantage of him. The unselfish will "sow good seeds" and the selfish will step in and reap a good harvest without any sowing and so it does not seem to be true that "whatsoever a man soweth that shall he also reap," and therefore men lose faith and give up trying.

We notice that ethical teachings are often given in the form of injunctions or commands, encouraging unselfishness and right action. They seem to harmonize with the law of cause and effect, as for example the statement: "Whatsoever a man soweth, that shall he also reap," but they are not backed by any philosophical explanation of how the reaping is done. A spiritual appeal may be sufficient for spiritually-minded people, yet the modern, inquisitive man wants to know the "why" and the "how" before he is willing to accept any idea and act upon it.

If we could only add to ethical teachings an explanation showing what they are based on, we would satisfy man's inquisitive mind and thus make the ideas acceptable to the skeptic. If we could show that man's actions are governed by laws that are just as sweeping and just as unerring as the laws that govern material nature; if we could show that ethics have a philosophical as well as a spiritual basis, then the appeal to man's spiritual nature would no longer be in vain, for it would also appeal to man's mind.

## When is Selfishness Profitable?

If justice governs human life we shall reap what we sow. If we shall reap what we sow it is to our own advantage to sow good seeds. The more good seeds we sow the greater will be our harvest of good. In due time our acts will return to us. If our acts are of a beneficial nature and helpful to others, the return that comes to us will be beneficial also. Under these conditions it is simply good business policy, plain common sense to practice altruism. It may seem that this is putting ethics on a very low plane, but it just cannot be helped that it "pays" to do right and that ethics and common sense coincide if justice governs our lives.

Again, if justice governs human life and we shall reap what we sow, it follows that selfishness or any kind of wrongdoing can never be to our own advantage, for the evil effects of such actions will in the course of time return to us and we ourselves shall have to experience the suffering we cause others. To do an injury to another under such conditions is to do an injury to oneself. If we defraud others, we shall become the victims of fraud. Whatever has been gained by such fraud must in the course of time be returned to the victim. If we use violence and bring injury and death to others, exactly the same will happen to us. We do not want to reap evil; no one in his right mind does. The only way to avoid reaping evil is to avoid sowing evil. Under such circumstances any wrong doing, any act that will bring injury and suffering on others, not only does not "pay," but is detrimental to our own self-interest. Any person capable of straight thinking would shun such actions as he would shun the fire. Here, then, is an appeal to the selfish man, which the selfish man can understand: "Do good: it is sure to bring dividends. Avoid evil and you will escape future trouble." Whatever push we give to the pendulum, the pendulum will return to us.

A burglar would not break into a house if he knew that a dozen policemen were on the inside waiting to catch him. A man would not try his luck at the gambling table if he knew that the roulette wheel was fixed so that he *could not* win. There would be nothing gained by trying in either case. A knowledge that we shall reap what we sow would have the same restraining effect and keep man from doing wrong for he would realize the folly of bringing trouble on himself.

Selfishness or any kind of wrongdoing can be profitable only if chance rules our lives; only if it is possible to sidestep and avoid the effects of such wrong doing. In that case it would be possible to take advantage of others and to reap benefits which we had not sown and to do harm to others without having to experience the evil effects of such action. It is not difficult to see that those who practice wrongdoing believe that chance rules their lives. A politician who betrays the trust placed in him, a business man or financier who defrauds others, a gangster who kills his rivals, a dictator who inflicts suffering on his fellow men, an aggressor nation that oppresses its weaker neighbors, one and all base their actions on a belief that they can escape the effects of their evil doing. If they realized that they would have to suffer as they had caused others to suffer, they would act differently, for they would not want to inflict this on themselves. Their actions are proof that they believe in chance and not in justice, no matter what they may say to the contrary.

If men were convinced that their lives are governed by justice and not by chance, then the appeals of ethics and religion urging men to altruistic action would no longer be in vain. Man's innate, better nature, which prompts him to unselfishness, would be reinforced by his knowledge that such action is to his own advantage and that selfishness is to his disadvantage. Only a person lacking intelligence and common sense would act selfishly under such circumstances.

It may now be seen how vital to man's welfare and the future of civilization is a solution of the problem of injustice, as all wrong-doing is based on a disbelief in justice. A belief in justice brings out the advantages of unselfishness and the disadvantages of selfishness so clearly that it becomes an incentive for right action, while at the same time it removes the incentive for wrongdoing. If then we can show that justice rules our lives, we shall have taken the first step towards a solution of the problem of selfishness and crime.

Let us now turn to the main question: "Does Chance or Justice rule our Lives?" and seek an answer by examining nature and man and by reasoning from such data as we may be able to gather.

---

## **THE MATERIAL WORLD**

From CHEMISTRY we learn that certain atoms of one element combined with a fixed number of atoms of another element will produce a molecule of a new substance in a fixed relation to the original elements. The same ingredients will produce the same result every time. The result never varies. The same causes always produce the same effects.

In PHYSICS we learn that if a body falls in space its velocity will increase with a uniform acceleration. After a certain number of seconds we will have a certain velocity and after so many more seconds another corresponding velocity, always the same for the same number of seconds. The force of gravity follows definite laws.

Many of the laws of ELECTRICITY are known and the electric current is always found to act the same way under the same circumstances. In other words, effect here also follows cause with absolute regularity.

Examples could be multiplied almost indefinitely. Heat, light, sound, all are governed by laws well known to any student of these subjects.

Turning to ASTRONOMY we find that the planets are moving in fixed orbits around the sun with such regularity that their positions can be calculated far in advance. The sun, again, with its family of planets moves in a greater orbit of its own, and further, our entire "home-universe," the Galaxy, seems to travel on a still grander pathway.

As far as we have been able to investigate we have found a reign of law, order and harmony among the stars and planets in space. They all move in accordance with the law of gravitation. What may at first appear as a departure from this law is found upon closer investigation to be in full accord with it. At one time, for instance, Uranus was considered the outermost planet in the solar system. By careful observations and calculations, astronomers found that Uranus did not strictly follow the path that it should have taken if influenced only by the sun and the other known planets. This aroused the suspicion that there might be another, unknown body in the solar system which caused the irregularities in Uranus' orbit. Calculations were then made to find the location and mass of a body which would produce such irregularities, and the planet Neptune was discovered. What at first looked like a defect in the operation of the gravitational force turned out to be a demonstration of its perfect dependability.

Astronomers tell us that gravitation acts throughout the whole of space, that every body in space exerts a pull on every other body, no matter how far apart they may be, and that its action is so perfect that we cannot move a finger but what this motion affects all the stars.

We are also told that the length of the day as determined from eclipse observations extending over some 3000 years has not varied as much as one one-hundredth of a second during this long period. There are many other interesting facts furnished us by Astronomy which demonstrate the extreme regularity with which the celestial bodies move in space and thus prove the reign of law in this department of Nature.

Wherever man has been able to subject Nature's forces to rigid tests he has found that these forces obey certain invariable laws and that under the same conditions they will always produce the same effect. It has often happened in early experiments that irregularities appeared in the results, but that later and more carefully conducted experiments showed that these irregularities were due to causes that were at first overlooked and that when all contributing causes were taken into account, there were no irregularities in the entire process.

There are of course many phenomena of Nature that are not yet understood, but past experience indicates that, as our knowledge increases it will be found that these phenomena are also governed by the law of cause and effect.

---

## **THE MENTAL PLANE**

It is not easy for man to determine what thoughts are or how they operate, for they are not of a material nature and therefore cannot be examined by man's five senses. As a result our knowledge of the mental plane is very limited as compared to that of the physical plane. Certain mental processes, however, such as used in mathematical work, can be studied directly.

In GEOMETRY, for instance, by starting from a few axioms, or self-evident truths, we can demonstrate certain other truths that are not so self-evident. The mental process is one of placing together certain

facts and showing that from these other facts must follow. In other words, the process is governed by a law of cause and effect. Who would know, for instance, by simply looking at the figure of a right angle triangle with squares drawn on its three sides, that the square on the hypotenuse equals the sum of the squares on the other two sides? Yet this has been demonstrated from a few simple axioms by such a step-by-step method of reasoning as above referred to. We are so sure of the absolute truth of this proposition that, if we measure the areas referred to and find a slight inequality, we know that this error is due to faulty measurements, and not to an error in the proposition. The latter is proved without a chance for an argument.

To use another illustration: when we sit down to play a game of chess, we reason about the various moves and the consequences that will follow from each. Every new move makes a new combination of causes and the possible effects are all in exact relation to the new set of causes. An experienced player will be able to trace in his mind the chain of cause and effect for several moves in advance. An inexperienced player will only see a few of the effects that follow from a certain move. The entire game might be said to be a mental exercise with the visible pieces simply aids to the memory of what has been done and furnishing starting points for the mind to work from. All the mental processes involved consist in tracing the relations between causes and their effects.

We can form some idea of the nature and operations of thoughts from the effects they produce on the material plane.

An inventor holds in his mind a certain idea and builds around it a mental picture of a machine that will make this idea workable. Then he proceeds to make drawings as the next step and finally he has experienced mechanics build the machine to these drawings. A change in the idea will result in a change in the machine. Here, then, there is an orderly sequence of events: a cause on the mental plane, a thought, expresses itself as an effect on the material plane, a machine.

Mathematics, or the science of numbers, is the basis of engineering, and engineering is the basis of construction. A bridge or a skyscraper cannot be built without mathematical analysis and calculations. Here it may be said that the physical forms are based on numbers.

The painting of the artist is but the physical effect of a thought or an image in the artist's mind.

In many instances we can trace relations between forms, sounds and other manifestations on one hand and numbers or mathematical expressions on the other. Every algebraic expression can be represented by a corresponding curve. A different expression will have a different curve, but each curve is invariably fixed and determined by its own equation.

The musical scale is built upon a series of numbers. The variations in sound depend on varying wave lengths and frequencies of vibrations. And again there is a relation between sounds and material forms. This may be seen if a thin metal disc, fixed at its center and sprinkled with fine sand, is caused to vibrate by the bow of a violin drawn against its edge. If two points on the edge are kept stationary, the sand will

assume a certain pattern, a symmetrical and beautiful design. If the distance between the two stationary points is varied, the sand will assume a different pattern. Thus the form changes when the vibration varies. The change in the vibration is directly related to the number of vibrations per second. Here, then, is a relation between numbers or mental concepts and physical forms, the patterns in the sand.

The tones of an organ will cause vibrations in a building that can be plainly felt. Low notes will cause stronger vibrations than high ones. In the Alps, avalanches of snow have been started by the sound of a human voice. A steamer whistle blown in the neighborhood of a glacier will, by its vibrations, cause immense blocks of ice to break off and drop into the ocean. A shrill sound would not produce the same effect. In each of these instances a change in the number of vibrations produced a difference in the effect, showing that there is a relation between numbers and effects on the physical plane.

The illustrations given above show that there is a relation between the mental plane and the material plane and that phenomena on the material plane may be affected by causes on the mental plane. It seems that we are beginning to trace vaguely the "laws" that govern the material plane back to some underlying principles on the mental plane. Where we can make a theoretical calculation and check the result by corresponding measurements on the physical plane, we find a close agreement. If the calculation is based on a true theory we know that the calculated result is more accurate than the measured one.

If the material plane is governed by law, as scientific investigation indicates, is it not reasonable to assume that the mental plane, which seems to be the basis of the material plane, must also be governed by law?

The thought that the mental is the basis for the material has been held from remotest antiquity by some of the greatest intellects. Pythagoras taught that "the Universe is built on numbers." Plato said: "God geometrizes." Sir James Jeans, the modern astronomer, suggests that "the Great Architect of the Universe now begins to appear as a pure mathematician" and also that "the universe begins to look more like a great thought than like a great machine."

We know that our thoughts affect our emotions, and medical science tells us that the emotions have a powerful influence on the body. A person may die from an excessive grief or joy. Happiness or anger can be aroused by thinking of past events that were pleasant or unpleasant. These thoughts and emotions, if harbored continually, will in time affect the expression of a person's face. Grief and worry will lower the vitality and interfere with digestion.

In summarizing our observations on the mental plane, we find:

1st. -- Those mental processes which can be checked directly, such as used in mathematics, show an absolute and most perfect relation between cause and effect.

2nd. -- Those actions on the mental plane, which can be traced by their effect on the physical plane, show a distinct relation between physical effect and mental cause.

3rd. -- Since theoretical calculations are known to be more exact than physical measurements, it seems reasonable to conclude that the laws that govern the mental plane are, if possible, still more rigid, or at any rate no less rigid than those which govern the material plane.

4th. -- There are cases where we are unable to trace effects of mental causes either on the mental or material plane, on account of our limited knowledge. There is, however, nothing to prove that such effects do not follow, even if they may be long delayed. Such researches as we have been able to make show the mental plane to be governed by the Law of Cause and Effect.

---

## **A UNIVERSAL MIND**

So far we have built our reasoning on more or less direct observation. There is some indirect evidence which may be helpful to us.

Having found such wonderful reign of law and order in every field that we are capable of exploring, it is only natural that we should ask ourselves the question: Who or What laid down the "plan" or "framed the laws" or principles which seem to govern the processes of Nature? The orderly working of Nature could not have sprung into existence spontaneously or accidentally. There must have been someone or something, an intelligence or intelligences of a superior kind that did the planning, and formulated the laws according to which Nature operates. We seem justified in this assumption, because we know from our own experience on a small scale that even the simplest work requires planning. A heap of building materials will not turn into a house without an architect to draw a plan and experienced builders to shape the material and construct the building. On the contrary, we know for a fact that, if a beautiful building is to be erected, first the design must be beautiful and then the workmanship must be perfect. And we further know that if there is anything lacking in the plan or in the workmanship, the finished building will show it.

A railroad system could not operate successfully without a time-schedule, train dispatchers and a vast organization of cooperating officials and workers, and back of all this is a unified plan. This plan did not come into existence by itself. It was the product of some mind or some minds that formulated it and drew up the rules or "laws" of operation.

When we look at a building, the architect may not be on hand to answer our questions regarding it, but we can judge something about him from the building itself. When we travel on a train we do not see the operating staff, but we can judge something about this also by the service we receive. And so it is with the Universe; we dwell in it; we are "passengers" on one of its planets, but the Power that planned it is not on hand to answer our questions. However, if we could judge something about the architect by examining the house, and something about the railroad management by observing its operation, it should be possible for us to draw some conclusions regarding the Power back of the Universe by a study of that Universe, for "the work reveals its Creator." We have to admit our inability to get a full understanding of

this Power or these Powers, for man's finite, limited mind cannot comprehend something so vastly superior to itself. This inability to get a full understanding should not, however, prevent man from using such powers of observation and reason as he may possess to gain at least such partial understanding as he is capable of. People of all ages have sensed the existence of such Power or Powers and referred to them under many different names. The Hindus call it BRAHMAN; Emerson called it the OVERSOUL. Ancient philosophies state that it is infinite and hence cannot be personified or limited by any human description. While there are probably no two human beings that would fully agree in their understanding of it, yet most people will in all likelihood grant that there must be such a Power or Powers. Agreeing to disagree as to its exact nature, let us for the purpose of this discussion refer to this power or these powers by the term: God.\* Judging God,\* then, by His work, we have seen that He was able to lay down a plan according to which all nature works, from the miniature universe of the atom to the star-clusters in space, millions of light-years distant. From the magnitude of the work, we cannot fail to recognize the infinite greatness and power of its Originator. We have further seen that God\* formulated unvarying laws that govern the operations of Nature so that there is always an exact relation between cause and effect in these. From this we must conclude that order, law and harmony are attributes of God.\*

\*In the following discussion the asterisk (\*) is used with the word God\* in order to call attention to this footnote and to the fact that this word is not here used in any sectarian or limited sense or as referring to a personal God, but is used for want of a better word to allude to that Power or those Powers behind Time and Space, which man seems compelled to postulate as the unseen Cause of the Universe.

A Power that can construct such a marvelous Universe, could just as well destroy it with all the life that it contains, if it were so disposed. But the universe evidently has endured for countless ages -- and Nature provides food and other necessities to sustain life. Therefore God\* must be beneficent in His purposes. These are some of the conclusions we can draw about God\* by observing His work which we see around us.

May we not by analogy draw some further conclusions regarding other attributes of God?\*

A cell in our body is a living entity with evidently a certain kind of intelligence and a certain degree of free will, but in general regulating its life according to the laws that govern the body as a whole.

*We* can understand considerable about the cell, but the *cell* can know very little about us. The lesser cannot comprehend the greater in its fullness. Is it reasonable to assume that the cell possesses greater qualities than the man of whose body the cell is a part? Is it not more reasonable to conclude that any power which may be inherent in the cell will also be found in the man and found there in a much higher degree of perfection?

Man is but a cell, or less than a cell, in the great body of the Universe. Is it not reasonable then to assume that any faculty that exists in man must also exist in the "soul of the universe," in God\*? And further, is it not reasonable to suppose that the degree of perfection of the qualities of God\* must be as

far superior to the degree of perfection of man's qualities as the "works" of God,\* the Universe, are to the works of man? God\* then must possess all human virtues in their highest degree of perfection. Among human beings we respect such qualities as intelligence, justice, and love. A man who lacked these characteristics would not be held in high esteem by his fellows. If these qualities are necessary in the make-up of a good man, must they not also be necessary in the make-up of God\*? To assume otherwise would be to assume that man possessed qualities greater than God.\*

For the purpose of the present discussion let us consider only one of these qualities -- that of justice.

In all ages justice has been considered one of the great virtues. We cannot think highly of a man who is not just. From time immemorial all peoples have made laws and established courts for the administration of justice. Man-made laws are imperfect; frequently their administration has been imperfect also, but with all that, all men recognize justice as an ideal to be striven after.

If justice, then, is such a necessary quality in our ideal of a good man, is it not still more necessary to our conception of God\*? To assume the contrary would be to place God\* on a lower level than a good man.

Parents who love their children and desire their welfare, know how necessary it is to show justice and impartiality in training them. They know that training cannot be successful if inconsistent and contradictory methods are used. They know that certain rules of conduct, with suitable rewards and punishments affixed, must be set up and consistently adhered to, until the children learn by repeated experiences. They know that if they punished an act today and rewarded the same act tomorrow, the child would become confused. It would not know what was right or wrong and would soon give up all effort at self-improvement.

If this is true for the family, it is equally true for the human race as a whole. Absolute justice or a perfect reign of orderly laws of cause and effect are necessary for the growth and development of human character. If justice were imperfect, or if chance ruled in human affairs, men would become confused and discouraged. They would consider it useless to strive towards self-improvement if their efforts counted for nothing and they would sooner or later give up trying.

If then man recognizes the necessity for justice in character development, must not this necessity be still more fully recognized by God\*? A God\* without justice would be an absurdity, for it would indicate such a flaw in His nature that it would place Him below the ideal for a good man. As man is more perfect than the cell, so God\* must be more perfect than man.

An assumption that God\* might have wished to provide for justice in the world, but was unable to formulate and establish laws of cause and effect that would be workable and binding in all details of human life, is untenable. A God\* that can lay down and enforce laws of cause and effect that operate unflinchingly in the physical world has also the ability to lay down laws that will work unerringly in human life.

An assumption that justice rules in the world to a certain limited extent, but that it is not perfect in all details, is also untenable. Imperfect justice is after all not justice. If it is justice at all, it must be 100% perfect. This is man's ideal and nothing less can be the ideal of God.\*

On the basis of this Universe being the result of intelligent planning, then, we are forced to the conclusion that justice must be a part of the Universal Plan.

---

## **LIFE MUST HAVE A MEANING**

We may not all agree that there must be some purpose in life, but probably most people feel that this is so. It does not make sense to assume that the only purpose of life is for man to spend a few score of years here on earth, pass through some commonplace experiences and perhaps a few odd ones, and then vanish without any permanent benefit resulting from the experience. Such performance would seem so futile, so useless that it would probably be rejected by most people, who feel that there must be some higher purpose in life. And what could such purpose be but growth, evolution, the gradual rising into some higher state of consciousness and life, a pilgrimage towards perfection?

If we are to become perfect, if we are to learn by experience, law and order in the universe around us are necessary for this purpose. We find that we are surrounded by law and order; but we are so accustomed to the orderly processes of Nature that we often overlook their existence. We take them for granted and do not recognize that life as we know it would be impossible if Nature did not operate according to law.

Suppose gravitation suddenly ceased to act. If we dropped a stone, instead of falling to the ground it might go up in the air, or remain suspended, or perhaps shoot off to one side, nobody knows in what direction. A railroad train might leave the track any minute and start off into space; water might run uphill; buildings would not stay on their foundations, in fact they could not be built for there would be no weight to keep one brick on top of the next. Complete chaos would result, for nothing would "stay put." It would be impossible to plan or provide ahead for anything, for no two times would the same effect follow from the same cause and there would be no experience to be guided by.

On the basis that life has a meaning, that it is a school, wherein man learns by experience, the existence of law and an orderly sequence of cause and effect are necessities.

---

## **HUMAN LIFE**

Let us now turn our attention to the field of human relations; how men act towards one another and the effects that follow their actions. Also to those events and experiences that life deals out to us, and over which we have little or no control, such as circumstances of birth, inborn capacities, "luck," accidents,

etc. -- or what we might summarize under the term "Human Life."

Is there an orderly sequence of cause and effect here? Is there a reign of justice and law that governs our lives? Do men's actions always and unerringly bring to men their just deserts?

The most important parts of a man's life are not his physical actions and experiences, but his thought life, his aspirations and longings, feelings and emotions. None of these are directly visible to others, except occasionally in their effects. To trace a chain of cause and effect in human life is therefore very difficult, for men's motives and the links that connect causes with their effects are largely concealed from our view. Let us, however, consider some of the common experiences in life.

In certain cases of wrongdoing what would seem like appropriate effects follow, as when a person lives a life of dissipation, or otherwise breaks the laws of health, disease often results. But this is by no means always the case. It frequently happens that people violate many of the laws of health and abuse their bodies without apparently being much the worse for it; whereas it frequently happens that people who live with the most regular habits and take the best care of their bodies are overtaken by disease and suffering, for which we can find no cause.

We often see persons who work hard all their lives to provide for their families and lay up a little store for their old age. In many cases they are successful in their efforts, but they often meet unexpected reverses and the work of a lifetime is lost. Other people may be shiftless and irresponsible; in that case they usually do not get far, but it frequently happens that they have "good luck" and fare better than many who work hard and conscientiously.

Occasionally we see striking examples of "luck," good or bad, as the case may be. One person will be pursued by ill luck and will lose his fortune, perhaps accumulate another and then lose that also, seemingly through no fault of his own. Another person makes no great effort to accumulate wealth, but money seems to "fall into his lap." We have read of cases where the owner of some apparently worthless land became rich overnight when oil was discovered on his property.

Almost anyone can cite similar instances from his own knowledge.

Take the matter of acting according to one's conscience in, say, a case where a contrary action would promise a better material reward. Here the person who follows his conscience will have a certain satisfaction in the knowledge of having acted rightly, but the one who silenced his conscience and acted contrary to its dictates, may as a result have enjoyed a material advantage in gaining wealth, position or power. Here "luck" or chance seems to play a part, and if the wrong act is not found out, the actor may end his days in full enjoyment of the respect of his fellow men plus the added wealth and position that would never have come to him if he had obeyed his conscience.

Consider the life of a criminal. In some cases the first act of wrongdoing is discovered and the man is punished according to human law. Here again the personnel of the jury, the character of the judge, and

the ability of the attorneys may have a great influence on the severity of the sentence and thus the punishment may be greater or less according to the court before which the prisoner happens to be tried.

Another criminal may commit many crimes before he is discovered; or if he is very "lucky," as we say, he may escape detection altogether and may end his days as a respected member of society.

In the illustrations given above it could be noticed that man's actions towards his fellows perhaps more often than not brought the results they merited, but it was equally noticeable that in many cases the appropriate effects did not follow. In fact, wrong could often be done without the wrong-doer suffering the consequences of his acts. From this it would seem quite possible at times to sow without having to reap.

The circumstances in which men are placed at birth certainly have a great influence on their lives. Some men are born into families where the moral atmosphere is of the best. The influence of the home tends to build up and strengthen a noble character in the child. The financial circumstances may be favorable and the child may receive a good education. Influential relations and friends will use their power to aid the individual and the combination of all these circumstances will certainly be a great help towards an honorable life later on.

Other men may be born in circumstances which are the opposite of those cited. In their case the home influence tends to degrade the character. The examples of the grownups may be an education in crime for the child. His direction is wrong from the start. The circumstances were against him; "he had no chance," we say.

It may be argued that a man's character is the greatest determining factor in his life, and that individuals with strong characters have been born in the most degrading circumstances, but in spite of all obstacles have lived noble lives and been of great service to their fellow men. But the fact remains that on less strong characters these unfavorable circumstances have a very detrimental effect. Hence the circumstances of birth constitute serious obstacles to faith in justice.

Children who are born and brought up under the same circumstances show great differences in health, character, disposition and natural talents or gifts. Some of these differences may be modified by education, but even education cannot greatly alter the dissimilarities that exist from birth. In some cases a child will be possessed of a healthy body, a strong character, an intelligent mind, and a pleasant, winning disposition which will prove a great aid on his path through life. Another child is born without these gifts and may indeed be burdened with a sickly body, a weak, vacillating character, a dull mind and a sullen, irritable disposition, all of which may be serious hindrances to a life of happiness and service.

The circumstances outlined above have perhaps been the extremes in both the favorable and unfavorable direction, but of course there are all grades and conditions between these two. Whether extreme or moderate, such differences all indicate an element of injustice.

Accidents have a way of striking right and left without any apparent cause. Sometimes a reckless person will meet with an accident, but very often the most cautious and careful individual will also be struck. One person may go on some wild adventure and return without a scratch. Another may stay at home, trip on a rug and break his neck. One person plans to take a trip on a certain steamer. There is a traffic jam on the way to the wharf which causes him to miss his connection. Another person had no intention of taking this boat, but by some unexpected turn of events was caused to take the trip. The steamer is wrecked and all on board are lost. Here chance seemed to be the deciding element.

Summarizing our observations of human life we note that whereas man's actions sometimes bring appropriate effects, they often do not.

Unless we choose to ignore the evidence, we must admit that within the span of one human life here on earth perfect justice simply does not exist, but chance and injustice do play a large part.

---

## **LAW OR CHANCE?**

Let us now review our earlier observations and see how the evidence stands.

In the material world we found a most perfect reign of the Law of Cause and Effect.

On the mental plane we found a perfect reign of law wherever we were able to investigate.

We found that if there is a God\* and an intelligent plan back of the Universe, justice and law must be parts of this plan.

We also found that if the purpose of life is evolution, growth and an advancement towards perfection, law and justice are necessary to achieve this end.

In addition to this our moral nature, our sense of "the fitness of things," tells us that there must be law and justice in the Universe.

When we consider human life we find on one hand that the majority of human actions are governed by justice, but also on the other hand that much chance and injustice seem to operate in human affairs.

To summarize: we find that the evidence in favor of law and justice is overwhelming, but it is not 100%.

The injustice apparent in human life, then, is the "fly in the ointment," the flaw in what otherwise seems such a perfect plan. It is this which undermines our faith in justice and in God.\*

Two alternate theories present themselves in explanation of these injustices: either (1) these events actually do happen without due cause, or (2) they are effects of causes which we cannot see.

### **1st Alternative**

If the first proposition is true, then Human Life would be an exception to the general plan of Nature. Even though we human beings are a part of Nature, our actions would be outside of the law and order which governs the rest of Nature. Law, symmetry, harmony, order everywhere in Nature; but Human Life in contrast to all the rest subject to disorder, confusion, chance. This would mean that the laws of the Universe would not be universal; they would apply in spots but not everywhere.

Would we accept such a proposition in regard to other matters with which we are more familiar? Would we not, for instance, consider it absurd to claim that gravitation works in parts of the Universe, but breaks down and fails to operate in other parts?

When we turn the switch that controls the light in the ceiling we know that the electric current travels over wires concealed in the wall and reaches the bulb where the light appears. We know that there is no accident or chance connected with the entire operation. But suppose that a primitive man were suddenly transported from his obscure jungle and placed in our midst; how would he view the sudden appearance and disappearance of the light in the ceiling, especially if the switch were located in another room? He would know nothing about the electric current, or the wires concealed in the wall. He might think that the light came on or off by chance.

Not so long ago we too were ignorant of the laws governing electricity. How would the light phenomenon have appeared to us then? With our present knowledge we are unable to trace the connection between chance-events in Human Life and their causes, but shall we say that, because we are unable to trace the wires hidden in the wall that there *are* no such wires and that there *can be none*? Are we justified in smiling at the ignorance and lack of logic on the part of our jungle man if we take a position similar to his? Would it not be more reasonable to take the stand that, since the Universe is governed by the law of cause and effect in other departments, human actions and experiences must also be governed by this law, and recognize that what to us appears as chance because we cannot see the hidden cause, must be the result of the thoughts and acts of individuals, who thereby reap what they have sown in the past? Let us then consider the second alternative and see if it is not more logical than the first.

### **2nd Alternative**

A scientist, who is confronted with a phenomenon which he does not understand, will not accept chance as an explanation. Knowing that it must follow certain laws, he starts to investigate and experiment to discover these. If he is successful in his search he traces the event back to its cause. If he is not successful, he still does not believe that the phenomenon was the result of chance, but trusts that future research will reveal the underlying cause.

A few centuries back man knew very little of the law that governs gravitation, but Sir Isaac Newton's investigations resulted in his formulating this law. Of course this law existed from time immemorial and had been operating before it was discovered just as much as afterwards, but, as far as being recognized by man is concerned, it was non-existent until formulated by Newton.

Newton's third law of motion states that: "to every action there is an equal and opposite reaction," and this statement has been tested experimentally and found to be a fact in regard to material bodies. In human affairs action and reaction would be equal and opposite if a man's acts returned to him, meanness for meanness, service for service, injury for injury, kindness for kindness. If it is true in material things that "action and reaction are equal and opposite," may not the same be true regarding human actions also, and how do we know but what some future "Isaac Newton" will find some way of demonstrating this experimentally?

Our astronomers tell us that the Universe (on its material side) is so marvelously balanced, that cause and effect are so delicately and accurately adjusted, that if we move a finger, the effect of this motion is felt on the farthest star in space.

If gravitation can bridge the inconceivable distances of space and, without visible connection, link a cause on our earth with an effect on the farthest star, why should it be any more unreasonable to assume that there is some other force or principle, attraction or repulsion, some invisible wiring that links our thoughts and our deeds with their effects? If gravitation operates unaffected across space, why should not this other force act independent of time and outward circumstances? Surely the latter assumption is no more unreasonable than the former, and if Nature can provide the mechanism in one case, it can also provide the mechanism in the other.

In human affairs we may have to leave the full explanation of how effect is linked to cause, the wire-tracing, to future research. But may it not be possible that an advancing science will some day trace the wires that are now concealed from us and solve this problem as it has solved so many others in the past?

Perhaps investigators of the future will have at their disposal more sensitive instruments than we have, or perhaps man will evolve faculties within his own nature that will enable him to see directly and without the need of any instruments the connection between cause and effect everywhere.

In our present state of ignorance we have to admit our inability to follow the chain of causation and to link the cause to the effect, but in view of all past experience is it not reasonable that we should recognize that such a chain must exist?

If, then, we accept the idea that such a chain of causation exists, and while we are waiting for a complete demonstration of how it operates, let us use the method of the scientist who seeks to solve his problem. He examines all the known facts before him and then casts about for a theory or a working hypothesis which fits these facts and also explains the phenomenon which he is investigating.

As new discoveries are made, the theory is checked with these and altered if it no longer fits the facts, or perhaps it is completely discarded for a new and better theory.

If, then, the law of cause and effect governs human affairs, it should be possible to find a theory which explains how it operates.

What are the requirements which such a theory must fulfill?

There is a dim tradition, in the oldest Indian books, in the great Upanishads, and the earlier Vedic hymns, that the Brahmans were not in the beginning the spiritual teachers of India; that they received their earliest wisdom from the Royal Sages of the Rajanya or Kshatriya race. -- Charles Johnston (1)

The person serving both military and religious convictions imposes a challenge upon our images of spirituality. Some, like Asoka, discovered their inner potential in a reaction to the horrors of war. Others, such as Marcus Aurelius, ever in the midst of recurring battles, guided their entire lives from within. Theosophy and the modern theosophical movement have been well represented by individuals with military experience: Colonel Henry S. Olcott, General Abner Doubleday, Lt. Colonel E. L. Thompson of The Theosophical Society in Canada, and even H. P. Blavatsky, seriously wounded at the battle of Mentana near Rome, to mention a few.

I became interested in Arthur Latham Conger, Jr., after seeing a portrait of him (see above). There was strength, kindness, and a certain freedom in his face, and another quality that I did not at first grasp but came to understand. He was an early theosophist who lived through momentous times as student, military man, and spiritual mentor. In each of these phases, briefly surveyed and documented here, we observe theosophic principles taken beyond the books and into daily life.

The Conger family arrived in America during the middle of the 17th century, settling originally in Newby, Massachusetts. In 1667 they moved, taking part in settling the township of Woodbridge, Middlesex County, New Jersey. On March 18, 1669, they were participants in the first distribution of land, receiving 170 acres. (2) Over two hundred years later Arthur L. Conger, Jr., was born in Akron, Ohio, on January 30, 1872. He was the second of four children. His father, for whom he was named, was successful in business, military, and civic affairs. He was the director of many companies, participated in the Civil War and later became a colonel, was a state and national leader in the Republican Party, and a Mason (Knight Templar degree in the York rite and 32 degree in Scottish rite).

Arthur Jr.'s mother, Emily Bronson Conger, was remarkable as well. Her great-great-grandfather was a surgeon in Washington's army, and her grandfather was one of the first settlers of Ohio. She was influential in organizations such as the Daughters of the American Revolution, Order of the Eastern Star, and Women's Relief Corps. She was the author of *An Ohio Woman in the Philippines*. (3) She became a doctor of osteopathy in 1903, joining some of the first in this field in the world. (4)

One of the first notable events of Arthur Jr.'s life came at the age of thirteen. His 19-year-old brother Kenyon was involved in a racing-bicycle accident. The injuries were severe and, as was the custom then, the doctor recommended a year of foreign travel as the best remedy. Consequently, a week later Arthur, Kenyon, and Miss Marie Parsons -- professor of European history at Buchtel College, Akron -- found themselves on the high seas. (5) According to Arthur:

We had no definite plan, but went where we wished, and stayed in each country and place so long as we found it interesting and profitable. By December we had 'done' the British

Isles and most of continental Europe. The family joined us in Rome for Christmas, and suggested a continuation of our tour to include the Mediterranean countries and the Near East. We accepted. (6)

While still a teenager, Arthur had the opportunity to meet Phillips Brooks (1835-1893), an extraordinary preacher in Boston, who may have influenced how Conger viewed his spiritual life. In a letter to a young inquirer in 1945 Colonel Conger recalled

a conversation . . . with Phillips Brooks, the illustrious spiritual teacher of the last century. I told him that I wished to fit myself to be a minister and asked him how to go about it. He replied: "Every man is a minister. You are too young to decide yet what sort of a minister you will be." (7)

Arthur entered Harvard in 1890. He was a member of the fencing team, the Chess and Whist Clubs, the Institute of 1770, DKE (Delta Kappa Epsilon), and in April 1892 co-wrote the music for the annual Dickey play. (8) For the *Fiftieth Anniversary Report of the Class of 1894* he described his preparatory education and his years at Harvard:

It was my good fortune to have selected as tutors in Latin and Greek, in preparation for the Harvard entrance examinations, two scholars who really knew and could interpret the philosophy and the religion of the ancients. The next step in my education consisted in the investigation of oriental religions, and in this study George Cabot Lodge played a leading part. We had more interests in common, from tastes in music to the love of good books, than was the case in any other friendship. (9)

Curiously, one of Conger's classmates at Harvard was Elliott Baird Coues, son of the Elliott B. Coues known for his unjustified public attack on the Theosophical Society, H. S. Olcott, H. P. Blavatsky, and W. Q. Judge in the New York *Sun* of Sunday, July 20, 1890. (This one-page purported interview was coarse and violent; a suit for libel was brought against both Dr. Coues and *The Sun*. See *The Path*, vol. V, August 1890, p. 153, for retraction by *The Sun*).

## THEOSOPHY

While at Harvard Conger discovered theosophy. He was admitted to fellowship in the Theosophical Society on June 16, 1892. (10) He described that early period in the following manner:

Claude Falls Wright, a volunteer field-worker for the American Theosophical Society, came to Boston and proposed a plan for organizing a Harvard Branch of the T.S. among the students. He got together six of us for an organizational meeting, and made application for a Charter. Mr. Judge was doubtful if anything would come of it, but he issued a Charter. The new Lodge had about a dozen meetings in the Spring of that year until the

examinations and hot weather put an end to the meetings. Mr. Wright was called elsewhere, and I was then transferred from the Harvard Lodge to the Cambridge Lodge, which at that time was called Branch. (11)

During this period Arthur Conger and George Lodge discussed various aspects of Oriental religion and philosophy with everyone they met. They did their best to convert the young Episcopal ministers who invited them to dinner and talks in the evenings. (12)

Conger, age 20, was recommended by George D. Ayers for the Esoteric Section (ES) of the Theosophical Society in late 1892. W. Q. Judge waited two years until November 1894 before admitting him. (13) One of his sponsors at this time was Margaret Loring Guild (?- 1945), a Boston theosophist who would later become Mrs. A. L. Conger. (14) In 1894 she was the Secretary of the New England Theosophical Corporation, Boston, Massachusetts, and one of the more articulate theosophical speakers of the time.

Conger (age 18) Harvard Student

Conger graduated from Harvard the same year and faced a difficult problem with his parents. During his preparatory schooling, his father wrote to him on December 12, 1887, expressing his wish that one of the two boys would follow him in the publishing business.

My Dear Whittie -- Agreeable to my promise I take the earliest opportunity to inform you that I had a very pleasant interview with the Hon Wm Henry Smith, Genl Mangr of the Associated Press, & he has agreed to give me the afternoon dispatches for Akron whenever I want them, but in view of the long service of the Beacon he could not give me the exclusive right, but I do not care for this. He wants me to form a pool to buy up the Cleveland Leader -- but this is very private. I will look it over. Sometime I want one of you Boys to run a paper -- but this is way in the future. The *first* business in order will be to finish at Harvard. Then we will form a Co-Partnership of "Conger & Sons" & we will *all* stand & stick together in every thing -- & *always* stand by each other, & that [is] what I want you Boys to do *now* & forever, because in *unity* there is great strength -- I rejoice every day that you are so nicely fixed at Cambridge. With lots of love for you all believe me as ever your Father. A.L.C.

Both parents, however, had expected Arthur (or Whit, as he was called by the family because of his constant whittling as a lad) to study for the ministry. He told them he no longer believed in those things. His mother argued that he did not know enough about Christianity to reject it, that he did not have to be a minister -- he could be anything he wanted -- but he should at least attempt to please his parents by trying to find out what the religion meant. He entered as a candidate for holy orders in the Episcopal Theological Seminary at Cambridge at the age of twenty-two and completed the first year. Things were going as well as could be expected. He studied the *Sacred Books of the East*, the Greek New Testament, and the Hebrew Torah. (15)

He also continued his study of music composition under the American composer Edward MacDowell (1861-1908), well known for his piano works. They became close friends, with Arthur being treated as part of the family. In 1895 the MacDowells invited him to accompany them to Vevey, Switzerland, for the summer, and he gladly accepted. They would work until four in the afternoon, then get together for tennis or cycling. After dinner they would engage in conversation and perhaps a round of hearts. (16)

While in Europe, he wrote his mother that his mind was fully made up -- he could not be anything but a theosophist -- it was a waste of time to continue in the seminary. His parents' response was to meet him, upon his return, at the steamer in New York and spend a tumultuous, tearful three hours in a hotel room. In the end a compromise was reached: one more year at the seminary, at the end of which he could pursue whatever course he chose. (17)

During this period the whole class of 25 seminarians went through a difficult time with arguments over the relative merits of theosophy and Christianity. The head of the school must have complained, for the Bishop of Ohio knew about the discussions there, that Conger was a theosophist, and that he lectured on theosophical topics at the local Branch. The Bishop told Conger that such participation was improper for a candidate for the ministry. He was given an ultimatum: give up theosophy as far as active practice was concerned or resign from the seminary. (18)

My father and mother took the same view as the Bishop, which made a decision easy. I resigned and went to New York and offered my services as a volunteer worker at the General Offices of the Society. I never regretted the decision. (19)

In a letter to J. H. Fussell dated May 17, 1896, the young Conger wrote:

My family have at last given their permission to my being a T.S. worker openly and my going to N.Y. or doing anything for theosophy. -- only, so long as they are opposed to Theosophy, they do not want me to give to the Cause or spend on T.S. books any money which I receive from them, . . . Henceforth this poor body and its faculties such as they are and whatever they can be made into are the servants of the Lodge and Humanity. I shall certainly do all I can, and if you know of anything I can do, blacken boots or running errands that will help on, I shall be glad to do it.

After the death of W. Q. Judge (March 21, 1896), Katherine Tingley and a council of twelve met daily concerning the future of the Theosophical Society. Many years later she gave her impressions of Arthur Conger at that first meeting in the TS offices:

I can remember the day that Colonel Conger offered his services at 144 Madison Ave. He was a very unassuming character, rather retiring in nature. He seemed somewhat of a mystic to me, because he said so little and yet he carried with him in his presence, without words, a certain quality of trust -- as though through his own soul he had a knowledge which perhaps others had not reached. (20)

At a morning council meeting a few days before the annual convention held at Madison Square Garden, April 26-27, 1896, Mrs. Tingley -- knowing that 54 members and delegates from Boston and elsewhere had arrived -- asked one of the members present if he would be kind enough to go downstairs and find a young man from New England named Arthur Conger and bring him to the meeting. (21) Either at this time, or shortly after, Conger became Katherine Tingley's secretary. (22)

About six weeks after the convention, in June, E. T. Hargrove wrote to Conger:

it gives me real satisfaction to know that you are at Headquarters, assisting Fussell, who really needs help at this time of pressure. It was a bold move, but a bold move is often necessary. The opening which was your chance came & you did not miss it. (23)

A year later the 1897 annual convention resolved that the Lotus Circles, started by W. Q. Judge, would henceforth be independent of and separate from the official work of the TS. During the convention E. T. Hargrove made public his appreciation of Conger's work in his President's Report:

I must also mention Brother A. L. Conger, Jr., who has devoted his entire time to assisting

Brother Fussell during the absence of the Crusaders. He has done so in such a way as to take upon himself a considerable portion of the labor which no one man could have shouldered singly. (24)

Three days after the convention, on April 29, a meeting was held at the headquarters in New York. It was determined then to organize a new effort toward a practical demonstration of brotherhood. The International Brotherhood League was designed around broad nonsectarian work among convicts, the poor in the cities, and the children in the Lotus Circles. The following day, when an election of officers for the new organization was held, Arthur Conger was elected Secretary. (25)

Nine months later, on January 13, 1898, a constitution for a new theosophical organization was presented to a meeting of prominent Theosophists at the home of Katherine Tingley. The new organization was called The Universal Theosophical Brotherhood, which a month later was changed to the Universal Brotherhood. Among the signators were Basil Crump, E. August Neresheimer, Robert Crosbie, Joseph H. Fussell, and Arthur L. Conger, Jr. (26)

## MILITARY SERVICE

Arthur's stay at the headquarters lasted two years. During that time the Griscoms did much to make it pleasant and interesting for him. C. A. Griscom was an early member who had the complete confidence of W. Q. Judge. Conger's feelings for Mr. Griscom were those for a "second father." (27) In April of 1898, Conger's family began showing active displeasure with his devotion to theosophy, cutting him off financially. Out of money and not wanting to burden the Society, Arthur left to take part in the Spanish American War under the Regimental Company of Captain Newbold Morris. (28) Little did he realize that he would be in the military for thirty years, or that he would later work with Morris on the General Staff at the Chaumont headquarters in France during World War I. (29) Mrs. Tingley many years later would remark on his departure from Headquarters:

It all happened through the failure on my part to say a few words to him and the failure on his part to ask a few words of inquiry. A few words on the part of either of us might have made everything so different. (30)

On February 8, 1902, Conger married Margaret Loring Guild at Boston, Massachusetts. She is remembered today as the compiler of the *Combined Chronology* for use with the Mahatma and Blavatsky letters to Sinnett. Originally published in 1939, it remains in print. (31)

Arthur Conger's military career in itself was remarkable. (32) He rose through the ranks rapidly. During World War I, General Pershing chose him to be on his staff in France as Chief of the Department of Intelligence. Here he was appointed temporary lieutenant colonel August 5, 1917. While in the military he conducted a seminar on military history at Harvard during the summer of 1915, co-founded and edited a quarterly named *The Military Historian & Economist* (1916), (33) and wrote three historical

documents: "The Function of Military History" (1916), (34) "President Lincoln as War Statesman" (1916), (35) and "The Military Education of Grant as General" (1921). (36) He was decorated for gallantry with the Silver Star Citation (1900) and the Distinguished Service Medal (1919), the Legion of Honor from the Government of France (1919), and the highest award given by the French government, the Croix de Guerre (1919), which he received from France's military hero Marshal Petain (1856-1951). (37)

Following World War I he graduated from the Army War College in 1920, was made lieutenant colonel on July 1 of that year, was promoted to colonel on April 27, 1921, and commanded the 20th Infantry Regiment for two years. He served his last four years as Military Attache to both Berlin, Germany, and Berne, Switzerland. He retired from active service on October 31, 1928. (38)

The *Harvard College Class of 1894: Fiftieth Anniversary Report* described Colonel Conger in the following manner:

Our foremost army officer, with a training based on a study of the Classics and of oriental religions and practice in musical composition; military historian; adept in the acts of friendship and foreign diplomacy; well-deserving servant of our country. -- p. 102

Colonel A. L. Conger, San Antonio, Texas, c. 1922

## RETURN TO ACTIVE THEOSOPHICAL WORK

Colonel Conger's return to active Theosophical work occurred late in 1922, two years before becoming Military Attache. On November 23, 1922, Mrs. Tingley left Point Loma to go to the eastern and southern US. The party stopped two days in San Antonio as guests of Colonel William O. Gilbert. (39)

while she was stopping at San Antonio, Texas, a military officer of high rank was announced at the door, and he introduced himself as Col. Arthur Conger. The Theosophical Leader could not have been more delighted if it [had] been her own brother, for Col. Conger, as a young man just out of college, was her secretary in New York City in the early days . . . (40)

Two messages from Katherine Tingley to Colonel Conger mark this event for us, the first a telegram dated January 8, 1923, saying: "Constantly recalling those happy hours with you looking forward to another happy time in our sunny California. Affectionately . . ." The second is a letter dated the next day, reading in part:

I am of [the] opinion, my dear Comrade, that you have carried Theosophy in your heart and in your life to a larger degree than I supposed; and that all the good seed that you have sown in right action must necessarily bring you a rich harvest. . . .

. . . Joseph Fussell, with tears in his eyes and a great big smile, seemed to be all "set up" because I had met you. So many questions he asked me about you. He told of your being at my house when I was away in Europe on my first Crusade . . . and of the old days. . . .

P.S. Dear Arthur Conger: In spite of your being separated from us outwardly for so many years, you surely must be connected with the Universal Brotherhood Organization in a very active way on inner lines; for I am reminded that you were present at its formation at my residence on West End Avenue, New York, in 1898. That surely must mean something.

Four months later Colonel and Mrs. Conger stayed several months at Point Loma as guests of Mrs. Tingley. The visit officially began with their being honored at an evening concert in the Lomaland Temple of Peace on May 21. This was followed by a reception and reunion with many older workers from the early days in Boston and New York. (41) On July 16 Mrs. Tingley opened the Fourth Session of the International Parliament of Peace and Universal Brotherhood. Colonel Conger, along with a number of speakers including Kenneth Morris, Joseph H. Fussell, and G. de Purucker, gave a short address on peace. (42) From this point until Katherine Tingley's death in 1929 there was a continuous correspondence between the two of them. The overriding theme of the letters was the importance of his

working for theosophy.

Upon returning from her European lecture tour on October 26, 1924, Mrs. Tingley stopped in Boston to see Conger. She learned from him that he was soon to be appointed Military Attache to the US Embassy in Berlin. At the beginning of 1925 the Colonel was in Washington, DC; months later he was back in Berlin. On March 31, 1925, Mrs. Tingley in a letter to the Colonel detailed plans for another lecture tour of Europe, then added:

Now, I am burdening you with all this, for you and Margaret are so intimately connected with the Work, that I have dared just to give you the whole situation.

On May 26 of that year a letter addressed to him from the Department of State reads in part:

you are hereby designated to be Military Attache to the American Legation at Berne, Switzerland, in addition to your duties as Military Attache to the American Embassy at Berlin.

During this year Mrs. Tingley arrived in Europe and Colonel Conger spent time with her as well as assisting with publicity in Germany. In 1926 Mrs. Tingley went on another European lecture tour and while in Berlin stayed at the Congers' home. In a letter dated June 6, 1926, she wrote:

My visit here at the home of Colonel and Mrs. Conger was unexpected and has turned out to be in every way a blessing to myself and workers. . . .

Colonel Conger is the same royal, noble, trustworthy soul as of old, keenly alive to the best interests of our work, . . . It is so fine to realize that in all these years of distraction and disappointments and unrest and strains, he holds as tenaciously to Theosophy as he did when as a young man he explained to his father and mother, that Theosophy was henceforth to be his guide in life, and he would not desert us. He won his battle and now will begin to receive the help for a larger work, because of his past loyalty. (43)

On June 21, 1926, Mrs. Tingley wrote of Colonel and Mrs. Conger's having given a reception in her honor at their home. It was "attended by many of the most notable people of the city in private and public life, [and] was a tremendous success." (44) During this tour Conger must have traveled with Mrs. Tingley, as he signed a telegram to Point Loma from Czechoslovakia.

On November 4, 1927, Colonel Conger was again at Point Loma.

During a reception given him by Mrs. Tingley at her home, she gives this insight:

while he is fully doing this other duty as an officer of the American Government, yet that

other part of his nature has been working with us all along. So we have had the silent watcher or the silent comrade all the way along to help us; . . . (45)

Colonel Conger with Katherine Tingley

In 1929 Mrs. Tingley wrote a long letter describing her plans for another trip to Europe. At this time Conger, having retired from the military in October 1928, was her guest at Point Loma. He left not only to recuperate from a bad siege of asthma, but also to finish his book entitled *The Rise of U. S. Grant*. (46) In June 1929 he received letters regarding Mrs. Tingley's injuries in an automobile accident in Germany and, a short while later, news of her death at Visingsö, Sweden. He remained in deep sorrow for quite some time, for over the many years they had developed a profound and rare relationship.

After the passing of Katherine Tingley, G. de Purucker wrote a letter on July 30, 1929, expressing his friendship for Conger. In November the Colonel, still feeling the loss of Mrs. Tingley, wrote a short note to Dr. de Purucker, closing with a statement of his loyalty to him as the new leader of the Theosophical Society. (47) Five days later Purucker wrote to him about Mrs. Tingley's passing and closed with the following:

Thank you deeply, dear Conger, for your kind words of loyalty with which you end your note. I certainly do understand you, and knowing you as I do in these respects, the few brief words from you mean more to me than a whole letter full from some other. You have the true spirit, as the Buddhic Splendor is burning in your heart! I know that you are one

of the reliables upon whom I can always count. Thank you! (48)

The next decade saw a new direction in the Society's work. The emphasis was upon public activity, organizational growth, and members learning the doctrinal aspects of theosophy and their relationship to the path of altruism. On January 15, 1932, faced with the rather sudden resignation of the American Section president, J. Henry Orme, Dr. de Purucker implored Colonel Conger, "one of the trusted officers of the 'Old Guard' . . . [and] a servant of Those whom we all serve," to run for the position "for which you are so eminently fitted." (49) Conger responded affirmatively first by telegram and then in a letter written from Takoma Park, DC, dated January 24, 1932:

There could be but one answer to your letter of the fifteenth and I trust that my telegram made sufficiently clear my position. . . .

Yet there are two conditions which are likely to circumscribe my usefulness in the position you propose for me, which I wish to mention, not because they made me hesitate in my reply, but because you should know about them -- One is my poor health -- the ailment contracted early in 1929 still hangs over me; the other is my present straitened financial circumstances which will interfere somewhat with the way I should like to "carry on."

Arthur L. Conger was elected to office on March 1, 1932. (50) During the 1930s he struggled with Parkinson's disease, which early on reached serious proportions and required him to give up the presidency of the American Section in January of 1933. (51) When his health improved, and on request of Purucker, he was again elected president on September 23, 1939. (52)

During his presidency he fostered the study of the theosophical philosophy and encouraged creative presentations of these ideas. In 1938 *Lucifer* became the official organ of the American Section and remained so until April 1951. (53) One example of the creative new approaches encouraged by Conger was *Theosophical Nuggets* (1940-1944), edited by James A. Long. *Nuggets* was a pocket-size magazine filled with theosophical concepts, letters of H. P. Blavatsky, quotes from *The Mahatma Letters*, and original articles by members of the American Section as well as European members.

It was during the 1930s that Conger became good friends with Dr. H. N. Stokes, editor of the *O. E. [Oriental Esoteric] Library Critic* and sometimes called "the watchdog of the theosophical movement." Dr. Stokes regularly attended the *Mahatma Letters* study group run by the Congers in their home on Jackson Ave, Takoma Park. In 1942, Dr. Stokes appointed Conger as his literary executor, and entrusted James A. Long and Mrs. Goldberg (personal assistant to Dr. Stokes) as collaborators. (54)

As happens with growing organizations, personality problems and other conflicts occasionally arose in the TS. Cases involving the American Section were referred by Dr. de Purucker to Conger because of his administrative and personal abilities. In addition, Purucker kept Conger informed about financial and

operational affairs of the Headquarters at Point Loma. The Cabinet continued this practice during its administration (1942-1945). In April 1940, before making the news public, Purucker wrote Conger that the headquarters and all facilities would be moved from Point Loma to Los Angeles County near Covina. On June 29, 1942, shortly after the headquarters moved, Purucker wrote Conger about certain ongoing problems in the American Section:

Please take it for granted, Arthur, that anything you find best for the spiritual and other health of the Section will meet with my approval, and I think I can give this blank endorsement at any time, knowing you so well, as I do, and your utter fidelity as well as high intelligence and diplomatic tact, and your ability also to stand firm should need be, like the true soldier you are.

Eleven days later he wrote to the Colonel:

Permit me to say, my dear Brother and friend of many years, and even ages in the past, that all your answers to this correspondence, I mean this which you have allowed me to see, have been patterns of firmness, kindness, diplomacy, and clear-headedness; and these words are not empty, Arthur, for I mean one hundred per cent. of the significance of each one; . . .

Naturally I approve of your answers in every respect, in general and in detail, and I only wish that I had the ability to handle these situations as you have.

Two months later, on September 27, 1942, Gottfried de Purucker died, and for the next three years the Cabinet administered the Theosophical Society while Colonel Conger remained head of the American Section. During these years -- the height of World War II -- travel and communication in the United States were difficult, and to Europe and elsewhere nearly impossible.

## LEADERSHIP

On January 25, 1935, seven years prior to his death, G. de Purucker wrote a document which was later to become known as his instructions to the Cabinet. It dealt with how to proceed under certain circumstances after his death. In these instructions Purucker foresaw the possibility that his successor might not choose to assume office immediately. He wrote:

At the end of the term of three years, should my Successor as Leader of the Theosophical Society not yet assume office, i.e., should not have assumed office before the expiry of the term of three years after my decease, the Cabinet collectively and individually are hereby directed and instructed and requested, after all due deliberation and careful thought to elect some member who is in good standing in the Theosophical Society to be the Leader of the Theosophical Society and to enjoy all rights and undertake all the obligations and duties that such position calls for as outlined in the Constitution of the T.S. as has already

been stated in the second paragraph of Page 2 hereof.

I pray and beseech the members of the Cabinet in office after I pass on to subordinate all personal feelings or idiosyncrasies of temperament, and possibly even their own convictions, to the majority-will of the Cabinet in its various deliberations and acts as expressed by their majority-vote; and I ask all members of the Cabinet to look upon themselves as clothed with the responsibility and therefore as carrying the dignity which belong to their high office as personal representatives of the former Leader.

On June 30, 1943, nine months after the passing of Purucker and a little over two years before he was to take office as Leader, Colonel Conger wrote to Iverson Harris, Chairman of the Cabinet, in response to a private letter from him:

Thank you very much for your Air Mail letter of June 22. With your general attitude on the subject of G. de P.'s successor I am in entire agreement, but to explain my attitude in detail I should like to burden you with some extraneous thoughts.

The appearance of every new Leader has always been the occasion for a house-cleaning of the Society. This pressure is not applied solely with the change of leadership, but in individual cases may occur at any time. But the change of leadership always strikes home among the weak-kneed ones who cherish doubts secretly and provides the circumstances for the insanity which overtakes them.

The fact is that every Leader appears to be surrounded by mirrors which reflect his own image to the doubting Thomas.

What follows is important.

It is true, I believe, that no Leader of the movement has yet actually named his or her successor. The intuitions of the members have supplied the missing links; where intuition is lacking the result has been to plunge the would-be candidate into the abyss. The present circumstances of the Society are quite different than what they were in 1929. Despite the war, the educated public awaits with bated breath to see who the latest Avatara from Tibet is to be; then there is curiosity on every hand to know what miracles have been performed to prove his claims to the office. G. de P. gives the perfect response to this which is the proviso that if no one has established his claims in three years time, someone is to be elected to the office by the very prosaic Cabinet. My guess is that the new Leader, however selected and recognized in the meantime, will not under ordinary circumstances want his recognition made public until the three years have elapsed as provided for.

I have it from K.T. that when H.P.B. was visited by the Master on her sick-bed in the Maritime Alps, he caused to appear in a vision the seven Leaders who would take care of

her work until she should come again. And if the White Lodge is interested in caring for and the training of three messengers yet to come, I see no cause for alarm as to the immediate successor to G. de P.

I do not mean by this that the Cabinet is infallible and could not make a mistake, but even if it should the work will be carried on with the advantage of getting rid of a lot of deadwood. However, that is a remote contingency since we have it on the best authority that so long as there remain three conscientious workers in our Society, it can never be destroyed and a link for communication will always be provided.

Your ideas upon the subject of not expecting too much of the new Leader or expecting to find him a replica of G. de P. are wholesome and timely. Misunderstanding on this point and the idea that he can only speak or act on the dictation of a Master has been productive of ruin of many a promising pupil. Also you are quite correct in speaking of the Leader as *Primus inter pares* as G. de P. has made abundantly clear in his writings.

As ever faithfully yours,

(signed) A. L. C.

On October 22, 1945, Colonel Conger was elected Leader of the Theosophical Society by the Cabinet. (55) His wife Margaret had died in June and he was confined to a wheelchair by Parkinson's disease. For a few, it was a prejudice against this illness and his being head of the ES that lay at the heart of the turmoil to come. (56) However, his personal assistants felt it a privilege to serve him. An indelible mark was made upon them and others by Conger's integrity and courage, his strong but gentle demeanor, and unqualified dedication to the theosophic cause. Contrary to rumors spread about him, many felt his physical impairment enhanced his mental and spiritual insight. (57)

Although my purpose is to give a general outline of Colonel Conger's life, I would be remiss not to remark briefly upon this change of administration, as there have been varying and sometimes inaccurate descriptions of "dismissals" from the headquarters staff at Covina. For example, in an article entitled "Discord is the Harmony of the Universe" Adam Warcup remarked: "Under Col. Conger, the Point Loma group had its night of the long knives in which a number of prominent members were expelled." (58) In an unpublished paper, given only in part at the Theosophical History Conference at the Point Loma Nazarene College, June 14, 1992, Dr. Gregory Tillett commented:

In March, 1946, Conger demanded the resignation of the dissidents; they declined to comply, were dismissed and ordered to leave the Society's headquarters forthwith, although for many of them it was their home, and has [sic] been so for years. There followed a purge of dissident members. Many of these -- including Iverson Harris, Boris de Zirkoff, Emmett Small, Sven Eek, Cardinal Le Gros, Judith Tyberg, Geoffrey Barborka, L. G. Plummer, Elsie Benjamin -- continued significant Theosophical work . . .

Another example is found in Appendix IV of the Point Loma Publications edition (1975) of Charles J. Ryan's book, *H. P. Blavatsky and the Theosophical Movement*, and reprinted in *The Eclectic Theosophist*, No. 29, July 15, 1975, where it is introduced by the editors W. Emmett Small and Helen Todd, as "faithful to fact and dispassionately presented, . . ." I have added names in square brackets:

Those so uncharitably and swiftly deprived of former duties and responsibilities included, among others, the Chairman and the Secretary of the Cabinet [I. L. Harris, W. E. Small]; the Recording Secretary of the Esoteric Section [Mrs. I. L. Harris]; and the President [H. T. Edge], the Vice-President [Marjorie Tyberg], the Secretary [I. L. Harris], the Assistant Secretary, the Director of Studies [J. Tyberg], and the Registrar of Theosophical University [F. Collisson]. -- p. 7

As Charles J. Ryan was an ardent supporter of Colonel Conger, it is strange to see his book used in this manner. Professor Ryan remained at the international headquarters of the Theosophical Society in Covina until his death on December 24, 1949, and provided notes and corrections for his book which were incorporated in the second and revised edition published in 1975 by Theosophical University Press for the centennial of the TS.

Adam Warcup's phrase, "night of the long knives," is uncalled for in light of the facts. As to the inaccuracies of the second quotation, I sympathize with Dr. Tillett, as he suggests in his conclusion that he had limited access to verifiable information. The following documentation should help to clarify the record.

Resignations from positions of responsibility in Colonel Conger's administration were indeed asked of some headquarters members after nearly eight months of their continuous public expressions of dissatisfaction. Iverson L. Harris and his wife, Helen, were asked to leave the headquarters in the fall of 1946. (59) Emmett Small was asked to resign from the editorial office on July 8, 1946. He left the Headquarters of his own accord July 28, 1946. (60) In a letter to Mr. Small on July 25, 1946, Conger offered help to the family:

From yours of July 24th I note that you will be leaving Headquarters this Sunday. Please know that you have my heartiest good wishes for your future position and happiness.

You do not mention your wife and children leaving at the same time. I assume that you are already aware of our desire to be of whatever assistance we can while you are getting set up, and assure you that your family are welcome to stay here until you are able to care for them.

Boris de Zirkoff, on the other hand, had already left the headquarters years earlier under G. de Purucker's administration, as evidenced by a letter from Purucker to Conger on July 28, 1942:

As I have written you recently, we here at Headquarters are all of the opinion that Zirkoff has practically abandoned his status as one of the Headquarters Staff here . . . during the last few months [he] has not been seen around at all, except for a flying visit, I believe for about an hour, from Los Angeles. . . . but I am letting it be known now that he no longer is an International Headquarters Staff-worker, but is working entirely for Lodge No. 60, which has agreed to undertake his entire support.

Sven Eek also left some time earlier, between the end of 1941 and the beginning of 1942. On April 9, 1942, Eek wrote to Dr. de Purucker from Los Angeles: "I have not had the pleasure of seeing you for a long time, . . ." In the same letter he recounts his experiences at Point Loma ending in 1941. He eventually became the president of Lodge 60 in Los Angeles.

George Cardinal Le Gros never lived at the headquarters, except for a brief visit, though he was a frequent contributor to the magazines. Confused, he was not sure which way to turn. Visiting with a friend and old-time member of the Society, he heard a different story from that of the negative reports he had received from Covina, after which he wrote:

Since talking with you Sunday I have experienced a terrific inner shake-up and readjustment of viewpoint toward the state of affairs in the T.S.

For the first time in a long time I feel the strange, poignant nearness of that spiritual life which seemed to retreat after G. de P.'s death.

I am complete again, and free in my conscience to work for Theosophy through the T.S.  
(61)

Ten days later, on December 13, 1946, he wrote similar sentiments to Colonel Conger:

please know that I am always ready, at any time, and in the face of any difficulty, to respond wholeheartedly to any and every request that you might make in connection with the work of the Movement.

Under any organizational structure there come times when a new leader reorganizes the team. G. de Purucker had asked for the resignation or retirement of a number of members, some prominent. For example, shortly before he died, he asked Henry T. Edge to retire from the Cabinet. (62) In the case of Judith Tyberg, Colonel Conger requested the Board of Trustees of Theosophical University to accept her resignation as a Trustee. Following this action, she chose to resign from the faculty of Theosophical University and to leave the headquarters. (63)

Geoffrey Barborka was another individual who left under G. de Purucker's administration. He felt it his duty to leave before the headquarters was moved from Point Loma. Purucker wrote Barborka saying that he had considered him, along with his elderly parents, as part of the staff that would be moving to

Covina. However, Barborka's mind was made up and he left before the Society's headquarters was transferred. (64)

L. Gordon Plummer left Headquarters during the Cabinet's administration. Later, on November 27, 1947, he wrote a statement he wished made public:

It is quite true that I left Headquarters nearly three years ago, and it is well known by all the members of the then-existing Cabinet, if not by everyone at Headquarters that I did so for reasons of health. I discussed this matter with Col. Conger after he became Leader, and he gave me his assurance that I did the right thing. (65)

The last name mentioned by Dr. Tillett is that of Elsie Benjamin, who had been G. de Purucker's private secretary. Never under Conger's administration did she waver or show anything but the highest respect for and loyalty to him as Leader. She knew well of Purucker's high esteem for Conger, as she had taken dictation and typed most of Purucker's correspondence. She wrote to Colonel Conger from England, where she lived in 1946:

I have been interested to see the reactions of people over here, coming to me quite unexpectedly, and it is fine to see that those who are selflessly working for the Cause recognize what you are; and that some who are old-timers in Theosophy, but who have drifted into a selfish attitude of merely wanting to get more and more E.S. instructions and yet do nothing for the T.S. -- some of these do not. So it proves that all this talk at Covina about so-and-so having given so many years of service, therefore his judgment is infallible -- is all nonsense, to put it mildly. (66)

Some of these individuals did have strong differences with Colonel Conger and his theosophic policies. Some even attempted to become more organized in their dissatisfaction. An informal meeting was held at Judge Frank G. Finlayson's home in Los Angeles on Sunday, September 8, 1946. Present at that meeting were Judge and Mrs. Finlayson, Dr. and Mrs. Sven Eek, Mr. and Mrs. W. Emmett Small, Miss Florence Collisson, Miss Katherine Heck, Mr. and Mrs. Iverson Harris, and Mr. Boris de Zirkoff, who presided. Miss Judith Tyberg was present during the latter part of the afternoon. The following remarks by Iverson Harris were made in response to a direct question from de Zirkoff as to whether he was ready to join a Central International Committee which de Zirkoff and others present were inaugurating:

I for one do not feel that I can at present conscientiously join any such central committee as is here proposed.

If there was any outstanding individual among us around whom we could all rally, unite, and accept his proven leadership, without danger of causing further division in our own protestant ranks, I think there would be a better chance of our doing something effective to bring about changes for the improving and safeguarding the real interests of the T.S. But I know of no such individual yet. (67)

The acceptance of resignations from four Trustees of Theosophical University, submitted at the time of appointment as was customary, happened in the following manner. On June 19, 1946, Colonel Conger wrote to Iverson Harris as Secretary of Theosophical University requesting the resignations of H. T. Edge, President; Marjorie Tyberg, Vice President; Judith Tyberg, Director of Studies; and Florence Collisson, Registrar. The same day, the Secretary acknowledged in writing the request and said that according to the Articles of Incorporation, Trustees and Officers of the University "hold office during the pleasure of the Board of Trustees." A Trustee meeting was held the same day. From the minutes of that meeting come the following details. The Trustees present were Mrs. Marjorie M. Tyberg, Mrs. Lolita W. Hart, Mr. A. J. Stover, Mr. William Hartley, Miss Florence Collisson, Miss Judith Tyberg, Mrs. Ethel Lambert, Mr. Iverson L. Harris. Doctors H. T. Edge and Gertrude van Pelt were absent due to illness. Vice President Marjorie Tyberg presided as Chair. Each resignation was dealt with one at a time. First was a vote on Dr. H. T. Edge: it was evenly split due to a proxy for Dr. Edge held by Marjorie Tyberg, who as Chair abstained. Then came a vote on Marjorie Tyberg and the result was identical. When the vote for Judith Tyberg came, she switched from her previous votes and voted in favor of her own resignation, breaking the tie. A similar event occurred with Florence Collisson, who switched her vote from the first two and voted for her own resignation, again breaking the tie. Judith Tyberg requested the Chair cast a vote to accept the Chair's and Dr. Edge's resignations to break the tie. The Chair then cast a vote to accept her own and Dr. Edge's resignation. The tie broken, the Board of Trustees accepted the four resignations.

The challenge to those involved in a spiritual organization in transition can be heartrending, and no blame can be cast. No doubt all who had made pledges to the highest within themselves to serve the cause of universal brotherhood had to consider well H. P. Blavatsky's admonition to her esoteric students:

No member shall, under any circumstances, bring any charge of whatever nature against another member, whether to H.P.B., William Q. Judge, or any other member of the Section. This rule does not imply that the Masters condone, excuse, or tolerate any fault or crime. But no member is the judge of the acts of another member or theosophist, in this Section less than in any other. For, while in every Exoteric Branch, its President and Council decide upon any charges against their Fellows, in this Section each member is to be judged by his Karma and the Masters alone. (68)

During this period, of course, TS work was proceeding as usual. On August 9, 1946, Colonel Conger renewed an old friendship with A. E. S. Smythe, head of the Theosophical Society in Canada. Conger wrote:

I look back on memories of the evenings spent with you at 144 Madison Avenue in the early days with infinite pleasure. As I was quite a bit younger than you I do not suppose you remember me as vividly as I do you. However, the main fact is that I never cease to regard you as a friend and an elder brother -- one of those egos who walk together side by

side one lifetime after another.

This close friendship no doubt played a part in the friendly relations between the two organizations. In 1948 it was expressed by a generous gift from Colonel E. L. Thompson and the Theosophical Society in Canada to Colonel A. L. Conger and the Theosophical Society, Covina, of a limited edition of the Buddhist *Tripitaka* in 48 volumes, published by the King of Siam in 1932.

Conger's administration was one of transition, not only for the Society but also for the world just emerging from a devastating war. When he took office he made a rather simple statement regarding his administration. He said, in effect, that the Society must be turned from the receiving end of theosophy to the giving end. (69) This emphasis shifted the Society from leaning on the past, towards cultivating a modern presentation with which to begin the second half of the century. It manifested in a national speakers program, an overall expansion of lodges and membership, and an active publishing program. There was also a successful effort for Theosophical University to benefit from the GI Bill and to expand the number of staff and students. In addition, Conger encouraged John P. Van Mater, then Secretary General, to issue a *Theosophical Headquarters Bulletin* to open up dialogue with members around the world.

The first year of Conger's administration began a flurry of lecturing activity. Speakers were sent out to Canada, Europe, and across the United States. (70) During this time Elsie Benjamin came from England to spend two weeks at the headquarters in Covina, and to conduct a US lecture tour after her stay. (71) In the following years the TS gained immensely from this first year of public speaking activity. Lodges not only developed, but a model for members to build upon was established as well. Between October 22, 1945, and the end of 1946, a total of 17 new lodge charters and one new national section charter were issued. (72) By 1946, construction began on a new residence hall to handle the increase in students and visitors coming to headquarters.

The following year saw National Section conventions in the US and Europe. In the United States a convention of the American Section was held in Washington, DC, in April 1947. (73) Colonel Conger attended, along with Martha Franklin and Alfred Spinks, one of his personal staff, Colonel Marion O. French, later to be appointed president of Theosophical University, (74) and Grace F. Knoche, then working at the American Section office in Colonel Conger's home in Takoma Park. When Conger heard that the hotel would refuse entry of an African-American FTS into the auditorium rented for the convention, he immediately invited the member to become his personal assistant day and night during the weekend event, thus allowing him to participate in the convention proceedings.

A new course at the Theosophical University for those interested in field work was begun due to requests from this national convention. In addition, on August 31, 1947, a Western Area Field Work Conference was held at the headquarters at Covina to explore new ways to introduce theosophy to the public. (75)

Europe had been devastated by the Second World War; Colonel Conger knew from experience what the

difficulties were, and responded by sending representatives there to encourage new efforts. A series of European conventions were held in 1947 with headquarters representatives John and Ingrid Van Mater attending. The Swedish Convention was held May 25-26. (76) New by-laws were proposed and accepted in response to Colonel Conger's call for more activity throughout the Society. The Netherlands Convention on June 22 was one of the largest conventions held that year, with several hundred delegates attending. (77) The English Convention formally opened on August 3, 1947. The Saturday before, the General Council held a meeting passing new by-laws and electing Elsie Benjamin as President of the English Section. With Germany broken up after the war, not all delegates were able to attend the German Convention held July 3, 1947. (78) Certainly, as the war had prevented theosophists from carrying out many of their activities, these conventions were a profoundly moving experience for all who attended. Perhaps nowhere was this more poignantly felt than in Germany.

On May 29-30, 1948, the American Section held a Triennial Convention at the Society's international headquarters at Covina. Colonel Conger delivered opening remarks in which he spoke of HPB having "succeeded in changing the moulds of mind of two generations, but not in time to prevent the outbreak of two world wars of disastrous proportions, . . ." (79) Then he spoke of future work:

If we ask how many ways there are of spreading Theosophy, the answer is two. One is by personal contact, the other is by making use of the written word. (80)

He emphasized the importance of the small events in life:

The Theosophic life is made up of small events through which the spirit of Theosophy flows. Just so the impact of the Movement on the world is the accumulation of such small contacts . . . performed by true-hearted Theosophists in every land. Through these united hearts and minds which make up the T.S. the force of the Lodge flows. In this light our daily efforts take on real dignity and we see them contributing to the whole. (81)

Throughout his administration of renewal, one of Colonel Conger's chief endeavors was maintaining an active publishing program. New printing equipment was installed and, along with keeping the primary source literature of theosophy in print, he added new titles. Although the war had disrupted the ability to publish, it did not prevent European members from making translations of the writings of HPB, Judge, and Purucker. As soon as possible, these books began to be issued in various European sections.

In America the editing and printing of *Lucifer*, the organ of the American Section, moved to Covina. In 1948 Conger rebuilt the children's program, replacing the *Lotus-Circle Messenger* and *Junior Theosophist*, edited by Grace Knoche (Sr.), with *The Challengers Own*, along with related new activities. A summary of publishing activity during Conger's administration is as follows:

**1946**

*The Voice of the Silence* -- Blavatsky

*Transactions of the Blavatsky Lodge* -- Blavatsky

*The Key to Theosophy* -- Blavatsky

*Studies in Occultism* -- Blavatsky

*The Bhagavad-Gita* -- Judge

*The Crest-Jewel of Wisdom* -- Sankaracharya

*Spirit in Crisis* -- Oosterink

## **1947**

*The Secret Doctrine* -- Blavatsky

*Fundamentals of the Esoteric Philosophy* -- Purucker

*Man in Evolution* -- Purucker

*Questions We All Ask* (4 vols. boxed) -- Purucker

*Healing and Occult Science* -- van Uchelen

## **1948**

*The Mahatma Letters to A. P. Sinnett* in conjunction with

Rider & Co. of London

*Gems from the East* -- Blavatsky

*The Ocean of Theosophy* -- Judge

*The Dialogues of G. de Purucker* (3 vols.) -- Purucker, edited by A. L. Conger

*Nature's Magic* -- Stover

## **1949**

*Light on the Path/Through the Gates of Gold* -- Collins

*Practical Occultism* -- Judge

*Studies in Occult Philosophy* -- Purucker

*Theosophic Correspondence* -- Saint-Martin

*Everybody's Guide to Theosophy* -- Harry Benjamin

## 1950

*Isis Unveiled* (Deluxe Edition with illustrations) -- Blavatsky

*Once Round the Sun* -- Titchenell

## Magazines

*The Theosophical Forum* ([82](#))

*The Challengers Own* ([83](#))

*The Theosophic Challenge* ([84](#))

*Theosophical Headquarters Bulletin*

*Lucifer* ([85](#))

In July 1950, Colonel Conger initiated the eventual move of the international headquarters from Covina. He asked A. Studley Hart and James A. Long to search for suitable properties in the Pasadena area that would house himself and his immediate staff, as well as the entire headquarters family along with the administrative offices, library, and press facilities. By September a large home had become available in Pasadena to accommodate Colonel Conger and his second wife, Martha Franklin Conger (1878-1959), along with his personal and secretarial assistants, the Archives, and the TS and ES offices. The move was completed in early October.

It was a more challenging assignment to find adequate properties in favorable locations for the headquarters administrative offices and personnel, and also for the library and press facilities. Studley Hart and James Long reported regularly to Colonel Conger. By early February 1951 he was most

pleased to hear that the final papers had been signed for the "Deodars," which has housed the headquarters and its personnel since June 1951. Another building nearby, purchased to accommodate the library, press, and publications departments, required extensive renovation. However, Conger did not live to see the changes. Like his predecessor, G. de Purucker, he died shortly after the relocation of the international headquarters. He passed away in Pasadena on February 22, 1951, at the age of 79, thus bringing to a close a distinguished and remarkable life dedicated to the service of humanity.

It should be mentioned that during those five months of moving in 1950, the work of the international headquarters continued unabated. About six weeks after moving to Pasadena, in mid-December, Conger requested a meeting of the staff, as well as a representative of the American Section. He wanted a discussion of the work, the world situation, the situation of theosophy in the world, and theosophic work as it existed in the different national sections. Foreseeing new needs for the Society, he sent James Long on a world tour of the national sections to meet with officials and members. Mr. Long's first stop was England, where he received his first major directive from Colonel Conger: to close down the Esoteric Section in every country as he arrived. (86) While Long was in Australia, Conger asked his secretary, Grace F. Knoche, and the Western District organizer, George Simpson, to drive down to San Diego to ask the members to close their lodge and cease all public activity for the present. A week later Conger requested Miss Knoche and Mr. Simpson to close the San Francisco Lodge. Long returned to the US shortly thereafter. He described his return to the headquarters in Pasadena at the General Congress of the Theosophical Society held in The Netherlands:

I did get back very fortunately just one week before Colonel Conger had his heart attack -- time enough to give him a very brief digest of what I had found and what I felt was needed and he knew, as did we, that his time had come to leave us. We were greatly relieved when he said one day: "The end of my journey will not be painful." And it was not. Of course I did not know what day or how the end would come. But three nights before he passed on, I went upstairs to his room as I usually did before retiring, and said: "Colonel, I think I will turn in now." It was about 10:30. "Is there anything I can do for you before I retire?" He said: "Yes." I said: "Colonel, you just name it and I will do my best to do it." He thought a while and he looked up: "Finish the job you have started to the very end." I understood. I saluted him Good-night and Good-bye. The next morning he had a heart attack, did not regain consciousness for three days, and passed on. His memory in the Theosophical Movement will never fade out, nor will the effect of his Great Sacrifice be diminished. (87)

I conclude with a statement made in 1938. It sums up the singleness of purpose of Arthur Latham Conger who, as his life and work become better known, will be seen as a significant contributor to the health and vitality of the modern theosophical movement.

The higher Self in us will sound its clarion call to invoke the higher Self in our brother, whether that brother be Greek, Negro or Jew, master or servant. To the spirit in man conventionalities seem as trivial as do gradations of rank in a democracy. Despite all

obstacles "Deep will call unto deep" be it in the office or in the home, in the market place or on a street car. -- Arthur L. Conger, *Lucifer* (2:13), November 1938

## Preface

This volume is not a history of the early days of the Theosophical Society. No attempt has been made to produce a highly documented and exhaustive record, but by a careful selection of valuable material from the archives of the Theosophical Society (Point Loma), and from the magazine, *The Theosophist*, as well as from other sources, the aim has been to recreate for the reader the atmosphere of zeal and of devotion to the Masters and the T. S. which inspired the whole life of one of the outstanding characters in the early days of the Theosophical Society, Damodar K. Mavalankar. Unimportant matters, such as official notes and formal reports which contain nothing of permanent interest, though signed by Damodar, have been omitted.

No doubt many Theosophists have entertained the thought of compiling the writings of Damodar, but as far as we know, this is the only book of its kind that is at present available. It was some years ago that

consideration was first given to the preparation of a book on Damodar, but it was not until this summer of 1940 that the Literary Executive Committee felt that our Press could undertake this additional work, the compilation of which has been done by Mr. Sven Eek, Manager of the Publications Department of Theosophical University Press.

Particular help was given to the Editorial Board by Professor C. J. Ryan, who has contributed the valuable Biographical Notes. Professor Ryan is well known to Theosophists as the author of *H. P. Blavatsky and the Theosophical Movement* and of innumerable articles in Theosophical periodicals during more than forty years.

The material for this present volume has been taken from original sources, and is literally transcribed with the exception of obvious typographical errors which have been corrected. In certain instances such corrections appear in square brackets for the sake of absolute clarity. The Editors of this book are responsible only for those footnotes enclosed in square brackets and signed EDS.

Acknowledgment is due to A. Trevor Barker, Editor of *The Mahatma Letters to A. P. Sinnett* and *The Letters of H. P. Blavatsky to A. P. Sinnett*, for permission to include extracts from these two books. --

## What Is Theosophy?

Examine yourselves; realize that there is divinity within you, call it by what name you please. . . . Examine your own inner movements of consciousness, and you will know that these things of glory are in you. They are the working in you of your inner god, your spiritual inner sun.

This is the message of the great Sages and Seers of all the ages. . . .

. . . that living fire of consciousness within your breast which tells you of your oneness with all that is, and of your kinship with everything that is; for verily you are akin to the gods who are the rulers and counselors and governors of the Universe. -- G. de Purucker,

## *Questions We All Ask*

WHAT, indeed, is theosophy? This question, now being asked with increasing earnestness, cannot be answered in one sentence, but the leaders of the Theosophical Movement have given a few pithy expressions of its various aspects which form a fitting introduction. Helena P. Blavatsky, the Founder of the Theosophical Society, said:

Theosophy is, then, the archaic *Wisdom-Religion*, the esoteric doctrine once known in every ancient country having claims to civilization. -- *The Theosophist*, October 1879  
Theosophy is the quintessence of duty. -- *The Key to Theosophy*

William Q. Judge begins his *Ocean of Theosophy* with this:

Theosophy is that ocean of knowledge which spreads from shore to shore of the evolution of sentient beings; unfathomable in its deepest parts, it gives the greatest minds their fullest scope, yet, shallow enough at its shores, it will not overwhelm the understanding of a child. . . . Embracing both the scientific and the religious, Theosophy is a scientific religion and a religious science.

According to Katherine Tingley:

Theosophy is the inner life in every religion. It is no new religion, but is as old as truth itself. . . .

Theosophy will bring something to you that can never pass away: the consciousness of your divine, your inner self; a conviction of your inherent power to conserve your energy along the highest spiritual lines. For man cannot find his true place in the great scheme of human life until he has ennobled and enriched his nature with the consciousness of his divinity. . . .

Think of theosophy not so much as a body of philosophic or other teaching, but as the highest law of conduct, which is the enacted expression of divine love or compassion. --  
*Theosophy: The Path of the Mystic*, Chapter 1

G. de Purucker, the fourth leader of the Theosophical Society, defines the theosophical philosophy in these words:

The Theosophical philosophy is not something which has been invented by anybody at any time: it is the formulation of the truths of Nature -- not of outer Nature alone, which is but the effectual mirroring of hid causes; but more particularly of the vast causal realms behind the outer Nature which our senses know -- behind the outer veil of Reality; for these inner and causal realms are the inner Heart of Things. These truths were originally

formulated in systematic manner in far past time by Great Seers. This formulation of natural truth has come down to our own times checked and tested in every age by new generations of these Great Seers. This formulation today is called Theosophy. -- *The Theosophical Path*, Jan. 1930, pp. 3-4

Theosophy is not a religion in the ordinary sense; and the Theosophical Society is not a Church in any sense. H. P. Blavatsky was inflexibly opposed to the idea that it should degenerate into a sect and set up hard-and-fast dogmas or traffic with sectarian methods.

The object of its founders was to liberate man from bondage by presenting a philosophy of life that would show him how to find the truth within himself. The literature presented by the Theosophical Society, though a statement in modern form of the ancient wisdom, is not offered as a creed, but is intended to provoke thought and study. It gives an explanation of the problems of life that every person can verify for himself, if he so will. Belief in, and the wish to promote, the brotherhood of mankind are the only prerequisites for good standing in the Theosophical Society.

Theosophy touches life at all points and illuminates every problem, but, naturally, different people find certain aspects more attractive than others -- especially at the beginning. To the most intuitive, who immediately perceive the practical importance of its teachings for the happiness and welfare of humanity, this is the greatest incentive to its study; others appreciate its profound speculative features; some are attracted by its revelation of the inner meaning and basic unity of the great world religions; and there are many who prefer the scientific aspect, which includes the rational explanation of occult phenomena. To meet these conditions we must consider as many aspects of our subject as space permits.

---

## **Theosophy a Unity of Religion, Science, and Philosophy**

From the foregoing citations the reader will rightly conclude that theosophy is very inclusive. Dr. de Purucker says:

Now, the operations of the human consciousness are threefold, if you analyze them carefully; and these threefold operations men have designated by the words religion, philosophy, and science. . . .

They are not fundamentally different, but are like the three sides of a triangle, or like three views or ways of looking at truth, and their unified vision proclaims the recondite facts of Being. -- *Man in Evolution*, Chapter 1

The mistake of the modern age is to separate the field of knowledge into divisions. We notice this particularly in science, wherein specialization is becoming an embarrassment. In demonstrating that religion, philosophy, and science are and must be a unity, theosophy does not strain any point to

combine factors that are really not harmonious; it simply presents well-known facts from a new aspect.

Another artificial and fatal division that vanishes in the light of theosophy is that between the speculations of philosophy and the practical conduct of life. A fundamental principle in theosophy, one that cannot be too strongly emphasized, is that its teachings cannot be properly understood without a sincere effort to make them a power in our everyday lives; theosophy is not for Sundays alone. As H. P. Blavatsky said, "Theosophist is who Theosophy does," and as Dr. de Purucker says, "Love is the cement of the universe," without which it would fall to pieces (in other words, "God is Love"). So how can we expect to understand the laws of nature if we outrage them by our selfish thoughts and acts? Belief and conduct cannot be separated in the true.

---

## Universal Laws in Nature

The beginner in theosophy has a right to know the foundations of the theosophical structure, although only the briefest outline can be given here.

There is one infinite Life, without beginning or end; no such thing as dead matter exists in nature. Every atom is a spark of the one Life. The divine unity behind all manifestation, commonly called spirit and matter, which some call God, others That (Sanskrit *sat* or *tat*), is so infinitely beyond comprehension that we can only stand in mute awe and refuse to insult its majesty by attempting to describe it. The most reverent conception for us is that which comes from Oriental teachings: absolute compassion. Early mystical Christianity says:

No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, he hath declared him. -- John 1:18

The initiate Paul repeats:

Who only hath immortality, dwelling in the light which no man can approach unto; whom no man hath seen, nor can see . . . -- 1 Timothy 6:16  
God is Love. -- 1 John 4:16

Those statements are purely theosophical, and they are not atheistic. From the Unknowable its manifestation in the dualities of spirit and matter descends in cycles of *manvantara* (activity) and *pralaya* (repose), ranging from cosmic, solar, and world periods to such familiar alternations as sleeping and waking. The evolution of the human soul by physical incarnation, alternating with rest in spiritual conditions, has its place in this universal law of cycles.

In the East this process is called the Great Breath. During the outbreathing the gods awake: hierarchies of innumerable degrees of spiritual and other beings become active. With the inbreathing the process is

reversed: the manifested universe returns to the Father, enriched by experience.

Man on earth is a life-atom of the Divine, immersed in matter, a pilgrim seeking his way back to the source. At a certain stage of experience an inner awakening takes place, and it is then possible for him to step knowingly upon what is called the path. As love is the law of life, the only way to find the path to the god within is by obeying the law of compassion, of brotherhood. So we find every true spiritual teacher throughout the ages bringing the same message, which Dr. de Purucker has phrased in the following way:

Love is the cement of the universe. Learn to forgive. Learn to love. Each one of you is an incarnate god. Be it!

The aim of the Theosophical Society is to spread this teaching of universal brotherhood by revealing the facts on which it rests, and thus showing it to be the inevitable way to peace and happiness. H. P. Blavatsky, the one who was chosen to establish the modern Theosophical Movement, gives the key to the whole situation in a few words:

Our duty is to keep alive in man his spiritual intuitions.

There exist on earth, though unknown to the world at large, a few rare souls, the efflorescence of the age, who have purified themselves from all traces of personal selfishness and have become living incarnations of love and wisdom. Such are the Masters of wisdom, compassion, and peace who established the Theosophical Movement and who uphold and protect it today. These Masters of life have *realized* the truth of the most fundamental teaching of the wisdom-religion, theosophy, the *oneness of man with the universe*. They have found the divinity within, the inner god. They know the meaning of what the Upanishads say in so many ways: "THAT *thou art*."

---

## The Theosophical Society

The Theosophy Society was founded by Helena Petrovna Blavatsky, a Russian of high social rank. Her purpose was to restore theosophy to the West and thereby to build a firm foundation for the brotherhood of mankind. In her day Western civilization was in real danger from the increase of materialism, partly arising from the wonderful discoveries of physical science which seemed to discredit all spiritual interpretations of life; and H. P. Blavatsky was sent by the great Lodge of Guardians to counteract this by spreading theosophy. Not only science, but popular religion was materialistic: on the one hand blind force, and on the other rigid dogmatic formalism. A short time before the foundation of the Theosophical Society, Lord Lytton wrote:

Look where we will around us in every direction the sources of pure spiritual life appear to be altogether stagnant, or else trickling feebly in shrunken and turbid streams. . . .

wherever the grandest issues of Humanity are at stake, man's spiritual attitude towards them is one either of hopeless fatigue or fierce anarchical impatience. And this is the more deplorable because it is accompanied by a feverish materialistic activity. Yes, this age of ours is materialistic; and perhaps the saddest and dreariest thing in the ever-increasing materialism of the age is the ghostly squeaking and gibbering of helpless lamentation made over it by the theologians, who croak about their old dry wells wherein no spiritual life is left. Meanwhile society seems to be everywhere organizing animalism. -- *Fortnightly Review*, 1871

H. P. Blavatsky was specialty fitted for her mission by brilliant intelligence, dauntless courage, and overmastering desire to lift some of the burden of sorrow from the world. Her qualifications included trained occult faculties, which enabled her to demonstrate the theosophical teaching that man has far greater powers than he suspects locked up in his inner nature. After many wanderings in both hemispheres, she met certain members of the Tibetan Lodge of Initiates who prepared her for her coming work. She well knew that it involved the sacrifice of all that most people hold dear, and that the bitter hostility of the forces of prejudice and reaction would be aroused, yet she did not hesitate. However, in spite of having to endure both the crudest and most refined forms of persecution, and of being constantly misunderstood and misrepresented, she succeeded in spreading theosophy far and wide and in creating a large and active Society of earnest students and workers. Her teachings have already powerfully affected modern thought, and in the twentieth century, science, philosophy, and religion have been moving towards theosophy with rapidly increasing speed. In fact clergymen are preaching it from the pulpit, sometimes even using the name theosophy.

H. P. Blavatsky always repudiated the claim of having invented theosophy. Again and again she gave the credit for her teachings to her superiors, the guardians of the sacred knowledge. Her duty was to present it in a form acceptable to the West. As her work was chiefly intended to give Western civilization a new spiritual impulse, she was directed to begin in America, to which country she was sent by her teachers, the Masters of wisdom, in 1873.

On November 17, 1875, the Theosophical Society was established by her with the assistance of Col. H. S. Olcott, W. Q. Judge, and others, at New York. The remainder of her life was spent in spreading theosophy by personal teaching, writing books, editing magazines, and establishing Lodges in many countries. She died in London in 1891. In the sixteen years of her public activity the Society gained thousands of members, national and local centers were organized throughout the world, and a large literature was produced.

In 1888 Madame Blavatsky brought out her greatest work, *The Secret Doctrine*, which has had such a powerful effect on modern thought, and founded the Eastern or Esoteric School for the instruction of the more devoted students and as the energizing heart of the Movement.

After her death in 1891, William Q. Judge, her trusted American representative, who had been personally trained by her, was called on to keep the Movement true to the lines she had laid down; and

when he passed away in 1896, Katherine Tingley took his place. She reorganized the Constitution of the Society and in 1900 established the administrative center at Point Loma, California.

Upon her death in 1929, G. de Purucker, who had occupied responsible positions at Point Loma for nearly thirty years, became Leader of the Theosophical Society. Dr. de Purucker expanded the scope of Theosophical University, making it a valuable adjunct to the work of the Society. By lectures, classes, and through his numerous writings such as *Fundamentals of the Esoteric Philosophy*, he clarified and made intelligible to the lay mind the profound philosophy given by H. P. Blavatsky in *The Secret Doctrine*. Shortly before his death in 1942 he removed the International Headquarters of the Society to Covina, California.

Under Arthur L. Conger the original line of teaching and training in the Society continued, with particular emphasis upon making the theosophical literature widely known, so that the beneficent teachings of the theosophical philosophy may be applied directly to human problems. He moved the International Headquarters to its present location near Pasadena, California, where it has continued under James A. Long and the present Leader, Grace F. Knoche.

## Chapter 1

### The Yoga of Theosophy

"Does the Theosophical Society teach or recommend what are popularly known as yoga practices such as breath control, the development of psychic powers, or astral traveling, for seekers hungry for spiritual wisdom and who long to help humanity?"

This natural question is often asked because it is well known that the Theosophical Movement was founded by Oriental teachers and was associated for a short time with certain demonstrations of occult forces, shown to help break down the rampant scientific materialism of the age. The answer is definitely No. Theosophy, indeed, offers a system of spiritual development or discipline suited to all people, regardless of creed or race; and if we like to call it yoga with the proper meaning of "union" or "yoking" with the higher self, it must be remembered that it has no resemblance to the lower psycho-physiological (and frequently commercialized) yoga methods so widely advertised in the West, which attract the unwise who seek to gratify cravings for preternatural experiences. When closely analyzed, these methods are seen to be misleading when not positively dangerous, and only too often do they stand as impediments to spiritual progress.

The popular Western conception of yoga, with its stress upon phenomenalistic results, is not far removed from plain psychical research, only the latter lacks the Oriental appeal associated with the word yoga. The inferior so-called yoga may be regarded as mainly an organized system of psychophysical training developed in the Orient, but the true yoga, as taught by all the great spiritual sages and seers and emphasized in theosophy, is well-ordered spiritual development, the training which leads to the discovery of the inner god. This knowledge was practically lost in the matter-of-fact West, being manifested only by a few illuminated Christian mystics, and conditions prevented their teaching it in the more explicit and scientific manner of the great Oriental teachers; although even in Western lands methods were devised to meet the needs of various mental and emotional types. Salvation was to be attained by love, by devotion, and by works. The monkish practices of self-mortification and bodily torture resembled the methods for strengthening the will and perhaps obtaining a few supernormal powers of a low order employed by false Hindu yogis who injure their bodies by various physical tortures -- fire, knives, etc. Their hideous practices are sometimes, but quite erroneously, confused with what is called hatha-yoga.

A hundred years ago, even the genuine Eastern yoga was regarded in the West as a fantastic superstition, a fit subject for ridicule. In 1893 a sincere and eloquent Hindu *sannyasin* preached a high form of yoga in the West, but it was inevitably misunderstood by most of the hearers, largely superficial thinkers and curiosity seekers who were attracted by the Oriental glamour of what was to them the latest fashionable fad, promising mysterious revelations. The audiences melted away when they found that true yoga was not the practice of "magic arts" but meant strenuous efforts toward self-control and self-purification.

When the commoner forms of desire are overpassed, more insidious forms of egoism appear, such as the craving to obtain occult powers for personal gratification, however disguised under high-sounding names. Our motives are not always so pure as we cheat ourselves into believing, and the selfish personality is exceedingly cunning in using the lower mind to obtain what it wants. The yoga the world needs is founded on the love of truth, goodness, and wisdom for their own sake: it makes unselfish work for others a habit and a joy. The neophyte in theosophical yoga is told that "To live to benefit mankind is the first step," and he is asked, "Can there be bliss when all that lives must suffer? Shalt thou be saved and hear the whole world cry?" (*The Voice of the Silence*)

Let there be no mistake: the theosophical idea of spiritual discipline or yoga, by whatsoever name it may be called, is founded on that principle, and it is the only way to those golden gates which lead out of the prison of the lower self into the light of eternal day. It is pathetic to see intelligent persons who have been disappointed with the conventional answers to the deeper problems of life and human nature, grasping ignorantly for satisfaction in unprofitable, misleading and hazardous directions when the road is open, the landmarks clearly defined, and the guides ready to direct.

Among the lower yoga practices which the ill-formed West has begun to play with of late, the amateur experimentation with breath control or *pranayama* (literally "death of the breath"), with bodily postures and other psycho-physiological methods, has done grave harm to many. It may not only seriously injure the body, but it may only too easily arouse strange elemental forces inimical to man, "dread dwellers on the threshold," which threaten and sometimes destroy reason, the moral nature, and even life. A partial expansion of the lower astral vision that may temporarily satiate the craving for a glimpse behind the scenes is not accompanied, in the case of the tyro, by the power to close at will the doors he has forced open.

To speak plainly, the would-be practitioner of the psycho-physiological yoga of the breaths, etc., opens a psychological door within himself through which molesting nature-spirits can enter and obsess him. These objectionable forces lurk on the threshold of the astral light, the regions sometimes entered in nightmares and other abnormal states. He may also be the prey of earth-bound *kama-rupas*, lingering, shadowy, and soulless vestiges of persons who have passed on to their peace and rest in devachan. These "spooks" are eager to taste the sensual pleasures of the world again, and they quickly seize the chance of indulging their unbridled passions through the senses of the unprotected intruder into the astral region. Such entities are well known to the trained psychologists of the Orient, who take pains to keep them at a distance. Even some of the most skeptical Western psychic researchers have been forced to accept the reality of mischievous and often dangerous sprites which produce phenomena in haunted houses such as noises, violent displacement of objects, etc. These "poltergeists" may partake of the nature of either of the above-named astral denizens, but their energies are normally released in physical manifestations. The spiritually developed and trained disciple of a Master can safely pass into the dregs of the astral light if his duty calls, but it would be no pleasure for him.

The proverb about letting sleeping dogs lie should be heeded by one who is tempted to unlatch the door to psychic experiences. H. P. Blavatsky in her *A Bewitched Life*, and Bulwer Lytton in his *Zanoni*,

present in brilliant fictional form the suffering and havoc wrought by trespassing on "forbidden ground" on the part of well-meaning persons who had not given the right knock. Both occult writers had exact personal knowledge of their theme. In no way does amateur dabbling with the lower yoga practices resemble the tranquil process of a college course in modern psychology! No amount of intellectual training or Western scientific methods of research will make the venture secure, and this includes Orientals as well as Occidentals, as the writer has reason to know.

Many cases are known to theosophical students where dabbling with breath control and thereby disturbing the delicately balanced forces of the *pranas* on which life and health depend, has produced disastrous consequences, followed, alas, by bitter regret for the disregard of friendly warnings. Such tragedies usually come from ignorance of the dangers, but some minds, over-confident of their supposed security from harm, are willing to take any risk in order to steal forbidden powers -- forbidden in the sense of being premature in this period of evolution, except for the very few who have earned the right to have them and have developed the power to control them. These powers are hedged around by nature's wise prohibitions, and the unfit becomes a victim instead of a master. H. P. Blavatsky says of such a victim that he is liable to "fall into sorcery and black magic, and through many incarnations heap up for himself a terrible karma," and even "risk the annihilation of the present personality."

Attempts to get out of the physical body and travel in the astral plane are *not* recommended to students of the ancient wisdom. Although it is not a grateful task, we must warn our readers that the name of theosophy has been misused in certain quarters by the approval of methods to disentangle the subtle body from its physical sheath and wander in the astral plane of strange and bewildering illusions, unknown perils, and hostile denizens. Specious promises were made that great good can be done that way. Such a course is entirely opposed to H. P. Blavatsky's teachings and the wholesome theosophical ideals of service to humanity; and even on ordinary considerations of prudence cannot be too strongly condemned. Numerous cases, some personally known to the writer, testify to the disastrous mental and physical results that have fallen upon well-meaning but ill-advised persons who artificially released themselves from the protection of the body.

Warnings against irresponsible attempts to induce abnormal states of consciousness by breath control and other hatha-yoga exercises do not, of course, apply to the perfectly wholesome methods of breathing and physical exercise taught in athletic training.

It is unfortunate that misleading notions about yoga persist and that so many cunning sirens sing their alluring songs to entice the unwary by specious advertising of psychic powers, "arcane knowledge leading to success in life, privately given at so much a course," etc. Some clairvoyants, more or less genuine, practice under the name of yogi, but they should be more properly called fortunetellers. For one serious and valuable book on the higher yoga *philosophy* of the Orient, dozens of spurious ones are foisted on the public which pander to an unhealthy curiosity about phenomena, the authors being careless whether the practices they recommend are dangerous or not -- possibly being themselves ignorant in some cases -- so long as they can produce a salable article. Some of the more unscrupulous offer correspondence courses for money, professing to awaken psychic centers in the body and pranic forces connected therewith which become dangerous to health and sanity when the natural balance is

disturbed. Others promise "initiation" for two dollars! Is it any wonder that the genuine schools of the Mysteries were (and are) sacredly protected from profanation?

Other forms of psychic yoga, though not so vulgarly commercialized, are far from being spiritual. They have what may be called a scientific technique to penetrate a little way behind the veil of material nature, but it is no more spiritual or ethical than, say, chemistry, and it can, like chemistry, be used for abominable purposes. In the hands of those whose hearts and minds are not absolutely pure and unselfish -- and how few such there are -- it can prove as destructive as a combination of dangerous chemicals in the hands of an ignorant and inquisitive child. Alexandra David-Neel, the Buddhist scholar and authority on Tibetan occult lore, the Lama Yongden, and other qualified observers describe many cases where revenge, ambition or vanity inspired malevolent persons in Tibet to acquire this technique, regardless of consequences to others, and sometimes to themselves.

But far removed from such low ambitions, there are many sober-minded persons who renounce not only the vanities of this world but its wholesome activities and duties in order to obtain personal success in the lower yoga technique. They mistakenly conceive this to be the only road to knowledge, and concentrate on their own salvation, regardless of the general welfare of humanity, which may get along as best it can for all they care. The same principle, we may remember, is not unknown under other aspects in so-called Christian countries, but in the long run it defeats its own ends.

Such a self-centered attitude is the last thing that any yogi worthy of the name theosophical would approve, for it ignores the first principles of brotherhood. True yoga cannot exist without a sympathetic and helpful understanding of human nature and a genuine effort to lift the heavy burden of spiritual and intellectual ignorance in the most undeveloped, "even the least of these." It has no Untouchables. In her *Studies in Occultism*, H. P. Blavatsky writes:

true *Occultism or Theosophy* is the "Great Renunciation of SELF," unconditionally and absolutely, in thought as in action. -- p. 28

It is impossible to employ *spiritual* forces if there is the slightest tinge of selfishness remaining in the operator. For, unless the intention is entirely unalloyed, the spiritual will transform itself into the psychic, act on the astral plane, and dire results may be produced by it. The powers and forces of animal nature can equally be used by the selfish and revengeful, as by the unselfish and the all-forgiving; the powers and forces of spirit lend themselves only to the perfectly pure in heart -- and this is DIVINE MAGIC. -- pp. 4-5

This earth of ours is, and long will be, our home, and it needs all the help strong souls can give. As we make progress on that line, all the powers -- spiritual, intellectual, and even psychic -- will come to our aid in natural evolution as they are called forth by right aspiration. Unselfish labor to arouse the spiritual intuitions of a discouraged and materialistic world is the only worthwhile yoga, the yoga of theosophy. We are challenged by one searching question: Am I becoming more useful, more willing and capable to give the service my conscience demands of me?

The Masters who established the Theosophical Society are perfectly familiar with the psycho-physical yoga system which makes certain bodily exercises and breathing processes (the lower hatha-yoga) the precursor or foundation of higher activities, but their experience has shown serious objections to it, and they have never permitted its introduction into the activities of the Movement, interesting as it may be to scientific students of abnormal psychology. Any tendency toward what is called "sitting for yoga" has been firmly discouraged, and for excellent reasons. In this regard we may recall the experience of the Buddha, who began his search for truth by trying the lower yoga of extreme bodily asceticism. He soon found that it was a hindrance to progress, even in such an exalted case as his.

To the sincere aspirant for soul-wisdom the time comes when unusual psycho-spiritual powers and faculties begin to develop in a perfectly natural way, and under such favorable auspices he will find no difficulty in meeting a real teacher who can direct his further development. There is an occult saying, "When the disciple is ready the teacher will appear." The wise ones are always on the watch for recruits to the army of light and liberation. Many examples are on record down the ages of the reception of such guidance by the worthy, regardless of religious or philosophical belief, and there are instances in the Theosophical Movement.

An outstanding case is that of an intellectually and spiritually advanced Hindu lad who came to Blavatsky's assistance soon after she reached India and when she was bringing out her first theosophical journal under great difficulties. This young man, Damodar K. Mavalankar, abandoned his proud Brahmanical caste and brilliant worldly prospects to devote his life to unselfish work for humanity through theosophy. His sincerity and devotion attracted the notice of the Masters of wisdom and compassion who are behind the work of the Theosophical Movement; and gradually and without strain he found new powers, bodily, mental, and even psycho-spiritual, awaking and becoming available for the great opportunities for service which soon came to him. Damodar is a shining example of true discipleship. The faculties he developed were perfectly normal under the conditions he provided. They had not been desired for personal gratification, and they were never displayed as inducements to persons with selfish ambitions for psychic powers. Another and perhaps more noble example of a similar line of conduct within the Theosophical Society was William Q. Judge; and others are on record.

Such true devotees have visioned the path to the supreme goal of human evolution union -- with the inner god, the Father in Heaven. To step on this sublime path, to develop this spiritual clairvoyance, demands no physical processes or bodily tortures, and above all no withdrawal from contact with our fellow pilgrims on the uphill road of life. The experiences we need are found in the rough and tumble of the world, by cheerful endurance of what cannot be avoided, and by a sympathetic understanding of the karmic difficulties of others, who so frequently need help *to help themselves*. The theosophical "brahma yogi" is a man or woman to whom those in trouble will instinctively turn for advice, a peacemaker at home and abroad.

A devoted servant of humanity, William Q. Judge, sums up the yoga of theosophy in these eloquent words:

What then is the panacea finally, the royal talisman? It is DUTY, Selflessness. Duty persistently followed is the highest yoga. . . . If you can do no more than duty it will bring you to the goal. . . . It is that boundless charity of love which led Buddha to say: "Let the sins of this dark age fall on me that the world may be saved," and not a desire for escape or for knowledge. It is expressed in the words: "THE FIRST STEP IN TRUE MAGIC IS DEVOTION TO THE INTERESTS OF OTHERS." -- *Letters That Have Helped Me*, vol.

## Chapter 2

### A Tibetan Aspect of Yoga

It is not long since reports of occult mysteries and magic in Tibet and elsewhere were ridiculed by serious Western scholars; they were not admitted into academic "good society." The deadly, intolerant persecution from which H. P. Blavatsky suffered in the nineteenth century arose partly from the contemptuous denial of such possibilities among the Western educated classes intoxicated by the materialistic theories and brilliant practical achievements of science. Even the allegorical interpretation of the bewildering legends of gods and heroes in the Hindu and Buddhist scriptures was rejected.

When Col. H. S. Olcott, then President of the Theosophical Society, discussed that subject with Professor Max Muller, the famous Orientalist, about a little over a century ago, the latter pleaded with him to advise the scholars in the Theosophical Society to abandon the claim that the Hindu scriptures contained such hidden meanings as the "superstitious" pandits asserted. Today, however, we find a few Orientalists who not only speak of such matters with more respect and intelligence but accept the fact that some yogis possess so-called supernatural powers. Some, like Mme David-Neel, even claim a practical though limited knowledge of the *rationale* of certain Oriental psycho-magical processes of an elementary nature. Dr. Richard Wilhelm, sinologist; Dr. Carl Jung, psychologist; Sir Wallis Budge, late Director of Egyptology of the British Museum; Dr. Alexis Carrel, writer of *Man the Unknown*; and other distinguished scholars and travelers have given testimony to the existence of that Occult knowledge which was regarded in the West as the grossest superstition until Blavatsky began "to break the molds of mind."

Mme David-Neel's records of experiences behind the veil in Tibet have done much to open the eyes of the West to the fact that the life of the people of that mysterious land is permeated by psycho-occult activities which are no mere fancies, and Dr. W. Y. Evans-Wentz's scholarly works on Tibetan religion have drawn worldwide attention to the curious blend of advanced spiritual teaching with lower magical practices which flourishes in Tibet and its borderlands. The spiritual and philosophical side is practically the same as the fundamentals of theosophy, which is not surprising as both come from the same source, the ancient wisdom-religion, preserved by the Great White Lodge, whose chief esoteric center is the mysterious Sambhala in Tibet.

It is generally believed that about the seventh or eighth century of the Christian era, Buddhism was first introduced into Tibet. Padma Sambhava, a noted Hindu teacher, is credited with being the chief exponent. His presentation of the teachings was, no doubt, a great improvement on the superstitious native Bon religion, but it was tainted with the lower Tantric magic, therefore far from the pure teachings of the Buddha. Blavatsky says, however, that the Buddha, foreseeing future dangers to Buddhism in India, sent some of his Arhats to the slopes of the Kailas Range in Tibet nearly a thousand years earlier to establish the kernel of his teaching, the true "esoteric" Buddhism. She also says that the Tibetan population was too deeply steeped in sorcery at that time to accept the purer faith, and so it was not until far later "that Buddhism was finally engrafted with its two distinct Schools -- the Esoteric and the exoteric divisions -- in the land of the Bon-pa."

It is known, however, from Chinese sources that some great adept teachers had long been living in the "Snowy Ranges of Tibet."

In regard to Padma Sambhava, still much admired by many in Tibet, Col. Yule, the Orientalist, says "he was a great master of enchantments," presumably referring to his lower Tantric methods. Blavatsky distinguishes the lower from the higher Tantric in these words:

So little is known outside Bengal about Tantrik rites and ceremonies that space has been given this interesting paper [an article on Tantrik rites known as "Savasadhana"], despite the disgusting and horrid ceremonial it describes. As there are both magic (pure psychic science) and sorcery (its impure counterpart) so there are what are known as the "White" and "Black" Tantras. The one is an exposition, very clear and exceedingly valuable, of occultism in its noblest features, the other a devil's chap-book of wicked instructions to the would-be wizard and sorcerer. Some of the prescribed ceremonies in the latter are far worse even than the *Savasadhana*, . . . -- *The Complete Works of H. P. Blavatsky* 4:360

W. Q. Judge also speaks of the "noble philosophy" of many of the tantric writings, but of course severely condemns the lower tantrism. It is most unfortunate that this "exceedingly valuable" exposition of occultism in its noblest features, as Blavatsky calls the "white" tantras, has been so largely obscured by the prevalence of black magic among tantrists that the very name has become a reproach.

Unfortunately, in spite of various efforts to purify the state religion of Tibet, it was still adulterated by superstitions, magical practices, and excessive ritualism with its accompanying pride and pomp -- human failings similar to those that have crept into other faiths. At various intervals reforms were attempted with some success, but it was not until the fourteenth century that the great adept and avatara, Tsong-khapa, made a forcible revolution and purified the religious conditions by exiling 40,000 self-seeking monks and lamas who were making Buddhism a marketable commodity. Tsong-khapa is the noblest and wisest of the reformers of Northern Buddhism, and though he was originally an apostle of the semi-reformed "Kargyutpa" School, he attached himself to another Order, the "Khadampas," "Those bound by the Ordinances," in order to build the regenerated system which developed into the "Gelugpas," or Yellow Cap Order, which became the established church of Tibet. He also reorganized

the esoteric or mystic brotherhood (the "esoteric division" of Blavatsky, quoted above) with which a few of the highest lamas have the privilege of affiliation. Very little is known of this brotherhood in the outside world.

Since Tsong-khapa's reform, conditions never descended to the former low levels, but as mentioned before they were not ideal. The Gelugpas, however, were far superior to some of the Red Cap sects in western Tibet which remained addicted to the old Bon black magic.

We have no space to describe the interesting vicissitudes of Buddhist yoga in Tibet, but the student will find the information in Evans-Wentz's authoritative works, which have greatly added to Western knowledge of Lamaism. His *Tibetan Yoga and Secret Doctrines* covers a hitherto unknown field of first-hand information and, as he says, the seven principal treatises translated from the Tibetan represent a comprehensive expression of Mahayana or Northern Buddhism, the "greater path." They are not all, however, of equal value to seekers for spiritual light.

The treatises were translated from the Tibetan by the late Lama Kazi Dawa-Samdub, Professor of Tibetan at Calcutta University and an initiated lama of the Kargyutpa Order of Mahayana Buddhism -- whose chief doctrines are pure and elevating. He was well qualified to interpret teachings and yoga methods little known, if at all, outside the lamaseries. Even with the assistance of his careful translations and Evans-Wentz's admirable commentaries, many Western scholars find the subject matter difficult to comprehend because so few even suspect the existence of the widely differing inner planes of nature with their corresponding states of consciousness, which are familiar to occultists.

We may mention in passing that the Lama Dawa-Samdub is a notable witness in defense of Blavatsky against the absurd charges made in her lifetime that she invented the teachings of the ancient wisdom, theosophy. In another work, the *Tibetan Book of the Dead*, Evans-Wentz writes:

The late Lama Kazi Dawa-Samdub was of opinion that, despite the adverse criticisms directed against H. P. Blavatsky's works, there is adequate internal evidence in them of their author's intimate acquaintance with the higher lamaistic teachings, into which she claimed to have been initiated. -- p. 7

But Blavatsky belonged to a higher order of instruction and achievement than the word "lamaistic" usually signifies, unless the words "higher lamaistic teachings" are construed to mean the ancient wisdom, the "Esoteric Buddhism," as she called the teachings of the Great White Lodge. It would not be fair, however, to infer that all the lamaistic institutions in Tibet lost their spiritual life, for the Master K. H. and Blavatsky mention certain lamaseries in Lhasa and elsewhere where true and initiated occultists lived and worked in the training schools for chelas in genuine spiritual yoga. Blavatsky says that many Orientalists confuse the genuine lamas of certain lamaseries in Lhasa, etc., with the numerous charlatans and sorcerers of the Bon sectarians.

It is reassuring to learn from Dr. Evans-Wentz and Mme David-Neel that the teachers most respected in

Tibet consider such attainments as the ability to perform occult phenomena quite unimportant and merely incidental features in the process of spiritual development.

Returning to the yoga treatises mentioned above, we learn from Evans-Wentz that the first two are "fundamentally non-tantrik." The seventh is also sound and is one of the most widely-circulated Mahayana writings. It is an abridgment of the Sanskrit Prajna-Paramita (Transcendental Wisdom) and it deals with the profound theory of *sunyata*, the "Void." This treatise is especially important to theosophists because it supports Blavatsky's definite claim that the Buddha taught a secret doctrine to his inner group. Some Buddhist scholars deny this and claim that any really secret teaching in the possession of the Tibetan lamas is only instruction in practical magic of no spiritual or philosophical value. Evans-Wentz's Commentary on the Seventh Treatise indicates that they are mistaken, for Nagarjuna, the thirteenth of the Buddhist Patriarchs, gave out some of the Buddha's esoteric teachings in the second century A.D. Evans-Wentz writes:

According to Nagarjuna, the Buddha Shakya-Muni Himself composed and placed the teachings in the custody of the *Nagas* (Serpent Deities), to be kept hidden in the depths of a vast lake or sea till such time as men should be fit to receive them. This seems to be a symbolic way of stating that the Buddha taught the teachings esoterically, and that since prehistoric times they had also been so taught by the Buddhas Who preceded Shakya-Muni, as by the *Bodhic* Order of Great Adepts of *Yoga*, the wisest of the Wise Men, who have long been symbolized by the Nagas, or Serpent Demigods. . . . The Lamas, too, maintain, on the authority of an oral tradition, said to have been at first secretly transmitted by the Buddha's most intimate disciples, that the Buddha taught the *Prajna-Paramita* sixteen years after His Enlightenment . . . and that Mahakashyapa, His most learned disciple and apostolic successor, secretly recorded it. The Japanese also have a tradition that the Buddha taught esoterically to His disciples as well as exoterically to the multitude. -- *Tibetan Yoga and Secret Doctrines*, p. 344

The third to the sixth treatises deal largely with psychological and physical exercises for the development of personal willpower and the like, a very different teaching from the wholesome, impersonal, and beneficent yoga of the Lord Buddha and the Masters of wisdom who are behind the Theosophical Movement. These parts treat of the alluring byways in occultism which lead away from the strait and narrow path that leads to life, and are derived from the early pre-Buddhistic Bonpa sources. Blavatsky describes the Bon religion as:

itself a degenerated remnant of the Chaldean mysteries of old, now a religion based entirely upon necromancy, sorcery and soothsaying. The introduction of Buddha's name into it means nothing. -- *The Complete Works of H. P. Blavatsky* 3:271n.

The fifth treatise presents the "Chod" rite of the "short path," a violent and desperate method to grasp adeptship by the mystical sacrifice of the personality to the elementals, a ghastly process which is likely to result in insanity or death to the rash adventurer. The ostensible purpose of the grim and revolting rite

is to deliver the participant by a short cut from the necessity of rebirth. It is, however, more probably carried out to gain magical powers by controlling a low order of elementals. As mentioned above, Mme David-Neel found that many evil-minded persons in Tibet use such sinister and destructive methods to accomplish their desire for revenge and the like.

It is unfortunate that even the first (Kargyutpa) treatise ("The Supreme Path of Discipleship") should be associated with certain phenomenalistic instructions which exhibit the weaker side of Lamaism and are out of place in a work whose tone is, on the whole, spiritually elevated. Such pseudo-occult ideas can do no good in a world which is turning toward the exploitation of psychic powers for purely selfish ends, or at best for the gratification of curiosity disguised under high-sounding names. They may possibly shake some Western scholars out of their unabashed and arrogant denials of the occult side of nature, and suggest to them that the Orient is not unreasonable in regarding it as being subject to laws as "natural" as those of the physical world, however miraculous they may seem to the ignorant. The working of such laws is demonstrated in Tibet on a lower plane by such phenomena as the control of fire or water, levitation, transfer of consciousness to a distance, or the power to modify the action of the bodily functions. *Tummo*, the control of the bodily temperature, is a semi-occult process well known to certain lamas or hermits in Tibet. By its means the expert can keep warm and comfortable when exposed to extreme cold and without warm clothing. Mme David-Neel and other observers testify to their personal knowledge of tummo, and on one occasion at least she applied it with success when she was caught without fuel in the bitter cold of an icy mountain wilderness.

Such things, however, are not regarded by the wise as spiritual attainments nor as valuable in themselves, though under certain circumstances they may be of service. A quaint story is current in the Orient in regard to this subject. A merchant and a yogi of a low order met on the bank of a river and the latter, after expatiating on the immense labor he had spent in learning to levitate, proceeded to waft himself across the river in the air. The practical merchant paid a boatman to row him over. When they met on the other side the triumphant yogi expected congratulations but was nonplussed when the merchant showed him a small coin and remarked, "That is the value of your miracle!"

The higher Lamaism, as already mentioned, presents many of the leading principles of theosophy, and the diffusion of such teachings explains the well-known good qualities of the Tibetans in general. The Lama Yongden in his instructive and delightful romance *Mipam*, referring to a quixotic act of kindness writes:

He thought his young companion was crazy, but in Tibet every action inspired by compassion arouses, even amongst the coarsest and most materially-minded peasants or traders, an intuitive feeling of respectful admiration. Chenrezigs ([1](#)) of the thousand arms, the symbol of Infinite Compassion, was not chosen in vain to be the Supreme Lord and Protector of the lofty Land of the Snows.

The characteristic good humor of the Tibetans is seen in the following aphorisms quoted by Evans-Wentz in his *Tibetan Yoga and Secret Doctrines*:

For a religious devotee to try to reform others instead of reforming himself is a grievous mistake. -- p. 87

To preach religion and not practice it is to be like a parrot saying a prayer; and this is a grievous failure. -- p. 77

Many Western writers and travelers have spoken well of the Tibetan national character. One, an Englishman who studied the Buddhist teachings for some years among the lamas of the southern border of Tibet, states that the lamas and other Tibetans he met possess a spirit of love and kindness that is marked by an unusual note of serenity, new to him. He soon recognized that this rare quality is not based on a vague emotionalism, but is the result of their outlook on life, a wide-extending insight into the structure of the universe which sees the intimate relationship of all things and principles. To the enlightened lamas the laws of nature and the ethics or rules of right living are not independent but identical. This is an essential in the theosophical yoga teaching. In the West the fatal mistake is still made of separating religion from science. G. de Purucker places the matter in a few words:

Ethics are no mere conventions however much man may clothe them in conventional thoughts, but are based on the harmony and love at the heart of the Universe. . . . Ethics are very real because based on Nature herself. Ethics means doing aright; right means harmony; right means law; and law is cosmic justice which is universal love. -- *Questions We All Ask*, Series II, xxx

---

## Chapter 3

### Yoga in India

We are sometimes asked if H. P. Blavatsky did not go to India in 1878 to study yoga. No; after establishing the Theosophical Society in America she went to India to arouse a higher spirit of humanitarianism, brotherhood, where it was sadly lacking in spite of the thousands of yogis of one kind or another. She also went, under the direction of her Masters, to awaken India to the opportunities it had to present a great religious philosophy to a world that was vaguely groping for a more logical and liberating solution to life's problems than those of dogmatic theologies or materialistic science. She answered the call of many Hindus who realized that the ancient teachings were perverted by superstitious interpretations and forms. Many leading societies of native Sanskrit scholars welcomed her to fellowship, and a strange phenomenon happened in many places: proud Brahmans, exclusive and self-sufficient, recognized her as a teacher, she, a foreigner, an "outcaste" and -- a woman! She was publicly thanked by them and by other Indian associations on many occasions, and honored by various tributes for her self-sacrificing work in helping progressive India to higher ideals of thought and action. One of these, tendered by more than three hundred Hindu students at a Madras college, begins:

In according to you this our heartiest of welcomes on your return from the intellectual campaigns which you have so successfully waged in the West, we are conscious we are giving but a feeble expression to the "debt immense of endless gratitude" which India lies under to you.

You have dedicated your life to the disinterested services of disseminating the truths of Occult Philosophy. Upon the sacred mysteries of our hoary Religion and Philosophies you have thrown such a flood of light by sending into the world that marvelous production of yours, the "Isis Unveiled." -- *Incidents in the Life of Madame Blavatsky* by A. P. Sinnett

At a certain time when many students thought it was necessary for their spiritual development to rush to India for "occult" training, W. Q. Judge protested, saying that it was not the wish of the Masters, nor was it the teaching of Blavatsky, for theosophists to think that Oriental methods should be slavishly followed or the present East be made an example or a goal. The West has to adopt a method of spiritual development suitable to its mentality and the environment of its people. But, of course, the West can and must draw very largely from the Oriental scriptures, whose importance has greatly increased for students since Blavatsky partially lifted the veil of Isis and interpreted many of their hidden meanings. But in spite of all that she did to arouse the ancient spirit of spiritual life in India, we cannot look to modern India as a teacher.

The Indian Masters themselves say plainly that they "are all convinced that the degradation of India is largely due to the suffocation of her ancient spirituality," and the Mahatma K. H. says that he "cannot endure for any length of time the stifling magnetism even of my own countrymen." (Quoted in *The Occult World*, by A. P. Sinnett.) And again, we read in *The Mahatma Letters to A. P. Sinnett* from the same source:

If it be permissible to symbolize things subjective by phenomena objective, I should say that to the psychic sight India seems covered with a stifling gray fog -- a moral meteor -- the odic emanation from her vicious social state. Here and there twinkles a point of light which marks a nature still somewhat spiritual, a person who aspires and struggles after the higher knowledge. If the beacon of Aryan occultism shall ever be kindled again, these scattered sparks must be combined to make its flame. And this is the task of the T. S., . . .  
-- p. 384

There has always existed and exists what may be called an "esoteric circle" of knowers. Unseen and unknown to the world at large, they work for the spiritual advancement of mankind in many ways. In far-off ages Mystery schools were established to protect people against partial or misleading information about the occult half-truths which are more dangerous than complete error because they are not so easily detected. The historically known Mystery schools at Eleusis and elsewhere in Greece, at Philae in Egypt, and in many other parts of the world were their comparatively modern successors; their reputation was very high and they were revered and trusted by all. Their dramatic representations and other more or less exoteric ceremonies of the threshold were suited to the needs of the ordinary thoughtful man, but, even

in these, deeper meanings were symbolized. In the more advanced working, as we know from the accounts of the School of Pythagoras at Krotona, the candidates spent long periods in silence. With their minds and bodies purified and disciplined, they finally were prepared to arouse high states of consciousness within themselves which are quite inaccessible to the untrained intelligence. St. Paul, an initiate, speaks of having been "caught up into the third heaven" (2 Cor., 12), an obvious reference to one of these stages or steps toward what is called in the East *samadhi*. The process of "drawing out" what is locked up within is the true meaning of "education," and this is the method of any genuine yoga or Mystery school.

With the coming of the Theosophical Movement in the nineteenth century, a beginning was successfully made by Blavatsky to revive the Mystery schools in the West. She writes:

But if the voice of the MYSTERIES has become silent for many ages in the West, if Eleusis, Memphis, Antium, Delphi, and Cresa have long ago been made the tombs of a Science once as colossal in the West as it is yet in the East, there are successors now being prepared for them. -- "The Esoteric Character of the Gospels," *Lucifer*, 1:310, Dec. 1887

When the "beacon of Aryan Occultism" referred to by the Master K. H. was burning bright, yoga was properly understood. In her *Theosophical Glossary* Blavatsky speaks of Hindu yoga as being one of the six *Darsanas* or philosophical schools of India, but her special definition sums it up as "the practice of meditation leading to spiritual liberation." She adds that "*psycho-spiritual*" powers are obtained by the high forms of yoga which "lead to the clear and correct perception of the eternal truths in both the visible and invisible universe." Note that these are not the *psycho-physical* nor even the psycho-intellectual powers, but are acquirements of a far higher order.

The Yoga *Darsana* or school is divided into five main classes which correspond with the five leading types of human psychology. G. de Purucker defines them as follows:

Now, what are these five Indian Yoga Schools? They are these, beginning with the simplest and lowest: Hatha-yoga, the yoga of physiological-psychical training, dealing almost wholly with the body and lower mind. Next, Karma-yoga, from the word "karma," action. Third, Bhakti-yoga, the yoga of love and devotion. Fourth, Jnana-yoga, the yoga of wisdom or knowledge, of study. Fifth, Raja-yoga, the yoga of *self-devised* effort to attain union with the god within, the yoga of discipline, such as the kings of the Kshatriya or Warrior Caste were supposed to exemplify as the leaders of their states; and the sixth, which we Theosophists add, is the Brahma-yoga, the yoga of the spirit, practically including the other five. -- *The Theosophical Forum*, March, 1940

As the five Hindu systems of yoga, if fully studied and practiced, would demand the entire energy, thought, and time of the practitioner, it is obvious that they would be found impracticable, even if desirable, in a modern Western environment. A teacher of the rank of a minor adept, at least, would be absolutely necessary, one who would constantly watch and protect his pupil when the latter was passing

through certain stages of development. We are told that the hatha-yoga methods (*very rarely* used in the higher schools and only under exceptional conditions) are safe enough for chosen pupils when employed under a qualified guru or guide, but in the case of the rash, unprepared, and unprotected free-lance, the situation is very different and is likely to be very tragic.

Consider, for instance, the case of the *asanas*, or yoga postures, which are more or less familiar in the West by photographs and descriptions. These are purely physical exercises employed by some yogis to prepare the body for the terrific strain caused by the arousing of powerful and dangerous inner forces unknown to Western science. More than seventy *asanas* are known, most of them requiring a long preliminary preparation before they can be entered upon. Some of them are suited to one individual, others to another, and only the skilled and experienced guru can apportion them properly. The pupil has no means of knowing the difference, and it is a very serious matter to work on a wrong *asana*, the usual result, we are told, being death!

Not long ago, a thoughtful student of occultism published the results of a long search in "secret India" for higher wisdom. He found many so-called yogis, mostly fanatics or self-seekers who, he says, have discredited the very name of yogi among the younger generation of Hindus and the educated classes. There were some genuine psychics and magicians, seemingly of a low order. But he also found a few sincere and earnest men who were not "showing off" in any way, and who did not recommend the psychic, so-called yoga practices of which so much has been heard in the West of late, but who give teachings of vital importance for spiritual progress. One South Indian teacher of whom the student rightly speaks with great respect and admiration, when asked what must be done to enter the Path, replied:

There is only one thing to be done. Look within yourself. *Do this in the right way* and you shall find the answer to all your problems. You have to ask yourself, Who am I? Know the real Self, and then the truth will shine forth within your heart like sunshine. -- Paul Brunton, *A Search in Secret India*

The student need not have gone to India to learn this. It is an essential in theosophical books of spiritual training, such as Blavatsky's *Voice of the Silence* and G. de Purucker's *Golden Precepts of Esotericism*, where the path of discipleship is plainly set forth in a way suitable for all peoples, Eastern or Western. But what is "the right way"? Can it be right to withdraw from active participation in the life of the world and to concentrate on one's personal progress regardless of the welfare of others? Without fuller explanation, the advice just quoted might easily be misconstrued. The right way to gain self-knowledge is given in the *Bhagavad-Gita*, the greatest Hindu authority on yoga philosophy and self-discipline. It strongly enforces the necessity of doing one's whole duty in the world, which means duty to others as well as to oneself -- *dharma*. This kind of yoga, *karma-yoga*, is most important for Westerners who need to learn how to direct their exuberant energies more wisely. It is "the performance of right action." The subject of impersonal, compassionate service is fully treated by Purucker in *Golden Precepts of Esotericism* from which we take a few extracts:

The law of laws of the universe is self-forgetfulness, not concentration of attention upon one's personal freedom, not even upon your individuality. The primal law of the universe is living unto all things, not the doctrine that each must live for himself in order to develop for himself the spiritual powers within. The latter is true enough as a bald and imperfect statement; but it is also misleading, dangerous, unwise, and therefore unholy as a statement of esoteric training, unless properly qualified -- always qualified with the accompanying doctrine: Give up thy life if thou wouldst find it. Live to benefit mankind, for this is the first step. . . .

The man who thinks of others before himself is already great. The man who gives up his life that others may live is already great. The man who forgets himself in impersonal service to humanity is the greatest of all; and such a man reaps a destiny -- because he has builded a corresponding character -- which is godlike. -- Chapter 4

In theosophy we find a high yoga which can liberate us, if we will follow it, from the illusions we mistake for real living. Such initiation depends upon the right use of the opportunities of daily life in the world. It is not necessary to withdraw from the world but from enslavement to its selfish demands. Do we not all wish to be able to discern without hesitation the wise from the foolish course of action, and to possess a sympathetic understanding of human nature so profound and unbiased that we can make no mistakes in our efforts to help our fellow-men? This higher clairvoyance will develop as the human race advances, but we can hasten its coming by following the yoga of duty and unselfishness. Some would call this "moral rearmament," a popular expression today, but the higher yoga includes more than is usually meant by those words. As it becomes better understood, so will earnest students feel the stirring of intuitive faculties and, when they can be trusted not to misuse them, very marvelous powers will be allowed to develop, and very surprising expansions of consciousness will take place.

We have to fight our own battles, and it is a well-known occult saying that "the adept becomes, he is not made." We can find guides who will warn us of the pitfalls in the path, teachers who can bring our hidden weaknesses to light and show us how to overcome them; but we must be our own redeemers. There is no "vicarious atonement" on the yoga path but there is help, and, as mentioned previously, "When the disciple is ready the teacher will appear." Though it is a great blessing to have such an opportunity, the process of purification is bound to bring some unexpected and unpleasant revelations which must be honestly faced and conquered. But the sincere disciple expects this and does not ask the teacher to humor his egotism. On the other hand, there is increasing joy in the self-discipline which gradually reveals the fact that the self-centered animal-man, however intellectual, is not the real, immortal man, "for whom the hour shall never strike," and that we have everything to gain and nothing to lose by making the true self the master.

The noblest yoga teachings of ancient India, such as *The Crest Jewel of Wisdom* by Sankaracharya or the *Bhagavad-Gita*, present the essentials for high spiritual development without a trace of psychism or the lower forms of magic which disfigure portions of the mass of Hindu literature called the Tantras, and from which many of the Western yoga or so-called occult books derive their questionable and often dangerous information. Sankaracharya and the writer of the *Bhagavad-Gita* teach those methods of self-

government which open the path to spiritual wisdom. Some extracts from Judge's rendition of the *Bhagavad-Gita* (*passim*) will indicate this line of instruction:

When the man, so living, centers his heart in the true Self and is exempt from attachment to all desires, he is said to have attained to yoga. . . . In this system of Yoga no effort is wasted, nor are there any evil consequences, and even a little of this practice delivereth a man from great risk. . . . There is no purifier in this world to be compared to spiritual knowledge; and *he who is perfected in devotion findeth spiritual knowledge springing up spontaneously in himself in the progress of time*. . . . Such illuminated sages whose sins are exhausted, who are free from delusion, who have their senses and organs under control, *and devoted to the good of all creatures*, obtain assimilation with the Supreme Spirit. . . . Seek this wisdom by doing service, by strong search, by questions, and by humility; the wise who see the truth will communicate it unto thee, and knowing which thou shalt never again fall into error. . . . (*italics ours*)

Sankaracharya writes:

Soul-vision belongs to him who is free from passion; steady inspiration belongs to the soul-seer. . . . The first cause of Freedom is declared to be an utter turning back from lust after unenduring things. Thereafter Restfulness, Control, Endurance, a perfect Renouncing of all acts that cling and stain . . . himself well-controlled, he gains the fruit and the reward, and his reward is the Real. . . . For the Self, all that is seen is but mirage; it lasts but for a moment, we see, and know it is not "I"; how could "I know all" be said of the personal self that changes every moment? -- *Oriental Department Papers*, 1895-6, *passim*

It is indeed significant that Krishna, the inner divinity, does not teach Arjuna in the solitude of the hermitage, but in the clash of arms on the battlefield, which represents the activities and trials of the practical life in the world.

## Chapter 4

### The Buddhas of Compassion

In India the *Bhagavad-Gita* is the great classic of the Hindu yoga schools, and it is frequently mentioned or quoted by the mahatmas and H. P. Blavatsky with high appreciation. It is indispensable for all serious aspirants to knowledge of the self, but it does not plainly express the sublime expression of divine compassion which the Buddha teaches in his yoga of the great renunciation and which we are about to consider. Blavatsky seems to have felt this, and toward the close of her life she gave us that magnificent compilation from Eastern sacred literature, *The Voice of the Silence*, which she translated and annotated for "the Few" who ardently desire to live the theosophical ideal and serve humanity "to the endless end."

It stands as a textbook of theosophical yoga. From this little volume we can learn the principles on which the training of the chelas of the Masters is founded and which, when widely adopted, will not only clear our vision to see eternal things, but will make the world an infinitely better place to live in. In regard to compassion, we find in *The Voice of the Silence*:

Canst thou destroy divine COMPASSION? Compassion is no attribute. It is the LAW of LAWS -- eternal Harmony, Alaya's SELF; a shoreless universal essence, the light of everlasting Right, and fitness of all things, the law of love eternal. -- pp. 69-70

Alaya is the "Oversoul" of Emerson. It "reflects itself in every object in the universe" (*The Secret Doctrine* 1:48). The same teaching of compassion is an essential of true Christianity: "He that loveth not knoweth not God; for God is love." And "he who loveth God loveth his brother also." (1 John, 4.)

Many of the aphorisms quoted from Mahayana teachings in Dr. Evans-Wentz's *Tibetan Yoga and Secret Doctrines* state the essential teachings of *The Voice of the Silence*, self-sacrifice and love for humanity being the guiding rules. For instance:

Unless the mind be trained to selflessness and infinite compassion, one is apt to fall into the error of seeking liberation for self alone. -- p. 75

The smallest amount of merit dedicated to the good of others is more precious than any amount of merit devoted to one's own good. -- p. 90

If only the good of others is sought in all that one doeth, no need is there to seek benefit for oneself. --p. 90

The disregard of phenomenalism by the true yogi is plainly stated:

For him who hath attained the Sublime Wisdom, it is the same whether he be able to exercise miraculous powers or not. -- p. 92

The last quotation from the Yoga treatises relates to a teaching which is the very heart and soul of *The Voice of the Silence*. It is the sublimest possibility of spiritual aspiration:

The fact that there are Those who have attained Bodhic Enlightenment and are able to return to the world as Divine Incarnations and work for the deliverance of mankind and of all living things till the time of the dissolution of the physical universe showeth the virtue of the Holy *Dharma*. -- p. 95

This refers to the great renunciation, an ideal higher than any other that is offered to the world today; and it speaks well for the Tibetans that they give greater honor to such holy men (bodhisattvas or nirmanakayas) than to any other advanced yogi or "saint," however exalted. Associated with this is the

problem of the pratyeka buddhas, about whom some misunderstanding has prevailed, even among certain theosophists, although Blavatsky makes it clear enough in her *original* edition of *The Voice of the Silence* and in *The Theosophical Glossary*. Certain reprints of the former omit the significant passages. Owing to its importance we must devote some space to this matter.

Evans-Wentz rightly states that the ultimate object of Buddhism is the liberation from ignorance in its deepest sense, *maya*, which we inadequately translate as "illusion." But, as he points out, the Buddha taught that this desirable end, the attainment of nirvana, can be deferred by those devoted souls who are willing to follow the highest path of self-abnegation and to make the great renunciation. This means that the candidate for spiritual mastership resolves never to pass out of the *samsara* or phenomenal world-consciousness into the ineffable bliss of nirvana until the weary pilgrims in all the worlds have reached the culmination of their possibilities in this manvantara. This is surely the highest possible manifestation of universal brotherhood. The holy ones who have returned to help the world at the cost of their own progress are called buddhas of compassion in contradistinction to the pratyeka buddhas, whose ideal is not so exalted. According to the most authoritative Tibetan Mahayanists, and endorsed by the Lama Samdup, the accepted view in respect to the pratyeka buddhas is the following, as presented by Evans-Wentz:

Self-Enlightened (Skt. *Pratyeka*) Buddhas do not teach the Doctrine publicly, but merely do good to those who come into personal contact with Them, whereas Omniscient Buddhas, of Whom was the Buddha Gautama, preach the Doctrine widely. . . .

The *Gurus* of the Great Symbol School . . . teach that *Nirvana* is not to be regarded as a final state. wherein its realizer selfishly abides in absolute rest and bliss. That is to say, *Nirvana* is not a state to be realized for one's own good alone, but for the sake of the greater good which will accrue to every sentient thing merely in virtue of a realization of It. Thus it is that in Tibet all aspirants for the Divine Wisdom, for the Full Enlightenment known as *Nirvana*, take the vow to attain the state of the Bodhisattva, or Great Teacher. The vow implies that the *Nirvanic* State will not be finally entered, by the one taking the vow, until all beings, from the lowest in subhuman kingdoms . . . are safely led across the Ocean of the *Sangsara* to the Other Shore. Southern Buddhists are inclined to regard *Nirvana*, at least when attained by *Pratyeka* (or Non-teaching) Buddhas, as a state of finality. Mahayanists, however, say that *Nirvana* is a state of mind reached as a result of evolutionary spiritual unfoldment, and that it cannot, therefore, be regarded as a final state, inasmuch as evolution has no conceivable ending, being an eternal progression. -- *Tibetan Yoga and Secret Doctrines*, pp. 94, 144

Here we learn that the pratyeka buddhas are highly advanced in spirituality, yet Blavatsky speaks of their "spiritual selfishness"! This peculiar expression caused ill advised editors of certain reprints of *The Voice of the Silence*, wherein it occurs, to suppress her remarks on that subject under the plea that they had been written hastily without due consideration. She, however, repeated them in her *Theosophical Glossary*, published at a later date. G. de Purucker has explained the apparent difficulty in his *Golden Precepts of Esotericism* from which we extract a few passages, as the subject is of great importance to

students of the "right-hand path":

[The pratyeka buddhas are] very great men, very holy men, very pure men in every way, whose knowledge is wide and vast and deep, whose spiritual stature is great; but when they reach Buddhahood, instead of feeling the call of almighty love to return and help those who have gone less far, they go ahead into the supernal light -- pass onwards and enter the unspeakable bliss of nirvana -- and leave mankind behind. Such are the Pratyeka Buddhas. Though exalted, nevertheless they do not rank in unutterable sublimity with the Buddhas of Compassion.

The Pratyeka Buddha, he who achieves Buddhahood for himself, does not do it selfishly, however; does not do it merely in order to gratify self, and he does no harm to others; if he did he could never reach even his solitary Buddhahood. But he does it and achieves nirvana automatically, so to speak, . . .

It is a wonderful paradox that is found in the case of the Pratyeka Buddha -- this name *pratyeka* means "each for himself." But this spirit of "each for himself" is just the opposite of the spirit governing the Order of the Buddhas of Compassion, because in the Order of Compassion the spirit is: give up thy life for all that lives. . . .

The time comes when the Pratyeka Buddha, holy as he is, noble in effort and in ideal as he is, reaches a state of development where he can go no farther on that path. But, contrariwise, the one who allies himself from the very beginning with all nature, and with nature's heart, has a constantly expanding field of work, as his consciousness expands and fills that field; and this expanding field is simply illimitable, because it is boundless nature herself. He becomes utterly at one with the spiritual universe; whereas the Pratyeka Buddha becomes at one with only a particular line or stream of evolution in the universe. . . .

. . . Thus the time comes when the Buddha of Compassion, although having renounced everything, will have advanced far beyond the state that the Pratyeka Buddha has reached; and when the Pratyeka Buddha in due course emerges from the nirvanic state in order to take up his evolutionary journey again, he will find himself far in the rear of the Buddha of Compassion. -- Chapter 7

The pratyeka path is not a *downward* path except in comparison with the "secret way," the path of the buddhas of compassion, as Blavatsky calls it in *The Voice of the Silence*. At first the path is one, but finally the great choice has to be made, and the pratyeka buddha chooses the direction which leads away from the human world, while the other takes the course in which "he remains in that glorious body he has woven for himself, invisible to uninitiated mankind, to watch over it and protect it," as a stone in the mystic "guardian wall."

Gautama the Buddha heartened the average person by showing the way to break the terrifying and seemingly endless cycles of deaths and rebirths, the turning of the Wheel of Karma, during which we forge the fetters which hold us back. By following the Good Law faithfully we may reach the unspeakable bliss of liberation in due time. But for those who were qualified by their overwhelming love for mankind, the Buddha set forth the self-sacrificing and sublime path of the great renunciation.

The erroneous doctrine that creation is divided into two distinct and opposite parts, spirit and matter, has been the root of much confusion. The higher Lamaism contains the important theosophical teaching that it is possible for man by proper training to realize beyond a doubt the fundamental unity of the universe. This has profound implications. The samsara (the phenomenal or mayavi) and the nirvana (the noumenal or spiritual aspect) are really one, a most significant principle which can be studied in *The Secret Doctrine*. Only the illusion under which we live prevents us from realizing it. It is the basic principle behind the vital teaching in theosophy that brotherhood is a fact in nature, and the way to discover it is by putting it into practice. Evans-Wentz, speaking of the illuminated sage, says that he comprehends:

the root-nature of things, he sees phenomena from the view-point of noumena; and for him, therein, in the True State, there is neither the ego, nor the non-ego, neither the *Sangsara* nor Nirvana but only Divine At-one-ment. . . .

*Nirvana* is, therefore, the liberating of the mind from the sangsarically-produced illusions of the human state, the arriving at Right Knowledge, the transcending of personality, or of ego, and the conquest of Life and the World. Truly, therefore, an Enlightened One is called a Conqueror. In the rapturous words of Asanga, "Thenceforth his one joy is to bring Enlightenment to all living things." -- *Tibetan Yoga and Secret Doctrines*, p. 19

In another place Evans-Wentz refers to the Tibetan tribute in which the Conqueror of Maya is called a Master of Life and Death, a Light in the Darkness, a Guide to the Bewildered, and a Liberator of the Enslaved, and, in the case of a *bodhisattva*, a stone in the "Guardian Wall" that protects humanity throughout the ages.

On pages 43-4 of *The Mahatma Letters to A. P. Sinnett*, an interesting remark is made by the Mahatma K. H. on this subject:

When our great Buddha -- the patron of all the adepts, the reformer and the codifier of the occult system, reached first *Nirvana* on earth, he became a Planetary Spirit; i. e. -- his spirit could at one and the same time rove the interstellar spaces in *full consciousness*, and continue at will on Earth in his original and individual body. For the divine Self had so completely disfranchised itself from matter that it could create at will an inner substitute for itself, and leaving it in the human form for days, weeks, sometimes years, affect in no wise by the change either the vital principle or the physical mind of its body. By the way, that is the highest form of adeptship man can hope for on our planet. But it is as rare as the Buddhas themselves, the last Khobilgan who reached it being Sang-Ko-Pa [Tsong-khapa]

of Kokonor (XIV Century) the reformer of esoteric as well as of vulgar Lamaism.

## Chapter 1: INTRODUCTORY

This series of articles deals with the interpretation of symbolism and mythology, and in introducing this subject it will be advisable to give a brief summary of those theosophical teachings most concerned therewith. And while it is not possible to expound and demonstrate these teachings within the necessary limits, the inquirer will find what he needs in this respect in the theosophical literature which is so readily available.

Theosophy is the recent presentation of a body of doctrine known as the secret doctrine, the wisdom-religion, the esoteric tradition, etc., which has existed in all ages, and which constitutes the basis of all religious and philosophical systems. This knowledge concerns the deeper mysteries of man and the universe, and was communicated to the early races of mankind by man's divine ancestors. It has been handed down throughout succeeding ages by those qualified to be its guardians, by whom it is still preserved at the present day.

There have been times in past history when this knowledge was commonly known; and other times, including the present, when it has been esoteric or hidden from public view. But in this latter case, the wisdom-religion is communicated to mankind by messengers, who are the founders of great religions or the teachers of great philosophies. Theosophy accords to the human race, and even to civilization, a far

greater antiquity than is allowed by our timid scholars, not yet emancipated from the narrow purview to which theology has accustomed us. But when this prejudice has been overcome, it will be possible to give due value to the evidence of archaeology, which conflicts with the foregone theories of science, but supports the teachings of theosophy.

Humanity has been on earth for many millions of years, during which the earth has witnessed the rise and fall of countless races and cultures, succeeding each other like waves. It follows from this general plan of cyclic evolution that some of the races of antiquity have been further advanced in knowledge and culture than we as yet are; we stand, towards such ancient races, in the same relation as a child stands to its parent; the child belongs to a more advanced stage of evolution, but the parent has attained greater maturity. Hence we, though at a more advanced stage in evolution can learn from our ancestry because they had reached greater maturity in their cycle than we have in ours.

The course of evolution is, broadly speaking, double: there is an evolution upwards from below, and an evolution downwards from above. (We do not enter here into the distinction between evolution and involution, in order not to confuse the beginner with too many details.) The result of this twofold action is that humanity first descends from spirit into matter, and then reascends from matter into spirit. The earliest races of mankind (represented by Adam in Eden) lived in the presence of God (so to speak); they were in a Golden Age of innocence. In subsequent races, the natural course of evolution led man to become less spiritual and more material (represented by the expulsion from Eden and the acquisition of "coats of skin"). The spiritual faculties became latent as the physical faculties developed. Man had no longer direct communication with the gods, and this communication was kept up indirectly by the means of divine instructors. The traditions of these divine instructors are preserved in allegorical form in the ancient mythologies, which tell of gods, god-men, heroes, the founders of cities and civilizations, the teachers of arts, agricultural or technical. In still later stages, the progress of materialization had so far supervened that even this means of communication was no longer open. In these ages knowledge was kept alive by the sending out periodically of messengers, from the Lodge of initiated adepts who preserve the sacred knowledge, to reawaken the light among men by founding schools of the Mysteries, which schools afterwards became the great religious systems which we find today, or great philosophical schools like those of Pythagoras and Plato.

Thus man is essentially a god, having latent within him the germs of divine faculties, which are ready at some time to germinate and fructify. And this germinating is effected by the action of other men of more advanced evolution, who act as teachers and pass on the light which they themselves have received, kindling in their pupils and successors the latent spark of knowledge that is within all men. This is the esoteric tradition in one sense of the term; light is handed down from man to man and from race to race; and history shows us that progress of all kinds is due to the inspiration imparted by individuals and by the movements which they start.

But for our present purpose there is one particular mode of preserving the esoteric tradition which most concerns us; and that is the method of symbolism and sacred allegory. Before H. P. Blavatsky wrote her great work *The Secret Doctrine* in 1888, various scholars had studied this subject and became convinced that there is a system of symbols common to all religions, diffused over the globe, identical in essence

among the most widely scattered and diverse peoples; and that the mythologies of Greece, India, Egypt, Scandinavia, etc., have a common basis. But the works written by these scholars were few and sporadic, not generally known, and merely contributing to the rare exotics of literature. It was H. P. Blavatsky who put together these scattered fragments, wove them into a consistent whole, and gave them their real significance; for they are not mere items of curious lore, but facts of the most important character; and in our endeavor to interpret some of these myths and symbols we shall show their bearing upon an understanding of the mysteries of the life we all have to lead.

There are certain broad general truths which transcend the power of expression in ordinary verbal language; and this must necessarily be the case. For verbal language is the instrument of a certain portion of the mind which has limits; the knowledge of which we are speaking relates to powers of the mind which transcend those limits; and therefore they are beyond the power of words. Such profound ideas are expressed by symbols; the full meaning of these symbols has to be grasped intuitively by the exercise of higher faculties of the mind; but we can approximate to such a comprehension by studying the various meanings which the symbol conveys, and holding all these meanings in the mind, until finally we gain some sense of the real underlying meaning.

It is these symbols which constitute the mystery-language; which thus becomes at once a means of preserving and conveying the knowledge, and a means of concealing it. For mysteries are revealed to those who have eyes to see, and doors are opened to those having the keys. The classical mythology is a much altered form of ancient mystery-teachings which were conveyed to the public in the guise of dramatic presentations. For the Mystery schools had outer and inner mysteries, the inner for candidates for initiation, the outer for the public; just as Jesus had private instructions for his disciples, but spoke to the multitude in parables. In the course of our interpretation of symbols, we shall give illustrations of the real meaning of these classical myths and of similar myths in other lands.

## **Chapter 1**

### **Introductory**

The word *evolution* is used in theosophy to denote the universal process by which everything is brought into being; and consequently the subject, if treated in full, would be much too large for a single manual; besides which, the student would be overwhelmed with the vastness of the subject and confused with a

mass of details. What we must do, therefore, is to present a broad outline of the subject as a whole and to confine our more detailed treatment to special branches of it, such as the evolution of man and the animals, the Darwinian theory, and similar matters of general interest. And this plan will of course involve the making of approximate statements, true as far as they go, yet not the whole truth. In short, we pursue the usual method adopted by students of any science, and that is to begin with an elementary course and leave the higher course to a later time.

Evolution is the universal process by which things change and grow and develop. Its nature can be understood by a few familiar illustrations. A seed is planted, a minute particle, hardly distinguishable from other kinds of seed; but it goes through various stages of development until it has become a fully grown tree with flowers and fruit. This is evolution; the tree has evolved from the seed. A fertilized ovum in the womb passes through many stages until a fully formed human infant is produced, and this again develops until a fully grown human being appears. This again is evolution, and the human being has evolved from the germ. An architect conceives in his mind an idea; this idea takes form on paper, and plans are drawn; ultimately the plans are executed in marble and granite, until through many stages and by the work of many hands there has arisen a superb and mighty cathedral. This again is evolution, and the edifice has evolved from the idea. Human affairs illustrate the same law of evolution; for here we find institutions, social orders, customs, growing up through stages as manifestations of some idea or plan in which they originated. In a word, evolution is the realization of ideals.

There are other ways of defining the meaning. We can say that it means the bringing into visibility of that which was invisible; the bringing into activity of that which was latent; the coming into manifestation of what was unmanifest. But it does not mean the creation of anything that did not exist before. The cathedral existed before; not as a stone edifice, but as an idea in the mind of the architect. The tree existed before its physical manifestation; it existed in latency, in potentiality, within the seed. The entire future human being was concealed somewhere in or about the germ. Were this not so, there would be nothing to determine why one seed should produce one kind of tree, and another another.

We know that the growing seed gathers to itself elements from earth, air, water, and light; and of these builds its physical structure. The biologist with his microscope can study the evolution of a cell and give a most elaborate and detailed description of what happens; but he cannot see the agencies at work, and may define them as inherent properties of matter or of some life principle.

No sense can be made out of the matter until we recognize all these activities as guided by intelligence. Mind, purpose, intelligence, instinct, desire, guide all the processes in nature; and if we do not admit this, we shall be obliged to invent something else which in some mysterious way performs all the results of intelligence. Moreover, the mind, purpose, etc., are the attributes of living beings, and cannot be thought of apart from the living beings which possess them. Hence it becomes necessary to view all nature as an assemblage of living beings; and, once this is done, difficulties vanish and we can present a rational explanation of the universe and of life and evolution.

The idea of evolution has been held by philosophers from the earliest times, and is an alternative to the

idea of special creation by the divine word. The idea that God created the universe at once, at some particular time in the past, is very unsatisfactory to thinking minds. It is natural to think, as we see everything changing and growing around us, that the whole universe and all that is in it has come into being by the same process of growth. The controversy between those who believe in special creation and those who believe in evolution was well illustrated by the celebrated case at Dayton, Tennessee, in which a young school teacher, John Scopes, was tried for teaching children the modern scientific doctrine of evolution. Most people probably thought the attitude taken up by the prosecution was very backward and narrow-minded, and that they showed little knowledge and less respect for the work of science. But yet one feels that they had reason on their side. Crude as their reasoning may have been, they felt strongly that important issues turned on this question between the evolutionists and the religionists. The issue has been vividly and epigrammatically put in the phrase "angel or ape": did mankind descend from the angels or from the apes? In other words, it was felt that the evolutionist stood for a materialistic and animalistic view of human nature, as opposed to a spiritual and divine idea championed by their opponents. So it is hardly fair to accuse the religionists in this trial with making such a fuss merely about their Bible teachings, for there was more behind their zeal than that. They were championed by no less a person than W. J. Bryan, surely a man of intelligence and culture. It was the conviction that the scientific theories stood for materialism, animalism, a mechanical, mindless, soulless, godless universe; it was this feeling that actuated them and that still actuates many in their opposition. We may recall the bitter animosity aroused at the time when the modern scientific theory of biologic evolution was first promulgated.

But at the same time we feel that the scientific side is worthy of our deep respect. It is represented by people of intelligence and worth, whose findings cannot be dismissed in such a wholesale way. It is owing to this that so many earnest thinkers have sought to find some way of reconciling the conflicting claims. It has been said, for instance, that though God created the universe, he did not create it complete as it is now, but left it to evolve; that God is still creating the universe, his work being continual. It has been said that evolution represents the divine method or process. These are steps towards a unification of knowledge, but the matter needs to be much farther thrashed out. It is evident that the views of both sides in the controversy are very partial, containing truth mixed with error. The view which we stated above -- that the universe consists of living beings -- will enable us to solve the question.

---

## **Chapter 2**

### **The Modern Scientific Doctrine of Evolution**

In the words of Huxley: "Evolution, or development, is, in fact, at present employed in biology as a general name for the history of the steps by which any living being has acquired the morphological and the physiological characters which distinguish it." It is the theory that the various types of animals and plants have developed by descent with modification from other preexisting types; and humanity is included in the animal kingdom and regarded as having been developed in this way from lower types in

the animal kingdom. The general direction of this evolution has been from simpler types towards more complex and more highly organized types; but sometimes a retrograde movement has been observed. The attempt is to be able to trace the chain of evolving types back to a few very simple forms, or back even to a unicellular organism. Prominent among the names associated with these ideas comes the name of Lamarck, who held that the modifications occurring in organisms, and thus leading to their evolution, were brought about by response to their environment. This theory was developed by Darwin, and what is known as Darwinism has been defined as the theory which maintains that organisms tend to produce offspring varying slightly from their parents, and that the process of *natural selection* tends to favor the survival of individuals whose peculiarities render them best adapted to their surroundings. This is the doctrine of the *survival of the fittest*.

This means, then, that the higher types of organisms have been developed from lower types by the slow accumulation of small changes; that these small changes have been communicated from parent to offspring by procreation; that these small changes were caused by the effect of the environment (climate, food, enemies, etc.) upon the organism, causing it to change itself so as to become better adapted to its surroundings; that some of the changes thus produced did not survive, and only those best adapted to meet the conditions of life did survive; so that on the whole the trend of evolution was upwards towards more and more perfect forms. The theory does not give us any idea of the cause behind this process of evolution, nor of its purpose or its goal. It shows us a mechanical process going on, started we know not how or by whom, and reaching out towards an unknown destiny. In short it represents life as a mechanical process, devoid of soul and mind, end or purpose; and this is what causes the repugnance which many feel towards it.

Much study has been given to the subject since Darwin's time, and many of his views called in question; but the general theory of evolution is still held. Less importance is now attached to natural selection as a factor in evolution; indeed it is seen better than it was at first that natural selection is really a name for an effect. Certain unspecified or unknown causes result in a natural selection; it is illogical therefore to speak of this result as if it were a cause.

The declared scientific method is to frame provisional hypotheses for the explanation of certain observed facts, and to change these hypotheses from time to time as new facts are discovered. But the human mind has a tendency to fixed dogmas, and retains its provisional hypotheses too long; and when new facts are discovered which do not square with the hypotheses, will try to twist and force the evidence so as to make it square, rather than give up the theory. The scientific view of evolution has been gradually giving ground by sheer force of evidence, so that it becomes every day more and more like what theosophy teaches. This is an instance of the effects of candid and patient research in dispelling the dogmatic tendency.

The analogies between different types of organisms give a strong presumption that there has been evolution, but the difficulty has always been to find evidence of the actual process taking place. If the Darwinian theory is true, we ought to find intermediate forms between the existing forms and representing transition stages from one to another. But what we actually find is separate forms with gaps between. This, however, is explained by saying that the intermediate forms have disappeared, as not

being adapted to their environment; and it is pointed out that the paleontological record supplies us with many such intermediate forms which must have existed in long past ages when the conditions were different, but have since become extinct. But paleontology shows us that the reptilia reached an acme of development in the Secondary Age, being represented by gigantic saurians, which now exist only as lizards a few inches long. So here we have an instance of a type reaching its fullest development and then dying out. This is one evidence that the plan of evolution is not so simple as was at first supposed; and it is but reasonable to suppose that the workings of nature would be far more complex than any simple plan that might at first be thought of.

The later studies of biologists have confirmed the view that evolution, as it proceeds on the physical plane, tends rather to diversity than to uniformity; that each species tends to develop along its own special lines and to diverge from the main trunk, rather than to lead on in a straight line to the next higher form in the scale. Moreover it has been found that species which have been differentiated by external conditions, such as domestication, tend to revert to their original type when these special circumstances have been removed. For instance, there is a type of fowl called the jungle fowl, which seems to be the original from which our numerous breeds of fowls have come; and domestic fowls, if turned wild, instead of preserving their acquired characteristics, soon revert to the primitive type of the jungle fowl. And the same with other instances that are cited. This seems to show that the evolution of types is not in a straight line of continual progression from simple to complex, but that each form tends to diverge along its own special path. In fact, evolution has been compared to a tree with main trunk, limbs, branches, and twigs; the species represent the branches and twigs; while the main limbs are the primitive forms from which they have diverged. If two forms are found to be similar in structure, is this evidence that one of them has been derived from the other, or that both of them have been derived from a common ancestor, each then pursuing its own course, so that as time goes on they get farther apart? In this latter view, the multiplicity of forms which we see today would seem to have diverged from a comparatively few original forms.

Again, it is not clear that changes in species are produced by hereditary transmission. The elaborate studies which have been made in genetics serve to complicate rather than to solve the problem. But if small chance modifications are not transmitted by heredity, the general theory breaks down. And yet we can scarcely avoid the idea that there has been evolution, for such growth and development is evidently a general law of nature. How escape from the dilemma?

These and many other difficulties which arise in the interpretation of evolution are due to the attempt to represent it as a purely physical process, and as a mechanical process; but with every succeeding day science is approaching nearer to a just view of the question. Biologists now give more importance to the organism itself than to its environment; and certainly no environment could produce any effect unless the organism itself responded to the influence. So that, if the effect of environment is alleged, it is necessary to *assume* that the individual is capable of responding to it; and this, to an unprejudiced mind, is tantamount to admitting that the individual is a living being, a being with some degree of feeling and intelligence -- in fact a soul. Such a conclusion can only be avoided by falling back on "inherent properties of matter," or inherent properties of living matter, protoplasm; which is a very lame explanation, and is really no explanation at all. And the distinction between living matter and dead

matter (so-called), though admittedly a difference in kind, can hardly be an essential difference; for, if so, we should be obliged to suppose two kinds of matter in the universe, one living and the other not -- an unnecessary complication, and one that leads to insuperable difficulties. We observe in the mineral kingdom of so-called dead matter all kinds of wonderful properties and activities, which an unprejudiced mind might be disposed to regard as evidences of life and mind. But scientists, having assumed that this matter is dead, have been obliged to account for its properties and its activities by supposing the existence of blind "forces," the well-known physical forces of heat, light, electricity, magnetism, attraction and repulsion, cohesion, etc. And when asked to define these forces, they define them by their effects, which is reasoning in a circle. If attraction is the coming together of two bodies, then it cannot be the cause which brings them together; that would be like saying that things are moved by motion. Heat is known to physics as something which is accompanied by molecular vibration, expansion, and other effects; but what it is that causes these effects remains a mystery; and the old explanation of an invisible agent is much more satisfactory. The forces which move matter so as to produce these effects of heat, chemical action, etc., cannot be themselves material; or at least they must be of a finer kind of matter.

There seems no valid reason for admitting life in the plant and denying it to the mineral, though of course it must be conceded that life manifests itself in different ways in the different kingdoms of nature. And thus we get back to the proposition that all nature is composed of living beings, many of them microscopic in size, yet each of them organized, and each of them evolving and growing. With this proposition as a starting point, the doctrine of evolution becomes much easier to understand. We have more than once used the expression "an unprejudiced mind"; and this refers to the fact that modern biologists, despite their professed freedom from religious bias, have nevertheless certain unconscious prejudices derived from the dogmatism of past generations. The theological notion of a God outside the universe who has created the universe, has given rise to the notion that there must have been a lot of dead matter which he used as material, or to which he has given life. So the notion of dead matter is a corollary to the notion of a God separate from his universe. We find that in antiquity people believed in the universal sentience of nature, and that they still do so in areas where the idea of the theological God has not penetrated. People call this superstition and say that these ancients endowed dead things with imaginary life; whereas it is we who have invented the superstition that there are any dead things in nature.

But of course what troubles people most in the controversy is the question of the origin of man. The idea that mankind has descended from an ape or any other animal is abhorrent. In order to avoid such a conclusion the anti-evolutionists have thought themselves obligated to deny much that science has affirmed to be fact. Hence they have put themselves into strange positions, hard to defend. But is there any necessity of overthrowing science and denying things that cannot be denied? There is not. For, as has been shown, evolution cannot go on at all unless there are living beings who evolve, and the whole process is inconceivable except as a result of intelligence at work behind the scenes. This leads our thoughts to the true conception of evolution -- spirit seeking to express itself in matter, soul embodying itself, mind creating for itself organs. Science has concentrated its gaze on the building and the building process, overlooking the builders and the plan. It has imagined a primordial germ, endowed with mysterious and undefined powers of growth and developing itself through innumerable stages towards

an unknown goal; feeling out experimentally into the infinite, as it were, and producing forms by a casual process of adaptation to surroundings. But biologists are more reasonable than they were in the days when H. P. Blavatsky criticized the evolutionary theories in her *Secret Doctrine*; and some of them admit now that the real agent in evolution is the animal itself. But to include forms below the animal kingdom, we must use a more general term and say that the agent is the *monad*, which means the living soul within the organism, whether that organism be animal, vegetable, or even mineral.

So evolution is a process of self-realization or manifestation carried on by the cosmic life or spirit or intelligence; God unfolding and revealing himself, we might say in theological language; and nature the visible garb of Deity. Evolution must be considered as a twofold process -- spirit involving into matter, and matter evolving after the pattern of spirit. These two are often called involution and evolution, but the one word evolution is as often applied to the whole process. Such variations in the use of words have to be recognized and allowed for. But the point here is that mind has not evolved upwards as matter has. It has involved down into matter. So the attempt to imagine an evolution of mind parallel with the evolution of form in the kingdoms of nature is wrong and creates confusion. This confusion culminates in the attempt to argue that human intelligence has evolved from the intelligence of beasts. There is a radical difference between human mind and that of even the highest beast: self-consciousness. This is either present or absent and does not come in stages.

Evolution means the unfolding of what is latent, and thus implies that the original germ contains in potentiality all that is afterwards manifested. Evolution does not mean a putting together of separate parts so as to make a composite; it is not an additive process. Such a method would make a building or a machine, not an organism; or rather it would not even make that, for the building and machine must pre-exist as a plan in the mind of the designer. It is true that the seed draws to itself elements from soil and air to build its structure; but the building is done according to a model. Before the plant exists as a physical organism visible to the eye, it has already existed as an astral organism and could be seen as such by the eye of a clairvoyant. And when the plant decays, that astral organism remains, to form the model for future physical organisms of the same kind.

At the time of writing (1939) we continually come across utterances by leading biologists, which show an increasing readiness to accept the views here indicated. They see more clearly now that a mere description of *process* is not a sufficient explanation of evolution, and that there is no escape from the conclusion that intelligent forces are behind the process. Nay, even the physicists are saying the same thing, and are in some ways more reasonable than the biologists. They see that their forces are merely effects produced in matter by the agency of something unknown; and they have analyzed matter to a point whence it is impossible to proceed further without passing the bounds of matter. However complete may be the physical explanation of natural phenomena, it is complete only within the limits assigned; and still leaves plenty of scope for the introduction of ultra-physical agencies without in the least upsetting the physical explanation. And some physicists have taken the inevitable step and cut the knot by inferring that even physical matter is actuated by living forces -- that is, by living beings.

---

## Chapter 3

### The Astral Plane

Evolutionists, in their attempts to interpret the evolutionary process, are much hampered by a neglect to take into account the existence of other kinds of matter than the familiar physical matter. But it is impossible to explain the phenomena of physical matter without assuming the existence of a subtler form of matter behind these phenomena. As said above, a growing plant seems to build itself up mysteriously, according to its peculiar pattern, without visible agency to account for such building. The explanation is that the entire form of the plant exists beforehand in astral matter, and that upon this model is built the physical structure, the physical atoms taking their places in accordance therewith. In the scale of plants and animals, the changes take place in the astral form of the organisms, not in the physical structure; and thus is explained the gaps in the chain. This has been illustrated by the following analogy: if people are ascending a spiral staircase, a spectator looking from one side will see people at different stages, but will not see how they pass from one stage to the next. He may assume that they jump, or that they proceed by gradual ascent; but he will fail to see the process actually at work. The fact is that the people pass by gradual ascent round the back parts of the spiral, which are hidden from view. The physical species on earth remain unaltered for long periods; but this does not mean that there is no evolution. These physical forms are merely the successive houses in which the evolving *monad* dwells; but the monad itself is evolving all the time; its evolutionary changes take place in the astral form, and when thus changed it incarnates in the corresponding physical form.

At this point it is advisable to consider what we really mean by an animal or a vegetable. The assumption that it is merely a physical organism is wrong, and we cannot explain evolution on such a wrong assumption. The plant or animal is essentially a *monad* -- a living soul, a spark of the cosmic fire, an atom of the universal mind and life and spirit. It is performing a pilgrimage through matter, in the course of which it is gradually and progressively evolving various forms for the expression of its own latent capacities. It is a growing, learning thing. This monad is a seed, and contains within itself all the potentialities of its divine origin. This monad or spark of life is imbodiment; but not merely in a physical body, for beyond the physical there are other imbodiments in subtler forms of matter. It has a psychomental imbodiment, which makes of it an animal (or a plant) soul; this again has an astral imbodiment, and this again a physical imbodiment. All this has to be considered if evolution is to be rightly understood.

If we would look within our own consciousness, we should get a clearer idea than by looking at the outside of things. We find that we are primarily a self-conscious thinking being; our organs and bodies are instruments which we have built for ourselves in order to express ourselves in and to contact the outer world. We grow from within. It is the same everywhere; everything is growing, and everything grows from within. Visible plants and animals come out of the invisible; and it is in the invisible that the evolutionary changes take place. As the soul of the being gradually develops, the changes in it are produced in the astral form, and thence transferred to the physical form.

It is impossible to explain how the body of a plant or animal could remain the same throughout life when the physical atoms are continually changing, unless there is some permanent mold upon which those physical atoms are built and which preserves the integrity of the organism through all the changes of its physical atoms.

Thus we cannot explain evolution without taking into account the existence of the astral plane and the astral bodies of organisms. But, once this is grasped, the difficulty disappears.

---

## Chapter 4

### The Evolution Of Man

#### THE MEANING OF THE WORD "MAN"

We must first know what we are to understand by the word "man." If we may for the purposes of the argument assume (though without admitting) that the scientific evolutionists are right in their theories as to the evolution of the human body, we should still be left entirely in the dark as to the origin of the human intelligence, the human soul -- in a word, of man himself. This is what the anti-evolutionists feel so strongly, however inadequately they may be able to express their objections. They feel that the acceptance of the scientific view would commit them to an animalistic, materialistic, and brutalizing conception of human nature. It is true that scientists may reply that they are not concerned with this aspect of the question, they only study physical facts. Yet the fact remains that such a materialistic and mechanistic view does actually influence our minds and tend to promote in us a pessimistic view of human nature. In other words, science tends to become a religion, and a religion which denies Deity, or at least disregards Deity; a religion which emphasizes the brutish instincts in mankind; a religion which accustoms us to look back to the animal world for our ancestry. Not even the animal mind, nay not the intelligence that makes the plant grow true to kind and perform its functions, can be interpreted as mechanical or chemical products. Still less, very much less, human mind. Let us look within and try to sound the depths of our marvelous conscious being. If that came from matter, then matter must be God. Like creates like, and streams cannot flow higher than their source. Our consciousness is part of an ocean of consciousness; our mind is a little focus of light; and our organism cannot furnish more than the screen upon which the light falls.

Theosophy deals with facts, and what fact can be more factual than our own conscious existence? We cannot find anything more fundamental than our own consciousness to use as a starting point. The evolution of spirit is in the opposite direction to that of matter; by the conjunction of the two is formed mind. Mankind is (broadly speaking) the result of two lines of evolution coalescing: that of spirit from above, and that of matter from below. The whole manifested universe is created by the union of spirit and matter, by the cosmic life and intelligence building for itself vehicles for its expression. As said before, it may be better to speak of the involution of spirit into matter, and the consequent evolution of

matter. Science has studied the evolution of matter, but not the involution of spirit. Moreover, it has sought to make both conform to the same process, and to represent mind as having evolved upward through the animate kingdoms to man. It is spirit which causes the organisms to evolve; the form changes and adapts itself to the growing capacities of the indwelling monad. If an analogy from science itself were asked, we might mention the case of heat entering a body and causing it to undergo many changes, as from water to steam, or any one of the innumerable chemical changes produced by heat. We see here that the heat is the invisible agent which promotes the visible changes. But biologists have argued as if the changes took place of themselves, and the heat were a by-product of the process. If it is necessary for a devotee of science to shut off all his finer sensibilities and to view nature with a cold eye, he might fail to see in the eye of the animal that spark of conscious light which he might recognize as akin with his own; otherwise he might see the animal as a thing in itself, apart from its mere body.

---

## SELF-CONSCIOUS MIND

But to speak of man particularly -- he is not the end product of the chain of plant and animal forms; for there is a very marked gap, the gap of self-consciousness, as said above. Man has the power to study his own consciousness, and he has the power to alter himself by an act of will and imagination. These faculties the animals have not; and these faculties are either wholly present or wholly absent; they do not exist in any intermediate or partial stages. Here it is necessary to amplify a statement which was made in a qualified manner above, when we said that mankind is a product of a twofold evolution. We will consider the human being now as a product of *three* distinct lines of evolution. The third line is the line of the self-conscious mind.

As said in religious cosmogonies, the Bible included, man was created in the first instance out of the dust of the ground and made a living soul -- that is (according to a more exact rendering of the Hebrew) an animal soul. Later this soul was endowed with the divine fire, so that man was created in the divine likeness. This is a universal tenet; nothing has even been more a matter of agreement than that of the double creation of man. It is a truth, and we shall witness its confirmation by science, though science may use terms of its own instead of the Biblical phraseology.

By observing facts we shall find that intelligence is communicated from mind to mind or, to speak more accurately, it is aroused in one mind by the action of another. A child, left to itself, would not develop or evolve intelligence, but would remain a sort of instinctual creature, as has actually happened in some recorded cases. But he learns from his parents and nurses, both by instruction and imitation; and is afterwards taught in schools. Great movements in thought have always been started by master minds, thinkers of force and originality, who have gathered around them disciples, and thence the wave of thought has spread through the mass. Light is always handed on. It is true that intelligence lies latent in every human being, but it would continue to lie latent unless called into manifestation. The highest types of animals remain what they are, and show no tendency to develop intelligence. What reason can be alleged for supposing that it was anywise different in some past age? The hope of finding the fossil remains of creatures intermediate between mankind and the higher apes has not been successful; and it is

likely that the bones of degenerate human types would be mistaken for such links. The analogy between the structure of anthropoid and man works both ways, and may equally well prove the descent of the ape from the man; and there are biologists who believe that the evidence is in favor of that view.

Mankind is, then, the product of *three* principal lines of evolution, the third line being the *manasic* evolution -- that is, the evolution of *manas*, which means self-conscious mind. It is this self-conscious mind which so sharply distinguishes humanity from the animal species; and, as said before, it cannot be represented as a product of direct evolution from the unself-conscious mind which animals have. It was a distinct acquisition made by man at a particular stage of evolution. There was a time when he had it not; there was a time when he gained it. This marks the difference between the early "mindless" races of humanity and the later "awakened" races.

This event is called in theosophy the coming of the *manasaputras*, which means "sons of mind." These were godlike beings who had once been human; but, as they belonged to a previous round of the evolutionary cycle, they had evolved beyond the status of humanity as known today. It is from these beings that mankind derived its special intelligence. But it must not be thought that they gave mind as one gives a gift to someone who has it not. What they did was to awaken in the mindless human beings the latent seed of self-conscious mind which was already in them. For we must bear in mind that the highest potentialities lie dormant in every being in the universe, however lowly, awaiting development into active power at some time in the future, however remote. The sons of mind, then, were the teachers or instructors of mankind, the awakeners or saviors. This event is described in allegorical language in many sacred scriptures and mythologies, the Biblical *Genesis* included.

In the present place we must limit ourselves to what is necessary to explain the present topic. It is this manasic part of us which forms the necessary link between spirit and matter. We have to imagine a natural evolution proceeding from below and producing more and more complex forms, and a spiritual evolution (more properly involution) descending from above. But the spiritual beings are unable to incarnate in the animal organisms produced by the lower evolution, the gap being too great; so that it is this intermediate principle, manas or self-conscious mind, intelligence, which bridges the gap, bringing the spiritual into union with the physical, and thus making the complete human being.

Our own familiar experience will give us illustration of the fact that such is the method by which knowledge is actually conveyed from one person to another. We all learn from contact with other minds. These minds do not *give* us something, but rather arouse our own latent capacities. This is the true meaning of education, which means "drawing forth," as shown by Plato in the well-known story where he *elicits* geometrical truth from an untaught slave.

If it be asked whether the present animals will ever become human, the answer, as we said above, is Yes and No. It is not true to say that beast bodies can evolve into human bodies, or that animals become human by gradual transformation. But it is true that the monads now inhabiting animal bodies will one day pass over into the human kingdom and become enlightened with the fire of mind. But this will not occur in the present round or great terrestrial cycle; the door into the human kingdom is now closed for

this round, and the present beasts await their turn in a future round.

---

## LIMITED VIEW OF SCIENCE

It has been well said that physical science is of a highly metaphysical nature, and this is obviously true of the evolutionist philosophy. Those who uphold it seem hypnotized with the idea that things are developing upwards from the very simplest beginnings; but what a view of the world scheme does this make in our minds! The amount of things which we must presuppose and take for granted is wonderful. Upon the atom and its innate properties are loaded the whole responsibility of the universe and all its beings. Well may we call it the Almighty Atom! But, apart from this, the movement from simplicity to complexity is only one half of an observable universal process, the other being the movement from complexity to simplicity; and these two processes are working both at once and all the time. The processes at work in cosmic evolution are vast and various, and the whole scheme is infinitely elaborate and complicated. Science has hold of an important truth, but has glimpsed only a small part of its workings; the hypotheses of science are timid and confined. Again, science is unconsciously affected by the shortened view of human history fostered by religious teaching, and consequently seems determined to allow mankind only a few short years at the end of its time scale. This shortened idea of human history is further favored by the determination to make humanity the latest product of an end-on evolution.

Archaeology is continually frustrating these attempts and is always bringing to light new evidence that mankind, even highly civilized mankind, is of vast antiquity. An examination of the facts, without the pre-existing prejudice, would have led us to different conclusions; for in truth there is nothing to show that mankind has recently developed up from savagery.

And in biology, too, it has to be admitted that the structure of the human body shows a primitiveness which ill accords with the view that it is the most recent product of evolution. Man is in fact the original and therefore the most primitive stock of all, and bears in his body primitive arrangements of bones and muscles. As scientific authority for this statement may be called for, we refer to *Man in Evolution* by G. de Purucker, chapter 8, where are enumerated at length a number of anatomical details in confirmation, chiefly drawn from the anatomist Dr. Wood Jones. For a synopsis, see [Note 1](#).

---

## MAN THE MOST PRIMITIVE STOCK

According to the teachings as to evolution given by theosophy, and speaking for the present only of evolution in this fourth round or terrestrial cycle, mankind was actually the original and root stock of the mammalians, and the other stocks have sprung from the human stem. This accounts for these primitive and simple conformations in the human body. In the various animal stocks we find specializations of

particular organs and functions, such as wings, trunks, claws, horns, gills. These, according to the theory which evolutionists have been trying to establish, are features which have been discarded; but their presence is much more consistent with the theosophical doctrine of evolution than with the theory of the evolutionists. According to the theosophical doctrine, the human stem threw off from itself the germs of the future animal stocks, and these germs then proceeded to develop and specialize, each along its own peculiar line, so that as time went on the tendency was towards ever wider divergence. And a candid study of the facts shows that this is the case; for it is found that species do actually tend to specialize along their own lines, rather than to pass by gradation into other species.

In saying that the germs which afterwards developed into the mammals were thrown off from the human stem, it is necessary to add a qualification and to explain why we said "human stem" rather than "mankind." The events referred to took place in the very far past, and since then the human race has been developing, so that the humanity from which the mammals were thrown off was very different from the humanity of today. It is also necessary to bear in mind that, in a universe where everything evolves, matter itself has been evolving; and that its present stage, which we call physical represents the latest phase of a continuous succession of phases or states through which matter has passed. The process by which the germs or seeds which were afterwards to evolve into the mammalian stocks were thrown off is one that biologists call budding or gemmation. The present human organism is not able to produce offspring in this way, though this method of reproduction exists today in some of the lower orders of creatures.

So the question, Did the animals descend from mankind? can be answered both Yes and No; they did descend in the way described here, but not in the Darwinian sense. They did not come from human beings by procreation and as the end product of a single-line upward evolution; the germs of the animal stocks did proceed from the human stock, at a time in the far past when that human stock was not like what it is now. Thus the type of evolution in the animate kingdoms is like a tree with a main trunk, branch trunks, boughs, twigs, and leaves. This is quite different from the single-line type of evolution at first imagined, and science itself is coming more and more to this tree-like form of evolution, as facts accumulate and as studies progress.

---

## MAN DESCENDS FROM -- MAN

The ancestors of man were -- man himself; prehuman perhaps, but still human. And this necessitates that something be said as to what man is and whence he has come.

The human being came into existence on the spiritual plane as an unself-conscious spark of divinity, destined, after cycles of evolution, to return to unity with the divine essence from whence it sprang. It is a monad, a germ of the universal life. The monads destined to become human were thus godlike beings who came to earth in the earliest days of the planet's life. The first *physical* mankind existed on this earth 18,000,000 years ago; but before that, mankind existed on earth in astral or ethereal form. Here is a point

which the modern theories have overlooked -- that matter itself evolves, and that the earth was not always physical. This has a great bearing on the whole picture of paleontology, and many difficulties arise from supposing that the conditions and properties of matter were the same in very remote periods as they are now.

In the present globe-round of cosmic evolution, there are seven human root-races, of which we are now in the fifth. The first root-race was in Paleozoic times. Each of these root-races had its own peculiar form and its peculiar method of reproduction, the first by fission, the second by budding, the third by androgynous generation and egg laying. These methods are still found in some kinds of animals. The present method of sexual reproduction is a passing phase. The progenitors of the mammalian stocks were the first physical humans and the astral-ethereal humans who preceded them. At this time mankind was "mindless" -- that is, it was instinctual, for the light of self-consciousness had not yet been kindled. Human beings were able at that time to start the evolution of the various mammalian types by the cells or seeds cast off from their own bodies. These then pursued each its own special line of evolution, thus during the ages producing those widely divergent types which we see today.

Thus far we have spoken of the mammalia; there remain the types below, namely reptiles, birds, fishes, etc. These did not issue from the human stem in this globe-round of the great evolutionary cycle, but in a preceding globe-round. It is thus seen that the plan of evolution is much more complex than has been supposed. We do not propose to go into it here more fully or in more detail; and this may cause what is said to appear scrappy; but the plan is fully elaborated in other theosophical writings, and its consistency can there be seen.

---

## MAN AND THE APES

A special case has to be noted as regards the two classes of simians, the anthropoids and the monkeys. As surmised by many scientists, these are *from* mankind and not toward it. But they differ from the other mammals in the way in which they were derived from the human stem. The early race of mankind spoken of above as being "mindless" allied themselves with certain of the animals existing at that time, and from this union sprang a hybrid race which is the ancestry of the present monkeys (as distinguished from anthropoid apes). It is not right to call this miscegenation a crime, as such an act would be regarded today, because neither the humans nor the animals concerned in it were like the humans and animals of today. They were much more like each other; the distance between human and animal was not so great. Hence a fertile union was possible, and also a fertile offspring able to perpetuate its own race. Moreover, the humans being mindless were incapable of sin, and their acts were instinctual. This took place during the Mesozoic Age.

As to the manlike apes, their history is as follows. At a later date, during the Miocene period, when the fourth great root-race of humanity had passed its climax, certain degenerate remnants thereof repeated the act of the "mindless" (as just mentioned), by allying themselves with the then existing simian stock;

and thus sprang the anthropoid apes. This act was, however, one of bestiality, a sin, because these humans were not mindless but endowed with self-consciousness. It is still to be observed, however, that human and animals were even then not far enough apart to prevent a fertile and self-productive union. Neither man nor monkey were the same as now, both having since evolved along their respective lines.

Such is the story of the origin of the apes and monkeys; and proofs of its truth are to be found in a study of the anatomical features of mankind and the anthropoids, which will be seen to confirm the above teaching rather than the view that humanity has developed from the ape, or that both have developed from a common animal stock.

---

## SPIRITUAL URGE IN EVOLUTION

It is clear, then, that we can accept evolution without disparaging human nature; all we need to do is to get the doctrine straight and complete, not twisted and partial. It is materialism, not evolution, that denies the divinity of man. The human being is not his body; the latter may be a product of evolution from below, but man himself is a self-conscious being, with infinite untapped resources within. It is this infinite part which has come from above; this is the fire which has kindled in the animal body the fire of genius.

We stated that, in one sense, mankind is from the animals; which means that human body is the result of ages of evolution through lower kingdoms. But such evolution upward could never have been accomplished without a simultaneous involution of spirit into matter from above. It is the universal life, consciousness, spirit (an exact term is hard to find) which is the cause of evolution, in seeking to build for itself new and better mansions on earth. But life, consciousness, and spirit are mere abstractions in themselves, they are the attributes of living beings, and these living beings are the monads, of various classes and degrees.

Monads are sparks or atoms of the universal life. They are spiritual beings, and may be regarded as the ultimate seed or germ of every living thing, down to the smallest atom or particle. Each of these germs starts its own line of evolution; in it lies stored up and latent the potentiality of all that will develop from it. Thus the whole universe is the scene of a host of such living, evolving beings. They are at varying stages of their evolution. When spirit first begins to involve itself in matter, the evolution is very slow, so that long ages are passed in the lower kingdoms of nature -- the mineral, and before that the three elemental kingdoms, then the vegetable, and so on.

Individualization begins in the plants, develops farther in the animals, and is completed in mankind. But observe, it is not the organic forms that change one into another, but the indwelling monads, which inhabit one form after another, as their evolution requires. Thus the forms may remain stationary or nearly so for long periods, while all the time evolution is proceeding.

---

---

## EVOLUTIONARY WAVES

It is interesting to note here that some scientists have noticed that new varieties of plants or animals appear *suddenly*; this is in response to a particular urge from within, requiring the production of that kind of a body for the expression of what is within the monad.

All this has an important bearing on past evolution, as recorded in the paleontological record, and clears up many puzzles which that record has presented. While it is true on the whole that the types get lowlier as we recede into the past, yet the development has been by no means uniform. There have been great bursts of some particular type, like that of the reptiles in the Mesozoic Age, which attained such enormous development and gigantic size, and has dwindled until the little sun lizard represents the once gigantic saurian. At one time there was an immense development of tree ferns, at another of ammonites, and so on. Concurrently with this evolution of the plants and animals, there were changes in the structure of the earth, the distribution of the land and water, the nature of the atmosphere, the temperature and pressure, and other geophysical conditions; all of which makes the plan of evolution much more variegated than that of simple lineal descent.

Theosophy agrees with Darwinism in the belief that there is a law of gradual and extremely slow evolution embracing many million years. But it is necessary to distinguish between the fact of evolution and the manner of it; and in this latter point theosophy may find itself in disagreement. And yet again there is the question of the cause of evolution, another moot question subject to diverse opinions.

One evolutionist is quoted as holding that evolution is accomplished by the agency of the "energies" which are intrinsic in the evolving matter, and without interference from agencies external to matter. Here we find a good example of the method of evading a prime difficulty by the use of an undefined word -- in this case "intrinsic" -- which really begs the whole question to be solved. The word was probably used to exclude the action of a divine creator and thus to distinguish the evolutionary theory from that of special creation. But it really replaces one difficulty by another of equal or greater magnitude. In the first place, it might prove hard to distinguish between intrinsic and extrinsic, to say just what is within matter and what is without. Is an "agency intrinsic in matter" itself material? If this agency is itself material, then we have not solved the problem but merely moved it one stage farther. If the said intrinsic energy is not material, then what is it? The whole materialistic theory seems to be given away at once. Again, if the energy is not material, but is immaterial and separate from matter, then what becomes of the difference between intrinsic and extrinsic? The author of the above remark, however, goes on to say that intrinsic properties are a "property of the physical basis of tridimensional matter." This seems to imply that there can be something beyond matter, something which is not tridimensional; but the idea is spoilt by calling it "physical." It is evident, on any logical reasoning, that matter is either actuated by some agency which is not material (or not material in the same sense), or else this matter is the *primum mobile*, the primary element, the self-created or uncreate ultimate cause of all things -- in a word, God.

Logically speaking, mind is prior to matter; for all we can know of matter is what we find in our own mind. That is, we must *assume* mind before the question can be argued at all. The result of defying this fundamental rule of logic is the hopeless confusion described above. There seem to have been people actually capable of arguing that consciousness has been evolved from a matter which did not already possess it. Anything from which the human mind has evolved must be greater than that mind, whether we call it matter or an atom or a monad or a God. In this sense it may be true to say that evolution is caused by the powers intrinsic in matter; but this would then be only another way of saying that in every smallest atom there resides in potency the whole of whatever may afterwards be evolved from it. That is, this atom is a spark of the universal spirit -- which is pure theosophical teaching.

NOTE:

1. Anatomical evidence of the primitiveness of the human stock, condensed from *Man in Evolution* ([chapter 7](#)) and largely taken from Dr. Wood Jones, Professor of Anatomy in the University of Manchester:

(1) The bones of the human skull articulate both at the base of the skull and on the sides of the brain-case in a manner characteristic of primitive mammalian animals; thus forming a marked contrast with the same articulations as found in the anthropoid apes and monkeys.

(2) The extreme primitive simplicity of the human nasal bones, in contrast with the case of the anthropoid and other simian stocks.

(3) In five respects in particular the skull is built on primitive mammalian lines, which have been departed from in some degree in all monkeys and apes: the back wall of the orbit, the metopic suture, the form of the jugal bone, the condition of the internal pterygoid plate, and the teeth.

(4) The human skeleton, especially in its variations, shows the same condition of primitive mammalian simplicity.

(5) As to the muscular system, man also retains many primitive features which have been lost in the rest of the Primates; among which are specially noted the pectorals minor, whose attachment to the coracoid process is the original and primitive attachment, very different from that of the apes and monkeys, and

still more so from that of many of the quadrupeds.

(6) The human tongue is primitive, and no ape or monkey has a tongue like the human.

(7) The vermiform appendix is strangely like that of some of the marsupials of Australia; it is very different in the apes and monkeys.

(8) The great arteries which arise from the arch of human aorta have the same number, are of the same kind, and are arranged in the same order as in the ornithorhynchus anatinus or duck-billed platypus of Australia. The apes and monkeys have not this arrangement.

(9) In man the premaxilla, the front part of the upper jawbone carrying the incisor teeth, does not exist as a separate element. But in apes, monkeys, and all other mammals, the premaxillary element is shown on the face by suture lines, outlining its junction with the maxillary bones. ([return to text](#))

## Chapter 1

### Introductory

The work of theosophists and others have familiarized us with the word "astral" in such expressions as "astral body," "seeing in the astral light," "getting on to the astral plane"; and in the following pages an attempt is made to furnish inquirers with an outline of the subject in accordance with the theosophical teachings. The entire subject is vast and comprehensive; but, as with other subjects, it is possible to begin with what may be called an elementary textbook, which shall outline the main features without perplexing the neophyte with too many details; leaving these latter to be mastered in the course of further studies of the theosophical teachings.

Though much has been written about the astral light in other works, we have in mind in this manual a particular object, and that is to relate the subject to recent changes in world-thought which have taken place, especially as regards the scientific outlook. In a world in which the old-fashioned scientific universe is regarded as a plenum, and in which nature and her laws are held to be fully explained by scientific formulas, such a conception as the astral light may appear to belong to that mysterious category known as the "supernatural." Here, however, the supernatural will be entirely rejected, and we propose to show that the astral light is a part of nature, and an *essential* part of nature. It is realized today by scientists themselves that their former conceptions are by no means adequate to an explanation of the natural phenomena which have now come under their ken; and they are actually feeling their way towards ideas conformable to the theosophical teachings.

The restricted spheres of both religion and science have left unexplored a very large realm of nature and of human experience, thus leaving us without guidance in a realm which it is of the utmost importance for us to understand. This lack is partially and very inadequately filled by various schools of psychology, psychoanalysis, and the like, which are groping largely in the dark. Again there is the whole vast subject of the "night side of nature"-- apparitions, wraiths, presentiments, haunted houses, and the like, the reality of which is so well attested that few remain today who feel able to get away with a simple denial of the facts. Such things are natural, a part of nature, and demand to be explained and understood.

---

## Chapter 2

### Meaning of the Term "Astral Light"

This term, though perhaps not the best that could be chosen, has come down to us from certain medieval mystics and passed into current use. *Astral* means "starry," and was used both by ancient and medieval philosophers to designate spheres above the terrestrial or earthy. In the same way, such spheres were often spoken of as spheres of light or fire or aether. As to the word "light," we might substitute the word "matter" and speak of astral matter instead of astral light. But in this case it would be a kind of matter that was self-luminous. We might also speak of the astral plane; and this may help us to realize that we need to feel more certain as to just what such words as light, matter, and plane, really mean. How does science regard light? If it is a vibration, then we must suppose some vibrating medium, and this medium must be of a material nature. And if light is not a vibration, then we must suppose that it is itself a form of matter.

Theosophy recognizes several different *planes* of nature. The plane familiar to us is called the physical plane; it is related to our physical senses. These senses are limited in their scope; they give us a partial view of nature. While they are commonly regarded as our means of communication with nature, it is also possible to regard them as windows which only allow us to see a small part of nature and shut us out from the rest. From the reports received from these senses we have constructed an imaginary picture of the universe: put in technical language, we have a set of concepts derived from our percepts. If we have other senses, more subtle ones, and these should come into play while our former senses became inactive, we should get quite another picture of the universe. Things which we have taken for granted because we are so familiar with them, and which we have assumed to be universal and invariable, would be seen to be peculiar to the physical plane, to our physical consciousness, and not necessarily appropriate to other planes. Notions of space and time, magnitude and position, and density and force might be entirely different. We should have left the physical plane; we should be on the astral plane, in the astral light.

It is often convenient to consider the universe under threefold aspects, just as we may consider man as spirit-soul-body. In this view the astral light would be the intermediate sphere between the spiritual and the physical, and thus it would be the soul of the world -- as indeed it has often been called. Thus the

astral light, in this view, would form a connecting link between the higher and lower worlds; it would stand to the higher world in the relation of a body, and to the lower world in the relation of a spirit. But it must be pointed out that such a threefold division of the universe is not a complete analysis, and is only adopted for the convenience of a concise view; for theosophy divides the universe into many planes. In this latter view the astral light is the plane immediately above the physical plane, and is the lowest of a number of cosmic planes, reaching from the physical plane to the highest spiritual plane, in a gradation of steps of greater and greater refinement. To these other planes various names are given, such as akasa and aether; but it is not necessary at present to go into details as to these distinctions.

Thus the astral light or astral plane is another world, or another story of the world, related to a different set of human senses, and characterized by different relations of space, time, and other qualities. If it be asked whether the astral light is a form of matter or a form of energy, it may be answered that the former distinction made between these two by science is now becoming obliterated, and it is coming to be recognized that there is no essential distinction between matter and energy. Both of them are now regarded as particular and contrasted phases or aspects of some one thing which is more fundamental than either. What to call this one thing, and how to define it, is a question that now engages the attention of physicists. It is a very old idea that there must exist a permanent substratum to nature, a basic substance, a protyle, an "absolute," a *prima material* of which all the various elements known to science are merely modifications; and not only so, but all the various forms of energy are also modifications. The quest for such a basic substance is one form of the quest for the philosopher's stone, the great magic agent.

---

## Chapter 3

### Scientific Views

Physical science has found itself involved in difficulties and contradictions by the attempt to explain all physical phenomena in terms of physics alone; and has presented us with a picture of a universe composed of indestructible units of matter, acted on by forces. But, if these forces are material themselves, we have matter impelling matter; and if they are not material, they must be something else -- say spiritual -- and materialistic science did not recognize any such thing. Further, this scheme does not provide any means of explaining how the immaterial forces can act on the material forces, or (which is the same thing) how energy can act across spaces assumed to be empty. These and similar difficulties disappear at once, as soon as we regard the physical world as merely a manifestation of energies acting behind the scenes, so that we can see the effects but not the causes, the shifting scenes but not the scene-shifters. We may now say, with all the authority of modern science behind us, that the former supposed permanent and indivisible atom of matter has now become resolved into a mere center of vibrations and energies; and this makes it necessary to assume a subtler and ultra-physical form of matter in which these vibrations and energies can inhere. Thus we have full authority for presuming the reality of at least one grade of matter which is not physical matter, and whose properties must therefore be different from

those of physical matter. Also we can say that this matter partakes in an equal degree of the qualities usually assigned to energy and force. It becomes desirable therefore to use some such expression as force-substance or energy-matter to designate such an entity which is neither the one nor the other but both.

In view of the above, we can scarcely be accused of fantasy when we speak of the astral light as a world of energy-substance of a subtler order than the physical world, and underlying the latter as its prime mover.

The physical world, as compared with the astral world, is a world of results; while the astral world is to the physical world as a world of causes. The astral world is a world of forms and types, which find their expression in the physical world. This idea is necessary in order to account for many quite familiar happenings, which have no real explanation on orthodox lines of the older physics. Take for example the production of a tree from a seed. It may be granted that the materials for the tree are gathered from the soil and the atmosphere, but that is not enough explanation; we require to know why each seed should produce a tree conformable to its own nature and build these materials into one particular pattern and no other. It is because the entire pattern of the future tree is contained within the seed, and the growth of that seed is simply a process of unfoldment, during which the particles from soil and air are gathered together and built into the required form. And let us bear in mind that no question of size, no question of how such a large pattern can be packed into such a small seed, is relevant; for it has already been shown that our physical notions of space and dimension do not necessarily, or even probably, apply to the astral world. If thought desirable, we might here invoke that old friend the "fourth dimension" as a possible means of escape from the difficulty.

We can easily extend our illustration of the seed and tree to other familiar cases. For instance, what explanation can physics give for the way in which the human body preserves its integrity of shape, although its physical particles are continually changing, some being cast off, others taken on? Why does a mole persist in the same place throughout life? If we try to evade the point by saying that the new particles take the same *place* as the old particles, then it is legitimate to inquire, What is a *place*? And it will be a puzzle to define a place apart from any objects which may occupy it. The rational explanation is that there is an astral body within the physical body, and that this inner body remains unchanged throughout all the changes of physical substance.

This is a topic which belongs more particularly to discussions on the human constitution and astral body, to which the reader may be referred; but it is impossible to avoid some overlapping, so intimately are the various theosophical teachings interblended. In the same way we might adduce the phenomena of memory, a faculty which enables us to preserve the images of events, despite the continual changes in the physical substance of the brain. But we must deal specifically with the astral light in nature, rather than as manifested in man particularly.

---

## Chapter 4

### A Cosmic Picture Gallery

The astral light has been well called the world's memory and the cosmic picture gallery. It is nature's storehouse of forms. Everything in the physical world preexists in the astral world as an image or type or form. Besides this, it is a great memory, nature's memory; for it retains impressions of objects and events on the physical plane. Thus it is a great record. Human thoughts perish not when the thinker dies; they have passed out into the astral light, where their records remain, and whence they can be recovered by the vision of the trained seer. This suggests that nothing can ever be irrecoverably lost. This carries us beyond the familiar notion of the passage of time, and offers us a picture in which past, present, and future coexist as one whole. The astral light contains the germs of all that is to be on the physical plane, and the records of all that has been.

Here again the recent advances in scientific philosophy will help us to an understanding. In seeking to interpret the more recent findings of experimental research, it has been found no longer sufficient to regard merely the position which objects occupy in space; it becomes necessary to define their position in *time*. And thus a fourth coordinate is added to the familiar spatial three, and we not only ask *where* a thing is, but *when*. And in place of objects we speak of *events*. With this help it becomes easier to understand how the astral light may be a storehouse of events.

Many familiar phenomena have been pushed aside or declared impossible for no better reason than that they could not be explained by the orthodox science of the time. But when we have a simple explanation ready to hand there is no reason to reject them or to try not to see them. Thought transference is a matter of common occurrence, especially between people closely related or associated with each other. We often fail to remember something and leave off trying; and later on the memory comes back unexpectedly. We fail to solve a problem, and the solution pops into our head suddenly at some later time. We live in an atmosphere of thought, just as we live in an atmosphere of air; and ideas come into the head from we know not where, and pass out again we know not whither. Thoughts are things; they may not come under the definition of physical matter as "that which can be handled and weighed"; but we have seen that there may be other sorts of matter, having altogether different properties.

It is not only thoughts, but also emotions, which are stored up in the astral light and passed from one human being to another; and this explains the unconscious and unseen influence which we exercise upon one another. It is really impossible to sin in secret; an evil thought or feeling will poison the astral light as a dirty body would foul the water in which we bathed, or an unwholesome breath might pollute the atmosphere. On the other side of the picture, our good thoughts and aspirations must have their influence; and this influence is more potent because it rises to a higher plane. The importance of individual responsibility becomes greatly increased in view of this. And this leads us to speak of the connection of the astral light with the law of karma.

---

## The Astral Light and Karma

While we may believe that our present experiences are the fruit of our past acts or thoughts, and that our present acts and thoughts will beget future consequences for ourselves, we often fail to see the links connecting cause with effect. This is not surprising in view of the limitation of our knowledge of nature: we see only a small part of nature, and there must be much that we do not see. But the teaching about the astral light will enable us to supply some of the missing links. Every act, every thought and desire, imprints itself on the astral light, so that we may be said to "people our current in space" with our own creations, the offspring of our thoughts and deeds. And the consequences of such acts will return to their doer in accordance with two laws, for which we readily find analogies in physical science. One is the law of action and reaction; the other is the law that like attracts like. Any energy thrown forth in one direction tends, when the force is spent, to flow back in the opposite direction, as in the swing of a pendulum or a stone that is thrown up; and as each impression is stamped with the quality of its creator, the law of affinity tends to bring it back to him. Karma is the adjuster of disturbed equilibrium; it may even be said that what we call an act is only half an act; the whole act includes the reaction as well. But the deed and its reaction may be separated by long intervals, so that we fail to trace the connection. The two may even be separated by the gap of physical death, so that the causes set in motion in one incarnation will not yield their results until a later incarnation. But the astral light provides for this, for it is the great storehouse of nature and can preserve impressions indefinitely.

Misunderstanding as to karma may be caused by confusing physical acts with moral acts; and much of this misunderstanding will be cleared up if we bear in mind that the astral light is only one of seven cosmic planes, and that karma acts on all planes. Also, we must remember that karma is not a blind mechanism, such as is imagined by materialistic thought. There can be no such thing as a blind mechanism anywhere; life and consciousness lie behind all phenomena, even the phenomena of physical matter, as is better realized now than it was last century. It may be convenient sometimes to use mechanical terms in speaking of karma and the astral light, but we must not forget that the astral light, like the rest of nature, is alive. Spirit and matter are opposite poles of the same fundamental substance; and the higher we advance from physical matter up through the various cosmic planes towards spirit, the more accentuated become the spiritual qualities. So the astral light may be thought of as an intermediate grade between spirit and matter, or between mind and matter (it is hard to find exact terms in our language); and when we remember that there are seven planes of the astral light, we can more readily understand how mind and matter may be connected by a series of graduating links.

When we speak of a chain of causation connecting acts with their results, we must bear in mind that the links in this chain are not the inert bodies dealt with in physical mechanics, but are more or less conscious living beings, endowed with volition and purpose to a greater or less extent. It is taught that when a thought-form leaves our mind it may coalesce with an *elemental*, and by this coalescence there is engendered a living being, which thereupon begins a life of its own. Its conscious life consists entirely in the tendency to repeat the act which it represents, so that it is instinctual and is not endowed with more

intelligence than is necessary to enable it to execute that function. Here then we have an intelligible explanation of the phenomenon called *habit*, as also of a large class of actions known as impulsive. Each one of us has surrounded himself with a host of such elemental beings, which are continually trying to express themselves through our minds or our bodily mechanism. Such words as tendency, proclivity, and the like, as used in common parlance or by science, are mere counters; they are abstract nouns or uncashed checks or algebraic letters for unknown values; so that our explanation is not superfluous but necessary.

As soon as we begin to study our own daily experiences, with the above ideas in mind, we shall find plenty of corroboration for the teachings. Previously we had overlooked this evidence because we were not seeking it. It helps people greatly in the work of understanding and ruling themselves, if they can realize that they are to a great extent permitting themselves to be controlled by actual obsessing beings -- namely, these thought-elementals and elementals of desire, continually prompting to unconsidered speech or acts, and inspiring moods of anger, sarcasm, levity, etc., which we afterwards regret; and a poor excuse it is to say that "I don't know what made me do it, but something came over me."

---

## Chapter 6

### Dangers of the Lower Astral Light

That stratum of the astral light which lies nearest to the physical earth is its lowest and coarsest layer; and it is this layer which teems with what might be called the effluvia of human thoughts and emotions and passions and gross actions. This region is peopled with a great variety of beings, endowed with little or no intelligence, instinctual in their action, for the most part harmful to mankind; and there is constant interaction between the two planes. For the most of us, our physical bodies act as a merciful shield, shutting us out from these beings and protecting us against their noxious influence. The theosophical teachings tell us that, after the death of the body, a ghost survives for a time in the astral realms, awaiting what is called the "second death," which liberates the soul from its astral remnants. The extensive lore of ghost stories, apparitions, warnings, banned spirits, hauntings, etc., provides abundant evidence of the actuality of this belief, which has been familiar to humankind in all ages and countries. In cases where the person has died with a strong desire in his mind, his double has appeared to survivors, seeking their prayers or the burial of its bones, and so forth. The astral remains of very sensual and evil persons survive in the astral light, and seek to perpetuate their existence by preying upon the living; and this accounts for many cases of what can only be described as obsession. We often read in the papers of comparatively harmless but nervously unstable individuals being seized with sudden unaccountable homicidal mania, and perpetrating some act of violence which they afterwards regret and are unable to account for.

In short, not to dwell on a topic treated elsewhere in our literature, we may describe this lower astral light as a most undesirable region tenanted by a variety of undesirable beings. Those, therefore, who

presumptuously seek to force an entry into this realm are guilty of a most unwise action: they may open a door which they cannot shut again; they may establish links which they cannot again sever; they may expose themselves to temptations which they cannot resist; they may upset the delicate balance of their nervous system and their mental and emotional nature. To engage in any practices with a view to opening up communication with the astral plane or its denizens, is conduct which can only be described as the foolhardiness of ignorance carried to a high degree. Only an exceptionally strong, pure, and trained character can withstand the dangers of this realm; and it is not without justification that students of occultism are warned against any such procedure.

---

## **Chapter 7**

### **The Astral Light and Evolution**

Science has found difficulty in making facts fit theories, because it regards the physical world only. The physical organisms of plants and animals present a series of graduated forms, and their resemblances give rise to the idea that they are derived, the one from the other, by a process called biological evolution. But observation has proved that these species are a set of disconnected links, each remaining true to its own kind, and with no visible connecting links or gradations between them. It is even found that variations produced by an alteration of the environment, such as happens when we cultivate domestic breeds, are not permanent, but that there is a tendency for the species to revert to its original type as soon as the special environment is removed. This difficulty arises from not taking into account the astral plane. The changes by which one type passes into another take place in the astral form, which is plastic.

Actually the organism is a living conscious soul, which grows, develops, and changes by its own evolutionary purpose. These changes are then transmitted to the astral form, and thence to the physical organism. But it is only when the change has been completed astrally that its physical counterpart appears. Thus the physical organisms do not present an unbroken continuous line, but a succession of steps. When we view a spiral staircase from one side, we see a number of separate stages, one above another, but do not see the continuous stairway by which these are connected.

---

## **Chapter 8**

### **The Astral Light and Ether**

According to the atomo-mechanical theory of the universe, we have atoms separated from each other by empty spaces, and yet acting on each other; and the difficulty has been to provide an explanation for this seeming action at a distance. It would seem that it is necessary to suppose a medium between the atoms

for the conveyance of energy from one to another. If this medium is itself material, we have not solved the original problem, but merely moved it one step farther. But if the medium is not material, what is it? Again, in order to supplement the undulatory theory of light, it was necessary to suppose a medium, purely hypothetical and not subject to direct observation, to which was given the name of *ether*. Many obstacles were encountered because theorists would insist on trying to endow this ether with the properties of physical matter, especially as to density and rigidity. But all that was really necessary in this medium was that it should be able to transmit vibrations, and there was no justification for attributing to it those other properties which are associated with vibration in physical matter. It is clear that what is needed is a form of ultra-physical matter; and its properties can only be ascertained by experiment, and not by inference and calculation from known physical data. There must be a substratum for the manifestation of luminous, electromagnetic, and cosmic ray phenomena; and this would seem to answer to one of the subdivisions of the astral light. The astral light, instead of being an annex or upper story to nature, is a necessary component, and without it the physical universe would fall apart or be reduced to absolute stagnation.

Such things as weather, storms, and earthquakes also stand in need of the astral light to complete the explanation. Science may assign meteorological phenomena to a number of secondary causes, such as convection currents in the atmosphere, deflected by the earth's rotation; and they may trace them farther back to magnetic conditions, and even to fluctuations in the magnetic field caused by what goes on upon the sun. A knowledge of the astral light enables us to carry the chain of causation a step farther. Moreover it supplies a link between the mental and moral atmosphere of mankind and the terrestrial phenomena which are so often suspected of being related to them. Earthquakes are attended by various mechanical phenomena, such as subsidences and the slipping of faults; but it is at least an open question whether these should be regarded as causes or as effects. Besides it is well known that most animals and some human beings can feel the approach of an earthquake before it happens. If the earth is a vast globe, subject to continual contraction through loss of heat, the great wonder is that it remains as still as it does; and we wonder if it is not perhaps held still. The theosophical teaching is that the astral light is subject to tensions, caused by the thoughts and emotions of mankind; and that such tensions find sudden relief, thus agitating the crust of the earth. As to meteorological phenomena in general, it is obvious that, however many physical causes we may assign to them, they are still left in the category of "chance." But when we introduce the astral light as a factor, we see a way of connecting these happenings with the mental and moral condition of the inhabitants of the earth; the unsatisfactory idea of chance is avoided, and rationality is introduced into the explanation. Earthquakes occur most frequently in particular regions, but it is natural that when anything is shaken it should give way in its weakest spots, where the rocks are displaced or broken or where there is a dynamical tension due to inequality of pressure. There should nowadays be enough machinery at the disposal of science, in the way of sunspots and electromagnetic influence, to carry the explanation of earthquakes a step farther than mere mechanism; but still there would be a lack of links to connect them with mental and moral phenomena.

## The Astral Light and History

We have spoken of the need for the astral light in order to give a scientific explanation of nature, of the impossibility of explaining evolution without it, and of its role in showing the connection between human acts and the results which we reap from them. We have now to show how necessary the idea is for a rational understanding of history. In history, as elsewhere, the current views may be roughly divided into the theistic and the rationalistic. According to the former it is Providence which directs events; the latter seeks to represent history as a causal chain in which past events determine future events, or as a kind of evolution. It is very evident that, if history were such a chain of cause and effect, with no influence entering it from without, it would resemble a stream slowly winding down hill, and could not possibly rise to any higher source. The Providence idea is much the better of the two; without Providence we must fain introduce vague unknown influences grouped under the word "chance," a word which is merely a confession of ignorance.

History is the complex drama of human souls, each one growing and evolving, and all interacting with one another, the whole movement being fed by a continual fount of inspiration from within each individual. And the most potent effects are seen to be produced by a comparatively few individuals of extraordinary power, who give birth to new ideas, initiate movements, inaugurate new eras of thought, becoming the center of groups and passing on their work to their followers. But what we are considering in this place is the function of the astral light in the historical process. Thoughts mold events, but the astral light is the medium between thoughts and events. Hence the action of thoughts on events is not immediate and direct. The astral light acts as a great storer and accumulator, receiving impress from thoughts, and gradually transmitting that impress to events. As each individual bears about with him his character in the form of habits impressed upon his own astral substance by his past thoughts and acts, so on the large scale there are national characters and racial characters, due to deep impressions in the astral light and these may be called habits on the large scale. The tremendous force and fixity of such habits -- or fashions, prejudices, or racial characters -- is well known. In what do they inhere? What answer can science give? The intimate biological study of heredity has given us a notion of germ-cells handed on from generation to generation, whose function it is to preserve the type amid temporary variations.

Here then we have a ghost of an explanation, but the germ-cell is a very small apex upon which to balance so great a weight; at best it is a detail in the process. These tendencies inhere in nature's great storehouse, the astral light. It surrounds the earth like a mighty atmosphere in which we all live. Each race and nation has its own astral light, and the whole of humanity has its astral light. This stores up impressions tenaciously and enduringly, and it takes a great deal to change them. How else explain the well-nigh indelible characteristics of nations, lasting through the centuries and handed on with every succeeding generation? We are all born into such a ready-made atmosphere, and it takes a strong individual character to contend against it and modify its influence.

Many unaccountable happenings in history find ready explanation in this way. Take for instance the famous gunpowder plot in the reign of James I of England. Historians are at a loss to explain why a group of gentlemen of excellent character should incontinently decide to blow up the king, the royal

family, and the whole of the House of Lords, House of Commons, and various government executives in one vast massacre, which would have left the nation at the mercy of mob law and might well have brought the separate national existence of England to an end; and should have actually placed the powder and stationed the desperado with his matches, only to be thwarted at the last moment by what seemed a mere accident. What influence could make people depart so far from their natural character as to commit an atrocity of such unparalleled magnitude? The answer is found in the state of the human mind in those times. Europe was mad over religious controversies; France was split into rival creeds, bent on mutual extermination -- the massacre of St. Bartholomew was recent. The infection had spread to England. It was what we should call a "psychic wave."

From time to time the astral light grows surcharged with influences from human thoughts; and as nature tends ever to restore equilibrium, relief is found in violent outbursts or psychic cataclysms, which are strictly analogous to epidemics of disease. The immediate consequences are disturbing, but the result is purification.

---

## **Chapter 10**

### **Denizens of the Astral Light**

It is not to be supposed that there is any world, any plane of great nature, not inhabited and peopled with living beings, even as is our own familiar physical plane. The whole universe teems with living beings, appropriate to their particular spheres. If human beings such as we could not live on the planets, this is no reason for inferring that there are no humans at all there; and the same with the other planes of nature. As physical beings live on the physical plane, so astral beings live on the astral plane, adapted to their habitat as we are to ours. It must, however, be confessed that this is a ticklish subject to deal with, and one of which it may be said with some truth that ignorance is bliss. For, as has been said, we are mercifully protected by our physical bodies from too close contact with the pernicious influences of the lower astral light, and to remove that protection prematurely is to court disaster.

Yet on the other hand, knowledge may protect; so we must try to hold a just balance between these opposite maxims. To direct people's attention to pernicious astral denizens may be equivalent to encouraging them in the very thing they ought to avoid; for the morbid imagination of weak people may conjure up hobgoblins that have no existence outside that imagination, and cases of obsession are much better cured by a diversion of attention to healthy pursuits than by a morbid introspection or psychoanalysis of the slums of consciousness. Nevertheless it is of benefit to know that many of the impulses which we dignify by attributing them to ourselves may be actually the result of evil promptings from entities which are not ourselves at all but merely intrusive elements. It will place us on our guard and enable us to defeat them by taking our stand firmly on our own selfhood.

Following the disintegration of the physical body, there is a temporary survival of the astral and lower

psychic parts of the human constitution; and that in some cases this may persist for a long while, perpetuating its life by vampirizing the living, such contact being caused by weakness and intemperance in the living, or perhaps inadvertently courted through spiritualistic practices or dabbling in "psychism." Such a psychic remnant or "spook" is of course destitute of the moral element, because all the higher part of the deceased's nature has separated and passed elsewhere; so that it is merely actuated by the desire to satisfy its gross instincts. So here is one kind of denizen of the lower astral light. The existence of earth-bound spirits, ghosts, larvae, etc., has always been recognized, and the mind will recall instances of various modes of worshiping them or propitiating them, or warding them off. Intercourse with such creatures is harmful both to them and to us, for they should be allowed to die out naturally and not be kept in an unnatural existence.

Next we may consider that class of beings known by such names as elementals, fairies, nature spirits, nymphs, etc. It is found that classical antiquity believed in nymphs, dryads, and other beings inhabiting rivers, mountains, forests, trees, etc.; and that many peoples of today whom we call uncivilized believe in such beings; also that there is no nation but has its stories of fairies and nature spirits. This kind of belief is called animism by our "wise men," and defined as the practice of attributing life to nonliving things. But these wiseacres have put the cart before the horse. It is they who have attributed inanimation to living things. The ancient and popular view is right. Everything in the universe is a living being of one kind or another. To the ancients a tree was a living soul, which they called a dryad or some similar name; the visible tree was merely the outer garment of this living being. The dryad did not inhabit the tree, but *was* the tree.

So with other nature spirits; the astral light is the home of these beings, all of whom are on the path of evolution, each in its appropriate stage. It would be absurd to limit the number of kinds of animate beings to those alone who happen to be on the plane of physical matter. But this is a large subject and we must leave its special treatment for another occasion.

As for elementals, no physical action can take place without them; they constitute a necessary factor among those components which contribute to the performance of an action, and are represented in science by gaps which have to be provisionally filled by words of vague meaning, like "force" or "affinity." What after all do we mean by the *properties* of matter? A more suitable expression would be the *dispositions, instincts, or proclivities* of matter. For mind lies behind all, and physical phenomena are merely the expression of mental states. Hence there must be in the astral world the elementals of all actions in the physical world. When we hum a tune we create an elemental, which is quite apt to worry us by insisting on being sung at inappropriate moments; as though we were haunted by a fly settling on us.

This little illustration will suggest fruitful thought as to the nature of habits. Our actions generate elementals, endowed with our own vitality and tending to come again to repeat themselves and to be revitalized. Thus we get an idea of an elemental as a being which can only do one thing, and whose whole life consists in doing that thing over and over again. If this is not a good explanation of habits, we should always be ready to hear of a better.

---

## Chapter 11

### Social Influence of the Astral Light

Since the astral light teems with influences put there by human thoughts and emotions, and since there is constant reaction of the astral light upon human beings, then it follows that the astral light must play a very important part in determining human conduct considered as a society. The appearance of epidemics of disease simultaneously in widely separated regions is but imperfectly accounted for by the theory of minute germs transported by people or blown on high air currents. And even so, we have still to explain the *origin* of such epidemics, whose incidence is so little connected with physical events and so unpredictable that we can only fall back upon such weak words as "chance" and "casual." But, as has been said, physical events are the copy of astral events; physical epidemics follow upon astral epidemics, and these latter again are engendered by distempers in human thought. A familiar analogy is provided by physical science. We cannot transmit a sound wave through the air from Europe to America, but we can transform that sound wave into radio waves, then transmit them, and then reconvert them into sound waves. Similarly, epidemics may be transmitted, and their transmission explained by regarding them as being conveyed on astral currents and reproduced as physical diseases elsewhere.

But apart from physical epidemics there are astral epidemics, or perhaps we should say psychic epidemics; and in the case of these also the usual physical explanations do not suffice to explain all the facts. The propagation of such epidemics is of course greatly increased by word of mouth and the influence of the press, but these material means will not explain all the phenomena; for we find waves of opinion, emotion, enthusiasm, sudden crazes, appearing without assignable cause in widely separated places at the same time.

History furnishes us with strange instances of epidemic hysterias, and in the present day we may find great religious revivals sweeping over countries, or a war fever spreading over the world. What is called crowd or mass psychology is well known and shows the existence of something which is much more than the mere sum-total of the minds of the component individuals, for these individuals are swept away against their own judgment.

It has been said that "thoughts are things," and it is true. Ideas float into our mind, and we cannot tell where they come from; we work them over in our mind, and they pass from us, we know not whither. Of course there is a constant interchange of thoughts between people, and thought-forms are passing on currents in the astral light, like objects floating in water; we suck them in, and pass them out again in modified form. And not merely thoughts, but emotions -- or, better still, thought-emotions; currents of energy which cause emotions in us and prompt to action. Which of us can claim to be master of his thoughts and emotions, immune against influences coming from an unseen source, able to stand independent of this general atmosphere in which we are immersed? Truly, our individual separation grows thin when we think of this thought-atmosphere which we all share, from which we receive, and to

which we give. And think of the responsibility which is on each one of us! No person can sin alone; the privacy of his thoughts cannot shield him from guilt. A thought is an act, and every act produces consequences. Before blaming others for acts which we would not commit, do we not need to be sure of our own unexpressed desires and imagination? May we not ourselves have contributed to their delinquency?

But for consolation we may look at the other side of the picture and realize that no *good* thought, no high aspiration, no feeling of true generous love and compassion, can be entertained by us without passing out from us as a potent force to work healing in other lives; and such a thought is all the more potent because it acts on a higher plane.

There are many problems studied by scientists and by those interested in bettering social conditions, which would be greatly clarified by an acquaintance with the astral light and with its counterpart the astral body of man. For instance, the question of heredity, which is by no means fully elucidated by the findings of scientific research. But this is not the place to multiply instances of this kind; and they may be left to the reader to supply for himself.

---

## **Chapter 12**

### **Psychic Phenomena, Apparitions, Etc.**

Subject to what has been said above about the great risks attending heedless dabbling in psychism, a word may be said as to the relation of the astral light to the above matters. There are innumerable accounts of apparitions of recently deceased persons, the foreseeing of coming calamities, ghostly warnings, the poltergeist or raketizing spirit, and suchlike; and in these cases certain peculiar and comparatively infrequent conditions bring about a temporary connection between the astral and physical worlds. Relations of time, space, physical obstacles, etc., are seen to be different on the astral plane; communication between the living and the dead is difficult, and is often only achieved by the mediation of particular people endowed with a mediumistic constitution. A study of such records will provide much information and serve to confirm what we have said about the astral plane.

Glass, crystal, water, some metals, have a power of condensing (if that is the right word) the astral fluid, thus assisting the efforts of a seer; whence is explained the use of crystal globes, magic mirrors, and the like. The phenomena of psychometry, by which some people are able, by handling some object such as a letter or article of attire, to arrive at much information about the writer or wearer, is an instance of the power which the astral light has of preserving images of events. It is an intriguing thought that nothing can perish, for psychometry proves to us by unimpeachable evidence that even scenes belonging to a remote past can thus be recovered. Explanations along the lines of our physical experience are out of order and are necessarily futile. Observation must precede theory; a large range of unfamiliar phenomena must be studied before we can venture to attempt their formulation into a set of laws.

Foreknowledge, prediction, the seeing of events not yet enacted in the physical world, presents a great obstacle to our power of conception. It is evident that here we have to deal with the nature of *time*. Coming events cast their shadow before them, it is said; if we can see the shadow, we may forecast the coming event. But what is foreseen is not a certainty; it is only a probability of greater or less degree. Some of the stories of forewarnings show that the foreseen danger was averted by the precautions taken by the dreamer or seer. It would seem that the astral time and physical time do not exactly gear together.

---

## Chapter 13

### Concluding Remarks

Students of theosophy, especially those new to the subject, may find themselves perplexed in seeking a definite idea of the relation of the astral light to other cosmic principles. There are several reasons for this. In the first place let it be said that it is not desirable to expect a too narrow and hard-and-fast definition, for by striving to do that we narrow down the idea into something which will fit conveniently into our existing stock of ideas; and thus we limit the conception. It is necessary therefore for the student to keep his mind fluid until he has had time to study the matter from various angles and to relate it to the many collateral subjects from which it is inseparable. If he fails to do this, he will find what will seem to be contradictions; that is, his studies will bring him to statements which do not agree with the too narrow ideas which he has already formed from his first incomplete study. The difficulty here is the same as is met with in any other study; statements which at first appear contradictory are later found to be merely supplementary.

Again, the term "astral light" itself was borrowed from certain old philosophers, and has been borrowed many times by one writer or another, so that its meaning came to be vague and various; as those who used it were perhaps not very well informed, or each one used it in a sense of his own. Accordingly, when we read such a book as H. P. Blavatsky's *The Secret Doctrine*, we cannot safely assume that the term is always used in exactly the same sense, and shall need some judgment to decide in what sense it is being used at a given time. Sometimes other writers are referred to, such as Eliphas Levi, and the word may be used in their sense. Sometimes we find it used as synonymous with akasa, and sometimes as sharply distinguished therefrom. Such perplexities, however, will disappear on a more intimate study of *The Secret Doctrine*, and no doubt will be left as to the real meaning.

At the present time too we have the advantage of Dr. de Purucker's works, in which the teachings of *The Secret Doctrine* are so clearly analyzed; and it is now possible to give to the term "astral light" a more precise meaning, which can be regarded as the accepted meaning. In *The Esoteric Tradition*, by G. de Purucker, pages 952 and following, we find a tabular arrangement of the principles of the universe, of which the following is a brief summary:

1. The supreme monad or root, from which emanate the other principles, and called paramatman.
2. Alaya, akasa, the origin of cosmic soul.
3. Mahat, or cosmic mind.
4. Cosmic kama, the desire or impelling force of the universe.
5. Cosmic jiva or vitality.
6. Astral light; cosmic ether.
7. Sthula-sarira; the physical universe.

This then shows astral light as the next cosmic principle above the plane of our physical universe. It also shows astral light as the medium through which play the life-forces or "lives," collectively called cosmic jiva, impelled as these are by cosmic desire. Finally astral light is a medium connecting cosmic mind with the physical plane of nature. On pp. 949-50 of the same book we see the corresponding principles in the human constitution, the place of astral light being occupied by the linga-sarira.

It is always important to remember that these various cosmic principles do not actually lie one above the other in layers, but are interblended. It is often necessary to represent them in a tabular form for purposes of explanation, but we must avoid letting that tabular form create a false picture in our mind. Physical science has made us familiar with the idea of different states of matter occupying the same space and interpenetrating one another; and this might be represented by a diagram in which they were placed one *above* another.

Furthermore, every septenary division in nature is subdivided, and subdivided again, on the same septenary plan so that we can speak of various planes of the astral light and use such expressions as higher or lower astral light.

We find the following in G. de Purucker's *Occult Glossary*.

The astral light is with regard to the material realms of the solar system the copy or reflection of what the akasa is in the spiritual realms. The astral light is the mother of the physical, just as the spirit is the mother of the akasa or, inversely, the physical is merely the concretion of the astral, just as the akasa is the veil or concretion of the highest spiritual.

## **Chapter 1**

### **Introductory**

Theosophy is the essential truth underlying all religions and does not recognize any one religion as being supreme over the others or as the last word of truth. It is not hostile to Christianity, but finds itself obliged to combat many things which it considers alien to the genuine Christian gospel and which have

gradually crept in since that gospel was originally proclaimed. Among these is the idea that Christianity is paramount among religions or that it is a final revelation of divine truth, superseding other faiths. This idea is contrary to the truth and is becoming more and more difficult to maintain. For this there are two principal reasons. 1) Ancient religions have been widely and intensively studied, especially those of India, which have become accessible through the knowledge of Sanskrit. 2) Intercommunication between nations has grown so wide and intimate. These two causes combine to prevent the exclusive attitude of mind which was possible in past times. But it is hard to give up cherished habits and, moreover, people imagine that if they surrender the paramouncy of Christianity they will be surrendering religion itself. And so we find strange expedients resorted to in the attempt to account for the existence in more ancient religions of so many of the doctrines and rituals which were supposed to be peculiar to Christianity. The Abbe Huc, in his celebrated *Travels in Tartary, Tibet, and China*, describes how he found among the Tibetan priests not only many characteristic doctrines of the Roman Church but even many of their rituals, vestures, and sacred implements. His explanation is that the Devil thus anticipated Christianity in order to deceive mankind; to which he adds a theory that early Christian missionaries may have penetrated to Tibet. A recent improvement on this is found in a theory which we have just seen in a book published under the auspices of a well-known Christian propagation society, to the effect that the lofty doctrines found in India's sacred books were due to the work of the Holy Spirit, who thus prepared mankind for the "greater things than these" to come in the future. But still it rests with him to show that the Christianity which came was really greater.

There are various brands of broad-church Christianity, which seek to enlarge the scope of the religions so as to take in many things now known to man but which did not occupy the minds of our forefathers; but the difficulty with them is to enlarge the gospel sufficiently without destroying its identity as Christianity; and again, if a body of water be widened without increasing its volume, the result is to make it shallower.

At the Church Congress in October, 1935, the Very Rev. W. R. Matthews, Dean of St. Paul's Cathedral, London, said that until recently almost the whole of Christendom would have said that there is one revelation of God, and that it is to be found in the Bible; but (he continued) the supreme revelation is not wholly external and we cannot recognize the "Word made Flesh" unless the Word is within us. He went on to say:

God does not dictate from heaven a creed or articles of faith. He manifests Himself through the experience and personalities of His prophets and of His Son. The doctrines of the Church are formulas in which the revelation has been summed up, guarded and preserved. . . . It may be that more adequate expressions will be found hereafter for the spiritual heritage that they have been formed to express. . . . The Holy Spirit will guide us into new truth.

When such eminent and leading authorities are conceding so much, we can hardly be accused of being altogether unorthodox; we are merely pointing out some of the logical conclusions to which the Dean's admissions inevitably point.

These various attempts all tend to the confession that religions change with the times, that humanity progresses independently of them, and that they must keep up with the needs of humanity or else become a drag upon progress. Yet we cannot on this account reject all religious truth and lapse into one of the forms of unbelief, atheism, or materialism. We must not throw away the substance with the outgrown form. An organized religious system, with its creed, its prescribed ritual, its church organization, is a spirit embodied in a form; and like every other organism, the form has to undergo continual change, though the spirit within may ever be the same. These are facts which cannot be disputed by anyone with a modicum of historical knowledge or an acquaintance with the general laws of growth and evolution.

But there can be only one truth. Religion itself, apart from creeds and churches, is a recognition and observance of the basic laws of the universe. These basic laws are also inherent in man himself, so that the real eternal and universal religion is based on the facts of human nature and must remain the same as long as man is man. The most essential truth is that man is a divine spirit incarnate in an animal body; that his salvation consists in subduing his lower nature by means of his higher; and that the true law of human conduct is that which is expressed in the Golden Rule. This truth lies at the base of all religions, and Christianity, so far from having originated it, or even improved it, has merely inherited it.

It is necessary to refer briefly to certain theosophical teachings which will be found more fully treated elsewhere, and one of these is the teaching as to the wisdom-religion or secret doctrine. This is knowledge concerning the deepest mysteries of nature and man, but in the present cycle of human evolution, it is unknown to mankind in general. During this cycle therefore it rests under the guardianship of the Masters of Wisdom, or the Great Lodge of initiates, whose function it is to preserve the sacred knowledge and to communicate it to the world at appropriate times and in appropriate places. They accomplish this work in several ways: one is by sending out a messenger from themselves, who appears among mankind, gathers a body of disciples, founds an esoteric school in which to give private instruction, and also gives exoteric teaching to the multitude.

"And he said, Unto you it is given to know the mysteries of the kingdom of God: but to others in parables; that seeing they might not see, and hearing they might not understand."  
-- Luke 8:10

"And with many such parables spake he the word unto them [the people], as they were able to hear it. But without a parable spake he not unto them: and when they were alone, he expounded all things to his disciples." -- Mark, 4:33-4

But after the withdrawal of the teacher, the movement which he has started undergoes changes and degeneration. It falls under the influence of worldly motives and forces; it becomes formalized; it breaks up into schools and sects; it acquires various organic forms with churches, priesthood, and creeds. The process can be traced in the history of religions in general; it can be traced in Christianity, so that the Christianity of today is not in any of its forms the original gospel as given by the founder.

It will be well to say a few words about the attitude towards Christians which we here adopt. That attitude will be sympathetic, and not merely from feeling but from knowledge. For the writer, having been brought up in the Church of England and having in early life been a sincere Christian, is thereby qualified to speak with more sympathy and understanding than is sometimes the case with those who can view Christianity only from the outside. Moreover, there will not be the same likelihood of falling into the common forensic error of misrepresenting the case of one's opponent in a controversy, of comparing what is best in theosophy with what is worst in Christianity, or of attacking men of straw or flogging dead horses.

There is no wish to disturb the peace of those who find in Christianity, as they know it, all they need, and especially those who find in their faith the inspiration to a noble life. But there is a large and increasing number to whom our message may be welcome. The churches confess that they are losing their hold, and there are more people than ever who find themselves unable to accept what they are taught, and who yet cannot throw over religion itself and lapse into infidelity. Such people are at a loss for an expedient; they may find some way of their own, or they may form movements; but in any case their efforts lack both definiteness and cooperation. These needs are supplied by theosophy; theosophy can justly claim to stand as a champion of Christianity by pointing to the true and original excellence of that religion and showing how to extract the essence from the extraneous matter that encumbers it.

We shall show, then, what are the essential truths of religion which change not with the times, cause no conflict between creeds and sects, and are enshrined in the human heart; and we shall trace these in Christianity, its doctrines, its forms, and its scriptures. Thereby we shall prove that Christianity is kin to the other great religions and to the greatest philosophical systems, and that there is enough external evidence to prove that it is one of the effluents of the great river of the wisdom-religion. We shall try to trace Christianity from its beginnings, through various changes, to its present forms, so far as that may be possible with imperfect knowledge and in a limited scope. The principal dogmas, articles of faith, and ritual observances must be considered, their real meaning shown by comparison with the corresponding elements in other religions, in philosophies, and in mythologies. It will be shown how the teachings ascribed to Jesus in the Gospels, as well as some of those of his apostles in the Epistles, appear in a new light as soon as we have the key to their interpretation; and how many of such teachings have remained obscure because we had not that key.

Various movements have been started, and exist today, for uniting the world's religions in common service, so that they may pool their efforts instead of contending with each other; and though such efforts are worthy of all praise and have achieved beneficial results, yet their shortcomings and the reasons for these will be clear in the light of what we are saying. Religions are one in essence, and different in external form. The real way to unite them is to get back to the essence in each; attempts to bring about artificial union in externals are not so practicable. Moreover such attempts at unification are apt to take the form of eliminating from the common program the points of difference, so that what remains is a residue more or less vague and lifeless. Such a process resembles subtraction rather than addition; or, better, it is the attempt to find a common factor, which, as we know, becomes smaller in proportion to the multitude of the numbers whose common factor is to be found.

All religions have an esoteric basis beneath their exoteric form, and it is this which has so largely disappeared. Religions as they are do not satisfy the needs of human aspiration, for they leave out so large a part of what vitally concerns man. They are confined chiefly to ethical principles, but tell us nothing about the nature of the universe or the nature of man. Falling thus behind the age, they have allowed to grow up competing influences, such as natural science and abstract philosophy; and so we find the field of knowledge, which should be one, divided into compartments, either independent of each other or else conflicting.

The false antithesis between morals and knowledge, religion and science, righteousness and culture, has been one of the great banes of religion. A unification of the field of knowledge is much desired; a uniform law by which to live; a solid basis for ethics, morals, conduct, instead of dogmas which we cannot believe, or speculations and fads and cults innumerable. A person's real religion is what he lives by -- whatever he may profess. Thus the real unification of religions is found, not by trying to force an external union, or by eliminating from them all points of difference and thus leaving a weak residue, but by getting back to the esoteric basis of religions and showing the common parentage of them all; in short, by reviving a knowledge of the ancient wisdom-religion.

---

## Chapter 2

### Historical Sketch

#### "PAGAN" ORIGIN OF CHRISTIANITY

In this section we give evidence to show that Christianity was not new, but derived from what went before; that its cardinal doctrines are held in common with older religions; and that many of its rites and dogmas are adopted from what is called pagan belief. Those people called Fundamentalists seek to go back to the true old gospel; but how far back do they propose to go, and just what point in history do they stop at? Let us take a few quotations from early writers on Christianity.

St. Augustine says:

The very thing which is now called the Christian religion, really was known to the ancients, nor was it wanting at any time from the beginning of the human race up to the time Christ came in the flesh; from which time the true religion, which has previously existed, began to be called Christian, and this in our days is the Christian religion, not as having been wanting in former times, but as having in later times received that name. --  
*Augustini Opera*, I, 12

Eusebius, another Father, though an ardent advocate of the new faith, is constrained to admit that the Christian religion was neither new nor strange, and that it was known to the ancients (*Ecclesiastical*

*History*, see bk. i, ch. iv).

Justin Martyr, in defending Christianity before the Emperor Hadrian, is at pains to show its identity with Paganism.

By declaring the Word (*Logos*), the first begotten of God, our Master Jesus Christ, to be born of a virgin without any human mixture, to be crucified and dead and afterwards to have risen and ascended into heaven, we say no more than what you say of those whom you call the sons of Jupiter . . . As to the objection of our Jesus being crucified, I say that suffering was common to all the aforementioned sons of Jupiter, only they suffered another kind of death. . . . As to his curing the lame and the paralytic and such as were cripples from birth, this is little more than what you say of your Aesculapius. -- *Apology*, 1, chs. 21, 22

Ammonius Saccas says:

Christianity and Paganism, when rightly understood, differ in no essential points, but had a common origin, and are really one and the same thing.

The following quotation from the controversy between H. P. Blavatsky and the Abbe Roca, published in the French magazine *Le Lotus*, April 1888, is appropriate here:

For me, Jesus Christ, that is to say the Man-God of the Christians, a copy of the Avatars of all countries, from the Hindu Krishna as well as the Egyptian Horus, was never a historical person. He is a deified personification of the glorified type of the great Hierophants of the Temples, and his story told in the New Testament is an allegory, assuredly containing profound esoteric truths, but an allegory. . . . The legend of which I speak is founded . . . on the existence of a personage called Jehoshua (from which "Jesus" has been made) born at Lud or Lydda about 120 years before the modern era. . . . In spite of all the desperate researches made during long centuries, if we place on one side the witness of the "Evangelists," i. e., unknown men whose identity has never been established, and that of the *Fathers* of the Church, interested fanatics, neither history nor profane tradition, nor official documents, nor the contemporaries of the *soi-disant* drama, are able to provide one single serious proof of the historical and real existence, not only of the Man-God but even of him called Jesus of Nazareth, from the year 1 to the year 33. All is darkness and silence. Philo Judaeus, born before the Christian era . . . made several journeys to Jerusalem. He went there to write the history of the religious sects of his epoch in Palestine. No writer is more correct in his descriptions, more careful to omit nothing; no community, no fraternity, even the most insignificant, escaped him. Why then does he not speak of the Nazarenes? Why does he not make the most distant allusion to the Apostles, to the divine Galilean, to the Crucifixion? The answer is easy. Because the biography of Jesus was invented after the first century, and no one in Jerusalem was a bit better

informed than Philo himself.

These passages, which are only a sample out of what might be adduced, show that Christianity was recognized as being a continuance of an age-old doctrine, with changes in external form made necessary by changing times.

The history of Christianity proves it to have been inspired by enormous force, all-conquering vitality, enabling it to last through the centuries and dominate so much of the world. And yet, if we seek the origin, we can find only the most meager foundation. The historicity of Jesus is very doubtful; his mission, as recorded in the Gospels, is limited to a few months and is ignored by Pagan historians. Christianity was a revival of the wisdom-religion, started by some great messenger from the Lodge, of whom the record has been lost. The figure in the Gospels is fictitious; the Gospels were not written until long after the time of which they profess to treat; and Paul in his Epistles seems to know nothing of them.

There is a Jewish account of a certain Syrian, named Jeshua or Jehoshua ben Panthera, who lived in the reign of the Jewish king Alexander Jannaeus about a century BC; and some think the name Jesus was derived from this. From this man were derived the doctrines of two sects of Jewish Christians, living before the Christian era, the Ebionites and the Nazarenes. They represent the purest form of Christianity, and taught that Christ is in all men, and the doctrines of Aeons or divine emanations, whereby man himself is shown to be a descendant from the highest divinities. Such too was the teaching of the Christian Gnostics and of the Neoplatonists.

Evidently Christianity was originally a form of the wisdom-religion and taught that man is essentially a divine being, the Christ being simply the divine spirit in man; and that man must achieve his own salvation by recognizing his own divinity and invoking it to his aid. Later this sublime and ancient truth was transformed into belief in a personal God, apart from man and from nature, and into the doctrine of vicarious atonement. But this process of change was gradual.

## EARLY FORMS OF CHRISTIANITY

The center of Western civilization at the Christian era was the Mediterranean basin, the scene of a wonderful medley of competing beliefs and cults, under the general government of the Roman Empire. There were several centers where the ancient Mysteries were preserved, taught, and practiced -- Alexandria, Antioch, and other places in Asia Minor -- and these had communications with India and Persia. We find early Christianity maintaining the doctrines of these schools, and it has been customary to regard these forms of Christianity as heresies due to contamination from Pagan sources, which is exactly the reverse of the actual case. It is these which were the genuine Christianity, and later Christianity was a very much expurgated derivative. So much has our attention been focused upon the particular phase of this religion which eventually survived, that we have ignored the many other forms which for centuries rivaled it, only to succumb to the advancing materialism of the times.

Marcion, who founded the churches of the Marcionites in the second century AD, sought to purify Christianity from the corruptions into which it had fallen. He denied the stories about Christ found in the Gospels, saying that such statements were "carnalizations" of metaphysical allegories and a degradation of the true spiritual idea. He accused the Church Fathers of framing their doctrine according to the capacity of their hearers -- "blind things for the blind according to their blindness; for the dull according to their dullness."

Manicheism was a formidable rival to the Church. Roman emperors sought to repress it, Popes anathematized it; yet for nearly a thousand years it maintained its influence, which was felt even as late as the thirteenth century by the Albigenses in southern France, who held several of its doctrines. Its founder, Mani, was of Iranian descent, born in Babylonia; and in 242 AD he proclaimed himself the herald of a new religion, sent forth apostles, and founded congregations all over Asia Minor.

Clement of Alexandria, born about the middle of the second century, wished to enrich Christianity "with the deep spirituality of Platonism" and "advocated a Christianity resting on free inquiry," not on faith alone. Origen, who succeeded him, exhorted his pupil to devote himself to Greek philosophy as a preparatory study for Christian philosophy.

Celsus wrote his work, the *True Word*, somewhere between 177 and 200; and what we know of it and its author is contained in Origen's work written in opposition to it. He maintains that Christianity is of oriental origin; that its ethical teachings are not new; and that many of its ceremonies are the same as those of heathen religions. He asks why the one God whom Christians and Pagans alike recognize cannot be worshipped under various names, such as Zeus, Serapis, etc. Why should Jehovah be the only name by which Deity can be recognized? Why did Jesus come so late to save mankind?

Origen had been a Neoplatonist, both he and Plotinus having been educated in the school of Ammonius Saccas. He was born in 185, and marks a further stage in the development of Christianity from its broad and lofty origins towards its narrow and dogmatic ecclesiastical form. Yet he held many doctrines since condemned as heretical, such as that all souls are in substantial unity with God, and not the soul of Jesus alone; and that the visible universe is a manifestation of a higher spiritual causal world. Like Paul he knew of the doctrine of hierarchies of divine beings intermediate between God and man ("thrones, dominions, principalities, powers," etc.). The universe had a beginning, so also it must have an end; but it will be succeeded by other universes, its children -- a very theosophical doctrine.

The Gnostics of the first three centuries taught the *gnosis* or divine knowledge, and include such names as Valentinus, Basilides, Marcion, Simon Magus. Their teachings represent a stage of Christianity when it still had teachings about the nature of the universe and of man; but when the religion became vulgarized, these teachings were condemned as heretical. Their principal teachings may be summarized as follows:

1. The opposition between spirit and matter.

2. The allegorical interpretation of Old Testament stories.

3. That the supreme God was not the God who created the world; the world was created by an inferior Aeon, called the Demiurge.

4. Jesus was not the son of Joseph and Mary, but had descended from on high; was in fact the highest of the Aeons, proceeding immediately from the Divine; he was the Redeemer not only of man but of the world, and came to restore the original ancient Gnosis.

5. Belief in karma and reincarnation.

We must confine ourselves to these few samples which will, we hope, invite the student to follow up the subject by his own further studies. That so little is generally known about these matters is due simply to the fact that the condemnation of the churches has prevented people from studying them. But once we become aware that such information is available, we can readily assure ourselves that there is amply sufficient to establish the case. The present object is to indicate that Christianity has come down to us in a very much altered and debased form from much nobler origins.

## DEVELOPMENT OF CHRISTIANITY

The history of the early Christians as gathered from contemporary chroniclers of the Roman world is more familiar to the general reader. We find at first a sort of communistic sect, practicing high ideals of conduct; and as this grows larger, it acquires organization and becomes stratified into orders and we have the beginnings of an ecclesiastical hierarchy. The imperial authorities were tolerant or indifferent as regards religious belief, but extremely jealous of any organization which might threaten competition with the imperial sway. Trajan, though a man of broad sympathies, would not even permit the incorporation of a civic fire brigade for this reason.

It was thus that the Christians came in conflict with the powers that be; and the story is familiar to readers of Gibbon. It was the refusal of the Christians to enter into the ordinary life of the community, to sacrifice, to perform the usual ceremonies, to serve as soldiers, which set them apart as a dangerous sect and caused their persecution. As we know, they only grew stronger through persecution, until at last the worldly potentates were driven to make terms with the ecclesiastical ones -- Clovis in the west, Roman emperors farther east. Two great factions, the Athanasians and the Arians, occupy the arena for centuries, different emperors espousing the one or the other cause; until at last the Athanasian doctrine becomes predominant in the west, the Arian in the east. Christianity is adopted by the northern conquerors of Rome, and becomes, with modifications, the religion of northern Europe.

We need not follow the story through succeeding centuries: the long and bitter struggles of the Reformation, when both parties took their faith very seriously and the temporal power was not distinguished from the spiritual, are familiar enough. We see one side resting their case on authority, supposed to have been derived by lineal descent from the apostles; the other side resting their case on

the Bible. The ghost of the Roman despotic imperium still survives, disputing the field with freedom of thought; but the controversy has lost strength, as humanity is seeking its inspiration at the eternal fount the divine spark within the human breast.

Valentinus was the most famous Christian teacher of the second century, and was the instructor of the Church Fathers Origen and Clement. It suits Christian apologists to regard him as having sought to weld together into one, Grecian, neo-Grecian, Jewish, and Christian elements, and to have displayed marvelous ingenuity and originality in so doing. But a comparison of his doctrines with those of other systems shows at once that they were those of the ancient wisdom which he must have derived from the esoteric schools then existent in Egypt and other parts of the Mediterranean world. His school, the Valentinians, was very influential and widespread for a long time, having main branches in Italy and in Asia Minor, and giving rise to several minor branches. His influence on subsequent thought was very great. He averred that the Apostles had not given out publicly all that they knew, but that they had esoteric teachings. He teaches that the Primal Cause, which he names *Bythos* (the Depth), manifested itself as the *Pleroma* (Fullness), which is the sum-total of the manifested universe. He teaches the doctrine of divine hierarchies, according to which the supreme Deity emanates from himself successive orders of divine beings, to which are sometimes given such names as Archangels, Angels, Principalities, Powers, etc., until we come to man himself, who is thus in direct descent from the supreme Deity, and who therefore contains within himself all divine powers, which are mostly latent but can be called forth into activity. The world in which we live was not created by the supreme Deity, but by some of the inferior Emanations, and this explains its imperfections, which have so often been found hard to reconcile with our faith in divine wisdom. He gives the true teaching as to the meaning of Christ as the divine incarnation in every man, and salvation as the reawakening of man to a knowledge of his own essential divinity.

This gives some idea of what Christianity really is and what it was at one time known to be. But when Christianity became mainly a political factor, and it was found necessary to adapt it to the needs of so many different peoples -- Roman, Greek, Asiatic, Teutonic -- the necessity for uniformity and for an established church with fixed doctrines caused these finer teachings to be eliminated.

---

## **Chapter 3**

### **The Bible -- Fundamental Teachings: Part 1**

What is the truth between the extreme views that the Bible is the literal word of God, and that it is a mass of foolish folklore? The Bible is an esoteric scripture, full of profound meaning when interpreted aright, a mere collection of stories if taken in the dead-letter sense. H. P. Blavatsky, the founder of the Theosophical Society, pays the Bible the greatest respect, but only on the condition that it be understood in the former sense. It is one of many scriptures belonging to various times and nations. It should be studied in due relation to its fellow scriptures.

We have the Old and New Testaments. The Old Testament is a collection of ancient Jewish scriptures, and we read that, after the Jews had returned from their Babylonian captivity, the scribe Ezra collected again as much as he could of the old books and reestablished the Jewish canon. From this source, after other changes and eliminations, the Christian Old Testament was ultimately compiled. The Jews have their own interpretations in their Kabalistic books, such as the *Zohar* and the *Sepher Jetzirah*, and a great wealth of commentaries; but the Christians know only the dead-letter sense. This has shed a bad influence on the tone of Christianity, for some of these books, literally interpreted, contain much of war, cruelty, treachery, and grossness.

The Pentateuch or first five books of the Old Testament occupies a place of special importance; though long believed to be the work of Moses, yet intelligent criticism has shown that he cannot have been the author, and it is thought that they are largely the work of Ezra. Ostensibly these books contain the accounts of creation and the flood, the ancestry of the Hebrew nation, the wanderings and final settlement, and the law of Moses. The attempt to find consistency and to reconcile the narratives with other historical data is a puzzle to Biblical critics. No wonder, for it is a collection of allegorical legends put together for the main purpose of conveying the hidden meaning. But read esoterically in the light of the *Zohar*, etc., it reveals a mine of priceless occult truths.

The Old Testament also contains the prophetic books, and *Ezekiel* and *Daniel* contain much easily recognized occult symbology, though much tortured by those who try to find in them prophecies about the second advent and the end of the world. Then there is the poetical and imaginative literature, such as Psalms, Ecclesiastes, and the Song of Solomon; and Job, a very ancient allegory of the trials of a candidate for initiation, which is found elsewhere and whose origin is undiscoverable.

## THE NEW TESTAMENT

The present canon was arrived at as the final result of a series of decisions, and is a selection out of a larger number of books, some of which are still published under the name of the Apocryphal New Testament. There were other Gospels besides the familiar four, and critics can trace back the present Gospels to older ones from which they are evidently derived. We give some quotations from *The Esoteric Character of the Gospels*, written by H. P. Blavatsky in her magazine *Lucifer* for November, 1887:

the Bible is *not* the "Word of God," but contains at best the words of fallible men and *imperfect* teachers. Yet read *esoterically*, it does contain, if not the *whole* truth, still, "*nothing but the truth*," under whatever allegorical garb.

No more than any other scripture of the great world-religions can the Bible be excluded from that class of allegorical and symbolical writings which have been, from the pre-historic ages, the receptacle of the secret teachings of the Mysteries of Initiation, under a more or less veiled form. The primitive writers of the *Logia* (now the Gospels) knew certainly *the* truth, and the *whole* truth; but their successors had, as certainly, only dogma

and form, which lead to hierarchical power at heart, rather than the spirit of the so-called Christ's teachings. Hence the gradual perversion.

. . . the Christian canon, especially the *Gospels*, *Acts* and *Epistles*, are made up of fragments of gnostic wisdom, the ground-work of which is pre-Christian and built on the MYSTERIES of Initiation.

. . . the more one studies ancient religious texts, the more one finds that the ground-work of the New Testament is the same as the ground-work of the Vedas, of the Egyptian theogony, and the Mazdean allegories.

Not to make too many quotations, we may say briefly that the Gospels are symbolic narratives, sacred writings, written down by unknown scribes from their recollections or notes, and afterwards compiled into a canonical collection and taken in their literal instead of their symbolic sense. But more of this will come out when we treat of the teachings under their separate headings.

As to Paul's *Epistles*, it is evident that he did not teach the representative Christian doctrines of today. The Christ, for him, is an indwelling spirit in all men; he speaks like an initiated teacher, exhorting men to put off the old life of the flesh and to enter into the new life, wherein the Christ becomes alive and conscious in them. He is concerned with attainment and salvation in this life, not in some future life. He is evidently an adept teacher, unable to give out all he knows, especially in open letters, and doing his best to suit his message to the capacities of the various communities he is addressing.

## THE CREATION

The creation of the universe and of man occupy a foremost place in all cosmogonies and may be said to form the first chapter in the teachings of the ancient wisdom-religion. The word "evolution" would be preferable to "creation," because the latter word is associated with the idea of a personal God creating the universe out of nothing. The subject of the evolution of worlds is treated of elsewhere, and we are concerned here only with showing it as found in the Christian Scriptures.

In the early chapters of *Genesis* (which means "becoming" or "begetting"), we find a rather confused and abbreviated version of what is to be found in fuller and more accurate form in older scriptures. It derives immediately from Chaldean scriptures of earlier date, some of which have been discovered by archaeologists; but it can be traced farther back to the sacred writings of ancient Persia and India. Similar accounts are to be found in China, in the mythology of ancient Scandinavia, and even among the records of ancient America. This is to mention only a few, for it is not too much to say that the same accounts of the beginnings of worlds and of the evolution of man are to be found all over the globe.

The word "God" is in the Hebrew *elohim*, which is a plural word meaning "gods" or "spirits," and refers to the creative powers. First there existed naught but chaos, void, emptiness, often spoken of as the Waters or the Great Deep. Over this the creative spirits brood, and the first creation is light. From these

beginnings are produced the worlds and all living creatures therein. As to the creation of man --

And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul. -- *Genesis 2:7*

And God said, Let us make man in our image, after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth. So God created man in his own image, in the image of God created he him; male and female created he them. -- *Genesis 1:26-7*

As usual there are two accounts of the creation of man: he is first created a living soul (or, as more accurately translated, an animal soul); and then he is made divine. These two accounts have become transposed in the Authorized Version. Man has really a triple creation: first, out of the dust of the earth; then this is animated with the breath of life; last, this animal being is endowed with divine faculty -- made in the image of the gods (*elohim*). The plural word *elohim* has for some reason been translated God or Lord God; it means creative spirits, divine beings. This teaching of the twofold creation of man is very important, as it shows how man came by his dual nature, and in what way he differs from the animal creation.

As is stated elsewhere, the early races of mankind were "mindless," not endowed with the self-conscious mind; and at a certain stage in evolution, the innate divinity in man was called to life by the manasaputras or "sons of mind," who incarnated in the nascent human race, thus making man a self-conscious responsible being.

The story is continued in the legend of the Garden of Eden. This Garden represents the sinless innocent state of man before he became self-conscious. He was without sin, but also without the power of progress; he knew neither good nor evil. Then comes to man what has been called the temptation. A Serpent, who is described as very wise, appears to man and persuades him to exercise free will and rebel against God. To obtain this free will he must eat the fruit of the Tree of Knowledge of Good and Evil. He does so, and forthwith loses his state of innocent bliss, and becomes self-conscious and distinguishes between good and evil. He is cast out of the Garden and begins a life of struggle in the outer world.

This teaching has been perverted by theology into a curse and a fall; and Adam is represented to have sinned, and thereby to have communicated to all his descendants his sin, so that all men are born in sin and need a special divine sacrifice to save them. But in the original teaching, the so-called fall and temptation is a necessary stage in the evolution of man. The Serpent (who has been turned by theology into the Devil) is merely God over again in another form; for this Lord God is not the supreme deity but those creative spirits (*elohim*) who had made the first unenlightened man. And the Serpent is not the Devil but those sons of mind who, as aforesaid, enlightened mankind, showing him how to partake of the fruit of knowledge and to "become as Gods." This mystery is found in the Greek mythology in the story of Prometheus who, rebelling against Zeus, brings fire from heaven to enlighten man. Both the

Serpent of Eden and Prometheus are the same as Lucifer, the Light-Bringer, who has likewise been turned by theology into a devil.

Satan, or the Red *Fiery* Dragon, the "Lord of Phosphorus" . . . and *Lucifer*, or "Light-Bearer," is in us: it is our *Mind* -- our tempter and Redeemer, our intelligent liberator and Saviour from pure animalism. Without this principle -- the emanation of the very essence of the pure divine principle *Mahat* (Intelligence), which radiates direct from the *Divine Mind* -- we would be surely no better than animals. The first man Adam was made only a *living soul* (*nephesh*), the last Adam was made a *quickening Spirit*: -- says Paul, his words referring to the building or *Creation* of man. -- *The Secret Doctrine* 2:513

It is the misinterpretation of this beautiful truth that has given color to the slander against human nature, whereby man is persuaded that he is naturally corrupt, is set at enmity with his own nature and made to mistrust his own intelligence and freedom of thought; it is thereby that man is cursed for performing a simple natural act, which is sinful only when perverted and associated in the mind with guilt and impurity.

This subject of the creation of man and his so-called fall connects naturally with the subject of redemption and salvation, another grand old teaching which has become lost during dark ages, and which has been similarly perverted into something quite different.

## THE FLOOD

This is another sacred allegory common to all peoples. The story of a universal deluge, as is well known, is found everywhere, and has been supposed to be a tradition of floods following the last glaciation of parts of the northern hemisphere. And while it is perfectly true that there was an actual physical deluge -- one of many, as geologists will admit -- there is much more in the legend than its merely physical aspect. Daniel Brinton, in his *Myths of the New World*, has brought together a number of the flood stories of various races of ancient Americans, north, central, and south; and what is remarkable about them is the very close similarity in such details as the ark, its resting on a mountain, the sending forth of birds.

In the Sumerian Epic of Creation, which dates one thousand years earlier than *Genesis*, the flood is placed before the fall. Flood stories, with arks, etc., are found in ancient India, the Norse Edda, the Finnish *Kalevala*, the Mexican *Popol Vuh*, among African tribes and Polynesians. The Greek story of Deucalion and Pyrrha, who escaped from the flood and repopled the earth by casting stones behind them, is familiar to classical readers. The flood story is always connected with a purification of the earth by destruction of the wicked, and there is always an ark or sacred vessel which preserves a few remnants for the founding of a new race.

Is all this physical and historical, or is it allegorical? It is both; for the universal correspondences ordain that physical events shall be molded on spiritual events. There actually have been periodic alterations of

the earth's surface, accompanied by the sinking of lands and the upheaval of new lands, as indeed the geological records show. But these events have been but the physical accompaniments of great moral changes; they have been coeval with the ending of great races and the beginning of new races of mankind; and here we are using the word "race" to mean one of the great root-races, each of which lasts more than a million years. While the flood has this general meaning, the innumerable accounts referred to have usually a special reference to the last great deluge, that which accompanied the submergence of the continent of Atlantis, or to the last remaining portions thereof. This was the habitat of the fourth root-race, followed by the present fifth. The Atlantean race having reached the end of its cycle, many of them had descended into gross materiality and had become black magicians; they were of gigantic stature, which is referred to in the Bible narrative and has given rise to the universal tradition as to wicked giants. It was necessary that this corrupt society should be destroyed, and that the good should be preserved to form the seed of the new race to come. Hence the stories of floods, arks, and the other features. The Greek mythology abounds in stories of the semi-divine founders of cities and centers of civilization, and represents these founders as having migrated into Greece from the far west "beyond the pillars of Hercules"; and there is frequent mention of the sinking of lands beneath the ocean, and the rise of other lands, on which the immigrants settled.

The fact that these deluge stories, so similar to the one in the Bible, are so universally found, is conveniently kept out of sight by most Christians, and is a stumbling-block to others, who wish to regard the Christian revelation as unique and paramount; but the problem is cleared up when we remember how the Old Testament is a compilation of ancient sacred books, which had been preserved by the Hebrews from the still older sources whence they had derived them.

## REDEMPTION AND SALVATION

The drama of evolution, whether of worlds or of man, includes a descent from spirit into matter, and a reascent from matter into spirit. Man was at first spiritual, but mindless and undeveloped, living in a "Golden Age" typified by the Garden of Eden. Then he acquires the power of self-consciousness, which is aroused within him by beings who possessed it themselves. The Fall of man is a fall in one sense, but in another sense it is the fulfillment of a vital step in his evolution. He loses for a time his contact with spirit, in order that he may enter on a career of incarnation in this world and pass through all its experiences. His new power of free will he misuses and brings trouble upon himself; but eventually the divinity within him is destined to win through, so that man will rise again a much more glorious and complete being than before, because of all the added knowledge which he has garnered by his experiences. This is what is meant by redemption and salvation. It applies to the human race as a whole, to particular races of mankind, and to individuals. In the case of individuals we must of course take into account reincarnation.

And so the world's great teachers have at many times come into our world to preach anew the glad tidings, or rather to remind man of his forgotten birthright. For man is like some prince in an old story, who has been brought up among peasants so that he is unaware of his royalty; though even in dark ages there have always been a few mystics and intuitive minds who have perceived the truth. The wise one who initiated Christianity (whoever he was) was one of these teachers; and even in the mutilated

fragments of his teachings which remain to us we can see that he was proclaiming that old truth. Yet see what ages of spiritual darkness have made of it! Whereas the teacher proclaimed the divinity of man and showed to his hearers the age-old path to salvation, we are told today that we are essentially corrupt and that it is impious to rely on our own resources -- we, created in God's own image! Truly theosophy has come to raise the buried Christ from the tomb wherein his disciples have cast him. For theosophy is just such another revival of the wisdom-religion, two thousand years later; and what Jesus said of the Pharisees of his day might be applied to much that goes today under the name of religion.

The atonement, or making "at one," is theologically regarded as a reconciliation between God and man, due to the propitiation of his Son; but in the light of what has been said the word acquires a truer sense. It means the uniting of the human ego with the spiritual ego -- the innate Christ, whereby man recognizes that this spiritual ego, and not his personal ego, is his true self.

## SACRAMENTS: THE EUCHARIST

And he took bread, and gave thanks, and brake it, and gave unto them, saying, This is my body, which is given for you: this do in remembrance of me. Likewise also the cup after supper, saying, This cup is the new testament in my blood, which is shed for you. -- Luke 22:19-20

Then Jesus said unto them, Verily, verily, I say unto you, Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you. Whoso eateth my flesh, and drinketh my blood, hath eternal life; and I will raise him up at the last day. For my flesh is meat indeed, and my blood is drink indeed. He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him. -- John 6:53-6

The sacrament of the Lord's Supper means much to those who partake of it devoutly, but it might mean much more. Its sacredness and power are due to its august origin from one of the sublimest rites of the sacred Mysteries of old. Its frailty as a potent influence for good in the world, its role as a bone of bitter contention, are due to the attenuated and misunderstood form in which it has come down to us. If we study the ancient Mysteries, we find that bread and wine play a foremost part in the ritual of initiation, as also in the "lesser Mysteries" which were displayed before the public. In the greater Mysteries candidates were initiated into what Jesus calls the Kingdom of God or the Kingdom of Heaven, into which he seems anxious that his disciples should be initiated. Wine is often spoken of alternatively with blood, and both signify spiritual life: the words are thus used in the New Testament. Over against these we find bread or grain, or alternatively flesh; and these words also are used in the New Testament. This latter signifies terrestrial mortal life, so that the two together mean the higher and lower nature of man.

The reference is to symbols which were used in the ancient Mysteries, in which there was a twofold initiation, symbolized respectively by bread and wine, or by flesh and blood. The candidate had to be pure in body and the lower principles of his nature before receiving the baptism of blood or the wine of the spirit. These facts relative to the Greek and other Mysteries can be verified by reference to any

encyclopedia or book on the subject. In the Bible we find frequent reference thereto. Besides the two quotations at the head of this section, we may cite the interview with Nicodemus in John 3:

Except a man be born again, he cannot see the kingdom of God. . . . Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God. That which is born of the flesh is flesh: and that which is born of the Spirit is spirit.

Here we see the double birth: the first of flesh, the second of spirit. This doctrine of the second birth is of course the principal theme of Paul, and it is surprising that so little is made of it; at most it is regarded as referring to a state of mind or heart varying from mere self-satisfaction to a real holiness of character. But the real meaning is quite lost owing to belief in original sin and vicarious atonement and an ignorance of reincarnation.

These ancient teachings are immortal, which is why they survive through the ages, if only in form, until the time comes for them to be restored. The Eucharist is still celebrated as a means of receiving divine grace and as a commemoration, and some attach great importance to the faith in a miraculous transubstantiation of the bread and wine into the actual flesh and blood of Jesus.

## SACRAMENTS: BAPTISM

This is another rite derived from the ancient Mysteries. It was the outer and visible form of a purificatory process undergone by the candidate for initiation. Initiatory ablutions are common to all cults. In Christianity it means admission to the Church, and is regarded as cleansing from sin, affiliating with God, and the gift of the spirit. That those who have not been baptized will suffer damnation is a formal article of faith with some. The idea is repugnant to the feelings of the present day; but if we can be saved without baptism, why be baptized?

Sacraments are defined in the Catechism as the outward and visible sign of an inward and spiritual grace. They repeat physically what has already occurred spiritually, otherwise the ceremony is but an empty form. There are two baptisms: that of water and that of fire, corresponding with the two forms of the Eucharist already mentioned. It would seem that the candidate for baptism should be of an age suitable to the full understanding of the meaning of the ceremony. In these days, when our knowledge of nature is so restricted to externals, we have lost sight of that intimate knowledge of nature, of man, and of man's relation to nature which was possessed in more ancient times. The rites and customs of which we read in Greek and Roman history, or as practiced in ancient and oriental races, seem to us superstition because we do not grasp their real meaning; and it is quite likely that the Greeks and Romans themselves in later times had lost it also and continued the ceremonies merely from custom. But a further study shows that they originated in the teachings of the ancient wisdom. It is curious that we still go on practicing them; but there is an undying life in these ancient institutions which preserves them through the ages, like a seed under the snow, until the time comes round for them to be revived.

## Chapter 1

### Reimbodiment a Habit of Nature

A characteristic viewpoint of theosophy is that man is a deathless, spiritual ego using mind and body as a garment, or as its vehicle of expression and experience in the external world. The present general tendency to regard ourselves as the product simply of physical evolution has been one of the greatest handicaps in modern life. For it has had the effect of discounting the reality of our spiritual nature and has intensified the horror of death. How can anyone be truly happy or willingly unselfish if he believes that death ends all? And so long as the majority are convinced that the life of the senses is the only reality, we shall be unable to establish scientifically the fact of postmortem existence. Can one who has passed all his life in a blind dungeon prove that there is a sun? And he certainly will not be able to go further and explain how and why his very existence in the dungeon is dependent in a thousand ways upon the sun's invisible but all-sustaining life.

We must come out of the imprisoning dungeons of materialistic religion and science into the sunlight of spiritual truth. Then we can grow into the power to demonstrate for ourselves like a problem in Euclid that the real, inner self -- the essential core of each of us -- has always existed, is immortal at the present moment, and can no more be destroyed than the boundless universe of which it is an inseparable part.

Then, too, some satisfactory explanation must exist as to the prevailing injustices of life. There is hardly anyone who does not feel that life has more or less cheated him. Are not most of us born with desires and capacities that we shall never in this life have the opportunity to develop? And there are many indeed who are born with innate tendencies to evil which they are given no chance to outgrow. The glaring inequalities of modern life are in themselves enough to embitter the human heart and wither its moral initiative.

What is needed first of all is to demonstrate to man his significance in the evolutionary plan. We need a larger view of the purpose and destiny of the human race. Theosophy relates each person to the universe and shows that his individual consciousness is a ray of the universal cosmic consciousness. It starts out by emphasizing that we each are essentially a *center of consciousness* -- not just a body to which a so-

called soul is suddenly added at birth or death. Nor are we accidental products of blind, mechanical forces. Each individual is part of a living, organic universe. That universe itself is a product of evolution and carries forward within its own unfolding plan all that is -- atoms, humans, nebulae, worlds, solar systems, galaxies -- in a grand sweep of development in which the humblest earthworm as certainly as the most godlike genius has a definite part.

The history of generations of oak trees lies in the tiny acorn. From the heart of the acorn there slowly unfolds in response to nature's influences a mighty tree which is an expression of an immense past of evolutionary oak-tree experience. So with the human being, the "Man-plant of the Ages." In that divine unit of consciousness which is the inner source of our individual life is stored the essence of an immense past stretching backward across immemorial ages. And our appearance as human beings on this earth is but one act in the magnificent drama of our evolution.

Nor is the human race itself a recent development of nature. We came from former cycles of evolution and resumed a body here on earth, which is our present training school. Further, there has not been a constant "creation" of new souls all down the ages. The number of evolving humans on this earth, though immense beyond our power to picture, is yet fixed and constant. This means that, in line with the economy of nature, human beings as evolving egos have been reborn on earth again and again. All of us who make up our present civilization have been here many times before. We were the men and women who formed the great civilizations of the past, and we have also been imbodyed in the many magnificent prehistoric races which theosophy tells us something about (see *The Secret Doctrine*, volume 2).

Theosophy, therefore, begins with preexistence as a necessary part of eternity, for a thing which has a beginning must necessarily come to an end. Nature makes that plain enough. What we call eternity or immortality must stretch endlessly back into the past as well as endlessly forward into the future. Our innermost self is a deathless being, a god, which reclothes itself from age to age in new bodies, or vehicles, that it may undergo all possible experiences in the universe to which it belongs, and so reach its own most complete growth and self-expression.

Growth is eternal; evolution is without beginning, and it is endless. We pass through all the mansions of life, as the ages of Eternity slowly stream by into the limitless ocean of the Past. -- G. de Purucker, *Questions We All Ask*, Series II, xvii

Rebirth, then, is the pathway of evolution. It is the method by which nature progressively draws into growth or unfoldment the limitless capacities latent in all creatures from atoms to gods. Everything that has life reimbodies itself -- universes, solar systems, suns, worlds, men, animals, and plants, cells, molecules, atoms. Each of these forms is ensouled by a spiritual consciousness-center which is evolving in its own degree, passing ever upward, and unfolding like a seed from within itself its latent potentialities.

Reimbodiment of everything, of every individual entity, is one of cosmic Nature's fundamental operations -- "laws" if you like; and because the Whole so acts, does it not

obviously carry along with it every part of itself? -- Ibid., xxv

Nature repeats herself everywhere. What she does in the grand she reproduces in the small; and the reason for this is that there is one fundamental law or system of action, of operation, in the Universe, which expresses itself therefore in every part of the Universe, being its fundamental current of consciousness-vitality. Man is born, reaches the culmination of his powers, and dies, because the physical universe does the same thing in the great as man's physical body does in the small. -- Ibid., xx

In the human race we call this process of rebirth or reimpodiment by the word *reincarnation*, which means "refleshing," or taking on again a garment or body of flesh. There are various names for the different forms of reimpodiment which pertain to all beings from the highest to the lowest, but here we are concerned only with that form of reimpodiment which pertains to man, and which is called reincarnation.

Human life is thus seen as a necessary and highly important part of the cosmic evolutionary scheme. And we naturally inquire what its purpose is, for there seems to be no clear indication in the present confusion of beliefs and theories as to why we are here and what it is all for.

Briefly, the purpose of life is to raise the mortal into immortality. Or, to expand the idea somewhat, it is to give time and opportunity for the deathless spiritual potency at the core of our being to develop, grow, unfold, into perfection. For theosophy tells us that the personal self -- the everyday self -- is not immortal. John Smith or Mary Brown are not deathless beings. They are mere personalities, and as such do not reincarnate. It is the units of consciousness behind John Smith and Mary Brown, of which these perhaps quite ordinary persons are but the imperfect aspects -- this root of consciousness in each, this ego it is which reincarnates.

What man or woman has not often felt how short life is -- how inadequate to express all that one feels of inspiration and capacity within his nature. How often we hear it said: "I am only just learning to live -- now when I am old, and just about to die." The universe, however, is not run in that cruelly wasteful fashion. The very fact that we intuitively *know* that there are large reserves of power and possibility within us that are seeking expression -- the fact that nearly everyone yearns to develop, *to be*, that greater self which he senses within -- this very urge to a larger and fuller life is our daily witness to nature's true purpose. It is only because we are so preoccupied with our limited, everyday consciousness as John Smith or Mary Brown, and live only at rare moments in that deep, divine urge of the greater being within, that we are for the most part unconscious of the larger possibilities of life for us.

Let us, then, first of all try to realize that we are in our inmost nature a divine consciousness or ego; that this ego which is ourself has always existed, and shall never cease to live and grow, and develop towards perfection. Let us set our desire and will to realize our oneness with this divine ego and to bring it out in our daily life as a larger, deeper individuality than that of our personal consciousness. We will then enter upon a new life. We will become a creator, a self-generator of our own illimitable divine destiny. We

will begin at last to work self-consciously with the real purpose of evolution.

It is through reincarnation alone that we can bring out, and use and perfect, the fullness of that hidden wealth of power and capacity of which we are all conscious in some measure. For through reincarnation the ego undergoes every kind of human experience which this earth affords. In each life some new facet of character is shaped by environment. New powers and capacities are unfolded from within. Weaknesses, selfishness, and the faults of passion are corrected by suffering, that wise teacher which enables us to recognize and overcome our egoism and limitations.

Every new life gives us another chance. The criminal thus has time and opportunity to reform *himself*, and through restitution and self-mastery can advance to better things. One whose need to support and work for others all his life has made cultivation of his musical or other gifts impossible will, by the very strength of that dammed back energy and the moral power generated by devotion to duty, find increased capacity with freedom in another life for its development. So if we use well our opportunities, we shall grow steadily from life to life until in some future reincarnation on this earth character will flower into divine genius and we shall live and work in the fullness of our true spiritual being.

---

## Chapter 2

### What It Is in Man That Reincarnates

So far as we have gone we discover that humans are composite beings. We have already observed three elements in our constitution: a personality known to friends as John Smith or Mary Brown, and back of that a deeper reservoir of consciousness expressed in the ideal desires of the nature. Lowest of all there is the animal consciousness, including the body, the vehicle of these two higher aspects in human life.

These three elements can still further be resolved until we see ourselves as sevenfold beings. But in restricting our study now to the subject of reincarnation it will be necessary to regard ourselves only in the threefold division above indicated. This corresponds to St. Paul's description of man as body, soul, and spirit. Christian theologians, however, have persistently ignored this division because they have no conception of the nature of spirit. In making this threefold division St. Paul proved himself familiar with the teachings of the ancient wisdom, today known as theosophy.

It is the higher, ideal nature above referred to, the spiritual ego, which reincarnates. The name used in theosophy for this higher part of our consciousness is *manas*. This is a Sanskrit word and means "the thinker," so we may call the reincarnating ego the thinker in man. It is the origin of our *self*-consciousness, of the faculty of introspection and of self-realization. Through it we relate ourselves to life, understand what we are learning, and so build into ourselves in the shape of character and propensities the lessons derived from evolution. Without this center of permanent individual consciousness in which the results of evolution can be preserved, the fruit of experience would be

dissipated at death and no progressive evolution would be possible. Through this spiritual part of us comes also the voice of conscience. From it we draw high inspiration, unselfish love, intimations and intuitions of the divine, and all impulses to impersonal, magnanimous thought and action.

Thus two selves exist within us: the self of the ego or thinker, which persists through all our reincarnations; and the self of the personality, which is mortal and breaks up at death. It is the play of consciousness between these two which is the great mystery of life. Both of these selves, as yet contradictory in desire and purpose, make us what we are. How familiar everyone is with the duel between them, which is constantly going forward within us! The voice of selfish temptation and the call of incorruptible conscience -- each striving against the other for mastery. The struggle is of a depth and complexity unsuspected until we start out in earnest to conquer some habitual fault, like a bad temper, or a weakness of some kind, or an ingrained selfishness. How quickly then we find all the forces within and without us arrayed either on one side or the other! The victory in such deep-seated, essential strife as this between our two natures is far too many-sided and involves too wide a range of influences to be completely secured in one short life of limited experience. The struggle must be met under myriad conditions and attained by means of many experiences in life after life until at last complete mastery remains with the higher nature.

What is the origin of this duality within us? Why should we be both noble and ignoble? Theosophy describes how our external, animal vehicle was built up in long past ages of evolution on our globe by the lower, instinctual forces of nature. Slowly it was shaped under the action of evolutionary law as a vehicle for the reincarnating ego. When this vehicle of body and animal consciousness was ready, the spiritual ego took it in charge, incarnating there to overshadow and guide its further development. The presence of the ego now began dynamically to change -- to mold this vehicle for experience in human life. The spiritual fire of the thinker through life after life stimulated and developed the growth of the animal man, so that gradually it unfolded or evolved under this creative influence a semi-independent personal consciousness of its own. And this personal consciousness, expanding slowly, slowly through ages of incarnation under the inspiration of its overshadowing ego, became the human personality. And now not only is it an instrument wherethrough the ego may manifest its own divine powers, but gradually by its own struggles and victories under the urge of conscience -- the personality itself is evolving. It unfolds and expands, and rising out of the limited personal consciousness, achieves thereby its own immortality. By subjecting our lower selfish natures to the influence and guidance of the higher, we enable the ego to express its light on this plane and thus exercise and expand its own divine potencies. On the other hand, gradually raising our personal consciousness, we lift it at last unto the plane of the spiritual ego, and so the human is transmuted into the immortal. Thus the whole nature in all its elements has passed upward into a more advanced stage of consciousness. A graphic statement of this lifting of the whole being in all its parts is thus given by Dr. de Purucker:

The work of evolution is . . . the raising of the personal into the impersonal; the raising of the mortal to put on the garments of immortality; the raising of the beast to become a man; the raising of a man to become a god; and the raising of a god to become still more largely divine. -- *Fundamentals of the Esoteric Philosophy*, p. 287 (first edition)

But indeed, the personal part of us is only on the evolutionary road to such perfection. We are yet far from the goal. The whole human race is held in the grip of its ignorance of the spiritual, in the grip of suffering and confusion of mind and heart, because we have not yet learned to center our consciousness in the permanent and real part of us -- the spiritual ego. We are immersed almost altogether in the personal interests of our nature. And this personality is mixed, a mentality combined with passion, with emotional qualities, with physical traits and appetites. At different times any one of these may hold the mastery. At one moment the individual may be calculating with keen and absorbed mind, at another time swept from his moorings by a gust of violent anger. Again, physical pain or illness may turn him into a creature of ailing impotence. But seldom is any one of us for long the same. We pass from mood to mood, and our outlook on life changes perpetually and is never stable. And like all composite things this unstable personality must break up when the time comes for the dissolution of the different energies and classes of life-atoms of which it is composed. For only homogeneous natures are immortal.

This bundle of personal energies, when it is broken up at the withdrawal of the spiritual ego into its own sphere -- in other words at death -- leaves behind it what in theosophy are called *skandhas*. When a plant withers and dies, it drops into the earth the seeds which are the fruit of its little round of growth and development. From these seeds other plants will grow up when the cycle of the seasons has brought back the conditions necessary for their germination. If it was a fragrant violet, its seeds will produce their lovely kind. If it was a ragweed, more ragweeds will appear. So with the psychological-animal organism of man. When it dies and fades out, it deposits in nature's psychological soil or reservoir those invisible seeds of energy which its own growth has produced. Theosophists call these seeds or effects *skandhas*, using the Sanskrit because there is in English no word which can exactly describe these inner consequences of a life's experience. And it is these seeds or *skandhas*, or attributes of character, which shape the new personality, when the ego returns to incarnation, making it the exact result of what it thought and acted and built up of character in the last life.

That in us which reincarnates, then, is the spiritual ego, the divine individuality. The following words of Dr. de Purucker will help us better to understand the ego and its relation to ourselves:

First, then, there is the activity of the monad, the highest. During the process of incarnation the activities of this monad develop the intermediate nature which ensouls soul after soul, and this is the real meaning of this old Greek word metempsychosis; and these souls thus invigorated, inspired, and driven by the ensouling monad, ensoul body after body, which is metempsychosis, or reincarnation, as the word is commonly and properly used. -- *Man in Evolution*, chapter 14

Every one of you, my Brothers, is a divinity encased in vehicles, in sheaths, of an enshrouding lower selfhood; and all the work of growth, all the work of evolution, is the thinning out of these sheaths, is the dissolving of the gross physical aspects of them and the raising of them to become ethereal, translucent to the rays of the inner god-son, the god within. -- *Questions We All Ask*, Series II, x

---

## Chapter 3

### Why Do We Not Remember Our Past Lives?

The fact is that we *do* remember them. The question is here put in this form because that is how it is generally asked by inquirers. But it is not thus correctly phrased. It should rather be: "Why are we not able to recall the circumstances of our past lives?" For character itself is memory. In a certain family are born two children. One is candid and honorable, the other thieving and sly, and the second has to be painfully disciplined into a sense of honor. We all know of these puzzling cases of differing character in one family. The first has learned by experience in past incarnations that dishonesty is base, and so it is born with that innate knowledge as part of its character. The other child has this victory yet to achieve, and will the better achieve it because of its family environments -- a favorable condition earned by the beginning of effort towards learning this lesson in a previous incarnation. It is in this way that we can say that character is memory.

Genius too is memory. All inborn faculties, whether good or evil, are the consequences of past self-training or of past weakness in other lives on earth. Mercifully, it is rare that anyone can remember the particular events through which these victories or failures as to character and faculty have been built into the inner nature. For since we learn almost always through suffering and many initial failures, such memories would in the main be of a painful kind.

We might also include hereditary traits as a phase of memory, developing a little more fully the subject above alluded to. Why is it, for example, that of three children born into the same family, one is a genius, another has a shrewd business head, while the third is entirely commonplace? Theosophy teaches that an ego coming to birth must automatically, by the natural attraction of psychomagnetic energy, embody those hereditary qualities and traits appropriate to the expression of its own nature brought over from its experience and actions in the past life. We thus see that in every way character is memory. And without these stored-up, accumulated memories, carried over from life to life -- as before emphasized -- no evolution of organism either physical, mental, or moral would be possible. Evolution depends upon continuity. Moreover, everything repeats itself. It is the method of nature that through repetition characteristics are fixed and the type developed. Likewise is it by repetition through life after life that lessons of human character are realized and absorbed and become a permanent part of human nature.

Man is an individuality. He has free will. He is changing from day to day, from year to year, from life to life. He is not static. He is building now what his character will be in his next incarnation, . . . -- *Man in Evolution*, chapter 18

What is true of brain-memory is also true of the personality. As indicated in Chapter 1, the ego has a different personality with each life. This must of necessity be so because in each life we learn something new, develop mentally and morally, unfold emotionally or spiritually, so that the old personality

becomes inadequate -- the ego outgrows its possibilities as an instrument. The ego, therefore, when it is reborn, makes for itself another personality fashioned afresh from the lessons incorporated into itself in the last life.

So here is another and deeper reason why memories inhere and persist, but details are forgotten, when the ego returns to incarnation. Characteristics, faculties, which were built into the inner nature are brought back as unconscious memories; but the new-born personality can have no recollection of the actual happenings of a former life for it took no part in them. Just as an actor cannot say: "I *was* Hamlet" or "I *was* Macbeth"; but rather: "I took the part of Hamlet" or "I played Macbeth"; so no ego can truly feel, "I was So-and-so in a former life." For the personality is not the real *I*, it is only the mask or vehicle or garment or temporary character through which the real *I* expresses an aspect of itself. We may extend the comparison and think of an actor playing many parts in his long career. The actor knows Hamlet and he knows Lear and Shylock, but what do Hamlet and Lear and Shylock know of each other? Then consider the structure of the brain. Though the same atoms which made up the brain in a former life are now used again by the reincarnating entity, the brain of the new personality is a fresh combination entirely. For these life-atoms themselves have undergone changes (as explained in Chapter 4) so that while the instinctive trend is the same, the total effect is a fresh outlook in the character.

Another reason, and a basic one, why we do not remember the circumstances of past lives is that the universe to which we belong is an expression of intelligence, wisdom, and compassion. It is an organism, an immense, interblended series of infinitely graded living entities, having at its center or heart a divine intelligence, one of the cosmic gods. The "laws" of the universe are the life-rhythms -- spiritual, intellectual, and vital -- of that cosmic divinity, flowing out along the circulations of the cosmos, guiding and controlling all things from the mighty sun to the electrons of the atom.

These beneficent laws protect us, as far as our free will does not prevent, against those things which hinder our evolution. Evolution always looks forward, is constructive, builds afresh and on developing patterns. Foremost among hindrances to evolution would be a constant preoccupation with the past. We are supplied by the laws of the cosmos with an adequate memory of our own past and that of humanity, all that we need to use: we are protected in the very nature of things from a memory of details which would burden, distract, and bring suffering to our upward struggling nature. To leave behind "the low-vaulted past" is one of the conditions of growth. Does the oak bother about the acorn which produced it, or the butterfly take thought for its abandoned chrysalis? We are children of a universe of life, and we are forever and healthily abandoning the worn-out, and developing the new out of the old.

All of us undoubtedly, as spiritual egos, have played many parts on this wonderful stage of the human drama, our planet earth. It is through these manifold roles that we have developed the highly complex psychological apparatus called human nature, which in the great majority is able to adjust itself to almost any condition of human existence, under all climes and in any environment. So true is this that there is a great restlessness upon people today, a feeling that life as we know it has been lived out, exhausted of its possibilities. Mankind inarticulately feels itself upon the threshold of some new discovery. Theosophy proclaims that this is a genuine intuition, a prevision of the new era which is just about to dawn upon the world.

We must not forget, however, that a time will of course come when each of us will be able clearly to recollect all the events of our past lives. The register of everything that has ever happened to him is imprinted imperishably upon the deathless, divine side of our nature. But we have not yet developed the spiritual faculties which would enable us to peruse that mystic record. Nor shall we develop them so long as we constantly identify ourselves only with the life of the brain and the personality. For now self-interest shuts us in; passions hold us in selfish blindness; prejudice weaves its dense web over intuition and creative power. And so we languish in our narrow prisons of personality. Only occasionally, when the sunshine of divine love or the spirit of self-sacrifice inspires us, do we catch a gleam of the mountains of dawn without our prison walls. We must use our spiritual will to realize our essential godhood and break through the bonds of selfishness and ignorance into the glorious kingdom lying just beyond the threshold of our everyday consciousness.

---

## Chapter 4

### Some Objections and Misconceptions

One of the commonest mistakes made by inquirers is the belief that reincarnation means that a human being can be reborn in the body of an animal. Some Oriental religions teach that such animal incarnation is a punishment for certain sins. This doctrine is a distortion, which came about in the course of centuries, of an original teaching to be explained later. Theosophy denies this doctrine emphatically; all its teachings are a refutation of this idea. "Once a man, always a man" is one of the great axioms of the archaic science. This statement is based on the fact, already referred to, that the universe is a living organism. We are a part of that great organism and the laws therefore which govern our life spring from the nature of that organism. Thus, by understanding what happens in the physical world we can get an idea of the corresponding processes in all other spheres or planes within the boundaries of our own universe. The following quotation will emphasize this view:

The old Seers and Sages taught that the Universe is a living entity, that it is a vital organism -- much in the same way as man's body is a vital organism: . . . and man with his life and his intelligence and his consciousness and all his power, all his thought and feeling and emotion, is but a reflexion of the Whole, working in him as an inseparable part of that all-encompassing Whole. The part obviously partakes of what the Whole is. --  
*Questions We All Ask*, Series II, xiv

Looking at ourselves from this standpoint, we see that as the circulations of the human being, arterial and nervous, make growth possible, so do the universal circulations, vital and spiritual, make evolution possible. In man the life forces flow along definite channels called veins, arteries, and nerves. In the universe the evolutionary pulsations also pass along definite channels and are called in theosophy the circulations of the cosmos. The relation of this fact to the permanence of the ego as a human being has

been well expressed by one of the teachers as follows:

*Manas* the Thinker . . . does not return to baser forms; first, because he does not wish to, and second, because he cannot. For just as the blood in the body is prevented by valves from rushing back and engorging the heart, so in this greater system of universal circulation the door is shut behind the Thinker and prevents his retrocession.

Reincarnation as a doctrine applying to the real man does not teach transmigration into the kingdoms of nature below the human. -- W. Q. Judge: *The Ocean of Theosophy*, pp. 68-9

This distortion of the law of reincarnation referred to as the transmigration of the soul is a misapplication of a fact anciently known and now again brought forward by theosophy -- the transmigration of the life-atoms. In theosophical literature it has been often explained, as in the following passage:

In the application of this word to the life-atoms, . . . it means, briefly, that the life-atoms which in their aggregate compose man's lower principles, at and following the change that men call death, migrate or transmigrate or pass into other bodies to which these life-atoms are psycho-magnetically attracted, be these attractions high or low -- and they are usually low, because their own evolutionary development is as a rule far from being advanced. -- G. de Purucker, *The Esoteric Tradition*, p. 598

If a person has led a grossly animal existence, the life-atoms of which the cells of his body are composed will automatically through attraction pass into those bodies or substances which will afford the appropriate outlet for the kind of energy which has been built into them. If the life of another has been high and fine, the vibrations impressed upon the atoms will cause them to be attracted only to clean, wholesome, finely organized substances or organisms. When the period of rebirth comes again, and the life-atoms return by the action of psychomagnetic attraction to the reincarnating entity to which they belong, they bring with them a reinforcement -- through their transmigrations -- of the bad or good influences educated into them during the last life. Thus it is easy to see how this teaching of the transmigrations of the life-atoms has, like so many of the occult doctrines, been degraded by ignorance or priestcraft from its original and true significance. (For a fuller treatment of this interesting subject see an article by H. P. Blavatsky, "Transmigration of the Life-Atoms" reprinted in *The Theosophical Path*, February, 1930, and the story by W. Q. Judge, "The Persian Student's Doctrine," reprinted in *The Theosophical Path*, April, 1932.)

A good many object to reincarnation because they do not like the idea of coming back to this earth. They feel that they have had enough of the sorrows and difficulties of human life and do not wish to return to it. And such an objection is just as natural and understandable as a child's objection to being kept in school. But not for nothing has the term Mother Nature been a universal one in all ages, for it springs from our instinctive knowledge that we are her children, that she is greater and wiser than we are, and will hold us to her laws of evolution and discipline whether we will or no. No person by merely taking thought can add one cubit to his stature, or change any of the processes of life or death. It may be said that the truth of reincarnation cannot be proved. But it is so grounded in probabilities as founded on all

the ways of nature -- day and night, life and death, sleeping and waking, summer and winter, the phases of all planetary motion, and the very cycles of the sun itself; it is so natural and instinctive a human belief, being at the present time the conviction of a large majority of the human race, and in olden times always universally accepted; it makes such a strong appeal to the human heart and logic that thousands upon hearing it for the first time have accepted it at once as an inevitable conclusion from the facts of life, while it is at the present time spreading rapidly among all classes of thinking people; and finally, it has such power to reform and satisfy and inspire human nature, that it must, once encountered, become a theory that can at least never again be forgotten or ignored.

These things are but a part of the overwhelming "presumptive evidence" for reincarnation. To deny it -- to say, "I do not want to come back to earth" -- is hardly enough. There is a general tendency in human nature to adopt the easiest way, to think that because we find a certain course unpleasant and another one more agreeable we must be allowed to please ourselves. And this in spite of the fact that the very sorrows and difficulties we are so tired of are there to convince us to the contrary. Mankind must somewhere meet the consequences of its thoughts and actions, its failures and moral victories. Why not here on this earth, where he can reap the harvest on the spot where the seed was sown? The following quotation carries out the idea:

Every act we do; every good act, every evil act; every good thought we think, every evil thought that we allow to find lodgment in our minds, thereby affecting our conduct: each must have its inevitable consequent effect. . . . Where does that force or energy express itself in results? After death only, or in future lives? The answer is both, but mostly the latter, in future lives on Earth, because an earth-force can find no effectual manifestation of itself in spheres not of earth. -- *The Esoteric Tradition.*, p. 660

Let us remember, however, that these teachings of theosophy have nothing to do with what is called fatalism. We are indeed held in the grip of our present circumstances, because having intertwined ourselves by former actions into these circumstances we cannot escape them until by a reverse course of action we effect our own liberation. But at any moment that anyone can see and admit that he has this power, and then sets about using his will, he begins to be a master of those circumstances and can use them to bring about exactly contrary results to what they would have produced if he had tamely submitted to them. Thus man, using knowledge and free will, becomes increasingly master of himself and therefore of his destiny. Theosophy is foremost among all systems of thought in arousing us to this knowledge and realization of our power, and so leading us into creative progress and freedom.

Again people sometimes say, "But if we are all reborn into different bodies, how shall I know my friends?" Theosophy answers that no act of recognition is necessary. We and our present family and friends are knitted together by love, by mutual experience, and by congeniality. We shall not have to seek each other out. Families will be reborn together in continuation of the bonds they are united by now. We and our friends can no more help being attracted and brought together than a magnet can help selecting iron filings from a quantity of sawdust. We cannot escape our friends, or -- it must also be emphasized -- our enemies!

And there are not a few who object to the idea of being reborn as an infant and having to learn all over again the merely physical side of existence, as well as repeating in each life elementary education and brain development. But, as has been pointed out before, this repetition of even physical experience is a habit of nature that has been essential to evolution.

Yet as human spiritual development proceeds we will grow out of the need for this form of repetition. In answer to a question addressed to Dr. de Purucker at one of his public lectures as to whether the time spent in childhood would diminish as mankind advances, his reply was:

Yes . . . we advance . . . with the passing centuries, and the future will show us men for whom childhood and babyhood will be very much shortened. This shortening will be the result of evolution. . . . The time is coming in the distant future when children will be born almost men . . . practically adult, although this does not mean that they will be born of full adult size. -- *Questions We All Ask*, Series I, xxxvii

The whole point for us lies of course in the influence of *spiritual* development. We are burdened by conditions of physical weakness because in the past we have inwound ourselves into slavery to them, by living, thinking, and longing nearly altogether for material and personal satisfactions. These, being self-centered or centripetal in their action, create bonds for the spiritual ego which cripple its activities in this world. This has reacted on our bodies and slowed down even their evolution. So the need is to so spiritualize and impersonalize ourselves that all limitations and weakness will gradually dissolve away. The ego will then be free to control and develop its vehicles of self-expression in harmony with its own divine nature and purposes.

Objections to reincarnation spring as a rule from unfamiliarity with the teaching and its innumerable close applications to the problems and situations arising in life. And there are, naturally, some who will not accept it because they do not wish to believe it. But the great majority who encounter this doctrine are almost sure, sooner or later, to join that growing multitude of all kinds and classes of people -- not by any means all of whom profess theosophy -- to whom reincarnation is the very foundation of human justice, happiness, and spiritual growth.

## Chapter 1

### Introductory

Seven is one of the most important numbers in the teachings of theosophy, the wisdom-religion. It is a key by which are revealed and explained many of the mysteries of nature, for in theosophy it is taught that number and numbers underlie all the processes of creation. This numerical key of seven lies at the root of all evolution, whether physical or spiritual. It is therefore important both in its meanings and application.

There is nothing arbitrary about the use of seven as applied to the study of our composite constitution, as this number is found to be universal throughout the universe. We discover it everywhere. Some common facts are good instances of this, such as the seven layers of the human skin, the musical scale with its seven notes, and the seven colors which make up a ray of sunlight. Then there is the moon, which theosophy and science both show to have close relation to the generation of physical life on our planet. The moon is governed in its activities by the number seven. Note the recurrence of seven in the gestation period, the phases of the moon, with the week of seven days, etc. The inquirer has only to look observantly into the matter to find many other examples of the septenary in the world about him.

In Christianity we find the human nature divided by the apostle Paul into three elements: body, soul, and spirit. This division includes, however, the other four principles. Christian theology, while accepting this threefold division, tells us little about what soul really is, or what is the difference between soul and spirit. Nor can present-day psychology help us. The best known modern psychologists take into account only the lower ranges of soul activity. They study almost exclusively our *physiological* mentality, such emotions as fear, passional desires, and the like. However, this is not surprising. For over a century science has regarded the human being as merely a developed ape whose inner life consists of highly specialized reactions to his environment, though a change in this point of view is now seen to be on the way. A number of psychologists are discovering that to regard the human soul as a complex of merely semi-physiological reactions does not begin to cover the ground. They acknowledge that such a point of view is destructive to all moral and spiritual aspiration. It does not take into account the nature of our spiritual-mental activities. And they are beginning to admit that it is this higher side which is the more important.

Present-day psychology is the newest and most incomplete branch of modern science. How different it

was in the great ancient civilizations! They were built around the Mystery-schools as a nucleus. And those great esoteric colleges taught a complete science of the soul, a subject which we moderns name psychology. These schools or colleges were the guardians of a sacred science which included everything about life, death, man, and the universe. It included the truths of religion, science, and philosophy in all their immense ranges.

Our present religions, philosophies, and sciences are but pale reflections of that ancient knowledge; or else they are new and incomplete growths arising from its remnants. This ancient system, which is referred to in theosophical works as the wisdom-religion, the secret doctrine, the esoteric philosophy or tradition, the archaic wisdom, etc., was known all over the ancient world. Clear evidence of this fact can be found by a study and comparison of the basic doctrines and symbologies of all the old world-religions, including even the Bible. The same is true of the ancient great philosophies. Pythagoras, with his esoteric school at Crotona; Plato in his Academy at Athens; and the Stoics, of whom Marcus Aurelius is a celebrated example, all show, in spite of differences in the form of their systems, that they were teachers of the wisdom-religion. Evidence can also be found in archaeological remains the world over and in many other fields of research, should the reader be interested in this fascinating subject. (See also [The Esoteric Tradition](#) by G. de Purucker; and [The Mystery-Schools](#) by Grace F. Knoche.)

One of the most important of the teachings of these Mystery-schools was the sevenfold nature of the manifested universe, and of its offspring, man.

---

## Chapter 2

### The Monad

An explanation of our composite nature with its seven principles must include a brief outline of what theosophy tells us about evolution. Evolution, as taught by the wisdom-religion, means an unwrapping, a rolling out; in other words, it is the growth into manifestation or activity of qualities which are latent and invisible in the inner nature of any being. The qualities of a living seed when first dropped into the soil are invisible and latent. But when the time and the conditions are ripe for growth these latent qualities begin to develop, to unwrap or roll out into visibility. An acorn, for example produces first a tiny shoot and then at last the magnificent and sturdy oak.

All organisms, that is, all living beings -- plants, animals, men -- grow from seeds. In the case of humans and most animals these seeds are so minute as to be invisible to any eye but that of the microscope. And yet one of these infinitesimal vital cells may grow into a six-foot man with all his complex faculties, or into the enormous elephant with its highly specialized organs.

What is it that causes this truly magical growth of an invisible seed into a wondrous individual, such as a great musician or inventor? Why is it that the law of development from within outwards, from

invisibility into visibility, is at the root of evolution? It is because at the heart of every seed there is a living spirit-soul, atma-buddhi. This spirit-soul is a spark of the universal life-spirit. It is the urge to self-expression of this invisible spirit-soul at the core of every organism which causes it to expand, to unfold its own powers through the outward development of faculty and function. Of course it is fed and helped forwards by the stimulation of its environment. But unless there were this living spiritual urge present at its core, the seed would not expand and fructify. A dead seed will not grow, no matter how favorable its environment.

Again, modern science in its theories of evolution has confined its studies to the visible side of nature -- the physical; although there are scientists whose researches are bringing them to a more comprehensive view. Not only the bodies, however, but the minds and souls of creatures, are subject to evolution. For if evolution is a law of nature then nothing can be excluded from the action of that law. In every particle of matter there is imprisoned a spark of the universal, indestructible LIFE. This spark is named in theosophy the monad, a word which means a "unit," an "individual." This monad is a point, a center of complete, individualized, indestructible consciousness, originating, as said, in the central universal life. Such a monad lives at the core of every organism, from an atom to a star.

But these monads are in vastly differing degrees of evolution. The monad at the heart of, say, an atom in the mineral kingdom is much less evolved or unfolded than one which has reached, on its upward evolutionary journey of self-unfoldment, the vegetable or the animal kingdom. The monad at the core of a human being is immeasurably more advanced than either. The reason is that, during the ages of its progressive self-development through the stages of matter in all the lower kingdoms, it has now reached the point where it has so highly evolved its own latent intellectual and spiritual powers that it can at last manifest as a human being. The difference between this process, which is a *spiritual* one, and some of the erroneous ideas of Darwinian evolution is fully explained in [Man in Evolution](#) by G. de Purucker.

There is a monad at the core of every physical atom. The physical atom is the outmost body or vehicle through which the monad works and expresses itself. When it ensouls a chemical atom, the monad is starting near the bottom of the evolutionary ladder. And slowly through countless ages that monad passes from kingdom to kingdom of nature, advancing ever upward.

We can understand something of this process if we remember how a plant grows. Back of every plant is what may be called a plant-monad, in other words a spiritual monad passing through the vegetable phase of its evolutionary journey. A seed is dropped in the soil and immediately that conditions are right, the sleeping or latent energy locked within it begins the process of building up from the soil a plant-vehicle for itself. Similarly does the monad make for itself higher and higher vehicles as it passes upwards through the elemental, mineral, vegetable, animal, and human kingdoms -- someday to blossom forth in the vesture of humanhood.

The reader will now begin to see that it is these monads whose activities not only produce, but *are* the very stuff of evolution. The monadic hosts, high, intermediate, and low in their scale of development, ensoul and build all manifestations of life visible and invisible to us -- spiritual, intellectual, psychic, and

physical. And they do this because of the spiritual urge at the heart of each monad, this urge being generated in its origin in the central universal fount of life.

It is these monads, with their inner life of urges, activities, and slowly unfolding characteristics, which make up the invisible parts of nature -- that invisible world of inconceivably greater scope and range than our visible. Here in these inner realms work the vast hosts of invisible monads which are thus the *cause* of visible evolution.

Before passing on to consider ourselves as seven-principled beings, we shall answer a question that may have arisen in the mind of the student. He may ask: What is the purpose of all this monadic evolution from kingdom to kingdom and from range to range or plane to plane of evolving being? This purpose can be stated as follows: Each great solar period of evolution is called in theosophy a *manvantara*. In this solar period or manvantara the monad starts out at the very beginning as an unself-conscious god-spark. And the object of its passage through all the forms of life in that particular solar manvantara is that it may emerge from them as a fully self-conscious god. When the end of that solar period comes, a monad which has successfully completed its evolution will have first-hand knowledge of -- will in fact have *been* -- all the life-forms in that manvantara. It will have absorbed to itself at last the power self-consciously to understand and assimilate and use all those experiences. So it becomes a self-conscious god, a master of wisdom and life in that manvantara which it has just rounded out. In a later solar manvantara, the monad will go on to experience still higher levels of evolution and knowledge.

The monad at the center of each one of us is far on its way to becoming such a self-conscious god. And this of course means that you and I, who are in reality our own monads if we could only realize it, are destined to emerge at the close of this solar manvantara through which we are now passing as fully-fledged, all-understanding gods.

One of the most beautiful aspects of this teaching is that in thus mounting the evolutionary ladder of being we awaken and stimulate the evolutionary potencies of all the atoms and creatures which we contact on all the planes of experience. It is a law of the universe -- in other words it is in the very nature of things -- that we cannot ourselves rise without lifting everything else to some degree. The ethical implications in responsibility and karmic consequences are easily apparent. But let us now go back to our subject of the seven human principles.

---

## Chapter 3

### The Higher Triad

We ourselves, however, are not just a monad working through a physical body. We are the product of several different lines of evolution combined into that composite nature with which we are all so familiar. It would not be possible for a monad to work directly through a human body. The monad is

pure spirit-consciousness, but the body is made of matter which is too dense and sluggish for the monad to work upon it directly. It would burn the body up, just as electricity would consume the physical flesh. So intermediate elements between the monad and body are needed. These must be of a more ethereal and spiritually sensitive nature than physical matter because they have to act as transformers. They must step down or conduct the spiritual energies of the monad into the physical organism. Then the directing power of the monad can inspire and shape our evolution through the experiences of human life. It must be remembered too that the monad which works through a human being is immensely more evolved and powerful than the comparatively unevolved monad acting, for example, through the form of a vegetable atom.

One of the more ethereal forms of energy-substance used by the monad as a vehicle to step down or transfer its energies to this earth plane is mind. Mind is a very definite line of human evolution. Our minds are developing all the time on their own lines while our bodies are growing and developing along theirs. And we also carry on mental evolution side by side with the spiritual evolution of the monad above, as well as the evolution of the body and its vital energies below. Mind is the link between the body and the monad.

And now we understand something more of Paul's meaning when he divided human nature into body, soul, and spirit. Soul is the intermediate portion of human nature, and the higher part of that soul is mind or intellect.

Before going farther and showing how these three elements resolve themselves naturally into seven, a question which has probably already occurred to the reader should be answered. Where do these human principles come from? The monad, as we have already seen, takes its rise, and is an emanation from, the universal cosmic life or spirit. It is in one sense the person himself, his immortal root-principle. But what is the origin of the mind?

Mind as a principle is latent in the monad. For the monad, springing as it does from the central fire of cosmic spirit, contains within itself the seeds or possibilities of everything, even as everything is contained within its cosmic origin. The part contains everything that the whole contains. One spark is of the same nature throughout as the flame which throws it off. One drop of the ocean is in miniature all that the whole ocean is. So each monad holds within itself, as being a part of the cosmic whole, all the elements and potencies and possibilities that evolution can unfold in the life span of this our universe. But in the beginning of this universal life span these potencies are latent, asleep, undeveloped. Then, as the ages pass, and the monad journeys on its evolutionary pilgrimage from the invisible spiritual and causal worlds "outward" into the visible world of forms and effects, latent potencies -- mineral, vegetable, animal -- are gradually unwrapped, unfolded, evolved. Finally the time comes when the monad is ready to take upon itself humanhood. It has advanced to the point where it has completely developed all its lower faculties and is now ready for evolution along mental and intellectual lines.

It was at this point then, ages ago in our evolution, that occurred what H. P. Blavatsky in *The Secret Doctrine* calls "the incarnation of the manasaputras." As already explained, the monad is far above this

human plane -- too far for it to be able to awaken even the intellectual principle in the human constitution. For this reason at first the manasic or mind element was then still "asleep." This state of things has been explained as follows:

The course of evolution developed the lower principles and produced at last the form of man with a brain of better and deeper capacity than that of any other animal. But this man in form was not man in mind, and needed the fifth principle, the thinking, perceiving one, to differentiate him from the animal kingdom and to confer the power of becoming self-conscious. -- W. Q. Judge, *The Ocean of Theosophy*, p. 53

Thus the intellect of the now almost human being overshadowed by its monad needed a spark, an impulse to awaken it into consciousness of itself.

This spark or awakening touch was given to those evolved human vehicles of the monad by the sons of universal mind. They are called in esoteric tradition the *manasaputras*, or "sons of mind." These beings called manasaputras are a hierarchy, or range or class, of spiritual entities. They perfected their intellectual evolution in a long, long past cycle of what was equivalent to human experience in a now vanished system of worlds. For this reason the highest of these manasaputras are by this time advanced in their evolution to the status of cosmic gods. They are great consciousnesses who make up, who are, the hierarchy of intellectual self-consciousness in our universe. As a great hierarchy or group they are what Blavatsky in *The Secret Doctrine* referred to as *mahat*, or the universal mind.

It was these manasaputras or sons of cosmic mind who gave the spark, the creative impulse, which awakened mind in the human vehicle already evolved for that purpose by the monad.

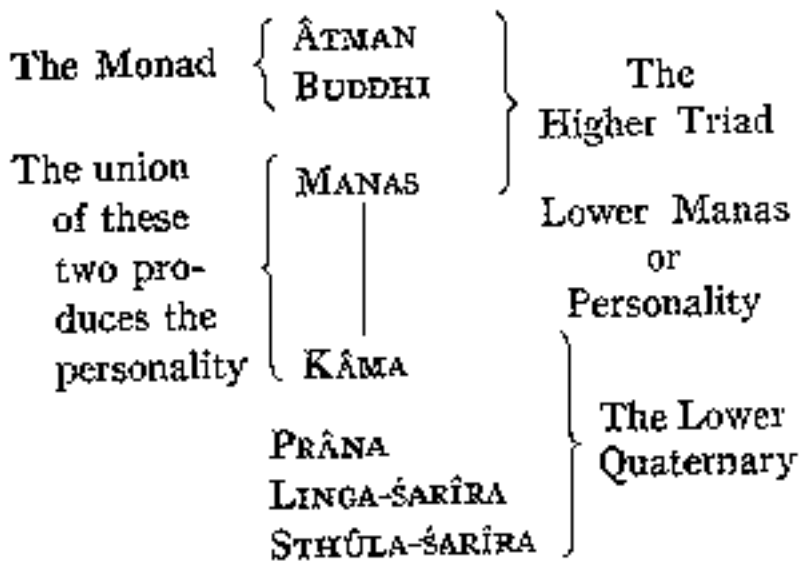

This process was something like the lighting of a candle. You cannot have a flame unless you have the fuel prepared in some definite form ready for lighting. Even a bonfire must be started from carefully laid fuel. In the case of the lighting of mind in the evolved human vehicle, man might thus be compared to a candle. He was a psychological vehicle or instrument evolved by the overshadowing monad through long ages of evolution. The forces of nature also contributed, so that when the time came that the creative flash could be given by the manasaputras, a flame would spring up, never again to be extinguished. Thus what then was human only in form became in actuality *manas*, a thinker. And this thinking principle linked the monad more or less directly to the animal nature, and human evolution was thus immensely quickened.

It was then, as said, that man first became truly man. For what differentiates a human being from an animal? Is it not mind, the power to think, to reason, to plan? Man is not guided by instinct alone as the beasts are. He is self-conscious. Sharply developed in him is the ego, the part which realizes, "I am I, and not anyone else. I am myself, not my environment. I am separate from all other things. I can influence or control these other things and bend them to my own uses, and so control my environment. Thus I can shape my destiny to suit myself."

Man alone has this power of self-conscious free will. He has the power of self-directed choice. And this he derives from manas the ego, the self-conscious thinker, awakened in him by the manasaputras. But, if this is the case, why is it, at present at least, that we do not show more power of free will over ourselves and our destiny? For the answer to this important question the reader is referred to [Mahatmas and Chelas](#) and *The Key to Theosophy*, pp. 180-6. It is this manas, this thinker, which in its higher aspects forms the third element of what we call the higher human triad. But before studying the other two principles which make up this higher triad, let us take a quick glance over the whole of composite human nature.

In the following diagram it is interesting to note that Sanskrit words are used to describe the different aspects of our septenary constitution. This is made necessary by the limitations of European languages. Western science, religion, and philosophy have so long forgotten the knowledge of the metaphysical and spiritual facts of being that no words have been developed to indicate or describe these higher and lower states of consciousness. But in the Orient the ancient sacred science -- theosophy or the esoteric tradition -- has been kept alive. Thus we find in the Sanskrit language, all ready for use, the words needed to make these seven principles easily understandable to those unfamiliar with them. And another reason for the use of Sanskrit is that these terms will then be the same in all languages, thus avoiding the translation of lengthy descriptions.

In the following diagram, the brackets indicate the relationships and some of the interactions of the seven principles.

It will be noticed first of all that what we have called the monad appears to be dual -- composed of two principles, atman and buddhi. And yet we have been speaking all along of the monad as a *unit* of consciousness. But when these two principles are understood, their inseparable existence in human evolution will be understood.

The Sanskrit word *atman* means "self." Every being anywhere, no matter how small, no matter how great, is a self. All these multimyriad selves are derived from the cosmic self, the universal atman or

cosmic life, as sparks are derived from their originating flame. There is the self or atman of our universe from which is derived the atman, the informing consciousness, of the solar system; and so on down the mighty scale of evolving beings until we reach mankind. And below mankind every being in all the kingdoms including atoms and electrons and elementals is a monadic self derived from the universal atman or self of the universe.

At the root of our being dwells *our* atman, the I AM, our self -- our sense of existence, of being alive. This sense of I AM is universal. It is the same in all creatures. And it is universal and the same in all because the inmost spiritual consciousness of every organism is an integral part of the universal self or atman, as a drop is an integral part of the encompassing ocean. And each single drop is like in composition and nature to every other drop and to the whole ocean itself.

This consciousness of I AM is sometimes difficult to understand, if we have never thought about it before. We are all so familiar with the ego -- it is about all that we know of ourselves. We are steeped in the consciousness of our *differentness* from everyone else. However, we can get some idea of what is meant by watching the young babe. Or we can find it in ourselves when we first awake in the morning -- aware of being alive and comfortable but not yet aroused to the sharp edges of our daily lives.

Atman, the I AM sense in each one of us, is universal and therefore unlike the ego or manas from which we derive our sense of "I am I." For this ego-sense is different in every person while, as said, the sense of pure selfhood, of being alive and active, is the same in all creatures, whether human or otherwise. The understanding of this basic selfhood of universal origin in each of us leads to the realization of true spiritual brotherhood and develops all our highest, because spiritual, powers.

It has already been noted that atman, the heart of the monad, is in its nature too far above this human plane to work directly here. So the first vehicle or garment with which it clothes itself is buddhi. This word *buddhi* imbodyes the idea, "to *awaken*." Thus the buddhic faculty in human beings leads to understanding, seeing into things, because it makes us awake or aware. How many there are who are still asleep -- unawakened! They are not interested in the common life of humanity -- in other people, in the horror of world conditions. Enough if they and theirs have a job and a car and a chance to enjoy life! But the person who has begun to think, to question, to seek, is waking up, particularly if his interest spreads out irresistibly from his own problems to an interest in the problems of others.

Buddhi as a principle is spiritual consciousness of the highest kind existing in that grade of evolution to which mankind belongs. When viewed from the universal standpoint of atman, buddhi is a garment or veil or vehicle of primary substance. But this "substance" is so close to the plane of the divine that viewed from below, from the standpoint of our comparatively gross mentality, it is pure consciousness. And so we can describe buddhi as spiritual consciousness. Dr. de Purucker in his *Occult Glossary* thus explains this principle:

Buddhi is the principle or organ in man which gives to him spiritual consciousness, and is the vehicle of the most high part of man -- the atman. Buddhi is the faculty in man which

manifests as understanding, judgment, discrimination, etc., and it is an inseparable veil or garment of the atman.

The use of this word "inseparable" explains why we can speak of the monad when viewed from our point of view as a unit.

Buddhi steps down the energies of atman to manas, the ego. From the standpoint of the ego, buddhi is practically a universal principle. It is therefore the seat or organ of impersonal love, that "love of all creatures" which is divine. And in the same sense buddhi is the origin of human conscience, our sense of rectitude and duty. Conscience is rooted in our feeling of duty towards others. It is also a sense of what is right. The right thing is the universal thing -- that which everyone ought to do when acting in harmony with spiritual law and order. The ego is willful -- seeks itself and its own way. Buddhi moves us to the sacrifice of egotistical feelings and actions to the principle of universal good.

A study of the higher triad with its different aspects and their practical relation to our daily problems would be one of the greatest contributions to psychology ever made. For the ancient wisdom teaches us to seek and to realize and make use of the almost unlimited spiritual powers which are stored there. It shows how to use them for the mastery of the lower animal and selfish nature by the higher triad. It is of incomparably greater utility and inspiration than digging into the libido and other underground byways of poor human nature. And as the student goes deeper into this study, he learns the sharp and important difference between the spiritual and the personal will -- a knowledge which will be of simply inestimable value to him. These points will become clear after reading Chapter 5 of this Manual.

---

## Chapter 4

### The Lower Quaternary

We have outlined thus far a necessarily brief description of the atman and the buddhic principles in our constitution, as well as of manas, the ego. We now come to a consideration of those sides of human nature with which we average men and women are more familiar -- the principles which comprise our lower quaternary.

The lower quaternary, as the name implies, consists of four principles: kama, prana, linga-sarira, and sthula-sarira. These four working together form the vehicle in which the ego, overshadowed and guided by atma-buddhi, reimbodies itself on this earth -- in a word, reincarnates.

#### KAMA

The Sanskrit word *kama* means desire. At first thought we may get the idea of kama as something low in the scale of human qualities, but such is not necessarily the case.

Kama is the driving or impelling force in the human constitution; per se it is colorless, neither good nor bad, and is only such as the mind and soul direct its use. It is the seat of the living electric impulses, desires, aspirations, considered in their energetic aspect. Usually however, although there is a divine kama as well as an infernal one, this word is restricted, and wrongly so, to evil desire almost exclusively. -- G. de Purucker, *Occult Glossary*

Also, in the *Bhagavad-Gita*, we find Krishna, who is the personified self of the cosmos, telling his disciple Arjuna:

In all creatures I am desire regulated by moral fitness. -- 7:54

Of course in the average man or woman desire is limited as a rule to narrow personal interests and certainly therefore it is not high in quality. We can better understand the range of this principle if we compare the desires of a Christ or a Buddha, in their compassionate self-dedication to the needs of the world, with the desires which motivate a gangster -- these being examples of extreme aspects of the human kamic principle.

In the average person desire is neither very high nor very low. It is the work of evolution to train us through experience in many lives to raise the quality of our desires, for these desires obviously form a powerful element in the development of character and therefore of evolution. Unfortunately, due to ignorance and selfishness, people too often use the vital powers of desire and will to secure success for themselves regardless of the rights and welfare of others. So we create disharmony and suffer sooner or later the consequences. This being an ethical universe we have thus had to learn mostly through suffering.

## PRANA

*Prana* signifies "life principle" -- vitality. It forms the psycho-electrical field, bounded by the organism, like the air in the lungs. Prana keeps the astral-physical organisms of all creatures alive and growing. It permeates the *linga-sarira* and the physical body from birth to death with ever-renewing currents of vital-magnetic energies. Prana also accounts for the falling to pieces of an organism. The death of an organism is caused in the first place by the prolonged wearing-down of that organism by streams of pranic energy which at last bring it to the point of dissolution. Both death and -- as even science is beginning to suspect -- sleep come not from the failure of life but from its excess.

## LINGA-SARIRA

This is the "model-body" upon which the physical body is formed. It is like a matrix or mold of ethereal matter into which the atoms of the physical body are built. It is often called the astral body. William Q. Judge wrote of it:

The astral body is made of matter of very fine texture as compared with the visible body, and has a great tensile strength, so that it changes but little during a lifetime, while the physical alters every moment. . . . The matter of which it is composed is electrical and magnetic in its essence, . . . The astral body is the guiding model for the physical one, and all the other kingdoms have the same astral model. -- *The Ocean of Theosophy*, p. 39

It is this astral model, flushed with prana, that preserves our physical identity. We have been told by scientists that within a period of seven years, more or less, the matter of the physical body is completely renewed. Each day we lose atoms which are replaced by others. We are therefore different physical beings today from what we were, say, ten years ago. What is it then that keeps our bodies in shape, so that in spite of this continual flux of entering and departing atoms, which is going on continuously all our lives, each body yet retains its own characteristics of structure? This marvel is due to the model-body which, existing within the physical, molecule for molecule and cell for cell, holds its form so that even scars, deformities, or mere wrinkles are perpetuated.

There is another point which should also be emphasized:

The astral body has in it the real organs of the outer sense organs. In it are the sight, hearing, [taste], power to smell, and the sense of touch. -- *The Ocean of Theosophy*, p. 42

In the case of marking by being born legless, the idea and strong imagination of the mother act so as to cut off or shrivel up the astral leg, and the result is that the molecules, having no model of leg to work on, make no physical leg whatever -- and similarly in all such cases. But where we find a man who still feels the leg which the surgeon has cut off, or perceives the fingers that were amputated, then the astral member has not been interfered with, and hence the man feels as if it were still on his person. For knife or acid will not injure the astral model, but in the first stages of its growth ideas and imagination have the power of acid and sharpened steel. -- *Ibid.*, p. 41

The astral body or *linga-sarira* is made of astral matter or substance. Speaking generally, it might be said, of course, that it is made of what science used to call ether. Theosophy, however, can explain much more about the ether than science. The aether or astral light or, to give it its technical name in theosophy, the *akasa* is, like everything else, sevenfold. Its highest or innermost levels or reaches are the home of our higher principles. Its lower and grosser levels surround our earth and we call them the astral light. All people cannot see the astral light in the way that they can see the surrounding air because they have not developed the astral faculties to enable them to see it.

Psychics and clairvoyants see its faintly luminous coils. It is this star-like luminosity that originated the name "astral." These sensitives have developed in themselves the astral senses which correspond in their range of activity to the astral plane. But these so-called visions of clairvoyants are seldom anything but glimpses into the lower levels of the astral light. These levels are the ones closest to and surrounding the earth. They are a welter of images and influences produced upon and within astral matter by mankind's

unregulated and often evil emotions, thoughts, and desires. Hence these visions are not only misleading but frequently dangerous.

At the moment of death, when the spirit-soul lets go of all the lower principles, they fall apart. The astral body then separates out from the physical but does not leave it, as they belong together. And as the physical body disintegrates, the astral likewise slowly passes away.

## STHULA-SARIRA

There are certain interesting facts connected with the physical body, or sthula-sarira, which theosophy has always taught but which physical science has only recently discovered. One of these facts is that physical matter is mostly holes. We are now told by scientists that if all the material spread out in this seemingly solid body of ours were collected into a compact mass, it would actually occupy a space about the size of a pin head!

The body, therefore, though appropriately called the sthula-sarira or "gross body," is really foam-like, full of vacant spaces, something like a sponge. This is one of the many paradoxes or seeming contradictions which abound throughout nature and which make the study of her processes so fascinating. The grosser a substance *appears* the more foamy it actually is, and therefore the more illusory. Our bodies appear solid because they are formed of particles of matter in such inconceivably rapid motion that to our senses they seem as if solid. Just as when we whirl a lighted stick fast enough we see what appears to be a complete circle of fire. This indicates one great lesson that we may learn from a consideration of physical matter -- that the real things, the permanent things, are invisible to our physical senses. We do not even see physical matter, but only the forms which it takes in the incomprehensible rapidity of its vibrations.

The sthula-sarira illustrates for us another basic spiritual fact of the cosmos. For it is a convenient example of the law of analogy, "As above so below; as it is below, so is it above." In other words, the physical body being, in its substances, structures, and functions, an offspring of the universal cosmic life, it is itself a cosmos in miniature. This being the case, a knowledge of what takes place in physical bodies will, in the light of the archaic teachings of theosophy, reveal to us and illustrate faithfully the processes of the invisible spiritual worlds. As Blavatsky tells us:

*Analogy is the guiding law in Nature, the only true Ariadne's thread that can lead us, through the inextricable paths of her domain, toward her primal and final mysteries. -- The Secret Doctrine 2:153*

The use of this law of analogy therefore -- in the action of the nervous system and the circulation of the blood, the nuclear structure of the cells, and many other facts -- will provide a wonderful key to the understanding and application of the deeper teachings in regard to the structure and operations of the invisible and causal worlds. To the ignorant the body is a gross drag upon spiritual experience. But when kept in its proper place, controlled and intelligently used, the body has its own basic part to play in our

evolution. For without it, how could we function in human life, where we are daily gaining such rich lessons in experience and development?

The relation of the sthula-sarira to our evolution may be viewed in two ways:

(1) It is our vehicle of contact with physical nature, and also with human life where we gain necessary lessons in experience and consequent development. Besides, without a complete knowledge of all the aspects of nature, divine, spiritual, mental, emotional, vital, astral, and physical, we would never reach the complete evolution of all our faculties.

(2) The sthula-sarira enables our higher principles to act not only upon our own physical atoms but also upon the atoms throughout the whole range of our physical and mental contacts. And this dynamic influence helps unconsciously in the evolution of all those atoms, particularly those used in our own body. We must remember that at the heart of every atom is a spirit-soul or monad pouring through it the urge to unfoldment and growth. And the effect of human will and evolutionary desires upon these developing monad-atoms is continuous and immense. So that the physical body has its definite and vital use in our development.

---

## Chapter 5

### **Kama-Manas -- The Personality**

The everyday self which we live with and imagine that we know thoroughly is called the personality. But it is precisely this personality of whose elements we are so ignorant. And this is true not only of the man in the street but even of the professor of the modern so-called science of psychology. For some of the most popular explanations of the human psychological nature are delvings into what we have already spoken of as the cellar regions, the lower physiological side, of the human psyche or soul.

The whole drama of human life, made up of the struggle within us between the forces of good and evil, centers around the personality. Why is this? If you look at the diagram you will see. It is because the personality is dual, twofold. It is a compound, a resultant of the mingling of the nature of manas, the thinking ego, with kama. It may do no harm to repeat that the kind of kama exhibited by the ordinary person is selfish passional desire. It is only the rarest human beings who know much about the higher aspects of kama, such as divine desire, although there are many men and women whose compassionate humanitarian interests and activities are lifting them slowly to those highest planes of desire. Therefore the technical name in theosophy for the personality is kama-manas. And as humanity is at present constituted, this name is more expressive than manas-kama, there being as said but very few in whom the thinker takes precedence over selfish emotions, or reason over impulse.

Kama-manas or the personality is the instrument, the vehicle, by which the monad with its spiritual

urges and energies is brought into remote control of this mental-material world. All evolution is produced by original monadic urges and energies poured down or outward through our less spiritual principles. If the monad were to withdraw its presence, as it does at death, the principles would fall apart and the man would disappear from this physical world.

This personality of ours has been built up in its kamic parts by the monad in its passage or pilgrimages through the lower stages or kingdoms of nature, as already explained. During that time it fashioned what is sometimes called the animal soul, another name for our kamic nature. And then when this kamic soul was ready, it was touched into self-consciousness, awakened to humanhood, by the infusion of the divine intellectual fire of the manasaputras. Thus kama-manas came into action. It is the combination of the animal soul and the thinking, self-conscious nature in the human constitution.

This personality then began to reincarnate as the vehicle for its higher manas. It took human form again and again, life after life on this earth. But all this time while man has been developing his faculties of will power, imagination, reason, creative intellect, and the like, the instincts and desires of the animal or kamic self have been strengthening and developing too, by the very reason of their dynamic alliance with manas. They have become strong, self-centered, and self-demanding. Thus the two forces in human nature, the spiritual and the animal, have been at war all down the ages. The lower kama-manasic self always urges to passion, strife, and selfishness; the higher manasic ego, inspired by atma-buddhi, slowly through innumerable incarnations has been striving for spiritual mastery.

In this way the lower and material principles are inspired or urged forward in self-unfoldment and are thus slowly transformed and developed from material into spiritual energies. For this is the purpose of life and the object of evolution -- to raise the mortal into immortality.

So that today we see our nature hovering upon the point of balance between self-indulgence and self-mastery, the animal and godlike in human nature. And this condition in the individual is naturally reflected in the mass. The present condition of our world well illustrates the situation. Nations, on the one hand, are urged by ideals of peace, international fraternity, and cooperation. On the other hand, they are goaded by greed, ignorance, and the clamor of selfish national interests. It was this very condition which was foreseen by the great teachers, the mahatmas who through the work of H. P. Blavatsky founded the Theosophical Society. At the same time they restored to us the knowledge which will enable the spirit-soul working through our higher nature, both in the individual and in the mass, to win the final victory over selfishness and hatred.

Katherine Tingley once wrote, "Impersonal love is the secret of life." It is the cure for all present evils, both individual and collective. By "impersonal" is meant self-forgetful love. Even more, it means love for all beings, no matter whether base or noble, no matter how different or hostile to us or dear and close to our hearts. By silencing the kama-manas, the selfish demanding personality, we begin to understand, to love, and to *know* in a wonderful new way, bringing us happiness and peace. Becoming quick to love, and so to understand and forgive, irritation and criticism and resentment fall away from us. No matter what happens we shall then never hinder or be unkind but always try to help. Ultimately we shall go

farther still and come to understand and forgive our enemies -- the happiest state of all. Broadening then gradually our sympathies, we extend our love to include all nations as well as our own beloved land. And thus we eventually become a power for universal good.

There are truly magical powers wrapped up in our higher nature -- creative powers which are even now feebly illustrated by intuitive imagination and disciplined will; with the unselfish impulses of our deepest hearts which lead to grand humanitarian activities; and all our dreams and visions and urges towards that spiritual genius which is beginning to unfold in humanity even today. But these seeds of magical powers will not sprout -- they cannot -- while our whole attention and desires are concentrated merely upon business interests, selfish self-evasive pleasures, and the race to keep up with or get ahead of everyone else. We are not expected of course to neglect or abandon necessary material pursuits; but in changing our inner *objective* we seize our present opportunity to develop the aspect of kama already referred to as divine desire.

The impulse to bless with unselfish service our family or friends, to take an honorable part in civic or national betterment, to give help and consolation to those in sorrow or need -- these impulses spring from our spiritual monad, atma-buddhi. Under this magic sunshine the dark side of the kamic principle will wither away; divine kama will come into action and coalesce with lower manas. Duality will disappear and the two will become welded into a perfect vehicle, a luminous personality, through which the spiritual monad, our inner god, may pour its divine energies into our human hearts. Such men were Jesus the Christ and Gautama the Buddha.

---

## Chapter 6

### We Are Rooted in a Sevenfold Universe

The sevenfold nature of the universe has already been referred to. One of the most important teachings of theosophy tells us that all we see of the real universe is but its outermost or physical parts. The other six parts are invisible to us. They are built of more ethereal matters than physical and move to higher and finer rates of vibration. We cannot sense them because we have not yet developed the etheric sense organs or the finer perceptions which could reveal them to us. So that six-sevenths of the great organism of Mother Nature is hidden from us at present, just as in the structure of light there are ranges of vibration beginning with the ultraviolet at one end and the infrared at the other. These are either too rapid or too slow to be perceived by our organ of vision, but they nevertheless have a very marked effect upon our health and in other departments of the world of physical causes.

The fact that all things are moved and motivated by inner invisible energies and their living urges, we see around us even in our physical world. A flower or a tree -- is not its life of distributing sap, of color transmutation and growth, unseen by us in all but its effects? And a rock is held together by the attractions and repulsions of the atoms and electrons which form the imperceptible side of its structure.

This fact of the physical and exterior being "worked from within" is what we call a law, being universal throughout nature.

Thus these inner and invisible realms are the causal or creative worlds. They produce the physical universe. Nature as we see it around us is but the multifold physical organism through which these inner realms of creative evolution work. But nature is much more than this. It should properly be called universal nature, and has been thus defined:

. . . 'Universal Nature' . . . means Nature spiritual and material with all the countless hierarchical ranges between, including worlds visible and invisible, beings divine, spiritual, intellectual, ethereal, astral, and physical. -- G. de Purucker, *The Esoteric Tradition*, p. 4

The foregoing will be easier to grasp if we think of it as exemplified in our own human experience. Take our nearest and dearest. All that we can see of them is their physical appearance and activities. But that is the very least of their meaning to us. It is their inner complex invisible selves that we love -- their sympathy, intellectual or temperamental fascination, or their moral beauty. These are the person. Someone who at first acquaintance may have seemed physically ugly to us becomes at last beautiful because of a noble or loving character. Or another who at first sight charmed because of physical beauty may end in being actually ugly to us when the real nature is discovered to be selfish or cruel. So with the world around us. It is made up of inner forces and invisible creative energies which are the reality of which physical nature is but the face and form.

There is a direct relationship between the invisible six-sevenths of human beings and the invisible six-sevenths of nature. In either case the physical aspect is the lowest or seventh principle, the body or sthula-sarira. And as we derive our bodies from the earth and our vitality indirectly from the physical sun, so we derive our invisible six principles from the six invisible principles of universal nature.

"But," someone perhaps objects here, "it has already been said that we derive all of our principles from the monad. The monad, you have told us, emanates buddhi, its envelope or garment of spiritual intelligent substance. Then buddhi produces manas, manas unfolds kama, and so on down the sevenfold ladder of being. But now you say that man derives his principles from the seven principles of nature. There seems to be a contradiction here."

No, because it is just as we see it in human experience. How often we hear the query as to character and environment. Which is the more powerful in shaping a person's life -- his inborn character or the environment into which he is born? In the last analysis we must agree that while environment is tremendously important, character must actually lead in formative power. Otherwise we should never see those cases of people born in poverty who have raised themselves to the pinnacles of achievement. The well-known phrase, a self-made man, has sprung from this fact -- that the real directing power of a person's life is within himself. When strong enough it cannot be nullified by his surroundings.

Our own characteristic principles spring from our spiritual individuality, the monad. But these principles of ours are also acted upon by the external principles of nature. An acorn will produce only an oak tree. But the acorn is fed by water from the air and chemicals in the soil. It later draws in solar vitality to build up its cells and produce color in its leaves and blossoms. Man likewise, the divine seed of the universe, draws sustenance from the surrounding seven principles of nature. The astral body cannot be fed from the earth, only by its own elements contained in the lower levels of the ether. And so on up the scale. Each principle draws its sustenance from higher and higher levels of the invisible six higher principles of nature.

All our principles are dual. Not dual in the sense of being in two parts like a box and its cover, but two in action in the same way that the electric magnet has a positive and a negative pole. Every principle has an energetic, that is a positive consciousness side, and a substance or negative side. And it is through this latter that the consciousness which derives from the monad is able to work on the lower planes of being. The consciousness side is spiritual electricity derived from the life-force of the monad. The material side is drawn by the magnetic attractions of this life force from the reservoirs of life-atoms of the corresponding principles in sevenfold nature.

We must also remember that the monad itself is an integral part of *spiritual* nature. It is an emanation of the root-consciousness of our universe, the cosmic self, and expresses its homogeneous energy through its immediate vehicle buddhi. So that we realize that just as we derive our physical energy indirectly from the sun, we derive our spiritual life indirectly through the monad from the spiritual energies of universal nature. It might be added here that the sun and all the planets are likewise sevenfold. And it is these inner principles of the solar system to which theosophy refers when it speaks of the inner worlds. It is in the relation of our seven principles to the seven principles of the sun and some of its planets that the explanation of this whole matter lies.

This subject is one of the most fascinating of all the theosophical teachings, involving the glorious destiny of mankind with its experiences and adventures in the inner worlds. But it is too wide-reaching and important to be dealt with adequately here.

---

## Chapter 7

### **An Ancient Basis for a New Psychology**

The final test of any idea lies in its power of practical application to the difficulties of human life. Can it help us to develop and strengthen character? Will it lead us into more satisfactory human relationships, giving a greater understanding of our fellows with consequent capacity to help them? Will it give us a larger power to control environment and direct our own destiny? Theosophy answers that the knowledge it confers of the composite nature of man puts into our hands the practical means which enable us to do all these things. And thus it gives us the basis of a sound and workable psychology.

Psychology is one of the most popular subjects in our present-day world. Its uses and implications are evident even to the thoughtless. Such expressions as "the psychology of salesmanship," "mass psychology," etc., indicate how widely spread is the perception of the importance, for success in any field, of understanding the basic principles of human nature. And the use of every form of commercial or political slogan to create consumer or voter psychology illustrates this point.

If a person will study himself but for one day he will be amazed to see the wide range of moods, impulses, and character trends that his thoughts and actions will exhibit. And he will also be astonished to find how very little he knows about what goes on in his inner self. He will come to realize that he is almost completely at the mercy of these shifting currents of consciousness upon which he is more or less dangerously drifting -- dangerous because of his ignorance of the source or the meaning of these contradictions within himself.

In fact, it is the almost universal *discontinuity* of human nature that shows how composite we are. And this rather highbrow statement means that the inability of the average person to hold one line of thought or feeling or willing for any considerable length of time indicates that there are different and opposing elements in his make-up. These prevent him from continuing in the same frame of mind or feeling for very long at one time. Obviously, then, until we master these opposing elements -- bring them into harmony and learn to direct them -- they will continue to run amuck in our lives. But to be able to master them, must we not begin by knowing what and where they are?

Then we go a step farther and examine the dual personality -- how it works, how to understand it and direct its energies. For here in this dual personality is where the battle is waged in the evolution of the human being into something higher. It is in the struggle between the personal and the divine.

This struggle, as already pointed out in Chapter 5, centers in the dual personality. And this personality is dragged down now by its alliance with kama, and now uplifted and purified by its union with higher manas. H. P. Blavatsky in *The Key to Theosophy* gives us a very clear and complete analysis of this dual psychology in human nature. At one point she tells us of the

*essential*, inherent, characteristic, heaven-aspiring mind (higher *Manas*) and . . . the human quality of thinking, or animal cogitation, rationalised owing to the superiority of the human brain, the *Kama*-tending or lower *Manas*. -- p. 184

We must get a practical conception of these two elements in ourselves. We must learn how to recognize each element in its workings in our daily lives; how to cultivate the higher manas and how to transform its lower kama-manasic side into an instrument or vehicle for the use of the higher manas. Until we have this knowledge and can put it into self-conscious operation, we will be at the mercy, not only of our moods and weaknesses, but will also react injuriously to the moods and weaknesses of others.

Self-consciousness means self-recognition. It is the power of manas as the thinker to realize itself as a separate individual being, different in character and capacities from all other beings. From this follows a

recognition of our relationship with others and to our environment -- what these mean to us and how to react to them.

It is in this field of self-consciousness that free will in man first arises. Through his recognition of himself in relation to others and to his environment there comes home to him a realization of his power to develop himself and use his circumstances and relationships to further his own desires and aims. But it is here in this field of self-consciousness that the struggle of duality in his nature takes place. Recognizing these facts, man can apply them to the selfish personal ends of the animal nature below, or he can subject his personal will to the silent but ever present demands of the higher manas. Here at this point, as said, the struggle of human evolution concentrates.

As man progresses he learns to control and to dedicate the lower kamic nature to the service of the higher manas. If he fails to do this, he deteriorates. If he uses his self-conscious free will to injure others -- or even only for his own personal ends -- he makes the kind of karma that produces sufferings and failure. Yet, even so, through these sufferings and failures he slowly learns and develops. And at last through many lives the personality is brought to realize that only the alliance with higher manas can bring peace and happiness.

When we reach this point we first know true freedom. Knowledge of the *spiritual* psychology taught by theosophy convinces us that only when the will voluntarily subjects itself to the good of others does it become really free. A person acting entirely from selfish animal instinct is merely willful. And he suffers as a slave to fear and envy and every form of personal frustration. He only imagines himself to be free.

We may use an extreme case to illustrate this important point. Compare the man of civic virtue, who willingly lives in entire conformity with the equitable laws of his community, with the hunted existence of the habitual law-breaker. Most criminals pass the greater part of their lives in prison, while the more notorious ones who may escape imprisonment live under the heel of some petty criminal dictator who, like themselves, is generally short lived. But the man who obeys the ethical dictates of brotherhood and gladly adjusts his life to the laws of his country enjoys freedom of body, mind, and spirit.

Moreover, in exact proportion as we consciously discipline our free will by conforming to the good of others do we expand in consciousness. For this attitude means that we are turning the personality to the light and power of higher manas, and are thus opening our whole lower nature to the divine.

The reason why in following this course we are expanding our daily consciousness and opening our lower selves to the divine, lies in the nature of buddhi and atman. Atman, as already explained, is the ray of the cosmic universal self which dwells at the innermost center of each of us. It is identical in us all, being therefore the root of universal brotherhood. Atman is pure divine consciousness at one with the universal source from which it springs.

Buddhi is the divine vehicle of universal consciousness. It is emanated from atman. Buddhi therefore

partakes of the universal nature of atman. Within buddhi lie all the universal potencies of atman -- impersonal love of all creatures, genius in its highest and divine expression, intelligence in its most glorious and abstract power.

Thinking this over we see that when any personality strongly turns to higher manas and obeys its mandates of love and compassion and self-dedication to the universal and the real, it brings itself under the quickening power of the buddhic radiance. For this buddhic radiance broods like a divine presence over the nature and activities of higher manas. This radiance is always there. But most personalities are so saturated and obscured in a fog of selfishness and petty personal interests that the pure rays of the buddhic splendor cannot penetrate to their brain-minds.

But when, through deliberate self-discipline, these fogs are cleared away, then manas is free to ally itself with buddhi without hindrance. It is no longer preoccupied with the effort to control the distracting struggles of the kama-manas. When this happy time arrives, then the buddhic power of impersonal love, the stimulation of divine and creative intellect, will quicken all the lower man. Unsuspected faculties and powers will begin to unfold in the hitherto limited personality. It will grow almost daily in peace and happiness and the ability to help and bless those with whom it lives.

This is why virtue and unselfishness are truly and literally their own reward. And this too is why the practice of brotherhood and the spiritual discipline of the human will can lead to a magnificent expansion of consciousness. Such people, living under the glory of the buddhic splendor, are on the way to becoming gods in human form.

If the student will compare this system of truly spiritual psychology with the other systems in vogue today, he will see how much farther it goes in explaining himself to himself and in throwing light upon the complex world of people about him.

The following passage from G. de Purucker's *Fundamentals of the Esoteric Philosophy* will be illuminating in this connection. He tells us that the word psychology

is ordinarily used to signify in our days and in the seats of learning in the Occident a study more or less cloudy, mostly beclouded with doubts and hypotheses, actual guesswork, meaning little more than a kind of mental physiology, practically nothing more than the working of the brain-mind in the lowest astral-psychical apparatus of the human mind. But in our philosophy the word psychology is used to mean something very different, and of a nobler character: we might call it pneumatology, or the science or the study of spirit, because all the inner faculties and powers of man ultimately spring from his spirit. But as this word pneumatology is an unusual one and might cause confusion, let us retain the word psychology. We mean by it the study of the inner economy of man, the interconnection of his principles, so to speak, or centers of energy or force -- what the man really is inwardly. -- Chapter 12

Theosophy, then, confidently offers this system of psychology, knowing that the person who will apply it to himself and the problems of his daily life will find it supremely practical. It is not new. For it was founded ages ago on the always-existing and unchangeable laws of that universe of which human beings -- their nature, problems, and evolution -- are an inseparable part.

It is not experimental. For it was developed and tested, and made as nearly infallible as anything in this world can be, by "the seers and sages of the ages," who, as G. de Purucker tells us, have

penetrated behind and beyond the veil of appearances; have gone behind that veil to the roots of things; have sent their souls deep into the womb of being and have brought back knowledge therefrom. Wonderful indeed are the systems of thought that these great seers and sages of the ages have formulated in human language, touching every phase of the human being; systems which are so symmetrical, so profound in philosophical and scientific reach, that every fact that exists in human psychology finds its proper niche, its proper pigeon-hole so to say, its exact lodgment, where it belongs. -- *The Masters and the Path of Occultism*

The only thing new today in this ancient system is its "formulation in human language" with a few necessary adjustments to the modern point of view. It stands as it has always stood, upon its demonstration of cosmic law, revealing man as a sevenfold being like the universe around him; and pointing out as it has always done the only road to happiness -- harmony in thought and word and deed with the universal heart of impersonal love in which spiritually we all live and move and have our being.

## Chapter 1

### Introductory

Death is the opener, the one giving vision; death is the greatest and loveliest change that the heart of nature has in store for us. -- G. de Purucker, *Golden Precepts of Esotericism*

"O Death, where is thy sting? O Grave, where is thy victory?" We are all familiar with these beautiful words of Paul, but alas, how little real consolation have they given to bereaved hearts! For there has been no teaching or experience to bear out their promise of divine assurance. And yet the truth has been close beside us all the time, whispering to our hearts in the very voice of our own love for our departed: *Spiritual man is eternal: there are no dead.*

Love itself is the evidence of our spiritual survival -- true love, which is unselfish and undemanding, pure, forgiving, and indestructible. Can we ever cease to love, though we may at least cease continually to mourn, those who have preceded us into the Land of Light? Our love, just because it is indestructible, must spring from something in us which is also undying, for how can a quality be greater than the source from which it springs?

It is here, in love itself, that we must look for proofs that the human spirit lives for all time. But we must not forget that it is real love only, and not selfish emotional clinging, that can open for us the door of true spiritual communion with our departed.

Theosophy tells us that the seeming separation from our loved ones at death is not a reality, and that we live in illusions. Does not even physical science tell us that matter is "mostly holes"? Yet matter and external life seem to have become for us all that we care to understand. We live almost entirely in the material aims and interests of our personalities -- our brain-minds or our emotional mentality. And these personalities, being of the earth earthy and bound up with the bodily things that perish with the body, themselves die and pass away from human ken. The great lesson we have to learn, if we would keep in spiritual touch not only with the dead but with all those who are absent from us in the flesh, is the fleeting nature of the personality. We must learn to understand our personal selves for the transitory things they are. Then, discovering and living in the spiritual reality behind them and within them, we shall find our inner immortal selves and begin to live in and for that permanent root of our being. When we can do that, we shall *see*; we shall *know* ourselves as being immortal today -- now -- in this moment! And we shall then also recognize the true selves of those we love, and experience in every moment of our lives the fact that we are together always, always in real touch with one another even when the bodily eyes do not see the beloved face and the bodily ears hear not the voice of the absent. It is knowledge alone of our spiritual selves and of the inner spiritual selves of those we love that will give us the victory over death.

There is indeed truth to be had. It is within the power of each one of us to solve all our problems and find healing for every sorrow. Death is not a mystery in the sense of something that cannot be understood. The truths about death are within the reach of all of us.

It is only our ignorance of the spiritual facts behind material life that surrounds death with such grief and dread and fearfulness. If we will but have courage and determination we may lift the veil and find, by means of our own awakened spiritual faculties, that death is but an entrance to a higher form of being on a plane where we and our loved ones are inseparable; and that, together always, "we advance from age to age and from heights to greater heights forever."

Ignorance is our greatest enemy, and above all else ignorance of our own nature. *Man, know thyself!* for in thee lie all the possibilities and realities of the universe. It is because most of us know practically nothing of ourselves beyond that narrow groove of living in which our thoughts and feelings daily repeat themselves, that we are ignorant about why we are here and whither we are bound.

The illusory and deceptive nature of material things is being gradually brought home to the thoughtful by the work of modern science. Physicists, for example, tell us that our bodies in the last analysis are made up of small electric particles which science classifies as electrons, protons, neutrons, etc., but which theosophy calls lives or life-atoms. If all the particles in a human body could be packed together, we are told they would be no larger than a speck of dust. And yet it is this speck -- spread out as it were by the magic of the life forces -- which makes this relatively enormous, seemingly solid physical body. Similarly, a table, a block of marble, or any "solid" body is really a mass of these particles vibrating with such inconceivable rapidity that our eyes cannot see between them, and so we sense the illusion of solidity, as when we whirl a lighted stick, it appears to our vision like a complete circle of fire. Thus we understand how it is that what we have always thought of as "solid reality" is actually an illusion, though real enough when looked at from the viewpoint of experience.

We have also recently discovered that there are forms of matter which we cannot see because their rates of vibration are not perceptible to our senses -- like infrared and the ultraviolet light rays, one too slow and the other too swift in its oscillations for us to see them, though their existence is proved by photography and other experimental tests.

If then we are to understand the mysteries of life and death -- to see and to know those things of the spiritual realms which are beyond our present perceptions -- we must realize the deceptive nature of merely material things. And we have to recognize the meaning to us of the existence of forms of matter which are beyond our present ken. We must understand what science is just beginning to demonstrate, but which theosophy, the ancient wisdom-science, has taught for ages: that the real universe is built, not of matter, but of consciousness. Man is not a body, for that is illusory. He is a center, a unit of consciousness, imbodyed in a garment of impermanent flesh.

The body and the personality or brain-mind -- that is, our everyday selves -- are not of course to be undervalued, for they are our tools, our apparatus for experience in the world around us where our present evolution is taking place. Indeed, a true understanding of our personalities would enable us to develop them into a beauty and usefulness now undreamed of. But we cannot do this, nor can they be trained to serve us properly, until we can step aside in our thoughts and view them in their relation to the deeper, undying self in which lies the key to all our "mysteries."

We are bewildered often by our own moods and mental conditions. We do not understand why we are so changeable from day to day. But we know that there is within us something permanent which can recognize these changes and observe them, something by which we have carried forward our sense of identity from childhood to old age, and through all the experiences which so greatly alter character. This permanence within is the true self, which persists beneath our moods much as the sea remains unaltered for all the waxing and waning tides and storms that undulate its surface. And this abiding reality within is our spiritual self.

In thinking this over we see that the real person can be best understood if we regard him not so much as a body or a mind, but as a consciousness. The word "consciousness" is one with which we should familiarize ourselves, for consciousness is the stuff with which evolution works. It is the basis of all life and growth and being. And a human being is really a complex of different kinds of consciousness in which the spiritual self is the binding element -- the invisible core, so to speak. Even the leading exponents of science no longer look upon consciousness as something which is a byproduct of the brain, but as the fundamental stuff of existence (see *The Esoteric Tradition*, pp. 409-13).

Now what do we mean by consciousness? Radically, it is the sense of I AM: I exist: I am alive, feeling, and experiencing. But this I AM is only the root of ourselves, the impersonal, universal basis. During life this sense of root-consciousness develops into many forms: bodily consciousness, emotional and mental consciousness, and greatest of all, self-consciousness: the sense of *I AM I* -- I am myself and no one else. Each of these various kinds of consciousness itself grows into a complex, or bundle, of

energies, which exist in us as centers of activity.

That this is true we recognize in the fact that different individuals are pretty sure to think or feel in certain characteristic ways. We do not expect a miser to act upon a sudden impulse of generosity. He has built up through thought and habit certain strong centers of feeling that dominate him, even when generosity might serve his own interests. But most of us have not developed in so definite a way and so are hardly aware of the growth of this inner psychological organism of loosely knitted centers of feeling, any more than we are aware of the growth of our bodies.

Nevertheless, these centers are there. We identify ourselves daily, first with one then with another, as our moods testify. We have built these centers ourselves throughout the years. They are the basis of our characters and actions. All the tyrannies of temperament, the difficulty of breaking habits or getting rid of prejudices are due to the existence of these centers of energy which we have all unaware been building within us all our lives. So it is to the study of consciousness that theosophy first of all directs us. The mystery of death is one of the mysteries of consciousness.

---

## Chapter 2

### Sleep and Death

The similarity between sleep and death has impressed all thinkers. The ancient Greeks had a saying: "Sleep and death are brothers." For death is the same phenomenon as sleep on a larger and deeper scale. We all recognize sleep as a temporary state because we understand it, or imagine that we do. But we think of death as the end of life when, as a matter of fact, death should not be coupled with life in that way. We ought not to say "life and death" but *birth and death*. We do not think of birth as a final thing because we know it is followed by death. But theosophy shows us that neither is death final. Death is not only a birth of the spiritual man into a higher sphere of existence, but death in its turn is followed eventually by man's rebirth upon earth. So that it is life or consciousness which is the great enduring fact; and birth and death are but rhythmic events in the endless circle of the conscious evolution of all things.

Thus in our daily experiences we find that sleeping and waking are also the rhythmic events through which this life rounds out our personal development. If we would but observe ourselves more closely in the light of theosophical teachings, and would link up death with the experiences of our ordinary consciousness, it would cease to be such a dark and hopeless riddle. Once recognized as an understandable part of our evolution and as being rich in interest and new discoveries for the mind and heart, the study of death adds a new and wonderful chapter to the romance of our spiritual history.

. . . I tell you, my Brothers, that each one of you, given the right key, can solve all the mysteries of Sleep and therefore of Death, because Sleep and Death are psycho-physical

brothers. . . . Exactly the same succession of events takes place in death that ensues when we lay ourselves in bed at night and drop off into that wonderland of consciousness we call Sleep; . . . Death and Sleep are brothers. What happens in sleep takes place in death -- but perfectly so. What happens in death and after death, takes place when we sleep -- but imperfectly so. -- G. de Purucker, *Questions We All Ask*, Series II, No. 19

Now if we consider a little more observantly our various states of consciousness, we find another valuable clue. But what do we mean by states of consciousness? Most of us, you see, rarely think of ourselves as anything but bodies animated by a physical brain. We do not go deeply enough into our own inner life to realize that the real part of us consists of our consciousness centering itself at different times in different parts of our constitution. This is very simple to understand if we will reflect upon the fact that even our commonplace daily life is made up of states of consciousness as different as possible from one another.

Some of these "states" or functions of our consciousness are emotional, such as anger, grief, happiness, or excitement; occasionally they are purely intellectual, as in the work of a scientist or a writer; again we may center ourselves, when we are hungry or tired or have suffered a painful accident, entirely in the body. At night our consciousness passes into still other and less familiar functions or aspects of ourselves.

Nearly everyone has had the experience, when walking along the street, or in reading or conversing, of noticing something that instantly recalled a vivid dream of the preceding night. Or, upon waking in the morning, one's mind is full of some dream experience that, though sharp and significant at the moment, fades hopelessly as waking consciousness returns. In the first instance the dream might never have been remembered but for the external event which recalled it. Both instances show, however, that we have experiences in consciousness of which we may remain ordinarily unaware, but which on their own level are as vivid as those of the brain when awake. How many such experiences has the inner self not had that are never recollected by the waking self! Yet they have existed, have at the moment been as real as waking life, as real as those infrared and ultraviolet rays which we never see. Moreover they have had their share in shaping us to what we are. And herein lies the clue above referred to.

So if we would understand death we must study our own consciousness, we must *know ourselves*. For, as already emphasized, consciousness is the fundamental fact of the universe. Modern science, so long convinced that consciousness was a mere byproduct of matter, is now gradually, through some of our foremost scientists, coming to the theosophical point of view, and are beginning to talk about consciousness as the reality behind all phenomena. Two passages are here quoted from men of different temperaments and outlook, the first being from Max Planck, regarded as one of the soundest and most original researchers:

. . . I regard consciousness as fundamental. I regard matter as derivative from consciousness. We cannot get behind consciousness. Everything that we talk about, everything that we regard as existing, postulates consciousness. -- *The Observer*, London,

January 25, 1931

Sir James H. Jeans, another original scientific researcher, expresses the same idea in almost identical words:

I incline to the idealistic theory that consciousness is fundamental, and that the material universe is derivative from consciousness, not consciousness from the material universe. . . . It may well be, it seems to me, that each individual consciousness ought to be compared to a brain-cell in a universal mind. -- *The Observer*, London, January 4, 1931

With the basic thoughts expressed in the above quotations theosophy, the ancient wisdom, is in complete agreement. It has been teaching them as long as mankind has existed. But we now begin to see where this idea leads us: If consciousness is the fundamental reality in the universe and each person is an individual center of that consciousness, this shows him to be as real and therefore as indestructible as the universe itself. He is a droplet of the universal life.

Indeed, the universe itself is made up of consciousnesses, stretching in innumerable degrees of development downward from mankind to the lower kingdoms, to the electron, and even below; then upward, from mankind to divinity -- an endless scale of hierarchical beings of which we are an integral part. We are parts of a living whole, so that until the universe itself passes away, we and all creatures composing it cannot cease to exist. We are sharers in its continuity.

This idea is emphasized again and again in theosophical literature, but particularly by G. de Purucker, who tells us:

You don't live outside of the Universe, you are a part of it, as a part is an integral portion of the whole. . . . What the Universe is, that you are; what you are, the Universe is. -- *Questions We All Ask*, Series II, No. 20

Know thyself, O son of man! For in thee lie all the mysteries of the Universe. Thou art its child; inseparable from it shalt thou ever be; for It is thou and thou art It. This is the pathway to all wisdom, to all knowledge, to all achievement. It is also therefore the pathway of evolution -- of evolving, of unfolding, what is folded up or latent within you. -- *Op. cit.*, Series II, No. 30

In connection with the similarity between sleep and death the following interesting suggestion has been made:

If one desire to know how he will feel when he dies, or what he will cognise at the moment of death, let him then when he lies down in his bed to sleep, grip his consciousness with his will and study the actual process of his "falling asleep" -- if he can! It is easy enough to do this once the idea is grasped and practice in the exercise has

become more or less familiar. -- G. de Purucker, *The Esoteric Tradition*, pp. 832-3

We must *re-educate* ourselves if we would be able to solve life's deeper problems. It is our present habit to identify ourselves with our personal consciousness; that is, those mental and emotional concerns which center in self-interest or personal desire. If we would understand and conquer the mysteries of either life or death we must study ourself as a center of *spiritual* consciousness, a divine pilgrim progressing ever upward upon the glorious pathway of self-directed evolution.

---

## Chapter 3

### Why Do We Die?

We die because we are, in our innermost, a spiritual being. Life on this earth is only part of our evolution. Our spirit-soul is native to the invisible spiritual worlds and only sojourns here for a while in order to round out its experience and to afford an opportunity for growth to the innumerable less evolved entities, such as life-atoms, which make up its earthly vehicle.

The spiritual self reincarnates here during life after life after life; but between these lives it returns to its home in the inner worlds and pursues there the higher ranges of its evolution.

The real reason why we die is because, deep within us, the spiritual self feels the call of its "homeland." The time comes when it grows weary of the burden of flesh and longs for the freedom and light of the spiritual realms. So, little by little in the case of the average human being, the spirit loosens its hold upon its earthly tenement and prepares to depart upon its sublime homeward way.

What we call death means far more than almost anyone realizes. Laying down its physical body or encasement is not all that the spiritual tenant has to do in order to be free for its journey to the inner spheres. For man is a composite being. He has not only a physical body but his spirit-soul also uses a psychological vehicle -- his personality. This is made up of mental and emotional states of consciousness. It is a complex tissue which in its selfishness and materiality weighs down the spirit even more heavily than does the physical body. This garment of personality must also be sloughed off and must in its turn suffer dissolution. And this later process is called in the esoteric philosophy, the second death.

Death therefore is really the breaking up of these two lower aspects of consciousness, the physical and the psychological, into their respective elements. The body is dissolved and disappears. All the ephemeral energy centers of the psychological nature -- those of the passions, the earthly desires and appetites, and the purely personal mental activities -- dissolve away into the life-atoms of which they were built by the thoughts and actions of the individual who has been using them. The real person, the spiritual self, having thus sloughed off -- like the butterfly its chrysalis -- these enshrouding earth

vehicles, can then wing its way into the freedom and joy of its native spiritual realms.

The whole wonderful, mystical process of death is assisted by the law of periodicity which governs the life of all things. For death and birth are themselves twin manifestations of this universal law of periodicity. All life has two poles, the positive and the negative. Everything swings pendulum-like between night and day, heat and cold, ebb and flow, storm and sunshine, systole and diastole, sleeping and waking -- also between birth and death. But as the second of each of these pairs -- the ebb, the cold, the systole, and sleep -- are really only periods in themselves and not endings, so theosophy maintains that death is not an ending but is the beginning of a period of life of another kind. And being but a period, it must be followed again by birth.

So it is this law of periodicity underlying the manifestation of all active, composite beings which assists the spiritual self to achieve freedom from its earthly tabernacle. But this event, this so-called death -- which we can see -- is only the turn of the tide, beyond which the undying, physically invisible self is carried outward by its spiritual ebb upon the boundless ocean of unending existence.

Let us remember, however, that

. . . Death is never sudden; . . . nothing goes in nature by violent transitions. Everything is gradual, and as it required a long and gradual development to produce the living human being, so time is required to completely withdraw vitality from the carcass. -- H. P.

Blavatsky, *Isis Unveiled* 1:480

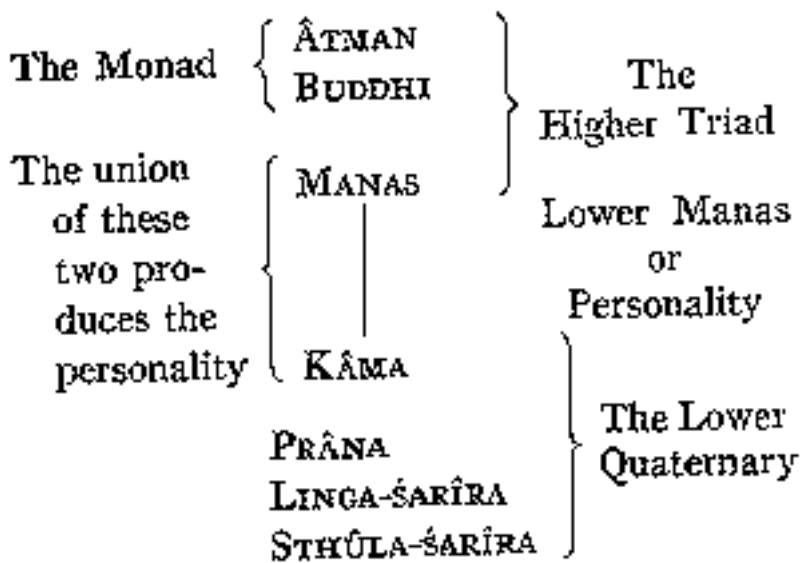

Old age is nothing to fear. It is a blessing. It is a splendor seen as through a veil, of the life beyond, the higher life, the life in which the higher incarnating ego lives, literally.

Shadows -- coming events casting their shadows before, the shadows of the splendor to be -- such is a fine old age! -- G. de Purucker, *Golden Precepts of Esotericism*, chapter 2

## MAN'S SEVEN PRINCIPLES

In order to understand more clearly what happens after death and how the inner spiritual self abandons one by one the garments or vehicles through which it gains experience here, let us briefly examine the seven principles of our composite nature.

The following diagram, beginning with the spiritual as the first and highest principle, will give a brief idea of them:

Atma-buddhi is the monad, the spirit-soul. The word *monad* means a "unit" of life or consciousness -- an individual. A monad exists at the heart of every being -- star, planet, animal, plant, atom, electron -- no matter what. In ourselves we can regard it more graphically as his spiritual self, the sense of *I am*. Atman is a ray of pure universal spirit, linking us with the ALL. Buddhi is pure intelligence, wisdom, and love. It acts as a vehicle or channel to step down the light of the universal into the human constitution. From buddhi spring all our highest qualities: compassion, discrimination, sympathy, and conscience, as well as the visions of genuine spiritual seership or exalted genius. Atma-buddhi is pure consciousness, which is common to all beings, though without manas (as in the animals) it cannot function intellectually.

Manas is the "thinker" in man. It is our ego, the seat of self-consciousness, by which we feel, "I am I and no one else." Through it we relate consciously to others and to our environment and thus are able to carry on our own self-directed evolution. It is manas which gathers in and remembers the experiences of individual life in all the worlds; and these, when finally absorbed by the universal spirit, constantly enrich the unfoldment of cosmic consciousness. These three higher principles are divine in their origin.

The lower quaternary is that composite vehicle, made up of the animal-vital qualities in nature, which evolution on this earth in past ages prepared for the use of manas, the self-conscious thinker. In this diagram we observe that manas is dual, for this self-conscious thinker or ego, once it takes up its work on this earth by means of a physical body, must associate itself on its lower side with the animal quaternary. This association it is which makes the personality or human ego, which we call the lower manas.

But the higher side of manas is associated with the wisdom and light of buddhi; and it is this higher side which is the reincarnating ego, the higher manas. The reincarnating ego does not experience death; but lower manas, being the product only of the association of manas with the mortal part of human nature, exists but during earth-life and meets its dissolution at the second death.

## THE LOWER QUATERNARY

We come now to the kama-rupa, the highest aspect of the lower quaternary and one of the most powerful and important elements in human nature. *Kama-rupa* means literally "desire-body" and is that center of animal appetites, passions, and emotions which is the basic inciting energy in the lives of the majority. For are we not most of us more easily swayed by our passions and appetites, or by self-interest and prejudice, than by unselfishness and impersonal wisdom?

The kama-rupa, as just stated, has been developed by past evolution through many ages. During human life it is that bundle or complex of energies needed by the higher triad to come into touch with the material kingdoms of nature on this earth. To conquer and transform this desire-complex into a center of spiritual desire instead of animal and selfish propensities is one of the evolutionary tasks of manas, the reincarnating ego.

As the thinker within us chooses to be swayed by the lower quaternary or the spiritual self, it makes bad or good karma which shapes its present and future lives. And the object of reincarnation is that through experience and self-directed effort over a long series of earth-lives, the thinker may learn through pleasure and pain the fleeting and unsatisfactory nature of all things connected with the lower quaternary. Then, finally discovering how to ally himself with the spiritual self, it will raise its mortal parts into immortality.

Another important principle for us to understand is the so-called astral body or *linga-sarira*. *Linga* means "model" or "pattern," and *sarira*, an impermanent form. It is described by Dr. de Purucker in his *Occult Glossary* as the sixth substance-principle of the human constitution,

the model or framework around which the physical body is built, and from which, in a sense, the physical body flows or from which the physical body develops as growth proceeds.

Prana we may think of as the "field" of vital energies circumscribed by our astral-physical organism. It is an aggregation of vital life-atoms drawn from nature's reservoirs and determined as to kind and activity by the karmic affinities and characteristics of the person concerned. In a study of afterdeath states these principles are not as important to understand as the higher ones, for both are dissipated almost immediately after death. The same is true of the physical body.

## AFTER-DEATH STATES

Let us see now what happens to these principles at death. First, the higher triad departs from the lower quaternary, and the latter immediately begins to fall apart. Dissolution of the physical body at once sets in and this releases its astral model-body or *linga-sarira*, which also disintegrates. Prana or vitality passes back into the reservoirs of nature.

Upon the withdrawal of the higher triad and the break-up of the three lower principles, the kama-rupa is, so to say, separated out as a bundle or rupa (form) of desire energies. It is soulless of course, for the higher triad, the real self, has gone; but it will persist for a longer or shorter time according as the passional selfish nature of the individual was encouraged, or was controlled and refined, during the life just ended.

But where does this kama-rupa exist? And is it still alive and active? This shell of the person that was exists now in what is called in theosophy the *kama-loka*, i. e., the "place" or "world" of desire.

This kama-lokic afterdeath state is important for us to understand, for it has a very real bearing upon human progress and happiness. The whole psychological realm extending in consciousness between earth-life and devachan, the spiritual heaven-world, is known in theosophy as the *kama-loka*. Another quotation from the *Occult Glossary* will explain this kama-lokic sphere:

**Kama-Loka** (Sanskrit) A compound which can be translated as "desire world," . . . It is a semi-material plane or rather world or realm, subjective and invisible to human beings as a rule, which surrounds and also encloses our physical globe. It is the habitat or dwelling-place of the astral forms of dead men and other dead beings -- the realm of the kama-rupas or desire-bodies of defunct humans. "It is the Hades," as H. P. Blavatsky says, "of the ancient Greeks, and the Amenti of the Egyptians, the land of Silent Shadows."

It is in the kama-loka that the second death takes place, . . . The highest regions of the kama-loka blend insensibly into the lowest regions or realms of the devachan; . . .

When the physical body breaks up at death, the astral elements of the incarnate entity remain in the kama-loka or "shadow world," with the same vital centers as in physical life clinging within them, still vitalizing them; and here certain processes take place. The lower human soul that is befouled with earth-thought and the lower instincts cannot easily rise out of the kama-loka, because it is foul, it is heavy; and its tendency is consequently downwards. It is in the kama-loka that the processes of separation of the monad from the kama-rupic spook or phantom take place; and when this separation is complete, which is the second death above spoken of, then the monad receives the reincarnating ego within its bosom, wherein it enjoys its long rest of bliss and recuperation.

The second death is a gradual process and for the average human being is entirely unconscious. It is a perfectly normal process. Remember that by death we mean simply the dissolution of the elements of a body. We are no more aware of this second death than we are conscious of the daily and quite normal and healthy breakdown of the tissues of the body, or of the gradual and more subtle changes always taking place in our characters, for the bundle of energies called the kama-rupa or desire-body is instinctual only. But though it is ordinarily unconscious, it yet preserves for a time the stamp, the characteristic personal impress, of the person to whom its energies belonged -- the human individual, in short, who brought the kama-rupa into being. And it is this fact which it is so important for us to

understand.

A very large number of spiritistic manifestations are due to the fact that the medium and the sitters attract, by the magnetism of intense desire, grief, or curiosity, these shells or masks or kama-rupas of the departed, left as their remnants in the kama-lokic sphere. Such shells can be magnetically drawn into the thought-atmosphere of the seance room and, vitalized and given concrete direction by the vitality of the medium and "circle," are galvanized into a fictitious life. Then these automata can, like phonographic records, give off phrases, recollections, and ideas closely associated with the life and personality of the departed. Or they can reflect, like a photographic plate, the thoughts of those in the circle. Theosophy maintains that an enormous percentage of so-called "communications from the dead" are of this class.

That these communications are rarely anything but such automatic repetitions is evident when we remember that no creative philosophy of this world or the next, no hints for new paths of scientific research, or for archaeological and historical discovery, have come from the seance room. A "Summerland" which is but a rainbow-hued repetition of earth-life is about all that almost two centuries of modern spiritistic experiments have given us. What tentative new lines of research have resulted from Spiritism have been the result of living rather than departed intelligences.

This, however, is but the negative side of the matter, as a later chapter will set forth.

The following listing sums up briefly the various processes and conditions which are brought about by the separation of our seven principles after death:

- Atman, Buddhi: Dwelling in the spiritual worlds
- Manas: Gradually absorbing the spiritual essence of the lower manas or human ego and then passing into devachan
- Kama-rupa, lower manas: Dissolving away slowly at the second death in kama-loka
- Prana, linga-sarira, sthula-sarira: Already disintegrated when the second death takes place

## I -- INTRODUCTORY

The word karma refers to one of the basic teachings of theosophy by which it is able to explain the meaning of human life and to resolve its enigmas and seeming injustices. It is a Sanskrit term expressing tersely the principle of action and reaction, or the law of consequences. This word and the idea which it embodies are now quite commonly used in fiction and philosophy, cinema and drama. Karma is a law of unerring, never-failing justice, the workings of which stretch from the atom to the uttermost and innermost cosmic spaces; from the birth of a thought to that of a universe.

In the New Testament, the action of karma is formulated in the well-known words of Paul in his *Epistle to the Galatians* 6:7: "For whatsoever a man soweth, that shall he also reap." Yet while it has been thus forcibly expressed by the great Christian apostle and initiate, the Christian nations, crippled by the lack of any real philosophy of life, have failed to understand the profound meaning in this formulation of the law of ethical justice. Overlooking its far-reaching action, they have accepted it superficially only and not as a working hypothesis on mental and spiritual planes. But this has been the case only in the field of moral and social life, for the law of action and reaction is so evident in the physical world that our lives are unconsciously guided by our sense of its infallibility. Day follows night unfailingly, as birth is succeeded by death. Certain common principles of mechanics expressing this law are understood and acted upon instinctively, even by children. Law and order are the rule everywhere and are constantly readjusting the disorder which ignorance and carelessness produce. The presence of this law of logical results following upon action is indeed plainly revealed over the whole range of external nature, yet the Western world, at least, has failed to realize its universal reign and to follow the indelible record written beneath the surface.

This failure to connect human life with the universal working of the habit of action and reaction amounted, in the last century, to a veritable mental aberration. In the pursuit of science cause and effect on the physical plane were recorded with the greatest accuracy; their relation was studied with such skill that results could be foreseen and absolutely relied upon. Out of the close observations of the transformations of nature, in which every atom of energy had to be accounted for, grew the formulation of the law of the Conservation of Energy, which, although only partly true, still disclosed the reign of trustworthy law in the physical world. Yet beyond the borderline which our present physical senses

cannot cross, there was said to be chaos -- mere chance -- reigning, and we heard such meaningless expressions as "a fortuitous concourse of atoms"; until finally the strange conclusion was drawn that the very minds which had so carefully observed and comprehended the reactions of matter, were themselves nothing but the secretions of that which they had studied and controlled. This special nightmare is passing, for now we find some leading scientists asserting that "mind-stuff" or consciousness, rather than matter, is the fundamental thing in the universe. (Cf. *The Esoteric Tradition* by G. de Purucker, pp. 409-10.) Nevertheless, this old error of the scientists is here cited to show how adrift humanity has been without a knowledge of the true philosophy of life. Lacking this, they have studied effects only, and through these have undertaken the difficult, indeed impossible, task of finding causes. Theosophy, the ancient wisdom, on the contrary, shows the causes which explain the effects we everywhere observe.

To understand karma, it must first be clearly perceived that the cosmos, the universe, is a unit -- one single organism composed of an infinite number of lesser organisms in an immense variety of grades of consciousness and development, all united into a single whole by the one consciousness which includes and is common to them all. This sublime idea is well illustrated by man himself, who is a universe, a cosmos, in miniature. Is he not composed of an almost infinite number of centers of life or consciousness -- atoms, molecules, cells, organs, ganglia, etc. -- under the unifying overlordship of the human individual consciousness, which pervades and unifies and directs them all? And just as a felon on the finger is felt by the whole body, so we are taught that a thought of hatred or a throb of mental anguish has its due effect throughout the greater cosmic organism. For the law of action and reaction, of cause and effect, so evident in the limited sphere of mere physical life, is simply an evidence on the surface of what takes place in the inner spiritual and causal realms. The physicist perceives only that action and reaction are equal in the world of matter, but the eye of the spiritual seer discovers the same law acting behind the scenes, and acting with far greater dynamic energy. In *The Key to Theosophy*, H. P. Blavatsky defines karma as

. . . the *Ultimate Law* of the Universe, the source, origin and fount of all other laws which exist throughout Nature. Karma is the inerring law which adjusts effect to cause, on the physical, mental and spiritual planes of being. As no cause remains without its due effect from greatest to least, from a cosmic disturbance down to the movement of your hand, and as like produces like, *Karma* is that unseen and unknown law *which adjusts wisely, intelligently and equitably* each effect to its cause, tracing the latter back to its producer. -- p. 201, orig. ed.

From the foregoing it is plainly seen that karma is the ultimate law of the universe because every entity contained within the cosmos is a vital part of it. Every thought and action affects, to the degree of energy involved, every other entity, which inevitably reacts in corresponding degree upon the thinker of the thought or the performer of the action.

It not infrequently happens that an evil intent is thwarted on the physical plane. A man, for instance, may be filled with hatred for another; he may even go so far as to plan to kill him. But the object of his evil passion, we will imagine, suddenly dies. Thoughts and desires, however, are energies, the more real and powerful the nearer their momentum approaches to expression. In this case the death of the intended

victim turns that dark torrent back upon its creator, within whose nature this strong evil energy has been brought into being. Shall this force, though physically unexpressed, produce no effect? Remembering the law of action and reaction, we see that can never be. It is at least plain that the hater has poisoned his own nature. He has altered his character for the worse, and the process of repairing the damage is certain to be a painful one.

It is here that the twin doctrine to karma comes in to make possible the complete process of human evolution -- the doctrine of *reincarnation*. This means the rebirth of the spiritual part of man again and again on this earth. At each rebirth or reincarnation he has a new body which is the karmic result of the thoughts and actions of his past lives. And as with his body so with his environment: it is the unerring consequence of what he has desired, worked for, or failed in, during past lives on this earth. Thus by living again and again here on earth and experiencing the exact effects of what he has made himself in the past, he gradually learns how to control and develop his own energies and faculties, and so begins to re-create his destiny. This is what Katherine Tingley called "self-directed evolution." But this wonderful process of self-salvation would not be possible unless all are reborn to reap in character and environment what they have sown in thoughts, desires, and actions in previous lives. Men do not "gather grapes of thorns, or figs of thistles": neither do they sow a crop in one place and reap it in another.

So in some future life on earth these two enemies pictured above must meet again, drawn together by those very unexpended forces which connected them before; for hate is as magnetic and dynamic as love. Then, who can tell? -- will the rebound return as hate to the one who sent it forth? Or will the victim of this evil energy be great enough to work the magic transmutation, by the divine alchemy of compassion -- great enough to transform hate into love? However this may eventuate, the energy brought into being must produce its effect, it may be through many lives, until equilibrium or harmony is restored. We little realize with what dynamics we so idly play in this magnetic ocean of life in which we live. Action and reaction, cause and effect, energy and its consequences, balance each other not only in the outer world of physical effects but also through the inner spiritual and causal worlds where moral and ethical forces act with mathematical precision. This is the message which theosophy brings regarding the majestic law of karma, this merciful law which is our teacher, friend, and savior.

---

## **II -- IS KARMA BLIND FORCE?**

It has been stated that to understand karma, the universe must be recognised as an organic whole. If this were not the case, its various parts could not act and react upon each other. Take the human body as an example. Through it runs a complex system of nerves, arteries, and avenues for the circulation of electrovital forces, intimately and instantly connecting every organ, cell, and atom with every other. Let the foot slip and immediately the counteracting muscles seek to restore the balance. The eye closes automatically if a foreign substance threatens to enter it. The reaction is perfect because the body is an organism. Further it is necessary to observe that every cell in this organism is an individual life under the control of a higher center. In the case of a muscle, for instance, all the cells act together; and similarly in

an organ. So by a series of grades the cells come under the control of more and more highly developed centers up to the brain, and through that to an invisible center of intelligence which unifies and coordinates all the functions of this marvelous mechanism, making of it an organism. Then the body itself is part of a greater organism, man himself. Men collectively form humanity. Above this are innumerable hosts of beings gradually mounting, each grade vitally connected with and responsible for the grade below it, and helped by the grade above it. Thus we have beings above the human reaching up to gods; then above them, supergods, planetary spirits; rulers of solar systems; greater ones holding together groups of solar systems; up and up to a ruler of a universe and ever up to THAT, the Unknown, behind all manifestation. Rivers of life connect all these infinite grades of beings, like a network of nerves through which run vital currents unceasingly. And this mighty being fills all space, is indeed space itself. Or we can say that space consists of conscious beings of infinite types interlinked and interdependent.

This concept may seem strange to many because unfamiliar, but let the mind dwell upon it and it will gradually become clear that unless the universe was an organic unit, it could not hold together. The chaos which some of our physical scientists have imagined would actually exist, and there would not be the beautiful order and harmony which we have come to rely upon in those celestial bodies which we see apparently floating in an ocean of ether -- bodies indeed of divine beings. The universe is truly what its name implies -- a whole -- and this is what theosophists mean when they declare that "brotherhood is a fact in nature." This identity of origin and nature, this "one in many" and "many in one" makes not only possible but inevitable the interaction of all the parts of this whole and their reaction to each other.

G. de Purucker in *Fundamentals of the Esoteric Philosophy*, page 35, presents the same idea, as follows:

When man realizes that he is one with all that is, inwards and outwards, high and low; that he is one with them, not merely as members of a community are one, not merely as individuals of an army are one, but like the molecules of our own flesh, like the atoms of the molecule, like the electrons of the atom, composing one unity -- not a mere union but a spiritual *unity* -- then he sees truth.

We see that interdependence is a fundamental principle in the universe, and we shall find that this basic principle is worked out in all parts of the universal organism. We have shown the human body as an illustration of it. The atom, the solar system, the galaxy, all in their structure and their workings proclaim the basic reality of harmony and interdependence as the underlying, regulating principle throughout all life.

Every action, then, every expenditure of energy, whether physical, mental, or moral, has its due effect upon this underlying harmony, this basic balance and interdependence. Selfish thoughts or actions disturb the harmony and suffering in the near or far future results. We see all around us those whose disappointments and struggles in unfavorable environments are the result of ignorance and wrongdoing in this or past lives. The condition exists in some degree in the lives of all of us, for everyone has made mistakes in past lives, as we are making them now. G. de Purucker has put the matter very forcibly in

*Man in Evolution*, chapter 14, "The Rationale of Reincarnation," p. 177:

Everything that we do, everything that we think, is a productive cause, affecting us and affecting those around us, yet leaving the seeds and the fruits of such thoughts and actions in ourself. This is common knowledge. We have laid up for ourself in past lives treasures for happiness; but we may have also laid up for ourself a treasure house of another kind, and we are doing similarly in our present life.

But, although karma is spoken of as a law, there is no lawgiver, no over-ruling entity, who decrees this or that. Rather is it a quality inherent in the very nature of things. The ancient teaching is that every action is the result of a previous cause, and then becomes a cause for a future action, and so on indefinitely. This constant movement is not the outcome of blind forces, but a living stream of changes flowing from the thoughts, acts, emotions and feelings, aspirations, and desires of the lives which make up and are the universe.

Man is but one of an innumerable host of beings, imbodyed Consciousnesses, who infill the Universe. Nowhere do we find anything other than these hierarchies of beings, these consciousnesses active during the Cosmic Manvantara, and each individual of these hosts weaving its own Web of Destiny, its energies pouring out of its own inner being and directed by the intelligence streaming from its own spiritual and mental foci. -- G. de Purucker, *The Esoteric Tradition*, p. 480

There is no lawgiver, we repeat, and yet in a way there may be said to be agents of karma. Who are they? They are those great and wise beings who have consciously found their place in the universe; who are sufficiently evolved to be perfected in regard to a certain stage or plane, and therefore can be relied upon to work in harmony with universal law over that field. Above them are others, and so on ad infinitum.

It goes without saying that in this orderly, complex universe there is a plan, a meaning, and that every unit, being a part of the universe, is part of the plan. When, therefore, the harmony is disturbed by unevolved, learning entities anywhere, there is an overwhelming force tending to restore it. The actions of karma are always toward the restoration of harmony, but as every change is due to consciousness and the universe is but imbodyed consciousness, in the last analysis karmic adjustments are made by conscious beings, who are incarnate justice in their field of action. For instance, the ruler of a planet is such because it has reached that point in evolution when it has absolute knowledge of everything pertaining to that planet. Above that stage it is a learner, but as to the realm below it, it is perfected. Its knowledge thereof is of the nature of intuition or instant vision, and its guidance must be in harmony with justice and the divine plan. It is said that the gods never interfere with karma. They could not. Learning beings must be free to work out their own destiny, which means that their mistakes recoil upon themselves, for it is thus that they learn. Men themselves decide their fate by their choice of the various alternatives which life presents, while karmic agents execute what man has decreed.

Those above, however, guide, protect, and help forward the evolution of their younger brothers. The teaching is very beautiful and inspiring as to these relations. All the way up the ladder of life, the greater stand to those next below as parent to child. They live to inspire, to serve their offspring, and in later, more highly developed stages of humanity this relationship is recognised. Even great Masters, though below the level of godhood and still human beings, are perfected as to *our* plane and turn back to give help, which we realize as little as does the babe its mother's watchful care. Thus it is that the universe is bound together with a glowing web of compassion.

Canst thou destroy divine COMPASSION? Compassion is no attribute. It is the LAW of LAWS -- eternal Harmony, Alaya's SELF; a shoreless universal essence, the light of everlasting Right, and fitness of all things, the law of love eternal.

The more thou dost become at one with it, thy being melted in its BEING, the more thy Soul unites with that which IS, the more thou wilt become COMPASSION ABSOLUTE.  
-- H. P. Blavatsky, *The Voice of the Silence*, pp. 69-70, orig. ed.

---

### III -- YOU ARE YOUR OWN KARMA

Sow an act, and you will reap a habit. Sow a habit, and you will reap a destiny, because habits build character. This is the sequence: an act, a habit, a character, and a destiny. You are the creator of yourself. What you make yourself to be now, you will be in the future. What you are now, is precisely what you have made yourself to be in the past. What you sow, you shall reap. -- G. de Purucker, *Golden Precepts of Esotericism*, p. 104

It is a fundamental teaching of the wisdom-religion that every atom, being an inseparable part of the universe, has locked up within itself all the potentialities of that universe, as the seed contains the future tree locked up within itself. Hence every atom will in time become a man -- then a god, then reach still higher grades of divine life.

It follows that in the case of man these possibilities have been unfolded as far as the human stage, at which point is incurred the responsibility of creating personal karma. From this time forward, equipped with mind and free will, he will carve his own destiny. Theosophy teaches that in those early days humanity was instructed as to the purpose of life by great teachers, who launched these pilgrims on their long journey to godhood. Many, many times since then have they lived -- in various climes under various racial conditions, and in different bygone civilizations. Man has never been left without sufficient light to find the Way: there has been the voice of conscience; there have been the results of wrong and right action as lessons for the future; there have been mind to interpret these and free will to choose. Therefore it is fair to say that man has created himself and is his own karma.

This latter expression implies the fact that every act and thought alters character. From moment to

moment we change. Nothing remains for an instant *in statu quo*, so that constantly and progressively man is the resultant, the fruitage, of all his thoughts, emotions, actions; of the use or non-use of his will. He stands at every moment as his own autobiography -- or he is the great artist, having the tools of destiny in hand and compelled under the laws of being, to carve and carve until the outer becomes a worthy temple for the god within. Life is indeed the highest art.

Every moment, then, may be taken as a new starting point, as expressed in a beautiful "Salutation to the Dawn":

Look to this Day, for it is Life, the very Life of Life. In its brief course lie all the possibilities and realities of your existence.

Plainly, one can unfold or grow only from the point at which one has arrived. Whatever of power or vision has been gained, none can take away, and whatever of burdensome rubbish, pernicious habits, or degrading qualities one has acquired, can evidently be removed only by the evoking of the will of the one who acquired them. They have become a part of the nature, and no extraneous Savior can by any process of magic extract them from the character of another. But the saviors do seek, and all down the ages have sought, to awaken the warrior in the heart of every pilgrim who has lost his way. When such awakening happens, the sway of karma is altered. The whole purpose of life takes a new direction and gradually constructive forces are generated which modify the old destructive ones. We *must* meet the energies already generated, but we can then meet them with courage and understanding and with a new armor which they cannot pierce -- possibly even with an opposite equal force which will neutralize them.

Weak characters furnish a weak focus for karma. They take things easily, as they come, drift along the river of life, enjoy and suffer without asking why, and leave their bodies much as they entered them.

But Nature will not have it thus always: finally there comes the karmic impulse, the karmic stimulus, then you suffer a little; but in doing so you awaken and begin to grow. Bless the karmic stimulus; be not afraid of it. Look to the essential divinity within. Remember that everything that happens is transient, and that you can learn from everything, and in learning you will grow -- grow great, and from greatness pass to a larger sphere of greatness. -- G. de Purucker, *Questions We All Ask*, Series I, No. 34

But when the real man is aroused and consciously grips himself and cooperates with nature, which is seeking to evolve him, his unfolding proceeds rapidly. The past will decide the future events. They may bring quickly a sense of glorious freedom with deeper sympathies, new friends and opportunities; or perhaps more often, misfortunes, suffering, or enemies may be called out of the mysterious past; for none of us has avoided clashes with the universal law. All this, however, is but clearing the way. Eventually such self-directed evolution will lead out into the open spaces of freedom; into glorious possibilities; into friendship with those great ones who have overcome.

We are constantly upon the fringe of great opportunities and at some crucial point; and then, instead of grasping these opportunities and moving on to a larger view and a broader spiritual life, we shrink, we hold back through timidity -- and so we lose them all. The present is an unusual cycle, and never in this life shall we meet present opportunities again . . .

Fear nothing, for every renewed effort raises all former failures into lessons, all sins into experiences. Understand me when I say that in the light of renewed effort the karma of all your past alters; it no longer threatens. It passes from the plane of penalty before the soul's eye, up to that of tuition. It stands as a monument, a reminder of past weakness, and a warning against future failure.

So fear nothing for yourself; you are behind the shield of your reborn endeavor, though you have failed a hundred times. Try slowly to make it your motive for fidelity that others may be faithful. Fear only to fail in your duty to others, and even then let your fear be for *them*, not yourself. -- Katherine Tingley, *Theosophy: the Path of the Mystic*, pp. 68-9

Physical disease is one of the unpleasant expressions of past karma. It even shows itself in infants, who may come into life with such marks. The compilers of the New Testament give evidence of having recognised this fact in the question recorded in *The Gospel according to Saint John* 9:2: "Master, who did sin, this man, or his parents, that he was born blind?"

Dr. de Purucker, in speaking of disease, has said:

I will tell you a little esoteric secret in this connexion: Every time when a man flies into a passion, whether of desire or of anger, whether of fear or of hate, he has lost control of himself and at the time exemplifies the characteristic and power of some elemental being under whose influence he has fallen. This natural fact, so simple, so easily understood, is the basis of the old superstition about the action upon human beings of 'devils.'

These elementals are not 'devils'; they are simply elemental beings, and they have a natural and strong affinity for man. They look upon man much as we humans look to the gods; but when the man becomes degenerate and drops to their lower sphere, then is their chance. Automatically and instinctively they act; and they act as impersonally and as much without conscience as does the electric current. And I may say here that the electric current is but a stream or flow of these elemental beings. Turn the switch, release the current, and, if the circumstances are right, the man whose hand touched the switch is a dead man.

I will go a little farther: Diseases are the result of loss of self-control at some time, either in this or in some past life. You can say that an Elemental has entered into the man's vital aura . . . and if the man does not oust it with his will and by aspiration to better things, in

other words by resuming his normal spiritual manhood, that seed will grow, and disease or horrible consequences will be the result for him. -- *Questions We All Ask*, Series II, 31

This ousting it with one's will is quite different from apparent cures through psychic methods.

A man also can indeed apparently cure certain diseases of the body, if he can use certain psychological faculties that he has. . . . But the results . . . are not good. All disease is a purging, a purgation, a cleansing. Nature's law is that the poison should come out. If it remains within, it poisons the body, the constitution, still worse than before; and the physicians of the future will know perfectly well how to lead disease out of the body so that the body shall not be injured at all. But be very careful about damming it back, throwing it back into the stream of consciousness; for one of these days the trouble will come out despite your best efforts and it will have gained strength and power and be like ten devils worse than the first. -- *Questions We All Ask*, Series II, 9

It might be added that the physicians referred to in the above quotation are those of the far distant, not immediate future. Every inharmony, through the beneficent processes of nature, tends to work to the surface. Sometimes we observe in ourselves or in others a succession of mishaps or disasters which are commonly attributed to "bad luck." Then suddenly Dame Fortune changes her tactics, and everything undertaken turns out well. This suggests that the so-called bad karma has expended its force. But it is truly bad only if the lessons have not been learned; only if one continues to roam through life in an idle, inconsequent attitude, willing to be buffeted alternately by good and bad "luck." If people could only realize that they are the results of what they have thought and felt and done in this and other lives; that through these thoughts and acts they have altered the very fabric of their character -- a character often which invites misfortune -- would they not learn self-control, kindness, helpful cooperation, and thus become beneficent forces in nature? Human nature is complex, and the results of inharmony will naturally express themselves through the channels where the disturbance occurred.

This whole subject is complicated in its workings though simple in its broad outlines, and it would be idle for us in our present stage of evolution to attempt to follow the details. We sometimes see a deformed body, fine mind, and sunny disposition in the same individual; or again, a robust body housing a distorted mind and selfish disposition. In the former case, seeds of disease are working off, while in the latter, they are being planted, even though the physical energies may be strong enough to resist them through that incarnation. Often we see a beautiful nature, refined, sympathetic, in one who is working strenuously to benefit mankind, but who is careless regarding the body. It would seem in such a case that karma would begin and end on the physical plane, though there must always be a reaction from one plane to another. Or, one may concentrate his energies on the laws of health and forget the sufferings of his fellow men. Such may gain a strong body temporarily, but at what cost! Law reigns throughout. We attain what we ardently strive for. The infinite potentialities of the universe are before us, but only he whose note chimes with that of the overmastering law -- the law of compassion -- can hold his victories.

When at last this great achievement becomes a fact, it is said that man rises above karma. This, however

is only a figure of speech. Karma acts forever, everywhere, but when the great currents of the universe are no more thwarted, no friction is felt. One moves forward easily, rapidly, knowing the "glory of action" and the "bliss of growth."

Yes; "our destiny *is* written in the stars!" Only, the closer the union between the mortal reflection MAN and his celestial PROTOTYPE, the less dangerous the external conditions and subsequent reincarnations -- which neither Buddhas nor Christs can escape. This is not superstition, least of all is it *Fatalism*. The latter implies a blind course of some still blinder power, and man is a free agent during his stay on earth. He cannot escape his *ruling* Destiny, but he has the choice of two paths that lead him in that direction, and he can reach the goal of misery -- if such is decreed to him, either in the snowy white robes of the Martyr, or in the soiled garments of a volunteer in the iniquitous course; for, there are *external and internal conditions* which affect the determination of our will upon our actions, and it is in our power to follow either of the two. Those who believe in *Karma* have to believe in *destiny*, which, from birth to death, every man is weaving thread by thread around himself, as a spider does his cobweb; and this destiny is guided either by the heavenly voice of the invisible *prototype* outside of us, or by our more intimate *astral*, or inner man, who is but too often the evil genius of the embodied entity called man. Both these lead on the outward man, but one of them must prevail; and from the very beginning of the invisible affray the stern and implacable *law of compensation* steps in and takes its course, faithfully following the fluctuations. When the last strand is woven, and man is seemingly enwrapped in the network of his own doing, then he finds himself completely under the empire of this *self-made* destiny. It then either fixes him like the inert shell against the immovable rock, or carries him away like a feather in a whirlwind raised by his own actions, and this is -- KARMA. -- H. P. Blavatsky, *The Secret Doctrine* 1:639

---

## IV -- THE PROBLEM OF HEREDITY

It may be asked, if you are your own karma, how explain heredity? Theosophy offers here a solution more in harmony with facts as we observe them, as follows: one is born into his present family because he has been connected with it in the past and belongs there because of the psychomagnetic ties previously created. These ties consist of vital energies and must have their effects in the sphere where they were brought into existence. In studying karma, we see again here that we must study equally the teaching of reincarnation, as one is meaningless without the other. We are born among certain people and of certain parents because of the ties we formed with them in the past. As long as we love or hate anyone, we have a tie with that individual which will persist as long as that love or hate continues. So we all come back to earth together -- friends, relatives, enemies -- to take up again our joys and sorrows, our work and play, our experiences and lessons in human life.

We may say that the family affords the expression for individual heredity, for we repeat again what

cannot too often be recalled: karma is inherent in the individual, it is not imposed from the outside. Remembering this, we see that the heredity of a reincarnating entity is determined by what it itself is. Why do the members of one family differ, often so widely, although all are born under similar conditions and from the same hereditary strain?

The differing combinations of hereditary qualities in individuals are governed by the psychomagnetic attractions inherent in the *skandhas* of the reincarnating entity. The Sanskrit word "skandhas" is used in theosophical literature because there is no English word to designate exactly those qualities which are the concentrated aggregate, the essence, of the personal life of an entity. They refer to the attributes, tendencies, qualities, both high and low, which distinguish one personality from another. They are the seeds of acts, thoughts, and feelings, either of a material nature, which help to form the next body, or of mental or moral traits.

The nature and action of the skandhas can best be grasped if we understand first about the life-atoms. These may be described as the souls of the atoms, through which the incarnating entity is enabled to embody itself. They are the building blocks of which all things are fashioned. They exist on every plane in nature, spiritual, mental, emotional, physical, and in every degree of development or evolution within those planes. In human life, they form the human body with its cells and organs, they form our intermediate mental or emotional nature, and also our spiritual constitution.

These life-atoms which now make up our physical bodies, and also our psychological and our spiritual natures, are being every second impressed by our every thought and action, no matter what. If we are loving, pure, unselfish, joyous, we have given them that impress; and equally we can impress them with selfishness, qualities of passion and hate, or give them vibrations of fear or pessimism. As our bodies and inner natures are constantly changing through growth, development, and decline, these life-atoms do not stay with us, but flow out from us to combine temporarily with those other natures and substances which are akin to the impressions they have absorbed from us.

This happens all through life, but more completely after so-called physical death. Then there is a separation of the principles which have made up the human being. The spiritual part, after withdrawing into itself all of the personal man that had become purified, rises to higher spheres; the passionate, emotional nature rests on its own plane for a time before disintegrating; and the body as we know, is dissolved quickly. Then the life-atoms on all these planes, charged with the tendencies and qualities given them in the last earth-life, find their natural habitats. But on reincarnation, under the influence of natural attraction, they flock back to the entity which sent them forth.

It is these life-atoms which carry the skandhas, the aroma of our past lives. They are the building materials of many different degrees of evolution which thus shape by their inherent characteristics the personality that is about to be born. As stated by G. de Purucker in *Man in Evolution*:

the next body that we shall get will be -- not the same old body that we had before; that is to say, not the same John Smith or Mary Brown, not at all; for John Smith and Mary

Brown are but a name and a form -- but our new body will be composed of these same life-atoms in which we lived and worked and expressed ourself in the preceding incarnation . . . these life-atoms exist not merely on this physical plane . . . they exist likewise on the intermediate planes; that is to say, on the astral and emotional planes, as well as on the intellectual and spiritual planes. -- p. 179

It might be added that because they are our own children, we are responsible for them. They, too, are evolving entities, bound to us throughout the ages. Only the outlines of the changes which bridge the apparent gap between two incarnations on earth of the human ego have been roughly sketched, in order to sustain the explanation regarding heredity given by theosophy. Similarities as well as differences are thus accounted for in a way which is not only logical but just.

We reap what we sow, and where we have sown; and if we have sown seeds of good and evil in this life and on this earth, it is only in another life on this earth that we can reap what we have sown. Would not a farmer be considered a lunatic did he sow a field in one part of the country where he lived, and some months later travel to another part of the country, far from where he sowed his seed, in order to reap his crop? So it is with man. He sows seeds of thought and action, and he reaps that crop where he sowed them, which is in himself and in this physical world.

Our universe is ruled by law and order; and this word karma expresses that fact of universal harmony and consistency manifesting as what we call law and order. -- *Man in Evolution*, p. 177

---

## V -- FATALISM OR DESTINY

This Law -- whether Conscious or Unconscious -- predestines nothing and no one. It exists from and in Eternity, truly, for it is ETERNITY itself; and as such, since no act can be co-equal with eternity, it cannot be said to act, for it is ACTION itself. It is not the Wave which drowns a man, but the *personal* action of the wretch, who goes deliberately and places himself under the *impersonal* action of the laws that govern the Ocean's motion. -- *The Secret Doctrine* 2:305

Probably there is no truth which cannot be perverted so as to appear something it is not. As has been said, karma is essentially, intrinsically, a doctrine of free will. Yet this, which implies choice of action, is often, by a strange mental twist, interpreted as fatalism. What imp of darkness is it that has ever suggested to man -- the embryo god, the carver of his own destiny -- that he lives under a doom foreordained? But in any case, whatever may be the surface expression of a mood, every man, deep in his nature, knows that he is free to act and to think. As evidence, he constantly makes efforts in this direction or that from which he expects results. If he attributes to himself those which are favorable, by

what logic is the "will of God" to account for the others -- unless, indeed, it be the will of the god within himself? Or, as so excellently expressed:

In practical daily life there is no uncertainty about man's having free will. A man's freedom, within certain natural limits, is obvious. In his relations to his fellow-men his freedom of choice and therefore his responsibility are fundamental. Our whole social structure and our laws are founded upon it. The whole idea of moral responsibility presupposes free will. A man who refused to act, or to accept responsibility for his acts, on the ground that he did not have free will, would be considered a man of addled brain or one obstructing duty and right action by senseless caviling. A man whose acts escape the control of his will is defective, a hysteric, or insane. The civil Courts would send him to an asylum, not to jail. They do not execute a man whose free will is inhibited.

The question of free will is much beclouded by an exaggerated idea of what freedom is. The assumption, perhaps unconscious, is that if there are any limitations there is no freedom.

Freedom can only be exercised on condition that it is not abused. A man has personal freedom within the laws of the society to which he belongs. If he violates these laws his freedom is thereafter limited to the inside walls of a prison. Does anyone ever doubt or question that a man at liberty has freedom when compared to a man in prison?

In a society governed by law and order all men have freedom within the limits of law and while they conform to the social order. A law-abiding citizen is not a slave because he conforms to the necessary restraints of the social order. -- *Lucifer* (6:9), March, 1935

Law-breakers must suffer penalties, more manifestly when the *higher* law is broken -- that law of unity, cooperation, and compassion which holds the universe together, which is the very nature, the essence of things. Every current set in motion strikes its objective and returns, rebounding with force in direct proportion as it is aimed consciously against the higher law. *But* it is always possible to start a counter current to weaken or neutralize the force of the first. Suppose, for instance, that one is involved in a family feud like those which poisoned the life of Venice during the Middle Ages, with feelings running higher and fed with new life by every generation; and that then such a one resolved -- as happened sometimes in those days -- to break the spell, to make offers of friendship and settle the old quarrel. That would mean starting a new karma to counteract the old and would bring peace where there had been discord.

There is another twist which the selfish lower mind sometimes brings to bear upon this teaching. All, at times, while traveling their own path, run into others suffering from accidents or misfortunes with which they are apparently disconnected, and occasionally one with a pharisaical respect for the law hesitates to interfere with the other's karma. Or he may be frankly brutal and say: "The sufferer brought it on himself; let him take the consequences." In such cases, there is always this to be considered: we *may* run

into the misfortunes of another because in the past we helped to bring them about; and this is to be remembered: "Inaction in a deed of mercy becomes an action in a deadly sin" (*The Voice of the Silence*). In this intricate web of life binding us all together, how often in our blindness do we make a tangle of the threads!

But let us beware of indifference. The man fallen by the wayside which we for the moment travel, has a claim upon us. If it is his karma to be sore beset, it is equally his karma that someone able to help him should come along. That needs no argument, surely. But more fundamental than the law of consequences which brought us there, is the "Law of Laws, Compassion." It is our patent *duty* to help and succor him. We can trust the laws of divine justice to see to it that a man gets what he deserves, "without ourselves giving an extra pinch." And Dr. de Purucker says very plainly:

It is our duty to help others, where we see that they are in danger or in pain, or need help. It is our duty to share what we have of the beautiful and of the good, with others. This is simply decently human. -- *Questions We All Ask*, Series I, No. 25

We are our brother's keeper. Woe to us if we callously "pass by on the other side." Better the millstone around our neck and the depths of the sea to receive us.

Certain things indeed *are* inevitable. We are all in the universe and we *must* live. We are here on this earth and we must continue to come back to it again and again until we learn its lessons -- we are tied to it until that day. But we ourselves guide our bark through its streams either wisely or unwisely. When we have mastered its problems and ourselves in relation to them, we are then free to move forward -- we then, in fact, *decree* to move forward. The basic fact overlooked in this theory of fatalism is that man at the core of his being is at one with the core of the universe, than which there is no higher authority.

We cut these numerous windings in our destinies daily with our hands, while we imagine that we are pursuing a track on the royal high road of respectability and duty, and then complain of those ways being so intricate and dark. We stand bewildered before the mystery of our own making, and the riddles of life that *we will not* solve, and then accuse the great Sphinx of devouring us. But verily there is not an accident in our lives, not a misshapen day, or a misfortune, that could not be traced back to our own doings in this or another life. If one breaks the laws of Harmony . . . one must be prepared to fall into the chaos one has oneself produced. . . .

Therefore, if any one is helpless before these immutable laws, it is not ourselves, the artificers of our destinies, but rather those angels, the guardians of harmony. Karma-Nemesis is no more than the (spiritual) dynamical effect of causes produced and forces awakened into activity by our own actions. . . .

This state will last till man's spiritual intuitions are fully opened, . . . Until then the only palliative to the evils of life is union and harmony -- a Brotherhood IN ACTU, and

*altruism* not simply in name. The suppression of one single bad *cause* will suppress not one, but a variety of bad effects. -- H. P. Blavatsky, *The Secret Doctrine* 1:643-4

---

## VI -- WHY KARMA HAS BEEN FORGOTTEN

It is natural to ask why a teaching so in harmony with facts and common sense should not have had general recognition in Western lands, as it has in the East, wherever the ancient wisdom has not been forgotten. The answer is not far to seek. Western nations have been taught to believe in a personal God outside of themselves, one who could be influenced by prayers for special favors -- a god who was, in fact, an enormous image of human personality. How could people so believing be expected to develop the impersonal, the lordly and divine side of their natures? How could they, taught that they were born in sin and that eternal bliss or torture was to follow this short life on earth -- lived often against great odds and with little help; taught also that belief in the blood of the Son of God insures their safety: how could they, indeed, fail to have their sense of justice blunted? The fact that, in spite of this, the qualities of compassion, gentleness, forbearance, mercy, kindness still flower in Western lands, is a standing witness to the divinity within the human heart.

But if we step outside the little circle of creed and consider the universe as a whole balanced by the exquisite adjustment of parts, how all sound logic, how the faintest glimmering sense of Justice revolts against this Vicarious Atonement! If the criminal sinned only against himself, and wronged no one but himself; if by sincere repentance he could cause the obliteration of past events, not only from the memory of man, but also from that imperishable record, which no deity -- not even the Supremest of the Supreme -- can cause to disappear, then this dogma might not be incomprehensible. But to maintain that one may wrong his fellow-man, kill, disturb the equilibrium of society, and the natural order of things, and then -- through cowardice, hope, or compulsion, matters not -- be forgiven by believing that the spilling of one blood washes out the other blood spilt -- this is preposterous! Can the *results* of a crime be obliterated even though the crime itself should be pardoned? The effects of a cause are never limited to the boundaries of the cause, nor can the results of crime be confined to the offender and his victim. -- H. P. Blavatsky, *Isis Unveiled* 2:542

It is astounding how such perversions and misinterpretations of the true teachings ever developed; how there were ever found people to teach them or others to believe them. No doubt there are many mysteries connected with this which must some day be explained. It is certain, however, that the great teacher known as Jesus, one of those avatars who appear at certain cyclic periods, never taught any of these dogmas. He came, as did every other great teacher, to restore once more the ancient wisdom -- that inexhaustible source of all the religions and philosophical systems of the world; for Christianity was, in its beginnings, pure theosophy. This can be proved through an intimate study of those times in the light of the Neopythagorean and Neoplatonic systems. For perhaps fifty years after the passing of Jesus, his

teachings survived, but even he could not stem the ebbing spiritual tide of that age. A dark cycle, begun about the time of Pythagoras, lifted a little for short periods, but gradually grew heavier, its lethal vapors clouding human intuitions, until in the fifth century those recognised channels for conveying truth -- the Mystery schools -- whose light had by this time burned low or vanished, were closed by order of the Emperor Justinian.

Many of the old forms and ceremonies were, it is true, used by the church which called itself Christian, but the life and meaning went out of them, and new interpretations crept in, transforming those vehicles of spiritual splendor into agents for mental paralysis. Rites and forms distracted from realities and drugged the souls of men. The multitudes were obsessed by selfish fear, which was exploited by others until gradually it was as if a dense cloud settled over men's minds, shutting out a knowledge of the glorious past, even of the contemporaneous areas of sunshine on the globe, such as the golden age of China, ushered in by Li-Shih-min, until the Europeans were lost and isolated in the gloom of the dark ages.

People speak of Christianity as if it were wholly derived from Judaism. Very little of it is. It is, in its theology, almost wholly derived from misunderstood Greek thought, mainly, as said, from the Neopythagorean and Neoplatonic systems; and this is obvious to anyone who reads the writings of those who are called the great doctors of Christian theology, such as Dionysius, the so-called Areopagite, whose system is, in essentials, entirely taken from the Neoplatonic philosophy. Mainly derived from him, again, are the present standard theological works of the Church of Rome: I mean the works of Thomas Aquinas. These are today the standard by which the theology of Rome is directed and settled when disputed points are to be adjudicated. And yet, while this is so, and while much of that which was taken over by the early Christian Fathers still remains as factors and words in the Christian theology, it has utterly forgotten the spirit of these early pagan thoughts, and that religion today stands reduced to a system of forms and ceremonies, mostly. -- G. de Purucker, *Fundamentals of the Esoteric Philosophy*, p. 487

. . . practically all the civil institutions of ancient times, punishments among others, were based upon what took place in the Mystery Schools. Such, for instance, was the crucifixion of the Romans, taken direct from one of the ceremonies of initiation, the "mystic death"; taken from it, stolen from it, and made an instrument of legal murder by the State, in later, degenerate times. Another instance, also taken from the ceremony of the mystic death, was the "cup," in India the Soma draft; in Greece we find Socrates punished by drinking from the cup of hemlock; and we are reminded of Jesus, praying that the "cup" might pass from him. Numerous other very different instances could be cited. . . .

Another instance which we might mention, of a quite different type, is that of the wearing of a crown or a diadem by civil rulers, formally enacted in the coronation of a king -- a ceremony adopted from the Mysteries. Some of the earliest crowns which they wore had outstanding spikes, reminding one of the crown of thorns of Jesus; . . . -- Ibid., p. 255

It is a few philosophers who, driven by the political events of the day, tracked and persecuted by the fanatical Bishops of early Christianity -- who had yet neither fixed ritual nor dogmas nor Church -- it is these Pagans who founded the latter. Blending most ingeniously the truths of the Wisdom-religion with the exoteric fictions so dear to the ignorant mobs, it is they who laid the first foundations of ritualistic Churches . . . -- H. P. Blavatsky, *Lucifer*, Vol. 4, p. 37, March, 1889

Other remarkable instances are the festivals of the Christmas and Easter seasons. These are materialized reflections of sacred ceremonies of initiations held at these times and described in symbols, which the Church interpreted as physical facts. All of which goes to bear out our statement that Christianity *in its beginnings* was pure theosophy.

From the dark ages we have happily emerged. They are past, and a great cycle of opportunity is before us, but the old false dogmas have left a stain, not yet wiped out. Among those obliterated teachings which were essential to an understanding of life was that of reincarnation. It was believed in the early centuries of this era, but discouraged by the Church when it became a political power. Finally at the second Council of Constantinople, AD 553, the teaching was anathematized. Thus, gradually, the knowledge of it faded out in the dark night which followed.

Without this fact of re-embodiment, life would be an absurdity, a grotesque farce without meaning. The events, emotions, ambitions, fortunes, or misfortunes of any one life period, would be anomalous, as incoherent, as dislocated, as would be any one day with the yesterdays and tomorrows blotted out. Try to picture such a crazy unhinged day, if you can. Observing superficially, one might say that from day to day we have the same body, the same brain, and a memory, conditions not present between lives. But this comprehensive, archaic philosophy, every aspect of which dovetails into every other, relating all parts to the whole, leaves no unexplained gaps, but shows the perfect analogy between the day and the life cycle. At the close of a life, all the entities which make up the complex nature of man, separate and go to their respective realms, as has been stated. The body, as we know, disintegrates, and the teaching is that its life-atoms gain experience by transmigrating through the kingdoms of nature. The human or reincarnating ego passes into a state of consciousness known as devachan, leaving behind the groups of attributes or skandhas which make up its personality. This longer night is for the human soul one of absolute bliss and rest, one in which all the experiences of the past are assimilated; all the nobler aspirations realized and worked into the nature; and from which it awakens, refreshed and strengthened, to take up its unfinished duties. The striking fact in the analogy drawn between sleep and death is that the complete man returns identical in all his elements. The higher aspects begin again to function together; the skandhas again become active; even the same life-atoms which made up the old body are magnetically attracted to their old places. The stage is set in new surroundings, but the same old actor is there charged with the same energies, tendencies, power or lack of power to deal with the problems which he himself has created, and which he is therefore bound to face. Without a knowledge of these facts it has been impossible for people to realize that they must reap what they sow. The thread of continuity, though unbroken and clear to the higher parts of the human constitution, has been lost to view by the brain of each succeeding rebirth. Thus with intuition clouded by false teachings, life has become an enigma. Our civilization is indeed an exemplar of the dire results of the loss of a true, deeply-

rooted sense of justice and responsibility.

The Law of KARMA is inextricably interwoven with that of Reincarnation.

. . . it is only this doctrine, we say, that can explain to us the mysterious problem of Good and Evil, and reconcile man to the terrible and *apparent* injustice of life. Nothing but such certainty can quiet our revolted sense of justice. For, when one unacquainted with the noble doctrine looks around him, and observes the inequalities of birth and fortune, of intellect and capacities; when one sees honor paid fools and profligates, on whom fortune has heaped her favors by mere privilege of birth, and their nearest neighbor, with all his intellect and noble virtues -- far more deserving in every way -- perishing of want and for lack of sympathy; when one sees all this and has to turn away, helpless to relieve the undeserved suffering, one's ears ringing and heart aching with the cries of pain around him -- that blessed knowledge of Karma alone prevents him from cursing life and men, as well as their supposed Creator. . . .

Truly a robust "faith" is required to believe that it is "presumption" to question the justice of one, who creates helpless little man but to "perplex" him, and to test a "faith" with which that "Power," moreover, may have forgotten, if not neglected, to endow him, as happens sometimes. Compare this blind faith with the philosophical belief, based on every reasonable evidence and life-experience, in Karma-Nemesis, or the Law of Retribution.

. . . Karma creates nothing, nor does it design. It is man who plans and creates causes, and Karmic law adjusts the effects; which adjustment is not an act, but universal harmony, tending ever to resume its original position, like a bough, which, bent down too forcibly, rebounds with corresponding vigor. If it happen to dislocate the arm that tried to bend it out of its natural position, shall we say that it is the bough which broke our arm, or that our own folly has brought us to grief? -- *The Secret Doctrine*, 2:303-5

---

## VII -- KARMA AND JUSTICE VERSUS PUNISHMENT

It knows not wrath nor pardon; utter-true  
Its measures mete, its faultless balance weighs,  
Times are as naught, tomorrow it will judge,  
Or after many days. -- *The Light of Asia*

The sense of justice is deeply rooted in the human mind because mind is part of the cosmos, all of whose actions and reactions are based upon justice. There is nothing a child so keenly resents, nothing that so embitters an adult, as a feeling that he has been unjustly treated. People will accept misfortunes, at least without bitterness, if they *know* they deserve them. Unfortunately, in the confused and distorted mental

outlook of today, with selfishness so rife and the "every man for himself" doctrine so commonly practiced, there is in Western lands no confidence in the justice of things. How could there be, after centuries of false teachings and counter-strokes of revenge all down the ages, until few can be found who are not in the tangle? Nothing but a true philosophy of life can possibly make people face the facts. There must be a broader outlook than the one-life theory offers. Some chance to harmonize with justice the frequent sight of good punished and bad rewarded must be given men before they can clean their hearts of bitterness, turn suspicion into trust, and shake off the deceiving lenses which have disguised every brother as an alien.

It is more particularly in Christian lands that the perception of justice in the universe has been so completely lost sight of. In Buddhism, Zoroastrianism, Vedantism, Taoism, the teaching of karma has not been lost, and even though the countries under these religions are in their dark cycles, crime is not as rampant as with us. In *The Key to Theosophy*, H. P. Blavatsky said in 1889:

According to the last census in Ceylon and India, in the comparative table of crimes committed by Christians, Mussulmen, Hindoos, Eurasians, Buddhists, etc., etc., on two millions of population taken at random from each, and covering the misdemeanors of several years, the proportion of crime committed by the Christian stands at 15 to 4 as against those committed by the Buddhist population. -- pp. 73-4 (orig. ed.)

Since then, we know, crime has enormously increased in the West. In *Lucifer*, Vol. 2, p. 147, April, 1888, H. P. Blavatsky writes editorially:

This is what one reads in the *Tablet*, the leading organ of Roman Catholic Englishmen, about Creeds and Criminality. I underline the most remarkable statements.

"The official statement as to the moral and material progress of India, which has recently been published, supplies a very interesting contribution to the controversy on the missionary question. It appears from these figures that while we effect a *very marked moral deterioration in the natives by converting them to our creed*, THEIR NATURAL STANDARD OF MORALITY IS SO HIGH that, however much we Christianize them, *we cannot succeed in making them altogether as bad as ourselves.*"

The following quotation from *The Wheel of the Law* may suggest an explanation of these facts:

Buddhists believe that every act, word, or thought has its consequence, which will appear sooner or later in the present or in the future state. Evil acts will produce evil consequences, good acts will produce good consequences . . . -- p. 57

Theosophy teaches that justice does not call for punishment from us. Karma will take care of this more efficiently than we can possibly do, and bring to all *just* what they deserve. Why should any seek to add to this? Our sole care should be to help men to meet their deserts bravely. What might we not

accomplish if our prison system were based on educative rather than punitive measures! The wisest and best minds of our civilization in increasing numbers are realizing this in considering the most outstanding violation of the duty of one to another, namely, legalized murder, which is a stigma upon our age. Future citizens of our Republic will certainly look back with horror to the barbarous custom of capital punishment. The karma of thwarting nature's plan in this way must be heavy for the nations who have permitted it. Society must, of course, be protected against malefactors, but in such a way that the latter are redeemed, not made worse. When one's moral sense is shocked, it is safe to assume that there is always a philosophic basis for this in the facts. Theosophy has given very specific teachings in regard to the sin of taking the life of another, which seems, in a way, to be magnified when the State is the murderer, because so many are involved in the crime.

Without attempting to explain in detail here the teaching as to the reaction upon society, it may be said that one who is violently deprived of his body does not really die -- that is, leave this earth atmosphere -- but remains on the astral plane, more at liberty in a way than behind the prison bars, until his natural life-term has expired. Here he can and does freely influence the weak-minded to commit crime and inject his feeling of hate against society, which has so ill treated him, into the minds of living men. Think of the terrible karma this brings to all concerned, and contrast that with the results which would follow an intelligent and sincere effort to help the criminal out of the mire he is in. Certainly, in this country at present, we manufacture criminals.

*Resist not evil, and render good for evil*, are Buddhist precepts, and were first preached in view of the implacability of Karmic law. For man to take the law into his own hands is anyhow a sacrilegious presumption. Human Law may use restrictive not punitive measures; but a man who, believing in Karma, still revenges himself and refuses to forgive every injury, thereby rendering good for evil, is a criminal and only hurts himself. As Karma is sure to punish the man who wronged him, by seeking to inflict an additional punishment on his enemy, he, who instead of leaving that punishment to the great Law adds to it his own mite, only begets thereby a cause for the future reward of his own enemy and a future punishment for himself. -- H. P. Blavatsky, *The Key to Theosophy*, p. 200 (orig. ed.)

Theosophy also states something which may further complicate the reading of the karmic law. Besides the so-called misfortunes which come unwittingly and unasked to the majority, there are those who have surpassed this majority in the school of life, and whose egos sometimes take up deliberately what is called bad karma for the sake of discipline, to overcome defects, and to gain fortitude. Or, they may assume difficult and unpleasant tasks, such as voluntary living in the slums or our prisons, solely for the sake of helping our brothers. There will occur to the mind many other such examples, which are happily becoming more and more frequent and form many a bright picture against the black background of our civilization.

Another evidence that the sense of justice is obscured is found in the belief in prayer to an external deity. This does not refer to aspiration, to the effort to reach to the god within -- which should be ever in the background of consciousness when not in the foreground -- but to the begging for personal benefits. H.

P. Blavatsky calls this foolish and useless unless accompanied with willpower; when so accompanied it becomes black magic. Impersonally regard the spectacle of two armies sent forth to murder each other, each side appealing piously to God to bring it victory! If sincere, prayer for personal favors is weakening and degrading; if not sincere, it is pure *cant*. How much more healthy, virile, stimulating, and elevating is the teaching of karma! How it evokes the innate dignity in man to know that he is master of his destiny; that as he sows, so shall he reap; that there is no chance in the universe; that "privileged beings" do not exist, but that the unlimited treasures of nature are open to all who meet the conditions.

There is a gentler aspect to the justice dealt to all which should not pass notice. After the life of struggle, of discipline, of perhaps pain and disappointment, there comes the beautiful devachan -- a wonderful compensation of bliss and rest, a glorious preparation for the new day.

Such is the law which moves to righteousness,  
Which none at last can turn aside or stay;  
The heart of it is love, the end of it  
Is peace and consummation sweet. Obey! -- *The Light of Asia*

---

## VIII -- NATIONAL AND RACIAL KARMA

We have said that all life is one, that it has a common origin: in other words, that the universe is a great organism. But within this are contained uncountable lesser organisms in an infinitely descending scale, all rooted in the unknown source, and springing into life from it as children from their parents. Thus we have, as said in Chapter 2, rulers of the cosmos; of solar systems; of planets; gods; demi-gods; great seers and sages. When we come to humanity, we find its units assembled together in countries, cities, families, etc. It follows that karma must act collectively as well as individually. Great cycles will affect races as a whole; smaller ones, the various subdivisions. In this some have seen fatalism or inescapable destiny, but it is no more present than in the individual cycles. These groupings are no more arbitrary than are those which the chemist finds among the elements. All are where they are, because they belong there. And everyone has built up his own attractions.

The choosing of environment begins with the individual. The reincarnating egos, as has been said, on returning to earth bring their characters with them -- an axiom which, it would seem, could go without saying. Having then well-defined tendencies, they are of necessity drawn to those parents who can give them a body most akin to their characteristics. This teaching casts an entirely new light on the problem of heredity, one in accord with essential justice, as has been shown. When life is viewed from this standpoint, children cannot throw upon their parents the responsibility for the bad tendencies they bring with them, and blame fate and luck for their birth and environment. Parents, of course, may fail to meet the problems they find in their offspring problems which they, perhaps, helped to create in past lives, and which must, in such event, recoil heavily upon themselves. But that is another story.

Thus, just as the individual chooses his family, so does the family choose its nation and race; that is to say, it is reborn where by its inherent nature it belongs. Therefore individuals are involved in national karma because they have helped to make it. A narrow and intense nationalism might attach one to a particular nation in one way; while in quite another would a strong feeling of duty toward that nation or a desire to help it.

The old Aztec and other ancient American peoples died out because their own karma -- the result of their own life as nations in the far past -- fell upon and destroyed them. With nations this heavy operation of karma is always through famine, war, convulsion of nature, and the sterility of the women of the nation. The latter cause comes near the end and sweeps the whole remnant away. And the individual in race or nation is warned by this great doctrine that if he falls into indifference of thought and act, thus moulding himself into the general average karma of his race or nation, that national and race karma will at last carry him off in the general destiny. This is why teachers of old cried, "Come ye out and be ye separate."

With reincarnation the doctrine of karma explains the misery and suffering of the world, and no room is left to accuse Nature of injustice.

The misery of any nation or race is the direct result of the thoughts and acts of the Egos who make up the race or nation. In the dim past they did wickedly and now suffer. They violated the laws of harmony. The immutable rule is that harmony must be restored if violated. So these Egos suffer in making compensation and establishing the equilibrium of the occult cosmos. The whole mass of Egos must go on incarnating and reincarnating in the nation or race until they have all worked out to the end the causes set up. Though the nation may for a time disappear as a physical thing, the Egos that made it do not leave the world, but come out as the makers of some new nation in which they must go on with the task and take either punishment or reward as accords with their karma. Of this law the old Egyptians are an illustration. They certainly rose to a high point of development, and as certainly they were extinguished as a nation. But the souls -- the old Egos -- live on and are now fulfilling their self-made destiny as some other nation now in our period. They may be the new American nation, or the Jews fated to wander up and down in the world and suffer much at the hands of others. This process is perfectly just. Take, for instance, the United States and the Red Indians. The latter have been most shamefully treated by the nation. The Indian Egos will be reborn in the new and conquering people, and as members of that great family will be the means themselves of bringing on the due results for such acts as were done against them when they had red bodies. Thus it has happened before, and so it will come about again. -- W. Q. Judge, *The Ocean of Theosophy*, pp. 96-7 (orig. ed.)

But history shows that often in national disasters, all are not involved. We query why the cyclone, in its seemingly mad rush, chose its victims so curiously; why the earthquake destroyed certain areas and not others; why, when the tidal wave destroyed the city, some had accidentally (?) been elsewhere than at

home. Even in the sweeping racial cataclysms the same curious fact is on record. This is strikingly illustrated in the story given in *The Secret Doctrine* of the sinking of the main continent of Atlantis. Before the close of the highly intellectual and brilliant Atlantean civilization, many of the spiritual and higher psychic powers unfolded in the race. A large portion used these selfishly and became wicked sorcerers or black magicians. On the other hand, many of the nations and tribes turned into what is called esoterically the right-hand path, and became white magicians, using their powers impersonally. These latter were warned of the coming general disaster by those great ones who eternally watch over the human races. A striking and graphic description of this period in our ancient history is given in *The Secret Doctrine*, 2:427-9, in which H. P. Blavatsky hints that the story of the Exodus in the Old Testament was built up on legends of this distant event. She tells how the "great King of the dazzling Face" sent his air-vehicles to his chiefs all over the land, and how the great Adepts and their followers escaped to safe quarters of the earth in *vimanas* or air-ships far superior to anything we have today, and became the founders of the fifth race. The description closes with this:

*the nations that were led away, were as thick as the stars of the milky way. . . . Like as a dragonsnake uncoils slowly its body, so the Sons of men, led on by the Sons of Wisdom, opened their folds, and spreading out, expanded like a running stream of sweet waters. . . . many of the faint-hearted among them perished on their way. But most were saved.*

One can see the beneficent working of nature here. Although the evil Atlanteans were destined, of course, to reincarnate later in the fifth race, they came into fresh, clean lands, where the followers of the karmic law had already gained the upper hand and where opportunities for improvement were greater. They are, nevertheless, a part of ourselves, and it has been stated that we are still suffering from Atlantean karma. Knowing the close ties that bind together the members of our human family, we must infer that responsibility for the disturbing elements will not end until all are redeemed. Should this fail to be recognised, then the suffering they are certain to cause to the nobler, more advanced, will become a reminder of our unfortunate Atlantean inheritance, and compel action.

Karma, as has been said, is universal. It moves from world to world. Planets are born out of their parent-planets; solar systems and universes, the same. Everything is the result of a previous cause. Nothing comes by chance. The peoples of our earth make its history in very truth, generate the forces which are so certain to focus at a given time that the great seers can foresee the future to which the past and present so surely point. They can tell why and when a race is to run its course, when cataclysms are due, when the high and low spots of a civilization will appear; and thus know just how and when to use their energies to lighten so far as possible the heavy karma of the world.

Why does this (Karmic) sterility attack and root out certain races at their "appointed hour"? The answer that it is due to a "mental disproportion" between the colonizing and aboriginal races is obviously evasive, since it does not explain the sudden "*checks to fertility*" which so frequently supervene. The dying out of the Hawaiians, for instance, is one of the most mysterious problems of the day. Ethnology will sooner or later have to recognise with Occultists that the true solution has to be sought for in a comprehension of

the workings of Karma. As Lefevre remarks, "the time is drawing near when there will remain nothing but three great human types" (before the Sixth Root-Race dawns [several millions of years hence]), the white (Aryan, Fifth Root-Race), the yellow and the African negro -- with their crossings (Atlanto-European divisions). Redskins, Eskimos, Papuans, Australians, Polynesians, etc., etc. -- all are dying out. Those who realize that every Root-Race runs through a gamut of seven sub-races with seven branchlets, etc. will understand the "why." The tide-wave of incarnating Egos has rolled past them to harvest experience in more developed and less senile stocks; and their extinction is hence a Karmic necessity. -- H. P. Blavatsky, *The Secret Doctrine* 2:780

Yet in the prognostication of *such* future events, at any rate, all foretold on the authority of cyclic occurrences, there is no psychic phenomenon involved. It is neither *prevision*, nor *prophecy*; no more than is the signalling of a comet or star, several years before its appearance. It is simply knowledge and mathematically correct computations which enable the WISE MEN OF THE EAST to foretell, for instance, that England is on the eve of such or another catastrophe; France, nearing such a point of her cycle, and Europe in general threatened with, or rather, on the eve of, a cataclysm, which her own cycle of racial *Karma has led her to*. The reliability of the information depends, of course, on the acceptance or rejection of the claim for a tremendous period of historical observation. Eastern Initiates maintain that they have preserved records of the racial development and of events of universal import ever since the beginning of the Fourth Race -- that which preceded being traditional. -- Ibid. 1:646

---

## IX -- FRUITS TO FLOW FROM RESTORATION OF THE TEACHING OF KARMA

Our civilization is being shaken to its foundations. Many have said that its fate is hanging in the balance. The feeling of instability and uncertainty as to the future is widespread. Earnest people are asking what can restore normal conditions and are answering the question by a growing recognition of the fact that human hearts must be changed before radical reforms can become effective.

People are not going to do right unless they see a reason for it; unless their minds are molded in harmony with the facts of nature. Fed as the Western nations have been, on unpleasant fairy tales about life, present and future, they are at sea for a rational explanation. Current religious misinterpretations of the original teachings given to every race have outraged man's sense of justice; in the groping after truth, a confusion of sects, good, bad, and indifferent, has arisen worse than the Babel of tongues. The ancient wisdom-religion -- the fountain-head of all the great religions and philosophies, the source of knowledge in science and arts -- in its universality and power to coordinate every faculty of the mind, can restore harmony and sanity to our world and evoke the true dignity of human nature.

An honest and whole-hearted belief in the law of karma in its relation to life as a whole would alone

completely change the character of our civilization. This may, perhaps, seem an extravagant claim to those not understanding its deep meaning. Yet the mere broadening of the present-day outlook would, in itself, be a wonderful thing. Human minds are now concentrated on one physical incarnation, a mere wink of the eye in the soul's history, and all events contained in it assume an undue importance in one way and a lack of importance in another. The sense of proportion and perspective is absolutely lost, and can only be regained by lifting the veil and revealing the illimitable vistas beyond. Simple common sense would then call into play the faculties of reflection and judgment, to say nothing of the awakening in the spiritual nature.

Gradually self-discipline would grow, beginning, perhaps, in self-interest, but merging by degrees into something greater, until the character is radically altered. Self-pity and whining would be stamped out when the realization came that misfortunes had been self-induced, and courage, will, and endurance would be evoked. There would be less condemnation and uncharitable criticism, and more kindness, more patience with the failings of others, if a deeper understanding of the difficulties as well as the possibilities in human nature were in the human race. We all know that among the subtle poisons of our life is the tendency to criticize others, to judge them unkindly, to impute to them unworthy motives, etc. And we also know how this takes the edge off every pleasure, and on the contrary, how fresh and clear the air is when suspicion is absent and an atmosphere of healthy sympathy exists.

The knowledge that one is master of his own destiny would remove the fear that at any time, out of the blue, an avalanche of misfortune might be precipitated, once that the old records are cleaned up; and the knowledge that these old records themselves can be softened in their results or even sometimes neutralized by the force of will intelligently directed, would arouse courage.

The easy-going irresponsibles, the indifferent, would gradually awaken if the truth of karma were in the minds of the majority, for, by degrees, these sleepers would feel such an invigorating mental atmosphere. Further, when the teaching of karma is realized, people will not seek to get something for nothing, or envy those who have more than themselves. They will know that time and the rolling cycles adjust all wrongs; that the only way to gain life's treasures is to concentrate on the duty in hand and leave the results to the Law.

There is a law of compensation in the Universe, meaning that all evil-doing has its own retribution by Nature's own act. Leave it therefore to the gods to avenge you if you have suffered, and suffered wrongly. "Vengeance is mine," said the Scriptures claimed by the Christians, merely re-echoing an ancient truth, a teaching of the Sages and Seers. Harmony is at the heart of things, for all Nature is orderly, and beautifully moves in system and stately measures. Give justice when you receive injustice. Ally yourselves with the gods, with your own inner god. Requite never hate with hate, for thus you but add fuel to an unholy flame. Requite hatred with compassion and justice. This is the ancient law. Thus also you make no evil Karma for yourself; thus you ally yourself with Nature's own spiritual procedures and you become a child of the cosmic life, which thereafter will beat in your own heart with its undying pulses. -- G. de Purucker: *Questions We All Ask*, Series II, 27

Imagine the sense of responsibility which would dignify life if all realized the intimate ties binding together all that is; if each one verily believed that "no man can live unto himself alone"; that with every act and thought he is either raising or dragging down the hosts of which he is a part. Even physical health would follow such realization, a natural result of moral health.

We make our own bodies, we make our own lives, we make our own destinies, and we are responsible for it all, spiritually, morally, intellectually, psychically, and even physically. It is a manly doctrine; there is no room in it for moral cowardice, no room in it for casting our responsibility upon the shoulders of another -- God, angel, man, or demon. -- G. de Purucker, *Fundamentals of the Esoteric Philosophy*, p. 130

Yet, as in every advance that nature makes, as the cycles in their wheeling course come round, there are some who lag behind and lose sight of their heritage, blinded by the desire of personal gain, by ambition and love of power; so that today there are some who refuse the opportunity that for ages their souls have waited for. The cycles have brought them and ourselves to the point of former achievement and former failure. We and they have met in the past as in this life, and shall meet again in the future, and by our action today we are forging the links that shall help or mar their progress, as well as our own and that of all humanity, in the future.

But the crucial point of the cycle is past; the fiercest ordeal is over; no powers in heaven or hell can longer stay the onward progress of humanity. The hosts of light are already victorious. -- Katherine Tingley, *Theosophy: the Path of the Mystic*, pp. 58-9

## Chapter 1

### Introductory

The word *hierarchies* has a very limited application in the English language, being confined almost entirely to church organization. The dictionary gives as the first meaning "a body of ecclesiastical rulers," and only in the third definition suggests a wider application, such as that of kingdoms, classes, orders, families, genera, and species. Practically, the word is of ecclesiastical association. The reason for this is no doubt due to the fact that during the dark ages it was only in the ancient Mystery schools that the real teaching of hierarchies was given, as the fundamental, universal scheme of nature. These secret schools dealt with the problems of life and death, and were known as the highest court of authority. But as they declined, due to the prevailing social conditions, and were finally closed in the sixth century, certain teachings in a limited and restricted form remained in the public mind associated with the religions, which were really the degenerated shadows of the Mystery schools.

During the early centuries of this era, several religions were contending for general acceptance. When finally the Christians gained supremacy, their religion was naturally colored with the old beliefs and forms familiar to and loved by many of the people. The influence of the Stoics, the Neopythagoreans, and Neoplatonists was evident, but especially the last named left its mark. This was largely due to certain writings which appeared in the fifth or sixth century purporting to have been written by Dionysius the Areopagite -- a man who, according to the Christian legend, was one of the first converts of Paul when he preached on Mars Hill in Athens. The real author was evidently a man of that later time who was in sympathy with the Neoplatonists' teachings, but who for some reason, possibly social or financial, worked under the banner of the dominant Church. At heart he was a Greek pagan, and perhaps wishing to save Christianity from pure exotericism and to illuminate it, he seems to have adopted a method of introducing some of the old teachings in a modified form which would influence the people in

their favor. His effort was reinforced through the influence of schools of learning active at that time in Alexandria, the great center of Hellenistic culture. However this may be, these writings profoundly influenced the Christian Church about the fifth or sixth century, and to this day are found among the canonical works. Among them was a treatise on the Divine Hierarchies, which taught that God, being infinite, worked through lesser divinities of graded development, each lower being derived from the one above it, thus following in a general way the Kabbala and the Neoplatonists -- only instead of using their terms, he adopted names more congenial to Christian thought. These terms were: God, as the Summit; then Seraphim, Cherubim, Thrones, forming the first triad; then Dominations, Virtues, Powers, as the second triad; and Principalities, Archangels, Angels, as the third triad; making ten stages or grades. And this, in substance, is the fifth definition in the dictionary.

The essence of the meaning of this teaching has long since passed out of the Christian religion, and probably was clearly grasped only in the very early years of our era by a relatively limited number of people. Esoterically the term has a special significance which we will try to develop. Exoterically it applies to any organized combination held together by a head, having under him a graded series of subordinates, each of them being responsible to the one directly above him. The army of a nation is an excellent example of a hierarchy, being organized generally in corps, divisions, brigades, regiments, battalions, companies, and other units, on a descending scale.

Human life even on this physical plane is only possible when it is organized after this fashion. Every country has its government, and whatever subordinate divisions of the country may exist, such as states, counties, or what not, all have their rulers and under-rulers. Within these are the cities, with a head manager controlling departments which are under the authority of one of still lower rank. Every business enterprise is carried on in a similar manner. Human activities cannot function otherwise, and there is peace, happiness, and harmony to the degree that the state or any other body is able to preserve these various relationships without friction. On the other hand, there is insecurity, confusion, unrest, social disease, exactly in proportion as the links weaken or become ineffective. In any combination or group of people there must be a central authority which has the confidence and respect of the units if life is to proceed normally. Let this weaken or cease to be present and, in the case of a country, the horror of a revolution is imminent. The climax of terror comes when human passions are let loose in a mob.

All these facts are so common that their deep significance is overlooked. Human beings direct their own lives along such grooves because they cannot do otherwise. Their minds are part of cosmic mind and they must follow nature's pattern or be torn to pieces. This is nothing which has to be learned any more than babes have to learn to breathe. Primitive people follow

and keep to the pattern more perfectly than do their so-called civilized brothers. The necessity for organization is innate.

## ILLUSTRATIONS FROM NATURE

We see the same thing in the lower kingdoms, especially developed in bees and ants. The bees have their

queen with her enormous family of sons or drones and daughters or workers. The latter are divided further into nurses for the young, maids-of-honor to the queen, builders, gatherers of pollen and of nectar for honey-making, and still another group to air and heat or cool the hive, etc. All know and fulfill their various duties. Some are watchers at the door to guide the timid young ones to their hive and to guard the door from enemies. All these together form a harmonious community working under the great law.

The ants represent another organized society. This principle of organization is universal throughout the kingdoms. Botanists see plainly the division of plants into families. Mineralogists see the mathematical precision of nature in the marvelous formation of crystals. But in the ant and bee families we can see nature's plan actually at work. In some ways the ants are even more wonderful than the bees. In the Alleghany Mountains there are 1700 ant mounds covering a space of fifty acres and they are all of one commonwealth. There is a similar division of labor as in the case of the bees: major and minor workers, sentinels for hostile approach, masons, builders, foragers, nurses, queen's bodyguard, and even harvesters and gardeners. These duties are mostly interchangeable, rather more so than in the bee communities. But in the case of the termites, perhaps the most wonderfully organized of all insect communities, there is a very definite division of duties and even a very great modification of the bodily structure into several classes. Yet there is never confusion, never disturbance unless an enemy appears in the fold. The citizens of this commonwealth seem to be so perfectly self-controlled, so absolutely free from any desire to violate law or swerve from duty, that this community of millions thread their ways through innumerable labyrinths as if dominated by some secret and occult guide, infallible and sure.

It is indeed the teaching that the lower kingdoms are informed by higher beings -- through remote control, we might say -- and they reflect as in a clear surface the harmony above. In the human kingdom we find entirely different conditions. Mind has been awakened and self-consciousness has resulted. We must learn to do for ourselves what higher beings are doing for the lower kingdoms. Moral responsibility follows the awakening of mind, and we must learn through mistakes and suffering to weave the pattern of the gods and make its fabric glow with its own inherent light.

But the human race is young, only a little more than half over its journey on this planet, and it must serve a long, long apprenticeship before it finds itself, and before the units themselves learn each one separately to put its own house in order. Collectively humanity is indeed a child, with all the conceit and self-confidence of childhood, yet instinctively, inevitably it knows that nothing can be carried out, that no project can begin to function, until it is framed in a suitable organization with its central authority.

The animal kingdom, being so closely connected with the human through its bodies of flesh, reflects more of human unrest than do the kingdoms below, but even here we find the hierarchical pattern more or less clearly marked in places. Humans not having overcome the "delusion of separateness" are constantly fighting cooperation through their selfishness, and yet are inevitably drawn into it both by their selfish and their altruistic instincts. Nothing else works. Even criminals are well organized, and have their own codes of honor for self-protection.

These facts are so common that we fail to read their meaning; to see that the innate tendencies in people

to shape their lives have their origin in the impulses from higher realms of consciousness, in the vital streams which flow through the natural channels in human nature to the lower planes where the human consciousness is at present functioning. The inevitable, irresistible tendency for human activities to shape themselves into hierarchical formation shows that this is nature's constitution. "As above, so below." The physical plane is the reflection, the shadow, of that which has produced it. The essential difference, however, between the man-made hierarchies and those existing throughout nature, is that the former are artificial and the latter real. The artificial ones are those upon which the undeveloped human beings are practicing, so to say. They are the means through which the undeveloped parts of the human constitution are being molded, thus fitting the human kingdom to take its place in the living tissue of the universe. With these preliminary remarks, we can consider the most evident example of a *real* hierarchy -- the human body.

---

## Chapter 2

### The Human Body

The human body is a hierarchy in manifestation before our eyes, a little universe in itself on our own physical plane which, could we fathom its meaning, would reveal the mysteries of kosmos. For the human intellect its secrets are a sealed book which only an adept of advanced degree could open. From one point of view it is but a mechanism, a vehicle for the use of higher forces. This is evident, for when these are withdrawn, as at death, it begins at once to crumble, the various entities which have been working together go their own ways, and the hierarchical combination temporarily rests.

When, however, the hierarchy of the body is active, it is the brain which is the dominant factor, the hierarch. But we must understand, of course, that the brain or any other organ is but a transmitter of the energies from entities of higher grades who make up the composite human constitution.

The basis of physical life is the cell, which in manifestation is a sevenfold entity, like man, like the earth, like the sun, like the universe; for every existing form is a reflection of the form above it. The cell contains, among other things, a nucleus, a nucleolus, and an enveloping membrane, which latter corresponds to the body of a human. It has also kosmic correspondences.

*"The Spheres of Being, or centres of life, which are isolated nuclei breeding their men and their animals, are numberless; not one has any resemblance to its sister-companion or to any other in its own special progeny."*

*"All have a double physical and spiritual nature."*

*"The nucleoles are eternal and everlasting; the nuclei periodical and finite. The nucleoles form part of the absolute. They are the embrasures of that black impenetrable fortress,*

*which is for ever concealed from human or even Dhyanic sight. The nuclei are the light of eternity escaping therefrom."*

*"It is that LIGHT which condenses into the forms of the 'Lords of Being' . . . -- The Secret Doctrine 2:33*

All the cells of the body are specialized to fulfill their various functions. For example, a muscle, liver, or blood cell is easily recognized as belonging to its own organ. But there is a further specialization for the different duties of any one organ: the liver, for example, has a variety of functions, and the cells grouped together for any one purpose are presided over and kept in order by their little brain, known as a ganglion. All of these ganglia are coordinated by the nervous apparatus of the liver as a whole, and all the organs of the body united by the central nervous system. There is instant and absolute communication between all the parts of this innumerable host; absolute obedience of each unit to its superior; and when in health, this little world moves in its orbit as serenely as the stars, without jar or friction, which might continue were it not for the discord injected into its ordered life by the unevolved intermediate nature of man, higher up on the scale. But the cells, basic units of the human body, are by no means the simple things they seem to be under the microscope. Smaller and smaller grows the pattern, but ever the small reflects the great.

Science teaches us that the living as well as the dead organism of both man and animal are swarming with bacteria of a hundred various kinds; that from without we are threatened with the invasion of microbes with every breath we draw, and from within by leucomaines, aerobes, anaerobes, and what not. But Science never yet went so far as to assert with the occult doctrine that our bodies, as well as those of animals, plants, and stones, are themselves altogether built up of such beings; which, except larger species, no microscope can detect. . . . Each particle -- whether you call it organic or inorganic -- *is a life*. Every atom and molecule in the Universe is both *life-giving* and *death-giving* to that form, inasmuch as it builds by aggregation universes and the ephemeral vehicles ready to receive the transmigrating soul, and as eternally destroys and changes the *forms* and expels those souls from their temporary abodes. It creates and kills; it is self-generating and self-destroying; it brings into being, and annihilates, that mystery of mysteries -- the *living body* of man, animal, or plant, every second in time and space; . . . -- Ibid., 1:260-1

It is by studying the small that we can infer the great, once we grasp the philosophy that is contained in the idea of analogy; once we realize that the universe is one organism, and that every lesser organism of whatever nature is an integral part of the whole, part of its nature and therefore essential to it. It is thus not a mere figure of speech to compare the human body to a universe, or the "spheres of being" (or stars and planets) to cells in the human body, for this body is verily an epitome of the whole. Perchance the organs of this whole may be great central suns, controlling lesser suns in an almost infinite series of gradations, whose planets may be atoms of this mighty entity. Analogy would lead us to infer a universal nervous system and circulations of life currents, purifying and rejuvenating every such cell, with its consciousness permeating everywhere.

---

## Chapter 3

### Source of These Teachings

The foregoing is but a sketchy outline of the hierarchical constitution of the universe, and before proceeding further it is pertinent to answer the question which must arise in the minds of those unfamiliar with these teachings as to the source from which they come. Are they inferences and guesses of some penetrating minds, arguing from particulars to universals? A study of this majestic philosophy will make it quite clear that no human mind could have evolved it. Only those far beyond the ordinary human stage would be capable of studying and recording the workings at the heart of nature.

Theosophy is the majestic wisdom-religion of the archaic ages and is as old as thinking man. It was delivered to the first human protoplasts, the first thinking human beings on this earth, by highly intelligent spiritual entities from superior spheres. This ancient doctrine, this esoteric system, has been passed down from guardians to guardians to guardians through innumerable generations until our own time. Furthermore, portions of this original and majestic system have been given out at various periods of time to various races in various parts of the world by those guardians when humanity stood in need of such extension and elaboration of spiritual and intellectual thought.

Theosophy is not a syncretistic philosophy-religion-science, a system of thought or belief which has been put together piecemeal and consisting of parts or portions taken by some great mind from other various religions or philosophies. This idea is false. On the contrary, theosophy is that single system or systematic formulation of the facts of visible and invisible nature which, as expressed through the illuminated human mind, takes the apparently separate forms of science and of philosophy and of religion. We may likewise describe theosophy to be the formulation in human language of the nature, structure, origin, destiny, and operations of the kosmical universe and of the multitudes of beings which infill it.

It might be added that theosophy, in the language of H. P. Blavatsky (*Theosophical Glossary*, p. 328), is "the sub-stratum and basis of all the world-religions and philosophies, taught and practiced by a few elect ever since man became a thinking being. In its practical bearing, Theosophy is purely *divine ethics*; . . . G. de Purucker, *Occult Glossary*

The real facts of life included in what is known as the wisdom-religion have been taught again and again in ages past, and as often have been lost and forgotten just as the cities of former civilizations are buried in the earth and lost to sight and memory. Great teachers have come in every age and have given, suited to the molds of minds of that cycle, as much of truth as could be understood and assimilated. The

teaching is that in the early ages of humanity on this planet, great beings from other worlds came and impressed the minds of human beings with the facts of life, leaving a body of adepts referred to in H. P. Blavatsky's *The Secret Doctrine* 281-2, as follows:

Alone a handful of primitive men -- in whom the spark of divine Wisdom burnt bright, and only strengthened in its intensity as it got dimmer and dimmer with every age in those who turned it to bad purposes -- remained the elect custodians of the Mysteries revealed to mankind by the divine Teachers. There were those among them, who remained in their *Kumaric* condition from the beginning; and tradition whispers, what the secret teachings affirm, namely, that these Elect were the germ of a Hierarchy *which never died since that period*: --

*"The inner man of the first \* \* \* only changes his body from time to time; he is ever the same, knowing neither rest nor Nirvana, spurning Devachan and remaining constantly on Earth for the salvation of mankind. . . ."* "Out of the seven virgin-men (Kumara) four sacrificed themselves for the sins of the world and the instruction of the ignorant, to remain till the end of the present Manvantara. Though unseen, they are ever present. When people say of one of them, "He is dead"; behold, he is alive and under another form. These are the Head, the Heart, the Soul, and the Seed of undying knowledge (Gnyana). Thou shalt never speak, O Lanoo, of these great ones (Maha . . .) before a multitude, mentioning them by their names. The wise alone will understand. . . ." (Catechism of the inner Schools.)

It is from these that all the great adepts of history have descended. They are the guardians of humanity, and it is from among their number that from time to time in history the founders of the great religions have come among mankind. Referring to the method of studying the framework of nature, H. P. Blavatsky wrote:

The flashing gaze of those seers has penetrated into the very kernel of matter, and recorded the soul of things there, where an ordinary profane, however learned, would have perceived but the external work of form. . . . It is useless to say that the system in question is no fancy of one or several isolated individuals. That it is the uninterrupted record covering thousands of generations of Seers whose respective experiences were made to test and to verify the traditions passed orally by one early race to another, of the teachings of higher and exalted beings, who watched over the childhood of Humanity. That for long ages, the "Wise Men" of the Fifth Race, of the stock saved and rescued from the last cataclysm and shifting of continents, had passed their lives *in learning, not teaching*. How did they do so? It is answered: by checking, testing, and verifying in every department of nature the traditions of old by the independent visions of great adepts; *i. e.*, men who have developed and perfected their physical, mental, psychic, and spiritual organizations to the utmost possible degree. No vision of one adept was accepted till it was checked and confirmed by the visions -- so obtained as to stand as independent evidence -- of other adepts, and by centuries of experiences. -- *The Secret Doctrine* 1:272-3

Such is our authority for the teachings of the hierarchical constitution of the universe, presented not in a dogmatic sense, but as an explanation, the acceptance of which each one must decide for himself. This has been, indeed, prior to the last century, an esoteric teaching for our historical period, and the fact that it is now given on a printed page seems to contain a hopeful promise of present possibilities.

The following definition of a hierarchy from this heretofore esoteric standpoint is quoted from G. de Purucker's *Occult Glossary*:

The name is used by theosophists, by extension of meaning, as signifying the innumerable degrees, grades, and steps of evolving entities in the kosmos, and as applying to all parts of the universe; and rightly so, because every different part of the universe -- and their number is simply countless -- is under the vital governance of a divine being, of a god, of a spiritual essence; and all material manifestations are simply the appearances on our plane of the workings and actions of these spiritual beings behind it.

The series of hierarchies extends infinitely in both directions. If he so choose for purposes of thought, man may consider himself at the middle point, from which extends above him an unending series of steps upon steps of higher beings of all grades -- growing constantly less material and more spiritual, and greater in all senses -- towards an ineffable point. And there the imagination stops, not because the series itself stops, but because our thought can reach no farther out nor in. And similar to *this* series, an infinitely great series of beings and states of beings descends downwards (to use human terms) -- downwards and downwards, until there again the imagination stops, merely because our thought can go no farther.

The summit, the acme, the flower, the highest point (or the hyparxis) of any series of animate and "inanimate" beings, whether we enumerate the stages or degrees of the series as seven or ten or twelve (according to whichever system we follow), is the divine unity for that series or hierarchy, and this hyparxis or highest being is again in its turn the lowest being of the hierarchy above it, and so extending onwards forever -- each hierarchy manifesting one facet of the divine kosmic life, each hierarchy showing forth one thought, as it were, of the divine thinkers.

Various names were given to these hierarchies considered as series of beings. The generalized Greek hierarchy as shown by writers in periods preceding the rise of Christianity may be collected and enumerated as follows: (1) Divine; (2) Gods, or the divine-spiritual; (3) Demigods, sometimes called divine heroes, involving a very mystical doctrine; (4) Heroes proper; (5) Men; (6) Beasts or animals; (7) Vegetable world; (8) Mineral world; (9) Elemental world, or what was called the realm of Hades. The Divinity (or aggregate divine lives) itself is the hyparxis of this series of hierarchies, because each of these nine stages is itself a subordinate hierarchy. This (or any other) hierarchy of nine,

hangs like a pendant jewel from the lowest hierarchy above it, which makes the tenth counting upwards, which tenth we can call the superdivine, the hyperheavenly, this tenth being the lowest stage (or the ninth, counting downwards) of still another hierarchy extending upwards; and so on, indefinitely.

One of the noblest of the theosophical teachings, and one of the most far-reaching in its import, is that of the hierarchical constitution of universal nature. This hierarchical structure of nature is so fundamental, so basic, that it may be truly called the structural framework of being.

## UNIVERSALITY OF THE TEACHING

Echoes of this ancient teaching can be found more or less plainly stated in India, Japan, and Egypt. The scheme in the Neoplatonic philosophy has just been given in the definition of a hierarchy. This was copied from the Greeks, as taught by Plato, and the Christian scheme which has been alluded to earlier, was patterned after the same with different names. The Syrians had a similar system, using their special terms, likewise the Babylonians. The Kabbala referred to the Ladder of Life. All of these were exoteric inasmuch as the real key to their full meaning was withheld, but they show how widely spread were the ideas, and indicate a common source from which they all sprang. They at least show that a belief in a gradation of power and authority in the inner spheres was general; that there was understood to be a multiplicity of gods working together in their appropriate realms and conducting the affairs of the universe. It took the dark ages to develop the degenerate belief in an extra-cosmic God who personally attended to the affairs of the universe. Now, however, it is being recognized that the God of theology is a logical impossibility. The perfect God premised should have made perfect beings living in a perfect world. But facts, as we know them, indicate that evolving, learning entities are working their way to freedom and knowledge. Every grade or plane or station must have its guides, infallible in relation to the territory they have conquered, but still fallible in their own spheres, while they too must have their guides, infallible to them, and so on infinitely. The ancient wisdom taught constant growth and evolution; imperfection ever working toward perfection, to be attained in the sphere inhabited for the time. Thus we see law and order and design in the universe as a whole, which yet provides the schools in which learning entities can grow through their experience and profit by their mistakes.

The AH-HI (Dhyan-Chohans) are the collective host of spiritual beings -- the Angelic Hosts of Christianity, the Elohim and "Messengers" of the Jews -- who are the vehicle for the manifestation of the divine or universal thought and will. They are the Intelligent Forces that give to and enact in nature her "laws," while themselves acting according to laws imposed upon them in a similar manner by still higher Powers; but they are not "the personifications" of the powers of Nature, as erroneously thought. This hierarchy of spiritual Beings, through which the Universal Mind comes into action, is like an army -- a "Host," truly -- by means of which the fighting power of a nation manifests itself, and which is composed of army corps, divisions, brigades, regiments, and so forth, each with its separate individuality or life, and its limited freedom of action and limited responsibilities; each contained in a larger individuality, to which its own interests are

## Chapter 4

### Man's Composite Nature as a Hierarchy

We have spoken of the human body as a hierarchy. This may be more easily grasped than the idea that man as a whole is a larger hierarchy of which the body is the lowest, the simplest, and least important. Christians have been used to the idea that we are composed of body, soul, and spirit, but the real philosophical meaning has been lost to the West for centuries, and the average person has been content to think chiefly of the body, while holding a vague idea that he has a soul as well. While this threefold classification is correct in a general way, for more careful analysis of the human being, the ancient teaching describes us as a sevenfold (or tenfold) entity, or expressed in another way, as an entity having seven principles or aspects. Each one of these aspects, like the body, is a hierarchical entity, having its own individual system, but working with the larger hierarchy under the hierarch.

These principles or entities are (1) *atman*, the essential self; (2) *buddhi*, the faculty or spiritual organ in man, manifesting itself as intuition, understanding, discrimination, etc.; (3) *manas*, the center or organ of the human ego-consciousness, and therefore the producing cause of the "I am I"; (4) *kama*, the seat of the impulses, desires, aspirations, and therefore the driving force in the human constitution; (5) *prana*, the "electrical field" manifesting in the human as vitality; (6) *linga-sarira*, the astral model body; and (7) *sthula-sarira*, the physical body. Number 3, manas or mind, has a higher and lower portion, which latter and the four lower principles have yet to gain their immortality. This word "immortality" is here used in a special sense. Nothing that exists can ever cease to exist, of course, since all units are part of the whole. But the lower principles have not yet evolved to the point of self understanding and mastery, which is their destiny in the eternities to come.

A less analytical classification includes the upper duad, namely, atman and buddhi, as spirit; the intermediate duad, namely, manas and kama, as soul; and the lower triad as body.

Here we are only outlining the human constitution from the hierarchical standpoint. Seven parts or principles have been mentioned, but in truth, as has been said, every hierarchy consists of ten, three of which, in our case, are unmanifested, at least so far as we are concerned. Further, there are two more, one connecting any hierarchy with the one above it, and one with the hierarchy below it, making twelve in every system.

A little reflection will reveal that this teaching about human beings as being many in One is in harmony with universal experience. Impulse, emotion, thought or impersonal love, directs every human act, the motive and quality depending upon the center in which the consciousness is resting, which may be either

high or low. Very highly evolved individuals work from their spiritual center, which sends its impulses down through the whole nature eventuating in noble thoughts and deeds. These impulses are felt but feebly in the undeveloped person who more frequently centers his consciousness in his unevolved, uncertain, and vacillating intermediate nature. But whether high or low, every impulse comes to the body from above or within, expressing itself in speech, thought, or action. And the within and the without are evidently one organism, acting together simultaneously.

The Universe is worked and *guided* from *within outwards*. As above so it is below, as in heaven so on earth; and man -- the microcosm and miniature copy of the macrocosm -- is the living witness to this Universal Law and to the mode of its action. We see that every *external* motion, act, gesture, whether voluntary or mechanical, organic or mental, is produced and preceded by *internal* feeling or emotion, will or volition, and thought or mind. As no outward motion or change, when normal, in man's external body can take place unless provoked by an inward impulse, given through one of the three functions named, so with the external or manifested Universe. The whole Kosmos is guided, controlled, and animated by almost endless series of Hierarchies of sentient Beings, each having a mission to perform, and who -- whether we give to them one name or another, and call them Dhyān-Chohans or Angels -- are "messengers" in the sense only that they are the agents of Karmic and Cosmic Laws. They vary infinitely in their respective degrees of consciousness and intelligence; and to call them all pure Spirits without any of the earthly alloy "which time is wont to prey upon" is only to indulge in poetical fancy. For each of these Beings either *was*, or prepares to become, a man, if not in the present, then in a past or a coming cycle (Manvantara). They are *perfected*, when not *incipient*, men; and differ morally from the terrestrial human beings on their higher (less material) spheres, only in that they are devoid of the feeling of personality and of the *human* emotional nature -- two purely earthly characteristics. -- *The Secret Doctrine* 1:274-5

---

## Chapter 5

### The Infinite and Eternal Cause of Being

The undeveloped individual has always stood in awe of the mystery of life. Only mystics have found within themselves some answer to the eternal questions, "Whence did I come?" "Whither shall I go?" Exoteric religions of the West have referred the origin of all things to a God -- a God colored, of course, by mankind's own various and immature conceptions of perfection. But the ancient wisdom, the fountain-head from which all religions have flowed, in whatever form it has been presented to humanity during all the millions of years since the human host was evolved on this globe, states that this form has always been built around the basic central premises of a boundless principle, which had no beginning and can have no end; in which all beings exist, from which all proceed, and to which all eventually return. It is the eternal IS, and the eternal NOW. All speculation concerning it is impossible, as a part

cannot comprehend the whole of which it is a part. It is the one reality, amidst the phantasmagoria of the never ceasing and eternally changing movements of life. It is the noumenon behind all phenomena.

This principle we know to be true, not only because such is the assertion of the ancient wisdom as it has been presented today, and therefore as it must have been presented in the past, but also because the rational mind accepts it as inevitable. This boundless principle manifests and withdraws, sleeps and wakes. The great universe is active during its day, then darkness and silence reign over space. In the poetical symbolism of the ancients, it is described as the inbreathing and outbreathing of Brahma. In the outbreathing a new universe comes into being, yet it is but the old reborn. In the inbreathing all returns to silence and darkness. So it is with solar systems, so it is with planets, with races of mankind as a whole; with individuals; with atoms.

The formation of crystals from a saturated solution of certain substances may offer a suggestion to some minds. The heated solution is clear and transparent, then quietly as the liquid cools, beautiful starry crystals appear as if by magic, now here, now there, while the liquid is not decreased or diminished. In our undeveloped state and with our finite minds it is not to be supposed that we can grasp these transcendent facts except in broad outline. Yet we can work in the direction of truth and absorb enough to guide us along the path which all must tread.

The universe re embodies itself . . . following precisely the analogical lines that the soul of man does in reincarnating, making the necessary allowances for varying conditions. As man is the product of his former life, or rather of his lives, so is a universe, a solar system, a planet, an animal, an atom -- the very great as well as the so-called infinitesimal -- the fruitage, the flower, of what went before. Each of these bears its load of karma precisely as the soul of man does. -- G. de Purucker, *Fundamentals of the Esoteric Philosophy*, chapter 4

We have said that this ancient wisdom-religion has been given to every great race, and we may add, to the various subdivisions of such races, in such measure and form as would fit the needs and understanding of these respective eras. There have been greater civilizations in the past than those we know today. There are times when more advanced souls are in incarnation than at other times, and naturally a great teacher would present the teachings about life in a form best fitted to the mental development of those who are to receive them, though basically the teachings would be the same. So it must always be, and the fact that such has been the case is corroborated by a variety of evidence from as far back as our historical records reach. The great religions can be shown to have had a common origin, but even without such overwhelming support from history, the assertion that there must be those advance guards of humanity, equipped to hand down such ancient teachings, is a belief which one cannot escape if evolution be accepted as a fact. And evolution is before our eyes every moment of our lives. We see everything growing in all the kingdoms. Children grow to adult age, and adults often unfold glorious qualities in their natures, showing the possibilities, the trend of human life, and suggesting, almost declaring thereby, that some men, during the long past, must have reached a godlike status, fitted to be great teachers to their younger brothers.

History again confirms this inference in the outstanding figures of Gautama Buddha, Krishna, Lao-Tse, Jesus, Quetzalcoatl, and others. It is true that these teachings invariably degenerate, more or less according to the relative darkness of the cycle in which they were given. Yet even in the Christian childish conception of a personal God -- a great cosmic man who is beseeched to grant favors to one over another -- even in this travesty of the original teaching it is possible to discern the distorted outlines of the true picture.

*"Thus there is but one Absolute Upadhi (basis) in the spiritual sense, from, on, and in which, are built for Manvantaric purposes the countless basic centres on which proceed the Universal, cyclic, and individual Evolutions during the active period."*

*"The informing Intelligences, which animate these various centres of Being, are referred to indiscriminately by men beyond the Great Range as the Manus, the Rishis, the Pitris, the Prajapati, and so on; and as Dhyani Buddhas, the Chohans, Melhas (fire-gods), Bodhisattvas, and others, on this side. The truly ignorant call them gods; the learned profane, the one God; and the wise, the Initiates, honour in them only the Manvantaric manifestation of THAT which neither our Creators (the Dhyani Chohans) nor their creatures can ever discuss or know anything about. The ABSOLUTE is not to be defined, and no mortal or immortal has ever seen or comprehended it during the periods of Existence. The mutable cannot know the Immutable, nor can that which lives perceive Absolute Life." -- The Secret Doctrine 2:34*

This fundamental proposition of a boundless underlying principle is recalled here because it must be the real starting point, from within, of our study of hierarchies.

## Chapter 1

### The Cosmic Path of Evolution

Human origins have heretofore been a mystery for this age, but theosophy now breaks the silence of centuries and declares that man is inherently divine and that, from the time that he is equipped with mind, *he creates himself*. This new-old teaching hangs upon those of the actual oneness of all life and the doctrine of hierarchies.

The mere belief in mankind's divine parentage is nothing new: on the contrary, it is almost universally accepted. Every religion presents it in some form. Human beings feel the necessity of accounting for their existence, and however much the pure religions may have been degraded or become split into innumerable sects over disputes regarding misunderstood or man-invented tenets, there remains in the minds of all, tutored or untutored, a belief in a Divine Being, a "Creator" of the universe.

The knowledge which theosophy restores to this age pertains to the manner in which this so-called creation came about. Proceeding from universals to particulars, the philosophy of the ancient wisdom-religion unfolds the broad outlines of evolution in such inevitable sequence, filling the gap in modern theories with such soul- and mind-satisfying reasoning, that doubt or blind belief gives place to assurance and knowledge.

It is, in very truth, to this archaic wisdom that we must turn to save us from ourselves; to guide us on our onward and upward march. The staggering questions as to the meaning and purpose of life, the origin and nature of sin, must be answered truly if the human race is to progress. The agony of doubt, the fear of the future, self-distrust, reckless indifference, the confusion of ignorance -- all must be met,

understood, and overcome by each one in himself, before we can rise to our essential dignity and move forward toward the transcendent glory of our destiny.

This great, superb, and comprehensive knowledge is not a compilation of the essences of the various schools of philosophy that have marked the pages of history. Rather are *they* the more or less clear echoes of *its* teachings. Its origin is archaic and different. This must be clearly understood. Theosophy makes the claim -- one which by study in the right direction can be verified -- that as soon as man on this planet was endowed with mind, great beings from other and previous cycles of evolution, far greater than this cycle of our earth, came to instruct and to strike the keynote for the coming human races. It is they who communicated the knowledge -- a small part of which the humanity of today is ready to receive -- to the chosen ones destined to guide the children of earth. Imperishable records of this truth do indeed exist, and are well guarded by those worthy of the trust. All through the ages there have been those, known as messengers, chosen by these guardians to come among men at certain cyclic periods and restate as much of this wisdom-religion as could be understood at the time, framed in language appropriate to the mental molds of that age. The Mystery schools of ancient Egypt and Greece gave profound teachings, but only to pledged neophytes; and all through the ages there have been advanced mystics who have had their pledged disciples. But on a printed page and openly taught, there has been nothing like H. P. Blavatsky's *The Secret Doctrine* in our known history. This fact, coincident with the increasing unification of all parts of the world in a physical way, presents matter for grave reflection. Speaking of her book, she says:

*The Secret Doctrine* merely asserts that a system, known as the WISDOM-RELIGION, the work of generations of adepts and seers, the sacred heirloom of prehistoric times -- actually exists, though hitherto preserved in the greatest secrecy by the present Initiates; and it points to various corroborations of its existence to this very day, to be found in ancient and modern works. . . . No *new* philosophy is set up in *The Secret Doctrine*, only the hidden meaning of some of the religious allegories of antiquity is given, light being thrown on these by the esoteric sciences, and the common source is pointed out, whence all the world-religions and philosophies have sprung. . . . It is also maintained that its doctrines and sciences, which form an integral cycle of universal cosmic facts and metaphysical axioms and truths, represent a complete and unbroken system; and that he who is brave and persevering enough, ready to crush the *animal* in himself, and, forgetting the human *self*, sacrifices it to his Higher Ego, can always find his way to become initiated into these mysteries. -- "The Babel of Modern Thought," *Lucifer*, vol. 7, 1891, pp. 442-3

There is another fact which might be noted as introductory to a study of our divine parentage and destiny. The average Occidental mind, colored, of course, by the exoteric religions of the time, thinks of the so-called creation or beginning of the being we now describe as human, as having taken place on this planet earth. But life here, all-important as it seems, is yet but a passing incident in mankind's eternal pilgrimage through space. A study of the theosophical teachings regarding the life-atoms and universal evolution will make clear that every atom composing the universe is a living being, engaged in the fulfillment of its own part in the universal scheme of evolution. It is the ultimate destiny of each such life-atom to become a human being. Every atom, being a part of the universal omnipresent reality -- i.e.,

of the cosmos itself -- contains within itself the potentialities of the whole. It is never created, for it always was and always will be. Its nature is to unfold, little by little to bring forth these potentialities, which unfolding we call evolution. Imagine the incalculable worlds any atom must pass through before attaining the human stage. Solar systems, of infinite grades of development, must have afforded it shelter and opportunities for growth, as slowly through the eternities it steps from world to world, attaining in each one a fuller expression of itself. So up and up the ascending spiral of life, conscious beings of numberless grades, encased in forms of myriad types, mount to the human stage, then pass beyond, become gods, greater and greater -- reaching ever nearer the light, but never touching the flame, the unknowable source of all.

Human beings, then, being verily fragments of the whole, having the potentialities of the whole, were never "created." Our evolution consists in a fashioning of more and more perfect and complex vehicles or bodies, which allow of an ever-increasing power of self-understanding and expression. In this endeavor each slightest increase in complexity has been and forever will be coincident with aid from beings or other fragments of the whole whose vehicles are in advance of our organism as we mount the eternally ascending spiral. And this notwithstanding the fact that as soon as mind is awakened, we create ourselves.

The effort in this booklet is to describe in brief outline some of the changes which have taken place since the beings we now call human reached our planet earth. Naturally only such facts are given in detail in the present restatement of the ancient wisdom-religion as relate to us as inhabitants of this globe. Our consciousness is probably not tuned to comprehend much beyond that in either direction.

One difficulty always encountered in attempting to put into language any part of this philosophy is to decide what to state first. For it is an absolutely true presentation of the facts of nature, every part of whose functioning is interrelated and interlocked with every other part. Wherever one starts, something else must be understood to make it clear. In other words, all the aspects of any subject must be seen at once before a true picture can appear before the mind's eye. On the other hand, so perfect are the analogies in this living whole -- the universe -- that any part of the field firmly grasped, illumines every other part. Thus our present study of human origin and destiny gives certain universal keys which can be applied to any unit in nature, great or small.

---

## **Chapter 2**

### **The Earth-Chain and Its Kingdoms**

We cannot understand the true human origin unless we know something about the earth on which we dwell, for the life of the two is intermingled. We do not merely live *on* the earth; our life forms a part of the life of the planet, and more than that, even part of its consciousness. It is an ancient truth that the earth is a living being. It is born, lives, and dies, only to be born again, after a period of rest -- rest, that

is, for the informing spirit of the earth, its soul if you like.

Furthermore, this earth is more than this visible rocky sphere. It is, so the ancient teaching runs, a group of seven globes, technically called a planetary chain. We see only the globe we are living on because the other six are composed of ascending degrees of finer substance than our own, too rarefied for our present sense perceptions. These different degrees or conditions of substance correspond to, and inevitably imply the existence of, different states of consciousness, forming what are called in theosophy *planes*.

Thus it is that the universe divides itself naturally into a number of such states of consciousness or planes; and each entity in the universe, such as a planetary chain, does likewise. The seven globes of our earth's planetary chain group themselves naturally into four of such cosmic planes. The diagram below is a useful key in studying the relationship of these seven globes:

It should be clearly borne in mind that the above is not a picture of the way the globes of the earth-chain are arranged in space, but is more like a symbol indicating certain basic facts about the planetary chain.

On the plane marked I are globes A and G (so lettered merely for our convenience). This means that there is a certain similarity between these two globes -- let us call it for easy understanding, a similarity of vibrational rate. This is likewise true of the pairs B and F, and C and E; while globe D stands alone on the lowest or fourth cosmic plane.

Now it is this entire chain of globes which is the arena for the majestic pilgrimage of seven great classes of beings, usually spoken of as life-waves. This is an appropriate figure of speech because it suggests the undulatory motion of these rivers of lives pressing forward, with alternating periods of activity and rest, round the planetary circle.

These life-waves are made up of spiritual beings, sparks of the divine flame at the heart of the universe, each group at a different stage of its evolutionary development, and finding on each globe opportunity for the unfolding of certain characteristics from the treasury of its own inner being.

These seven classes may be enumerated by the descriptive terms we use today, namely:

- Three Elemental Kingdoms
- The Mineral Kingdom
- The Plant Kingdom
- The Beast Kingdom
- The Human Kingdom

But if we use these names we must remember that we do so merely for the purpose of easy description; for the various classes have gone through an infinite variety of changes during the long ages of their earth-journey (not yet completed by many millions of years), and have already taken many millions of years to differentiate into the distinct classes as we now know them.

Furthermore, we should think of the kingdoms themselves as *houses* which the various spiritual beings inhabit. Thus a very undeveloped being, just starting on its evolutionary journey, would live in an *elemental* house of life. Another, more advanced, would find a *mineral* house of life appropriate for its necessities for growth; and so on. But such houses of life are abandoned for more highly appointed ones, so to speak, when the old ones are found to be no longer adequate; just as there may be seven or more grades in a school, but the pupils themselves move on from grade to grade when they have learned all that each grade can teach them.

Let us for easier understanding confine ourselves to the circling of the *human* life-wave around the earth planetary chain; remembering that we mean by this human life-wave that group of essentially spiritual beings who, after many marvelous vicissitudes, unrecorded except in the secret records of initiated sages, find themselves at present inhabiting human bodies, endowed with human brains, human feelings, human spiritual and intellectual capacities -- in short, members of the present great human family.

Turning again to our diagram, let us notice the circular manner in which the globes are placed. This is a symbolic representation of the way in which the life-wave passes through the seven globes. Starting with globe A at the left, it circles down the left-hand arc through globes B and C to D. This is called the shadowy arc or arc of descent, not indicating that there is a fall through space -- which would be absurd -- but that the life-wave is plunging farther and farther into matter. It is building for itself bodies of increasingly grosser physical substance. Matter draws it like a lodestone, and the purity of its early state on globe A becomes a dimmer and ever dimmer memory.

With the attainment of globe D the lowest point is reached, the pivotal point where matter balances spirit and where a definite effort has to be made to generate the spiritual force to continue the evolutionary journey, this time *upwards* through globes E, F, and G.

When G is attained, the life-wave has again reached cosmic plane No. I of our diagram, the same plane from which it started -- but with a difference. The high spirituality of the beings on globe A might be compared to the purity and innocence of a child. On globe G their purity is caused by the fact that the dross of matter has been burned away by the pure flame of spirituality. It is purity plus wisdom and strength.

Our human life-wave must pass around this earth-chain seven times, each such passage being called a round. When the seven rounds are completed, we shall, with our earth, have our "Sabbath" or day of rest; and then re embody with it again to seek grander and nobler adventures in our universe of inexhaustible opportunities.

The earth-chain, when the "day of rest" arrives, will decompose into cosmic dust, but its life-energies will be transferred to new centers in space, to re embody in time as a new chain of globes affording opportunity also for the less developed life-waves to unfold their infinite possibilities toward a perfect humanity.

Our human family has at present completed three circlings of the planetary chain. We are now in our fourth round, and on globe D of that round; but *we have passed the critical turning point on this lowest of the globes*. This is of tremendous significance to humanity. The understanding of this one teaching is like a guide pointing to the direction in which we should be moving. We then begin to acquire a truer sense of values. We learn, by applying the abstract teaching to actual life, what we can safely abandon, what hold on to as imperishable and therefore practicable to take with us. We begin to see that our attachment to matter has become, indeed, a habit with us, but is no longer a necessity; and that if we linger fondly among the sensations, excitements, and fascinations of the lower earthly life, we are throwing away precious opportunities now before us, and failing to recognize that the obstacles we find in our path are actually the means -- when overcome -- by which we may move on toward our divine destiny.

---

## Chapter 3

### From Moon to Earth

Just as the earth-chain will eventually die when the human life-wave leaves it at the end of the seventh round, and will be reborn after a period of rest, so it itself is but the re embodiment of a former planetary chain of a lower type of evolution. Our moon represents what is left of globe D of that chain, and so we speak of that former group of globes as the moon-chain. It is now, of course, but a wraith or ghost, but it was once as alive as earth is today and bore upon its then vital chain of globes seven life-waves even as now our earth does.

When the life-waves had passed seven times around the seven globes of the lunar chain and had assimilated all the experience possible there, that chain began to die out; a complete dissolution of the cohesive forces of all the seven globes set in, and after a long period of inactivity, these energies commenced to vivify new centers in cosmic space. These seven centers might be spoken of as seven *seeds of life*, destined to become the seven globes of the earth-chain when awakened aeons later by the cycling life-waves during the first round of the new chain.

H. P. Blavatsky, in her profound work, *The Secret Doctrine*, gives a conventionalized diagram to represent this transfer of the life-energies from one chain to the other. We reproduce it herewith, but again it should be noted that such pictorial representation must not be taken literally, though there are many suggestive ideas to be gained by its study.

Note that Figure 1 represents the *dying* moon-chain, while Figure 2 stands for *an as yet unmanifested* series of globes -- the earth-chain to be.

The graded shadings of the globes in each figure indicate their gradual coarsening in substance and consciousness from plane I to plane IV. The diagram also indicates that there will be a marked etherealization of each globe when it reimbodies, so that the whole of the new chain will be somewhat finer in expression than the old one. This exemplifies nature's law of *repetition combined with forward motion* -- the principle of the spiral. This is no arbitrary law, but is caused by the inward urge of every entity to express what it is within itself.

The moon is now an astral corpse, yet it is still sending earthwards what one might call the dregs or lees of vital energies which powerfully affect the life of our planet. This fact helps to explain many of the phenomena which have puzzled scientists, the influence extending also in other ways not observed or guessed. The action of the tides is common knowledge, as well as the moon's relation to human conception and gestation. The cycles of many diseases coincide with the phases of the moon; its influence can be traced in the growth of plants; but little really is told at present regarding this interrelationship.

For long ages the moon is destined to follow her "offspring." But before the seventh round of this earth-chain, she will have been utterly dissolved, because the last remnants of her energies will have been assimilated by earth and transmuted into regenerative forces playing their part in the gradual ascent of the whole chain and the life-waves upon it toward their spiritual consummation. It is because of the age

of Mercury and Venus, both far older than earth, that their moons have disappeared.

The story of how the seven life-waves proceeded through the three and one half rounds already completed is one of the most intricate and involved teachings of the ancient wisdom. But a few general ideas to be outlined here may serve as an introduction to the subject for those who may wish to study further in advanced theosophical books.

First of all, we must remember that all the entities seeking a milieu in which to grow and evolve had to do two things. They had to fashion bodies, inner and outer, in which to work, and they had to build the globes of the chain itself. They started out as it were unclothed and unhoused. All the kingdoms helped in the work of building, each class contributing the results of skill attained during the long sojourn on the moon-chain. In this way during the *first round* the route was marked and the tracks were laid for the sevenfold planetary circling.

But what complicates the process, and at the same time removes it from the realm of a merely mechanical arrangement to be learned by rote, is the fact that in the beginning each kingdom, as for instance the class destined to become the humanity of this earth-chain, had to recapitulate former experience by running through all the lower forms first. This is nature's rule always, and a wise one too: that when a new life period opens, the beings about to pick up the threads of life where they dropped them in the former period, must first make a quick review of those earlier states formerly attained. Thus they weave into the fabric of their present consciousness all past knowledge; and likewise provide a means of assistance to kingdoms not as advanced as they.

This means that those who were destined to belong to the human kingdom itself were not left unaided in their growth. Where, then, did superior beings come from to give them assistance?

When the life of the moon came to its close, all its inhabitants were not equally evolved -- just as is the case on the earth today, and as it must necessarily be when this present planet has finished its life-term. Some must always represent in their development the full possibilities of any given manvantara or period of activity. They have been the leaders, have shouldered the heaviest responsibilities, and at the end are the perfected beings for that stage of evolution.

Such perfected ones, the evolved humanity of the moon-chain, were the first to arrive on globe A of the earth-chain and took the lead in its evolution during three and one half rounds, while the new humanity was in process of development. They were the overseers of the builders of forms, these latter being those entities who, having completed their sojourn in the beast kingdom on the moon-chain were now seeking to enter the human kingdom. It was they who passed through the elemental kingdoms, the mineral, plant, and beast kingdoms, so that knowledge of these lower forms became instinctual. But by the time they were ready in the fourth round (and especially by the time they reached globe D thereof) to complete the building of the human vehicle, they found their capacities limited. They could furnish nothing better or higher than the astral, passion self, for this was the extent of their legacy from the moon-chain.

Growth for the human race would have come to a dead stop if it had not been for the intervention and help of that spiritual host of beings, the fine flowering of the moon-chain, who lit, in the incomplete humanity, the fire of mind. These made it possible for mankind to bridge the gap that existed between the lower vehicles and the divine spark within, the means by which it might lift itself out of the toils of matter into the radiant realms of spirit again. (The awakening of mind is described more fully in Chapter 5 of this manual.)

But as yet we have not fully valued our divine gift. We have prostituted it too often to base uses. Only too often we limit ourselves in consciousness to the self who eats, personally loves and hates, who suffers and sins, who struggles to supply the needs of the body, and beyond whose short span of life all is mystery.

This lower nature is in itself marvelously complex, with illusive centers of force, leading those whose consciousness is chiefly centered in the brain-mind into a maze of confusion when they try to study it. Strange powers which come to the front in sleepwalking, hypnosis, clairvoyance of a certain order; mysterious uncoverings of different layers of consciousness, such as double personality and other abnormal phenomena, all belong to the unevolved, growing lower part of human nature -- our moon-nature.

It is this nature that, with the aid of the higher beings within-above us, is in training during this present earth cycle and is destined to be refined, strengthened, and purified, and finally united to the spiritual sun within the human constitution, thus producing the perfected mankind of the seventh round of this earth-chain.

---

## **Chapter 4**

### **Early Life on the Planet Earth**

It has been said that all the life-waves from the moon pass seven times around the seven globes of the earth-chain, but these journeys cover in time what would seem to us many eternities. In studying this philosophy one is deeply impressed with the thoroughness and exactitude of nature's working. Everything is repeated until there is no possibility of mistake, yet every repetition, as said, involves some slight difference from the last, some new conditions and opportunities. The life period on any one globe is enormous and between any two globes there is also a period of rest. It is evident therefore that we have lived on all these globes in the past, that we shall do so again, and that in each the work of the creation of man is slowly proceeding.

There are seven great root-races on every globe in every round, their average life being about nine million years. Every root-race has seven subraces; every subrace, seven family races, each of which branches into nations, tribes, etc. We are now in the fourth round, on globe D, in the fourth subrace of

the fifth root-race, and have therefore begun the ascending arc toward spirituality in this round. At the midway point of this planet's life, viz., in the middle of the fourth root-race of this round, the door was closed for entrance into the human stage, with one exception, to be mentioned below, in Chapter 7. Therefore the human family is nearly complete for this manvantara or cycle of evolution.

All through these changes it must be remembered that it is the god-spark of divine origin which clothes itself in garments of mineral or vegetable or whatever it may be. It learns by this close association to use more and more complicated vehicles. And this constant adaptation never ceases. Nothing remains *in statu quo* for two consecutive seconds anywhere in the universe. To resist the onward impulse means backward motion. And two factors are always at work in the incessant mutation, true forever from the lowest to the highest. There is always an inner urge and always an outer intelligent force guiding and directing the unfoldment.

The least entity is a life clothed in matter, and matter itself is but the other pole of spirit, encasing less evolved lives. It is indeed a spiritual universe we live in, piloted throughout its infinite realms by an infinite series of lower and higher intelligences. At the upper rung of the ladder for this globe is a Wondrous Being, sitting at the threshold of Light, which he will not enter while any of earth's children may yet lose their way. He is known as the Silent Watcher, though in truth he is nameless. Earth can teach him no more, but from his self-chosen post he guides the great ones below him, who descend in an unbroken scale, through lesser divinities, rulers, teachers, divine dynasties, down to our half-awakened humanity. Absolute harmony throughout the uncountable hierarchies of nature must inevitably exist, and our work as humans is to find and fill to perfection our place in this universe of which we are an intrinsic part.

Every round has its special overlord, below whom come those guiding every globe of that round. Every race, every nation, has its own guardian down to every person who has his own inner god. Thus every human being is the result of hosts of creators, some for his body, others for his psychic, his mental, and his spiritual nature respectively. And the work of perfecting him runs through the life of this planet, many, many millions of years. Thus we see how immature we are as yet -- mere children, knowing practically nothing of our own real nature, and so little realizing our relation to others that we even war with and would destroy our fellowmen, parts of our own being.

In the first round, the globes of the earth-chain and all that they contained were very ethereal. There was no solidity in the beginning, only a cold brightness, which developed towards the close of the first round the essence of what in our round we know as fire. Gradually, as rounds two and three were in progress, consolidation took place, the element air developing in the second, and water in the third round. But it was not until our present round that our globe D actually settled and hardened, thus developing the element we know as earth.

Only a very general picture can be drawn of the early cyclings of the life-wave. Indeed it is not until we come to globe D of our present round that we can receive any sort of image of what actually took place. This does not mean that the long aeons of preparation consumed in the building of mankind were in

themselves characterized by a vague passivity with nothing worthwhile happening; but merely that descriptions are useless because we have nothing to compare the processes to in our experience.

When in our study we come to globe D of this present round, our picture begins to assume clearer outlines, and details become progressively more numerous. It was at this period that the work of forming the human body *as we now know it* was seriously undertaken. This in itself was no mean task, as we realize when we consider the exquisite precision with which it is built, coordinating as it does in a perfect harmony the innumerable hierarchies of lesser lives of which it is composed.

This era of "preparing the vehicle" is poetically described in the Stanza of Dzyan, an archaic manuscript quoted by H. P. Blavatsky in *The Secret Doctrine*. Earth is represented as being impatient and undertaking herself the work of peopling her globe, and as producing thereby "water-men, terrible and bad," which had to be destroyed by higher dhyanis or planetary spirits who guide the evolution of earth.

Fantastic as this tale may appear to some, it refers to an actual event in an unformed, early transition period, when nondescript monsters grew out of the superabundant energy of Mother Earth, before things were quite ready.

But gradually when the earth was cleared, the design for the future human bodies was worked upon, improving upon the pattern of the ape-like, ethereal forms that the "humans" of the third round had evolved. This was the first root-race on globe D of this round, known as the "self-born" because they produced their kind by a process which might be described as "oozing out" their astral doubles.

Their continent was in the region of the North Pole, the Imperishable Sacred Land, which lasts from the beginning to the end of this earth cycle or manvantara, and which is to be also the home of the last perfected race. It is difficult for us to have any conception of these first root-race beings, who were boneless, almost formless. They are known as the chhaya race, which means "astral image." It did not die, but disappeared in the second by a process of budding. Simple as the form was in comparison with the present one, yet to bring it about many classes of higher beings had already been called into service.

The continent of the second root-race was further south, embracing parts of Greenland, and during the course of their evolution the method of procreation changed to what is known as the "sweat-born." Large drops oozed from the bodies and developed into the human embryo. All these changes consumed aeons of time, but time was nothing to these dreaming creatures, to whom "a thousand years were but as a day." They created the third root-race and perished, leaving no external evidence of their existence.

## Introduction

The doctrine of cycles is a most important, fascinating, and illuminating subject as it is presented in theosophical teachings. In studying it, we find that here is a logical and comprehensive law which not only bears an intimate relation to our daily lives, but also has a universal range of operation. It not only concerns the details of our whole life, but it applies to everything and to every being in the universe. In short, the law of cyclic recurrences proves to be the principle or regulator for timing the events and operations of everything, visible and invisible, in mind and in matter, in time and in space. We find in it, at last, a reason why things happen when they do. The ancients well understood the vast sweep of the natural law of periodicity, and they included it in the cosmic scheme of unity when they said: "as it is above, so it is below." H. P. Blavatsky pointed out that it taught

the absolute universality of that law of periodicity, of flux and reflux, ebb and flow, which physical science has observed and recorded in all departments of nature. An alternation such as that of Day and Night, Life and Death, Sleeping and Waking, is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe. -- *The Secret Doctrine* 1:17

Cycles are so common that we take them for granted as much as we do the air we breathe, the water we drink, and the solid earth under our feet. We cannot imagine what our world would be like without the familiar repetition of light and darkness every twenty-four hours, of the year's regular seasons -- these things that keep pace with the planet's daily rotation and its yearly course around the sun. We, too, follow the same rhythmic course of action, going to sleep at night and awakening next morning for another turn of activity. Likewise, on a larger scale, we round out a lifetime. We begin with the misty dawn of infancy which, merging into childhood's awakening, expands into youth's bright morning, and so on to the noonday meridian of mature years. Next comes the turn on the arc of that one life, and we gradually slow down, to sink to rest with the lengthening shadows of old age. But the pulsations of the spiritual self deep within us never cease, whether we are imbodyed here or are freed from earth. When death releases us from the body, then a new cycle of rebirth begins in the soul's homeland.

After death, our better self awakens in higher realms of being where it is infilled with beautiful visions and blissful, refreshing rest that give strength and courage for another term of earth-life lessons. Thus we come back, again and again, with a newborn infant's fresh body and brain, ready for another round in working out our splendid destiny. Meantime, our uncounted lives are like small epicycles on the majestic arc of the solar system's lifetime. Thus, likewise, do countless universes come into being. After

their vast cosmic sweep of a manifested life period reaches its apex, the movement is set toward the end of that wheeling. Finally, the imbodiment of the whole universe dissolves in the ocean of space for a cosmic rest wherein all prepare for another grander round of manifesting life. "As it is below, so it is above."

In the passing moments we see the time-atoms, so to say, the revolving units of time measure. Their rhythmic recurrences are like pulsations of time flowing steadily during the life period of a universe with all its interrelated wheels within wheels of time, space, and consciousness. The human pilgrim is a spark of the divine flame, descending through all realms of matter, to reascend through a perfected humanhood to godhood, cycling back to Divinity.

A cycle means a ring or turning. It is not a closed ring, but a continuous rounding course, expanding and advancing, so that the path of its previous round is covered with a broader sweep of progress. The form of a cycle is somewhat like a circular stairway whereon, in going up or down, we are always above or below the level of the preceding step, or of the several steps that are covered in one round. Another form of a cycle's course is seen in the way the thread of a screw winds around and up from its small starting point. A typical example of cyclic growth is found in the expanding curves of the chambered nautilus, and even in the shape of the common snail shell. A craftsman will find suggestive lines in a spiral spring, or will see a more perfect symbol in the progressive curves of a helix spring.

However, no symbolic form can begin to picture the intricate movement and complex character of the countless wheels within wheels of time, of conditions, and of conscious unfolding life, that are always operating together. Universal motion follows a spiral course upon all planes of being, physical and superphysical. The same evolutionary pathway is continued through the material, mental, and spiritual realms. Does not the run of everyday life show the interplay of the activity of the human body, mind and spirit?

The greater cycles include numerous lesser ones of various sizes, characters, and interacting influences, as we shall see. There is nothing haphazard in all this, because everything moves with the coordinate precision of intelligent guidance. We are in a universe of natural law and order. We know that nature does not move by disorderly and causeless leaps and bounds. The child does not grow up in a day, nor does winter change to summer overnight. Each thing and each event plays its part in some greater round, by proceeding along its own course which is karmically adjusted to the whole.

The general overlapping and intermingling of cycles stands out clearly in the history of the great root-races. Here, as elsewhere, the rule holds good. The close of one great racial cycle merges into the beginning of a new racial career; and this change occurs at the climax or greatest round of activity of a third race's period of existence. Thus, the later egos of the disappearing third root-race mingled with the few forerunners of the fifth root-race at the middle period of the fourth root-race. It is all as natural as the familiar overlapping changes and events of daily life. Yesterday, today, and tomorrow all run along in a continued story. Our own sense of our identity, at its full in the present, is also the meeting point of a receding past self, and of an oncoming future selfhood.

As the racial cycles will be discussed later, we have a more familiar example of overlapping and intermingling spheres of influence here and now. The periodic recurrence of karmic conditions from past lives explains much of the puzzling state of our world's conditions. While our modern civilization has reached a certain climax of a brilliant intellectual and materialistic evolution, the old order of things generally, in government, science, religion, business, etc., is passing away. The struggles of the outgoing cycle mingle with the birth-pangs of a new one which will open the way for a saner and better balanced progress. Those who are wise may read an open challenge in the signs of the times. There is danger in holding back and clinging to the outgrown standards of individual and collective life. Those who invoke the finer forces of their own nature will go forward, sharing in the mighty urge of the current of universal life flowing onward through everything and every creature.

In many ways, present conditions seem like repetitions of those which prevailed in the heyday of Roman power and knowledge, preceding the decline and fall of the empire. There is the same lack of that equalizing spiritual growth which is essential for the natural balance of great mental and material gains. Evidently, we have also reached the safe limits in our control of the forces of mind and matter. These forces, neutral in themselves, are potent for good or evil. Used for the benefit of humanity, they work for the welfare of all; used selfishly, they react in disintegration and destruction. We need not repeat the mistakes of the past. The time has come for humanity to become more wholly human by bringing forth the finer and nobler qualities and powers from within its own nature.

Without question, the present time is a critical one. But if we face the responsibility of it, open-eyed and honestly, it is seen as a time of unusual opportunity. Human beings are essentially spiritual beings who *can* control the energies which their selfishness operates for their own undoing. We can transfer the same power into vitalizing a better and more timely order of world affairs. For a new cycle of inner light and peace and progress is already dawning behind the obscuring storm clouds which darken the outlook.

The Masters of wisdom foresaw the present chaotic world conditions, basing their knowledge on, and timing their work with, the law of cycles. They sent their messenger, H. P. Blavatsky, to prepare people for the inevitable confusion of a transition period. She founded the Theosophical Society through which to bring back to us the forgotten truth of our divine birthright which unites all in a universal brotherhood. In the light of mankind's common origin, mutual interests, and final destiny, it is time to leave childish things behind, and to go forward with the new cycle, working with the great scheme.

While the twentieth century has been speeding up its pace, astronomers tell us that our planetary home -- the "good earth" -- is also entering into a new region on its journey through space. Mother Earth is bringing us where the influence of Aquarius reigns in that twelve-spoked wheel called the zodiac. In fact, everything is moving on a conical, spiral pathway onward. That is why it is impossible for anything, however tiny or however vast its pathway may be, to return into itself like a closed ring. Think of our moon in its monthly pathway around the earth, which, in its turn, is moving along its yearly cycle around the glorious sun whose orbit encircles a greater center of a galaxy that is wheeling its majestic way through illimitable space. Every heavenly body is following the broader sweep of some other progressing center. In this eternal motion of a divine mechanism, there are endless wheels within wheels

within wheels, all moving with a universal plan of purpose. The picture is too vast for the mind to grasp it. But it is evident that at any point reached by a celestial sphere, its orbit is somewhat further along in the cosmos than it was on its preceding round. "End there is none, nor was there beginning."

It is a stimulating and liberating thought that we are all journeying through the universe in such good company, for every planet and sun and star is the body or dwelling of some bright celestial being. "A friendly universe" is no mere figure of speech, but is literal truth. The whole scheme of things is so perfect, so just, and so natural, that the only question is: How could it be otherwise?

---

## Chapter 2

### Man and Nature Allied in Cyclic Progress

There is a purpose in every important act of Nature, whose acts are all cyclic and periodical. -- *The Secret Doctrine* 1:640

Nature repeats herself everywhere. She follows grooves of action that have already been made; she follows the line of least resistance in all cases and everywhere. And it is upon this repetitive action of our Great Mother -- universal nature -- that is founded the law of cycles, which is the enacting of things that have been before, although each such repetition, as said, is at each new manifestation on a higher plane and with a larger sweep or field of action. -- *Man in Evolution*, chapter 13

Nature moves like a great wheel, ever turning round and round, so that as it goes forward in time and space, each of its spokes takes its regular turn in moving upward, forward, downward and backward. As the whole wheel of the universe rolls onward, every atom of it gains ground and experience, and also adds its impulse to the common urge forward. This evolutionary urge in mankind is naturally quickened, in greater or less degree, by mind and self-consciousness. Thus we are able to help things below us, as we in turn are helped by wiser, greater beings.

At first thought, this sweeping picture of progress may seem too vague and unfamiliar to interest or concern us, even if we could understand it. Of course, the details of our universe are beyond human comprehension. Nevertheless, the law of cycles is so evident in its universal operation that it proves the *unity of man and nature*, both evolving with a common purpose. The evidence of an ever recurring movement stands out clearly in the flow of everyday affairs. We have only to recognize the cyclic law operating before our eyes, to understand how it works likewise in vast horizons beyond our vision. Does not the periodical recurrence of night and day -- a time for sleeping and waking -- prove itself? This familiar example, so simple to us, involves the working of the whole earth turning once -- an enormous move which is timed to the minute. It goes without saying that no one could begin to understand how that one turn of the earth affected everything upon it. Of all the lands and waters, plants, beasts, and

men, nothing is *exactly* the same as it was on the previous morning. The point is, that *all moved together*, each of the countless things moving in its own cycle of experience within that one turning of the earth wheel. By analogy, we may grasp the idea that this working of the universal rule of spiral pathways is as simple and as comprehensive as the child's A B C's and the multiplication table. The same letters learned in the primer are used by wise men to spell out the profoundest truths; while the digits we use in petty personal accounts work accurately in enormous mathematical calculations.

Today science is moving with the new cycle, in careful studies of the recurring conditions, not only in the various departments of nature forces and phenomena, but likewise in the course of human affairs. Science is becoming keenly conscious of the close relation of all its researches to everyday life and to the present and future welfare of mankind. Furthermore, there is a growing move to verify the findings of a periodicity in one field of study by comparison with the reported evidence of cycles in other lines of investigation. The deeper these researches go, the more clearly there is revealed an underlying *unity of man and nature*. For instance, those strange sunspots are being studied in relation to the weather, growth of vegetation, wars, business fluctuations, radio reception, etc., etc.

Periodicity is being observed and recorded in the occurrence of floods, droughts, famines, diseases, calamities, magnetic storms, auroras, earthquakes; also in the appearance of great men, and in eras of advances and recessions in the arts and sciences; in the rise and fall of nations and of whole civilizations; in the change of continental coastlines and mountains slowly rising or sinking; in ice ages that came and went, leaving evidence of past eras of tropical climates in high latitudes; in the seasonal habits of animals, and what not. This scientific interest is echoed by the popular press. This opens the way for more knowledge of the ancient law of cycles which is the natural key-motion everywhere.

No scientific training is needed, or even much imagination, to see that recurring changes in the earth itself are inevitably reflected upon the life of its inhabitants. This fact comes home to us as being interesting enough. And the evidence that humanity and nature are interrelated, and are evolving under the same law, is as simple as it is comprehensive. The working of the periodic law may be followed either way, from small to large issues and vice versa.

Consider the recurrent "events" of time, of matter, and of conscious life. First, take the revolving atoms making the molecules which, united in cells, form the organs making the whole human body which lasts a lifetime; at death, the atoms disperse, revolve through other forms of earth matter, and when the individual is due to begin another round of incarnation, they come together to help build his new body. Next, take the conscious life-spark -- the inner self -- evolving through the unfolding body of the embryo, the infant, the child, the youth, the adult, then leaving the aged body, and passing from life here to begin a cycle of existence in ethereal realms. Meantime, the passing moments have become hours, days, weeks, years, which, in turn, go on to become centuries, solar lifetimes, complete rounds of a universe, and so on.

These minute cycles of the "atoms" of time, of conscious, unfolding life, and of matter, are the working in the small of what is summed up scientifically as time-space continuum. From this unity at the summit

of a universal circuit, the units begin to separate and to cycle down the progressive series of levels to the place of minutest rounds. Considered in the large or in the small, all follow the one plan of progress: matter becomes more perfect material; small time cycles become vast periods; and re embodying man brings forth more of his real, his immortal self. A living force circulating everywhere vitalizes everything into "becoming" more of itself.

It is the one life itself which is ever coming and going in all the different forms of substances. It is destined to an endless round of creation, preservation, and destruction *of its forms*. In recognizing this fact, some deep thinkers have summed up the secrets of nature as motion. To this, theosophy adds that this universal movement is responsive to the *rhythm of a cosmic heartbeat*. Each entity's response to this vital central impulse is its own key number of pulsations. Some rate of vibration is present in all the inner and outer spheres of life above, below, around, and within us. Science defines the subtle forces of x-rays, infrared and ultraviolet light, radio waves, etc., in the special vibratory rates of each. We all know that the different vibratory rates of light waves take the form of prismatic colors, and that we hear a series of sound waves in the musical scale. Do not we ourselves have an individual rate of vibration which is variously in tune or out of tune with conditions and people around us?

There is cosmic intelligence back of a sublime purpose which keys human destiny with that of universal Mother Nature. The wise ancients understood this mystic truth, both in its simple and in its expanded meanings. They saw a universal law working in everything and in every creature. A living test of its reality was spread abroad for all who had eyes to see -- as it still is. It was taught of old that, because man was an inseparable part of the universe, he was involved in, and concerned with, all natural processes. This knowledge of "things as they are" freed man from the dread of death, and from all fear of a hereafter of suffering, or of final oblivion. He had no fear of the Unknown while feeling his oneness with the sun and stars, as well as with the whole unfolding panorama of his earth home. That untroubled time was in the Golden Age when the world was young. Now it sounds like a fairy story. Well, the fairy stories and legends that our children love are based upon realities that surrounded our racial childhood. If those ideals had never been real to us, how could we respond to them as we do at heart, and thus keep them alive from age to age in myth and legend?

A few of our most intuitive philosophers and scientists are beginning to realize that there must be a unity, even a conscious oneness, underlying all things. This recognition of natural truth was anticipated in the theosophical teachings in the nineteenth century. Then H. P. Blavatsky's *The Secret Doctrine* repeated the forgotten story of the origin and destiny of mankind, of the planet, and of the universe. She came because the time was ripe for us to regain something of our forgotten birthright of the larger truth. In this period -- our Iron Age -- we have lost sight of a wonderful heritage from a far-off past. *We have become divorced from nature*. This has stunted our finer growth, and has blurred our outlook on all life. Mentally, we have withdrawn from our place as the beings who were to play the human part in this planetary drama. We seemingly stand apart from nonhuman things, regarding them as somehow alien, if not often hostile to us. Yet everything below us on the ladder of life is on its way to become human, just as we will outgrow the human stage, finally, and will reach the level of the men-gods who preceded us. All are moving together, on some round of a grand spiral pathway. All share in a common welfare, so that everything is helped by moving in unison with the whole. It is a friendly universe at heart.

It was in the primeval plan that, at first, mankind and its earth-home were cared for by divine instructors. It was a spiritual parentage starting everything aright for infant humanity. Then, when human beings became self-conscious, and had knowledge of good and evil, they were made morally responsible for the way they affected their good home. They were given charge of all, because only in them were the fires of mind lighted, giving them insight and reason. Their bodies were made of the same stuff as that of Mother Earth which was always to feed, clothe, and shelter them. Also, the electromagnetic and other nature forces operated in them, and put them in touch on inner lines with all around him.

Nature's work was to upbuild every form of use and beauty needed to embody the invisible current of life cycling through all the kingdoms. Gradually, earth's primeval forces and materials operated to condense and bring out the ethereal model forms which were ideals provided from higher creative levels. These astral models of everything were -- as they still are -- links between the mental and the material planes, and caused reactions between the two realms. Thus, the material of earth was subtly affected by the potent energies of conscious human thought and will and feeling.

From the first, because of mankind's intimate relation to, and its dominion over, the subhuman kingdoms, nature, perforce, has reacted to the influence and the quality of its stewardship. Thus, its early childlike state was reflected in a happy Garden of Eden atmosphere. Later, when human beings gave rein to selfish thoughts and passions, the air around them was charged with the disordered forces of storms, disease, and enmity. The reality of this forgotten kinship between the human master and the subhuman kingdoms stands out in the history of the enormous cycles of the rounds and races on successive continents. Our recorded history also has its suitably timed examples. Was it not human unsanitary dealings with the materials embodied in them and those of their surroundings, which reacted in the mediaeval plagues? Does not the present increase of mental and nervous diseases show the typical reaction of highly-organized brain and nervous tissues to the exhausting tension of modern life? Are not today's upheavals in world politics, etc., reflected in unusually disturbed nature forces?

Each new root-race began with a freshened earth, a favorable climate, peace among men and between them and the beasts. When a race, *en masse*, grew selfish, harsh, and warring, the climate became austere, fertile lands became deserts, and beasts turned hostile. Each root-race, in serial order descending into material life, imprinted its own quality upon the earth. The dominant quality of the first root-race was that of the Golden Age; the second that of the Silver Age; the third that of the Bronze Age; and the fourth that of the Iron Age; but each individual root-race evolved through the entire series of four periods.

Scientific students of the striking climatic and geologic changes of past eras, naturally regard them as the factors which compelled man to move with them. The larger truth, however, is that whether the change was on an upward or a downward cycle, the people affected were reaping what they had sowed in their relations with each other and with nature. The record might go back many lives. The karmic law which used natural forces of earth to start the period that was due for more or for less favorable conditions, also led men to when and where they belonged. The egos were born in fitting time and place, whether with an advancing or a retreating Ice Age, or during geologic ups and downs. We are not helpless pawns of

the elements. We are relatively free to mold things after our desires of mind and heart; and, broadly speaking, we make our world what it is. Thus, our creations, in karmically reflecting our general character, give us a *key to self-knowledge* which is also the *key to nature's secrets*.

H. P. Blavatsky struck a forgotten note of unity for our discordant times when she said:

Humanity is the child of cyclic Destiny, and not one of its Units can escape its unconscious mission, or get rid of the burden of its co-operative work with Nature. -- *The Secret Doctrine* 2:446

Even when this splendid truth of our human part in a cosmic unity with all other things, is beyond the grasp of the brain-mind, it is not beyond the range of the intuition. The inner self remembers all that has gone before in its other lives. It is of this store of knowledge that glimpses are caught at times by the artist and poet. These glimpses are not mere flights of fancy. Rather, they are the nature lover's recognition that, veiled in forms other than human, there vibrates a permeating quality of kinship with something muted and unnamed within *himself*.

The poet longs for words that can tell others of his oneness with a reality pervading earth, sea, and sky. But it *is* beyond speech. It is an inner sense of unity only to be felt by the man-child vibrating with the Mother Nature with whom he has cycled down the ages on this earth. This love of nature is rooted in the hoary past -- a spiritual memory of a primeval alliance.

However, most of us are neither poets nor mystics. Logical minds want matter-of-fact evidence that cycles are operating everywhere. Well, it turns out that when we begin to look around at familiar things, they speak for themselves of recurring periodicity. Take fluid things first: the ocean tides ebb and flow with clocklike regularity all around the earth, like a great breath; the waves break on the shore at about the rate that we breathe; this rhythm is fixed beyond human power to change it. The fresh waters moistening the earth, and taken up by the transpiring plants to become cloud and rain and snow, return upon their path to help the growing things that feed and clothe and shelter us -- Mother Nature caring for us always. The plant juices flow up from their busy roots, to work with sunlight in perfecting growth and, directly or in outer rounds, find their way back to earth. The life-sap of orchard trees keeps time with the season for an annual display of new leaves and flowers and fruit; and then it flows down to rest before another period of outgo. Only a unity of purpose could regulate the harmonious flow of these steady waves and annual tides of life. The grass blade no less than the giant tree has its own rate of pulsation. These everyday mysteries are so common that we overlook the wonder of them.

Even the lowly form of life in the common caterpillar soon completes its period of crawling. Then it builds a little cocoon retreat wherein it dissolves into a mere protoplasmic jelly. Out of this shapeless mass it takes on the form of a dainty butterfly, to begin an airy life-round, sipping nectar from flowers. Its eggs are timed to repeat this cycle of changing forms. This little thing's rhythmic course is as wonderful, in its own way, as that of the trade winds and the ocean currents which steadily follow their own pathways of blow and flow.

We take it for granted that the returning seasons will reel off the earth's picture of winter's cold merging into spring's awakening of things to ripen into summer's growth, and then the harvest home for the annual circuit of experience and progress. Meantime, the large wheel of the earth itself has rolled around its orbit, regulated so as to pass the spring equinox with its exact fifty seconds' gain in time. This tiny fraction of time is the germ, so to say, of the Platonic great year, the cycle of 25,920 of our years. The natural course of minute wheels within mighty arcs, recalls the old Hermetic saying: "nothing is great, nothing is small in the divine economy." Astronomers tell of pulsating stars that dwarf our sun in size and splendor. All the celestial bodies are timed with the cosmic clock that regulates the revolving universe.

The so-called laws of nature are the rhythmic operation of combined wills of great celestial beings working in harmony with the divine will and its ideal purpose. We are, literally, living cells in the organism of a great being, much as we are the overlord and the law for the trillions of cells that are evolving within our body. The same pattern and purpose is working out everywhere.

This invisible but intelligent direction, operating with such regularity in nature, explains what is not accounted for by blind chance or natural selection or active chemical combinations. For example, the encyclopedia speaks of the migratory flight of birds as the mystery of mysteries. The question is: How do these little creatures know when to start, or where to go? How can they survive to find their way across great distances without chance to stop for rest? Sometimes the young broods, even on their first trip, go apart by themselves on a separate route to the distant nesting grounds. To say that these bird cycles are timed by "instinct" does not explain so purposeful a thing. These unself-conscious creatures instinctively respond to an old impulse which was strongly impressed upon the species.

The idea that the Arctic region was the original home of the bird species that breed there, has been coupled with a pre-glacial period when the far north had a springtime climate. This theory refers to those advances and recessions of the last great Ice Ages which have left their mark upon the body of the earth. The evidence of radical changes is found in the fossils of plants and animals. Of course, human life naturally flowed back and forth with the movements of desolate ice sheets. Perhaps that strange lure of the great white north, felt by some Arctic explorers, is the stirring of an ancient memory of "home" when the race was young. As migrating birds follow an old habit of nature, something of an analogy lingers deep within some of us human "birds of passage." How many of us have felt that unreasoning lure to go back to the old homestead! Mature men and women, absorbed in handling large affairs, sometimes have a sudden urge to leave everything and revisit a lowly birth-place. They long to be where their infancy awoke in a warm home-nest, and their childhood dawned in the tender light of parental love and care. Of course, if they go back, they find everything changed -- as they have changed. Their mood passes; but for the time, it made the past seem more real than the present. Somehow, they were stirred by a vagrant breeze from an early turn in their present life cycle.

Another gesture of the subhuman creatures moving with the high tides of reproductive life currents is seen in the migration of some fishes and animals. The salmon that swim thousands of miles upstream, arrive at the spawning grounds thin and exhausted. They seem impelled to move with repetitive habits

impressed upon the early species. They evidently retain the impress of a former habitat so old that, meantime, the earth has changed its contours.

A similar nature-puzzle is the migration of the Northern European lemming. At irregular intervals, multitudes of these small rodents swarm down the mountains into the lowlands in a straight course, devouring all vegetation in their path. Enormous numbers swim into the sea where they perish. This strange contradiction to the natural instinct of self-preservation is accounted for by H. P. Blavatsky who says:

Coming, as they do, from all parts of Norway, the powerful instinct which survives throughout ages as an inheritance from their progenitors impels them to seek a continent, once existing but now submerged beneath the ocean, and to court a watery grave. -- *The Secret Doctrine* 2:782

These sporadic gestures of animal life are hints of old roads to yesterdays marked on the body of the earth. Explorations of the ocean floors have revealed many old submerged river valleys. Our own bodies likewise carry remnants of organs now useless; but they are biological evidence of wholly different states of human embodiment in early races. Nature's records all tell the consistent story of a wonderful past that, deep within us, is linked with the present, as islands are joined to the mainland under the seas.

---

## Chapter 3

### Progressive Rounds and Races

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the race of men unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain. -- *From the Proem to the Popol Vuh* (Ancient America)

According to the ancient teachings regarding the evolution of humanity, there are seven root-races, of which we are in the fifth. Our root-race, as such, began about 1,000,000 years ago, and we are now about midway along the course of its wheeling. Each root-race is divided into seven subraces, which, again, are divided into family races of some 30,000 years' duration.

Each race and subrace passes through its own rounds of birth, active maturity, and decline. The same periods mark the course of the civilization of each subrace, as well as the continued divisions of mankind into different nations, states, communities, and family groups. Keeping pace with these different cycles of human experience, there is an increasing number of the manifesting forms and forces in the realms of nature, as the spiritual man descends into the matter of material life on earth.

This descent is called the shadowy arc of an evolutionary cycle. At the midpoint or lowest level of this circuit, the earth matter begins to refine, and the human egos start their progressive ascent of the upward arc toward a lofty state of spirituality. This is called a planetary manvantara, which includes the entire forty-nine rounds of the seven races of that humanity, and it marks the lifetime of the earth itself. The ancient Hindus called this planetary cycle a day of Brahma, a period of manifesting life of 4,320,000,000 years. This bare outline of a recurring cosmic time period shows the same rhythmic movement in the great wheel that runs throughout the whole earth-series of "events," even down to Shakespeare's "seven ages of man." This universal law of progress, working through alternating periods of activity and rest, points out a unity of purpose in all evolution. H. P. Blavatsky says of the relation of humanity to the earth:

it is a case of descent into matter, the adjustment -- in both the mystic and the physical senses -- of the two, and their interblending for the great coming "struggle of life" that awaits both the *entities*. "Entity" may be thought a strange term to use in the case of a globe; but the ancient philosophers, who saw in the earth a huge "animal," were wiser in their generation than our modern geologists are in theirs; and Pliny, who called the Earth our kind nurse and mother, the only element which is not inimical to man, spoke more truly than Watts, who fancied that he saw in her the footstool of God. For Earth is only the footstool of man in his ascension to higher regions; . . . -- *The Secret Doctrine* 1:154

Our earth has to live through seven rounds.

During the first three, it forms and consolidates; during the fourth it settles and hardens; during the last three it gradually returns to its first ethereal form: it is spiritualized, so to say.

Its Humanity develops fully only in the Fourth -- our present Round. Up to this fourth Life-Cycle, it is referred to as "humanity" only for lack of a more appropriate term. Like the grub which becomes chrysalis and butterfly, Man, or rather that which becomes man, passes through all the forms and kingdoms during the first Round and through all the human shapes during the two following Rounds. Arrived on our Earth at the commencement of the Fourth in the present series of life-cycles and races, MAN is the first form that appears thereon, being preceded only by the mineral and vegetable kingdoms -- even the latter *having to develop and continue its further evolution through man*. -- *Ibid.*, 1:159

Though the Absolute from which universes come forth must ever remain the unknown for the finite mind, yet we can know somewhat of the periodical beginnings of manifestation in the case of mankind and the earth. That, naturally, is what concerns and interests us the most. The earth, then, is the reïmbodiment of the life-atoms, the forces, and the conscious entities which animated the planetary chain of the now dead moon. The life-waves of every kind, from minerals to man, left the moon chain of globes when the time came for its long interplanetary rest in space. This planet's sleeping period was not

unlike our regular nightly habit of putting out the light and retiring into restful darkness.

When the cosmic clock struck at the dawn of another period of manifestation, the atoms and forces of mind and matter and spirit of the sleeping universe, all felt the urge to come together again for a new "day" of planetary life. As always, nature and mankind work together for the grand new cycle. Just as the earth-to-be was at first "without form and void," so the earliest forms of humans-to-be were vague and ethereal. Then, when the inner self, cycling down through ever denser grades of substance, became clothed in a physical body, it was the earth that provided its "coats of skin." These physical "coats" are what we wear today, with the invisible astral model body within, cell for cell.

The material atoms that circulate through a human body take on something of its conscious quality, which they retain as they go forth with the outgoing cell. A pure and noble life thus squares the account with nature for the stream of atoms that unite to form the body. The plan in the universal mind is to teach everything to work together. The wise who have learned this, say:

Help Nature and work on with her; and Nature will regard thee as one of her creators and make obeisance. -- *The Voice of the Silence*

In keeping with the general plan, the earth is a sevenfold entity. Therefore, with its seven different gradations of substance and of character, the visible earth has six other globes which roll with it in space. These make up what is called the "earth chain" of globes. These correspond to the different states of human consciousness which is destined to function in our evolving sevenfold nature. Only our gross body is visible to us, because we are functioning on the solid fourth globe of the earth which our body represents. The globes interpenetrating each other, being "IN CO-ADUNITION *but not* IN CONSUBSTANTIALITY WITH OUR EARTH" (*The Secret Doctrine* 1:166).

This subject is best regarded in its metaphysical and spiritual aspect, which corresponds to the inner realm of our being. Does not the invisible world of thought and feeling interpenetrate the rounds of physical life? Also, in dreamland do we not see and think and feel and act in a realm where time and space and gravity are all keyed to astral vibrations independent of known laws of physics? Again, in deep, dreamless sleep, and in the ecstatic visions of a saintly person, it is a spiritual world that is entered. Mankind is destined, eventually, to cycle consciously through all these "globes" adapted to the different states of its own composite nature. Then, at the end of the great planetary cycle, the perfected human being's horizon will consciously include all his previous rounds of experience.

The threefold evolutionary urge which manifests in mankind as physical, mental, and spiritual unfolding, comes from that divine-spiritual monadic influence or ray which is at the heart of every thing and creature. The stream or mass of human egos evolving on our planetary chain is limited, though the actual quantity is incalculable for us. These egos came from the moon chain as a "life wave" in successive streams. The first river of "lives" began on the first globe, A, and there went through seven long rounds of evolution in bodies suited to that globe's state of matter. As this stream passed on to globe B, or the second one, another "river" of less progressed egos began their course around A. In

orderly sequence, all made the circuit of globes which are usually called for convenience A B C D E F and G.

Everything fits into its own time and place and conditions in the cosmic drama which each humanity enacts in its turn. Further details are given in *The Secret Doctrine*, and other standard theosophical literature. W. Q. Judge gives a thumbnail sketch in saying:

This journey went on for four cyclings round the whole, and then the whole stream or army of Egos from the old Moon Chain had arrived, and being complete, no more entered after the middle of the Fourth Round. The same circling process of these differently arrived classes goes on for seven complete Rounds of the whole seven planetary centers of consciousness, and when the seven are ended as much perfection as is possible in the immense period occupied will have been attained, and then this chain or mass of "globes" will die in its turn to give birth to still another series.

Each one of the globes is used by evolutionary law for the development of seven races, and of senses, faculties and powers appropriate to that state of matter: the experience of the whole seven globes being needed to make a perfect development. Hence we have the Rounds and Races. The Round is a circling of the seven centers of planetary consciousness; the Race the racial development on one of those seven. There are seven races for each globe, but the total of forty-nine races only makes up seven great races, the special septenate of races on each globe or planetary center composing in reality one race of seven constituents or special peculiarities of function and power. -- *The Ocean of Theosophy*

It is useless to attempt any account of the earlier conditions of mankind and the globe. The life and the matter of that time were wholly unlike anything we know of now. H. P. Blavatsky states that only when we come to consider our human race on our present fourth globe D, in our fourth round, do the conditions become fairly comprehensible to us.

A separate continent is described as being connected with the long career of each of the great root-races. The first continent has been called the Imperishable Sacred Land. This is geographically at the north pole, and is destined to last to the end of the planetary manvantara. Of this mysterious cradle of the first humanity, very little is said.

The name chosen for the second continent was the Hyperborean. It was "the land which stretched out its promontories southward and westward from the North Pole to receive the Second Race, and comprised the whole of what is now known as Northern Asia." The oldest Greeks spoke of the Hyperboreans dwelling somewhere far north, and visited yearly by Apollo which, astronomically, was the sun, the god of light.

Lemuria was the immense third continent which "once reigned supreme over the Indian, Atlantic, and

Pacific Oceans," and was the home of the third root-race. The Lemurians were the successors or progeny of the second root-race. They were the same embodying egos who had begun to cycle down into earth-matter together. They had spent vast periods of time in arriving at the stage where their gigantic astral bodies were becoming "physicalized" in forms which were progressively to consolidate and diminish in the evolutionary course which led to the present conditions of mankind. The continents were destroyed alternately by fire and water. Lemuria's fate came through volcanic fires, from a series of subterranean convulsions and the breaking asunder of the ocean floors. For surviving remnants of Lemuria we are referred to part of California, Australia with its aborigines and primitive fauna and flora, and to some of the islands "sown hither and thither on the face of the Pacific."

Atlantis is the fourth continent, historically recorded in the ancient traditions of all peoples. Its fate is told in the Bible story of Noah and the Flood. Plato's famous island of Atlantis was but the last fragment of it to be submerged.

The Fifth Continent was America; but, as it is situated at the Antipodes, it is Europe and Asia Minor, almost coeval with it, which are generally referred to by the Indo-Aryan Occultists as the fifth. If their teaching followed the appearance of the Continents in their geological and geographical order, then this classification would have to be altered. But as the sequence of the Continents is made to follow the order of evolution of the Races, from the first to the fifth, our Aryan Root-race, Europe must be called the fifth great Continent.  
-- *The Secret Doctrine* 2:8

The great racial cycles overlapped, so that the history of the first two really human races, that is, the last of the Lemurians and the first of the future Atlanteans, is more or less blended. The early third root-race was androgynous, and "mindless" in the sense that its consciousness was more intuitional than mental and physical. But, as the ages of development passed by, the fires of mind were lighted by manasaputras, lofty beings from higher spheres. The sexes were separated; and the bodies acquired a bony framework, the astral body becoming the inner model body -- the seat of the five senses today. These evolutionary changes explain the allegory of the "mental" sleep of Adam, preceding the "separation" of the *rib bone* which became Eve.

The later Lemurians were ruled over by divine dynasties, and these lofty rulers taught them the arts and sciences, so that they "knew astronomy, architecture and mathematics to perfection."

This primeval civilization did not, as one may think, immediately follow their physiological transformation. Between the final evolution and the first city built, many hundred thousands of years had passed. Yet, we find the Lemurians in their sixth subrace building their first rock-cities out of stone and lava. One of such great cities of primitive structure was built entirely of lava, some thirty miles west from where Easter Island now stretches its narrow piece of sterile ground, and was entirely destroyed by a series of volcanic eruptions. -- *The Secret Doctrine* 2:317

As evidence of the knowledge and skill of these gigantic builders, *The Secret Doctrine* points to the cyclopean ruins and monuments scattered around the world. These archaeological exhibits not only testify to extraordinary strength and engineering skill in their builders, but hint at more knowledge of potent, invisible forces than modern man controls as yet. The further researches of archaeology, geology, ethnology and of nature's finer forces, will unite in confirming the ancient history of the human race, which is handed down in universal traditions.

It was the "Golden Age" in those days of old, the age when the "gods walked the earth, and mixed freely with the mortals." Since then, the gods departed (*i. e.*, became invisible), and later generations ended by worshipping their kingdoms -- the Elements.

.....

Thus the first Atlantean races, born on the Lemurian Continent, separated from their earliest tribes into the righteous and the unrighteous; into those who worshipped the one unseen Spirit of Nature, the ray of which man feels within himself -- or the Pantheists, and those who offered fanatical worship to the Spirits of the Earth, the dark Cosmic, anthropomorphic Powers, with whom they made alliance. These were the earliest *Gibborim*, "the mighty men of renown in those days" (*Gen. vi*); who become with the Fifth Race the *Kabirim*: Kabiri with the Egyptians and the Phoenicians, Titans with the Greeks, and Rakshasas and Daityas with the Indian races.

Such was the secret and mysterious origin of all the subsequent and modern religions. . . .  
-- *The Secret Doctrine*, 2:273-4

Here, in a word, is the explanation of how men *brought* evil into the world. When their eyes were opened by spiritual guides, they were gifted with the light of mind which gave them a knowledge of good and evil. Even in the third root-race, a number used their free will in choosing to follow the right-hand path of light. Some of their brothers turned and followed the left-hand path of shadows. These latter consistently misused their power and knowledge, life after life. They were the Lemuro-Atlanteans who "became tall with pride." They used their control over nature forces for selfish ambition and evil ends. They became a mighty race of sorcerers, ever at war with their righteous brothers. The conflict continued, age after age, as humanity descended into denser levels of matter, up to the middle of the Atlantean cycle. By that time the root-race had developed a brilliant civilization very largely of black magicians.

In the end, after minor submersions extending for several million years, the evildoers went down with the last watery cataclysm. Meantime, their wiser brothers had separated from them, and, under spiritual guides, had migrated to distant lands that escaped the deluge. From these migrants came the beginnings of the present fifth or so-called Aryan root-race, which includes virtually all the human beings living on earth today. The germ of our present root-race dates back to the middle of the Atlantean cycle. Likewise, the germ of the subrace of the sixth root-race is even now stirring among us.

The unfortunate evil Atlantean egos were self-doomed to pass ages of repeated incarnations suffering the effects of their past evildoings. Bereft by karma of the mental and spiritual gifts they had betrayed, many of them were reduced to abject ignorance and degradation. On every hand, the united working of karma, reincarnation, and cycles points to the original purpose of bringing everything up to a balanced state of perfection. In the lower kingdoms, under nature's direction, things run more true to type than do men as the ideal of human possibilities. As a rule, our best traits and our worst ones are inconsistent with a balanced character. However, a day of reckoning is inevitable -- the sooner the better for our own progress. How often men and women of ability and worth seem held to limited and distasteful conditions of life! Presumably, they are reviewing some unbalanced account from previous lives. W. Q. Judge explains that

in one life one may be in an advanced sub-race in accordance with predominating qualities, but in that incarnation may bring up certain defects or generate certain causes requiring him to pass over next life to some other less progressed sub-race for the purpose of extirpating the defects or working off of causes.

In this way accurate adjustment, perfect development, regularity and roundness are all amply provided for. -- *The Path* 7:257

Would not the issues of such an experience be more easily, contentedly and rapidly worked out if one knew the meaning of the laws of his own being? Suppose we were aware that something within us which does know, will rest at nothing less than perfect work?

---

## Chapter 4

### Man's Body a Vast Sounding Board

Know ye not that your body is the temple of the Holy Ghost, which is in you? -- 1 Cor. 6:19

Every human organ and each cell in the latter has a keyboard of its own, like that of a piano, only that it registers and emits sensations instead of sounds. Every key contains the potentiality of good or bad, of producing harmony or disharmony. This depends on the impulse given and the combinations produced; on the force of the touch of the artist at work, a "double-faced Unity," indeed. -- H. P. Blavatsky, *Lucifer* 7:181

Verily that body, so desecrated by Materialism and man himself, is the temple of the Holy Grail, the *Adytum* of the grandest, nay, of all, the mysteries of nature in our solar universe. That body is an AEolian harp, chorded with two sets of strings, one made of pure silver,

the other of catgut. -- Ibid.

H. P. Blavatsky further explains how the body responds to the vital touch of its indwelling creator, the dual man. His *quality* of thought and feeling sets the harp's pure silver, or its animal strings, vibrating with the operations of his better or of his lower self. The embodied "artist" is playing continually on one or another set of strings, thereby arousing in them a habit of responsive vibrations. The influence of his habitual trend of playing, being registered upon the instrument, naturally reverberates back upon his mind and heart. Too often our body habits get the upper hand of our will to change them for our own good. There is practical wisdom in keeping the "heart with all diligence, for out of it are the issues of life," as Solomon advised.

Fortunately, nature, who supplies the material of our earth-body, has more to do with operating it than we understand or control. Our silent partner, nature, manages our wonderful body so well that we rather take it for granted that it runs itself. It is equipped with two nervous systems. First, there is the cerebro-spinal nervous system which functions with the brain, the senses, and the voluntary activities. Its vibrations being associated with our human nature, they are not usually as orderly as the rhythmic operations of the second or sympathetic nervous system which nature controls. However, both systems being intimately connected, they constantly react upon each other, in reflecting the conscious, the sub-, and the super-conscious life-forces.

It is nature which keeps us going, before birth and afterwards, when we are asleep or awake, conscious or unconscious, sane or insane, sick or well, vigorous or paralyzed. Nature works through the automatic nervous system to bring us back to smooth running order when we are either mentally or physically disordered. All the physiological functions are rhythmic. Their activities are timed in accord with the natural pulsation of the cosmic heartbeat.

Medical researches show that in the functions of respiration, circulation, digestion, secretion, excretion, gestation, etc., each organ has its own rate of vibratory motion, its *recurring ebb and flow of vital purpose*. Tiny ciliated cells, as in the bronchial lining, move the moisture in an outgoing current by their own rate of waving their delicate hairlets back and forth. The heart repeats its cycle of systole, diastole, and rest about four times as fast as the tide of air rises and falls in the lungs. Yet both are timed together so that the blood is received, purified, and passed on its rounds. There is a wonderful balanced relation of all the organs' pulsations to each other, and to the whole body. The coordinate system of continuous cycles within us, in its orderly precision, is regulated like a solar system. To say the least, the body is a marvelous living mechanism of interacting wheels.

Mathematics, so exact in astronomical calculations, shows that ratios of periodicity in the solar system are repeated in our body. Our organs pulsate in multiples of the solar heartbeat. For example, the sun is the heart of the solar system. At the beginning of the eleven-year sunspot period, there is something akin to contraction, and an outpouring of the sun's life force, similar to our circulation of life-blood. The solar vital currents reach the outermost limits of its system, to return progressively for another eleven-year round.

The sun has been vitalizing our humanity during the coming and going of its past four root-races. Each root-race in its turn evolved through a regular series of four periods of differing character and duration. Our present fifth root-race repeats this typical cyclic series. Its first period lasted 1,728,000 years; its second, 1,296,000 years; its third, 864,000 years; while the fourth period, our present age, will take 432,000 years -- a total of 4,320,000 years. (Cf. *Occult Glossary* by G. de Purucker, "Yugas.") This sequence of the digits 4 3 2 turns out to be a key number in certain recurring rounds, "above and below." In popular language, the precession of the equinoxes is a gain, so to say, of approximately fifty seconds on the arc of 360 degrees which the sun completes in its yearly circuit in moving around among the constellations. This yearly fraction of one-seventy-second of a degree accumulates until it totals the complete arc of 360 degrees. The sun then has arrived at the same place among the constellations in a cycle of 25,920 years -- the "Platonic year."

This cycle among the celestial bodies has its miniature copy in our own bodies. That is, we breathe in and out, completing one respiration about eighteen times a minute. In twenty-four hours we breathe 25,920 times. Our little day has a respiratory round on a similar scale of the sun's precessional movement. Meantime, our heartbeat averages seventy-two times a minute; and the sun takes seventy-two years to pass one degree along its zodiacal round. Our heartbeats in an hour total 4,320 times, repeating the digits of the ancient key number. The mathematical analogy can be carried further in showing the universality of periodicity. The significant point is the intermingling of active physical and superphysical forces. Through our sympathetic nervous system, the intelligent "laws of nature" time our organic rhythms with the superconscious heart of the universe.

The different body cells not only have their functional rhythm, but they are timed to come and go, by dividing into new cells. This simple division into new entities is now seen in lowest forms of animal and vegetable life; it repeats the way in which the ethereal, spherical first root-race reproduced itself. Our body cells are reborn, so to say, like miniature copies of the primeval method of the race. Some of our cells divide rapidly, as in young creatures; others change slowly, as in old age and in bone, but the ebb and flow is continuous. The whole body is changed in seven-year cycles; so that the man of seventy years has reembodyed, relatively speaking, ten times in one lifetime. He passes away but to return for another circuit on earth.

Life and death, then, are only the systole and diastole of the cosmic heartbeat which, for us, keeps the spiritual self coming and going, here and elsewhere. Occult physiology explains that

There is in nature a law that operates in every department whether moral or physical, and which may now be called that of undulation and then that of inhibition; while at other times it reappears as vibration, and still again as attraction and repulsion, but all these changes are only apparent because at bottom it is the same. . . . In our own blood circulation we find the blood propelled from the heart, and that nature has provided little valves which will not permit it to return to the heart by the way it came. . . . the Occultist . . . declares that the impulse is from the heart and that that organ receives its impulse from the great astral heart of the Akasa, which has been said by all mystics to

have a double motion, or alternate vibration -- the systole and diastole of nature.

So in this sense the valve in the circulation represents the abyss behind us that we cannot re-pass. We are in the great general circulation, and compelled whether we like it or not, to obey its forward impulse. -- W. Q. Judge, *The Path* 2:292-3

We are related consciously as well as mathematically to the sun and moon and the planets. Their orbital and interrelated positions at the time of our birth affect the trend of that incarnation. From this family of celestial bodies ebb and flow currents of the several spiritual, mental, psychic, astral, and physical life forces which circulate through us and everything else. The periodicity of the disintegrating moon has a marked dual influence which is both constructive and disorganizing. Its recurring phases are related to the periodicity of all reproductive physiology, to changes in diseases, and to growth of vegetation, etc. Its psychic and astral emanations are reflected in mental and emotional disorders. All these forces were so well understood by the ancients that they could benefit by the good and could minimize the ill effects of their influence. We human units contribute our share of the disorderly elements in the solar family. But we gain in power for good, and square our account, in proportion to our individual balance of right or wrong.

The vibrating *quality* of our conscious life is imprinted on the texture of our bodies, like mental and emotional fossils indicating their place in finer or coarser grades of earth-stuff. Even the physical contrast between a noble, clean-minded person and a selfish, bestial type is evident. The bodies of the evil Atlanteans were coarse and sensual. The earth, too, then had reached its lowest level of materiality. From their mid-fourth round, the planetary wheel began to revolve on the upward arc and matter began to refine. In line with this is the process of radioactivity which science is studying in rocks and minerals. Some interesting examples are reported, showing a cyclic course of events running through matter as well as in mind. Moreover, in both, the cycles run concurrently, because moving with a common purpose. We read that

the process of radio-activity will in future ages take place in all the chemical elements and compounds, beginning with the heaviest and grossest, and running up the scale towards the lightest and simplest. -- *The Esoteric Tradition*, p. 326

Thus it comes about that in the etherealizing process which our Earth-globe is now undergoing, the heaviest and grossest of the chemical elements and compounds will first become radio-active, radiating their substance away with increasing speed, and will be followed by the next or less heavy and gross, the process continuing until the end of the present Fourth Round in particular, and, with intervals of the reverse process during the downward arcs of the succeeding Rounds, proceeding until the Seventh Round will have reached its climax or end. By that time, the Globe and all on it will have returned to the highly ethereal state or condition of matter that prevailed through the First Round. -- *Ibid.*, 327, footnote

The picture of human beings evolving step by step with the matter of their bodies and in the body of the earth, shows a scientific phase of "universal brotherhood as a fact in nature." This is no mere metaphysical concept or human platitude. It is a natural fact, consistent with the essentials of science, philosophy, and ethics -- the three phases of the one truth. The material of the earth's body was with us when we were cycling round the moon-chain. The lunar life-atoms reembody again with our humanity here, bearing the quality of our former impress, both helpful and harmful influences. Likewise, our individual life-atoms from former incarnations come back each time, drawn to us by psychomagnetic attraction. This is nature's provision of the harvest field in which the unexpended causes of our past sowing may work out their effects. For example, the seeds of a karmic disease find a ready culture medium in one person's body conditions, while they will not grow in his neighbor's tissues because he is karmically exempt. Again, we see the musical, inventive, or other genius -- or the infant prodigies -- with the physical organism with which each can express the mental ability they have severally attained in previous life cycles. There is the same repetitive "coming home" of our astral model-body atoms, and of the ethereal mental and emotional substances which belong to us. The same rigid justice that rules in the universe, operates upon all planes of our being.

The chemical elements that are combined in our body organs, the musical notes that satisfy our sense of harmony, and the colors that appeal to our eyes, each have their mathematical rates of vibration. Of their progressive octaves, it is said:

To demonstrate more clearly the seven in Nature, it may be added that not only does the number seven govern the periodicity of the phenomena of life, but that it is also found dominating the series of chemical elements, and equally paramount in the world of sound and in that of colour as revealed to us by the spectroscope. This number is the factor, *sine qua non*, in the production of occult astral phenomena. -- *The Secret Doctrine* 2:627

Since the above was published, in 1888, marked scientific advances have shown how the different rates of vibratory forces appear as different phenomena. The popularity of the radio has made everyone wave-length conscious. *The Secret Doctrine* anticipated outstanding scientific advances of all kinds which show the intimate relation, if not the evident unity, of matter and force. This gives a scientific basis for a unity between conscious human forces and matter, which latter now is recognized as electronic in nature. For instance, our present five senses are responsive to vibratory rates which also manifest in tangible forms of sound, color, etc.

The five senses and their several sense organs were not evolved simultaneously in humanity, but came in serial order as regards time and sequence. Briefly, then, each root-race, toward the close of its great cycle, had developed one of the seven senses in full functional activity. The first root-race evolved hearing; the second root-race added to this the sense of touch; the third added sight; the fourth, taste. Our present fifth root-race has smell with the other senses, and also the potentiality of two more that will evolve during the future sixth and seventh root-races.

That hearing was the first sense acquired, is the oldest in point of time and of experience, agrees with

our ability to hear eleven octaves of sound, while our eyes see but one octave of light. It is pointed out in *The Esoteric Tradition* (pp. 466, 467) that the wireless wavelengths thus far known covering some eleven or twelve octaves, manifest as sound, and correspond to our sense of hearing. Passing along the scale through octaves of shorter wave-lengths, we pass through waves producing a sense of heat, i. e., touch. Continuing through octaves of still shorter waves, we reach the range of visible radiation; here the sevenfold colors of light correspond to sight. Passing through still more rapid wave-lengths, we enter the ultraviolet range of the scale, which is related to our sense of taste. Next, come the extremely short wave-lengths of x-rays which correspond to the sense of smell.

Our latent sixth and seventh senses will evolve progressively as they are called forth by the unfolding of our higher mental and spiritual nature. Then we shall radiate the constructive and inspiring forces of mind and heart as spontaneously as we now use our other senses. At that far distant period, the body will have become formed of more refined, flexible, and enduring substance; the human being will have acquired the balance of positive and negative creative forces, as sex is but a passing phase of procreation. Sickness will be unknown, as the then enlightened humanity will have learned to work in unison with the finer forces of nature.

In such future ideal conditions on the upward arc, man will be *self-consciously* evolving through realms of being through which, as an unself-conscious god-spark, he had slowly descended into matter on the downward arc. The Kabbalistic saying that "man becomes a stone, a plant, an animal, a man, a spirit, and finally God," is true as to his *forms* of imbodiment. In the ethereal first three rounds, he passed through the filmy "presentments" of what became the stones, plants, and animals of the physical fourth round. He still uses the mineral and plant elements in his animal body. The human embryo now develops through a repetition of *forms* which hint at experience in the earlier root-races.

The diapason of type is run through in brief. . . . The potentiality of every organ useful to animal life is locked up in Man -- the microcosm of the Macrocosm . . . -- *The Secret Doctrine* 2:685

Because of vast ages of experience in all kinds and forms of matter, the embryonic body is evolved now in nine months. In its earliest months, its indistinct sex hints first at the a-sexual, and then at the androgynous early root-races. Another hint of the early rounds is the early development and prominent position of the pineal gland which later is covered over by the embryonic brain. This small gland -- to which physiology assigns no function -- represents the once active "third eye." At present it is deeply "concealed within the hollow of the brain," where it is intimately related to all the intellectual, sensory, and psychic centers. It is pointed out that

it has once been active; for nature never creates the smallest, the most insignificant form without some definite purpose and use. It was an *active* organ, we say, at that stage of evolution when the spiritual element in man reigned supreme over the hardly nascent intellectual and psychic elements. And, as the cycle ran down toward that point when the physiological senses were developed by, and went *pari passu* with, the growth and

consolidation of the physical man, the interminable and complex vicissitudes and tribulations of zoological development, that median "eye" ended by atrophying along with the early spiritual and purely psychic characteristics in man. . . .

In the beginning, every class and family of living species was hermaphrodite and objectively one-eyed. -- *The Secret Doctrine* 2:298, 299

It is further stated that in the winding cyclic course of the great law, this "eye" will again function when we shall have reached the spiritual levels on the upward arc. Then, as perfected human beings, we leave earth-life to rest before beginning the next higher rounds of existence as young gods. There is an analogy between the human ego's whole course of planetary unfoldment and the evolutionary circuit which it travels in one incarnation. The ego begins each life as a little child, gains in experience, and in old age its outgoing pathway recrosses some of the incoming levels. The new-born brings with it a refreshing sense of other-worldliness and is little awake here at first; gradually the child walks along into an untried world -- happy, irresponsible, trusting. In the so-called second childhood, the ego's tide of vital force has turned. With the ebbing of conscious and vital currents, the aging body and brain are less awake here, are more detached, the person is forgetful but living in childlike memories, is careless, dependent. The life force ebbing here is beginning a cycle elsewhere. And the ego, now "going home," recrosses the inner levels by which it came. Senility often means an overlapping cycle of rebirth beyond the veil.

Space forbids discussion of the tuatara (*Hatteria* or *Sphenodon*), an ancient type of lizard with a third eye found in New Zealand (*Lucifer*, 1935). Also, the marsupials which dominate the fauna in Australia represent a transition stage between the monotremes or egg-layers and the placental mammals. What but the overlapping of ancient cycles accounts for these peculiar types? Evidently, they are subject to the same law of retardation which has held back the Australian aborigines, living on this relic of old Lemuria.

Modern biological researches are following the physiological changes of the cell inwardly, so to say, to the borderland of immaterial forces. Occult physiology points to the cosmic intelligence of nature as the causative agent directing the cell in bringing forth only its own kind of form and function. The invisible, re embodying life-germ of plant and animal even -- ages old in its own kind of experience -- is beyond the range of the microscope. Experimenters, in changing the natural order of the chromosomes or other elements of the fertilized cell, are only dealing with the natural vehicle or "body" through which intelligence is manifesting. The results, however interesting, will be disordered because artificial, and therefore will confuse, rather than reveal the question of the "issues of life" which are sought.

## Chapter 1

### Introductory

The craze to obtain superphysical powers, so apparent today, is nothing new. Nor is the appearance of such powers a recent evolutionary development. The literature of every people is full of references, historical as well as fictional, to certain individuals who can do things of a "magical" character, which the laws of physical science, known today, do not explain.

Such persons may be able to talk with "spirits": they hear phantom voices and see visions, and often think they are guided by angelic beings. They may be able to conjure up visions of the past, or of things happening at a distance, or they can foretell the future. Sometimes they are able to override the normal laws of nature by handling red-hot coals and similar things without being burned. Sometimes they are able under trance to draw and write things that are ordinarily quite beyond their capacities. Others may have the power of exerting a sort of enchantment or fascination over their fellows and of making these latter do their bidding; or they can heal the sick by the "laying on of hands," and in other ways.

It is noted that in the presence or atmosphere of a certain type of such individuals strange happenings take place. "Raps" and other sounds may be heard that are caused by no known agency; or there are the ringing of bells and sounds of musical instruments. Furniture perhaps moves of itself, and other household objects become disarranged. There may appear in the air what seem to be human hands and faces and ultimately complete figures.

The above examples, and many others that might be enumerated, are all included under the general category of psychic powers. In their essential nature these powers are not evil, though they vary widely in quality, ranging from those which are closely associated with our physical nature to those which work more closely with our spiritual nature.

Then, too, religious belief and custom has always profoundly affected the status of such powers, and it seems likely that their development along lower or higher lines has run parallel with, and has been a fundamental part of, the growth and influence of religion among the people. For instance, at a time when the Mysteries were still influencing the life of ancient Greece, a high type of clairvoyant was used in the sacred oracles, the priestess on the tripod being considered holy, and cherished and protected from contamination of any sort. The temples of Aesculapius in Greece, where the art of healing was highly developed, and where the most remarkable cures were performed, were a recognized part of the Mysteries themselves.

On the other hand, during the Dark Ages in Europe most unwholesome types of "psychic epidemics" occurred, connected in some cases with sorcery. And as late as the seventeenth and eighteenth centuries psychics were still believed to be witches and were put to death by the Church.

There are, in fact, certain cyclic periods in history when there occur unusual outcroppings of these psychic manifestations. At such times the numbers of these abnormal individuals increase. Others through curiosity and the element of wonder are carried along on the psychic wave. The whole matter is given undue importance and an emphasis which almost always reacts harmfully upon those thus engaged, because they are ignorantly invoking strange forces which they cannot control. We are at the present time in such a cycle. It is with this cycle that we are particularly concerned: how it is affecting Western people, and what light theosophy throws upon the whole matter.

The present cycle started in the middle of last century with the rise of modern Spiritualism. The movement spread like an epidemic, first through America and later to some extent in the European countries. About this time there had been a growing interest in cures effected by means of hypnotism, and combined with new possibilities these experiments suggested, the spiritualistic movement was welcomed as a new revelation. Reputed clairvoyants developed into mediums, "spirit circles" were formed in many families, and it was obvious that a great many people were rushing headlong into experimentation and practices whose dangers they little dreamed of.

Already by the last quarter of the century much harm had been done, both in the disastrous effect on mediums themselves, and in the tremendous interest that had been aroused in every and any sort of abnormal power. A glamour had been cast over it all and many were feverishly hunting after the most unwholesome sorts of inner development with complete ignorance of the nature of what they were after.

Part of the mission of the Theosophical Society, founded in 1875, was to call a halt to this mad rush for phenomena and powers. This was to be done principally in two ways:

- (a) By trying to illumine human hearts and minds with a spiritual light which so far transcended the will-o'-the-wisp flickerings of psychism, that the latter would lose their fascination.
- (b) By presenting a scientifically sound rationale of these lower powers, thereby giving logical and convincing proof, first, of the existence of such powers, and second, of their extreme danger.

It was in this cause that H. P. Blavatsky, when she first came to America in 1873, had been instructed to work with the Spiritualists (see *H. P. Blavatsky and the Theosophical Movement*, by C. J. Ryan, chapters 5 and 6). In her own words:

I am here in this country sent by my Lodge on behalf of Truth in modern spiritualism, and it is my most sacred duty to unveil what is, and expose what is not.

But beyond a certain point they were not willing to accept her explanations of phenomena based on the ancient wisdom which she had been taught. Many of them even repudiated her, and thereby they lost a valuable champion and gave up the opportunity offered to them to put their experimentations upon a sound basis and at the same time satisfy the natural human longing for evidence of post-mortem

survival.

There was, further, the counter-current of materialism that had to be reckoned with. While the simple-minded, as well as others of a mystical type, were being sucked into the psychic vortex, the great army of the skeptics saw in these manifestations only trickery and hallucination; and since both these factors are abundantly found in the annals of Spiritualism, the skeptics had a pretty good case.

The situation was a difficult and peculiar one because the psychic demonstrations which, it had been hoped, would jolt a materialistic world into an awakening to a wider outlook, got out of hand, so to speak. Since the group of Spiritualists had become utterly useless as an instrument for serious study, H. P. Blavatsky herself, under the direction and often with the aid of her teachers, was then instructed to give proof of her own supernormal powers (a description of these may be found in much of the early theosophical literature, as for instance *The Occult World* by A. P. Sinnett). Her purpose in this was to show the skeptics that beyond their circumscribed sphere of physical matter was an invisible world operating under its own unerring laws which, for one who understood them, could be made to act with definite and demonstrable results. Further, as W. Q. Judge says, she exhibited these marvelous feats

for the purpose of showing those who were learning from her that the human subject is a complicated and powerful being, not to be classed, as science loves to do, with mere matter and motion. -- *The Path*, vol. 8, May, 1893

Blavatsky was bitterly disappointed in the general attitude of the scientists towards her entirely disinterested efforts. Writing in her magazine *Lucifer*, in February, 1888, she says:

Never were the phenomena presented in any other character than that of instances of a power *over perfectly natural though unrecognised forces*, and incidentally over matter, possessed by certain individuals who have attained to a larger and higher knowledge of the Universe than has been reached by scientists and theologians, or can ever be reached by them, by the roads they are now respectively pursuing. Yet this power is latent in all men, and could, in time, be wielded by anyone who would cultivate the knowledge and conform to the conditions necessary for its development.

She continues:

Therefore, it is hardly to be wondered at, that *word* came to abandon phenomena and let the ideas of Theosophy stand on their own intrinsic merits.

When the mahatmas who started the Theosophical Society were urged to cause a newspaper published in India to appear in London on the day of publication, or vice versa, to convince the skeptics once for all, their answer came:

Very true, we work by natural not supernatural means and laws. But as on the one hand

Science would find itself unable (in its present *state*) to account for the wonders given in its name, and on the other, the ignorant masses would still be left to view the phenomenon in the light of a miracle; everyone who would thus be made a witness to the occurrence would be thrown off his balance and the results would be deplorable. -- *The Mahatma Letters to A. P. Sinnett*, Letter No. 1

They declined to perform the experiment, pointing out further that, on the one hand, no phenomena, however startling, would ever convince the skeptics; and on the other hand, that in order to prevent superstitious practices arising, a healthy element of doubt should be preserved. Further, as greater and greater proofs would be demanded, the mahatmas themselves would end by finding themselves on the point of breaking the unalterable esoteric law, namely, that the secrets of the occult arts shall never be divulged except to those who have undergone the most strict and thorough discipline in their own schools of training.

It is now more than a century since H. P. Blavatsky brought her spiritual message to the West, and we are seeing evidences of its infiltration into the general thought-world, which is turning men's minds away from materialism. But much remains to be done in educating people as to the dangers of psychism. We are opening upon a new cycle which will see the progressive development of new faculties in man. As the human race advances it will inevitably become more finely organized both physically and psychically, and will come gradually more and more in contact with forces, powers, and beings that belong to a more subtle plane of existence. What theosophy has to give in the way of explanation and preparation is needed *right now* as the introduction to a new cycle of development.

---

## Chapter 2

### Fundamental Ideas

The nature of the psychic powers and faculties cannot be understood without a comprehension of certain basic conceptions. These are as necessary as charts are in sailing an unfamiliar sea.

First we must dismiss the idea that anything can be brought about by supernatural means. No divine being can suspend the working of natural law. On the other hand, neither can we say with the materialists that everything can be explained by the laws of *physical* nature alone.

The teaching of the ancient wisdom is that there is indeed more to the universe than can be measured by our physical senses -- or by our laboratory researches, which are but an extension of the powers of our sensory perceptions. Our physical universe is but a reflection of a vast and invisible realm, filled full with many grades of conscious living beings. It is their combined activities which bring about what we call the laws of nature, but which might better be called the habits of nature.

Mankind forms one group of these invisible entities -- because, after all, the conscious thinking self of us is invisible. The portion of the universe that we call visible is merely that aspect of it for which we have developed organs of perception: the eye, the ear, and so on. Those aspects of the universe that we cannot perceive with our senses are not far away, in some distant stretches of space, but are right with us here and now, interpenetrating our physical sphere and impinging upon our inner selves at every moment of the day and night.

It is a mistake to suppose that invisibility necessarily implies spirituality. Assuredly spiritual energies have their source in the unseen realms of nature, but evil energies do likewise. The physical world is like a great arena for the enactment of the pageant of life, which we as human beings are at one and the same time taking part in and beholding. But this gorgeous and sometimes very tragic presentment only feebly depicts the unseen forces, both exalted and degraded, which move the actors to noble or to sordid deeds.

## THE ASTRAL LIGHT

Those substances and energies of invisible nature impinging most closely upon our physical sphere are known in theosophy under the general term the astral light. It would perhaps be more accurate to say that its grosser portions thus impinge upon our sphere; for in its highest reaches it merges indefinitely into the purest cosmic aether, the source of all intelligence in the universe. The astral light surrounds and interpenetrates our globe as an ethereal essence, so sensitive and plastic that it receives and retains in its subtle substance an impression of all that takes place on earth, and of all the thoughts and emotional energies emanated by man. But it is more than a photographic plate, a mere recorder. It is a great crucible

in which all the effluxes and emanations of the Earth, whether psychical, moral, or physical, are received, and after undergoing therein a myriad of ethereal alchemical changes are reflected or radiated back to the Earth . . . thus producing epidemic troubles or diseases, whether these latter be physical, psychic, or moral. -- G. de Purucker, *The Esoteric Tradition*, p. 953

There is, in fact, a constant interchange between what we call the physical plane and the astral plane. No sharp dividing line exists between the finest grade of physical matter and the densest grade of astral substance. The one merges into the other as naturally as dark night merges into dawn. This fact, with all that it implies, plays a large part in the explanation of the phenomena of memory, hallucination, emotional "complexes," psychoses, and dozens of other problems of mind and consciousness that puzzle psychologists. And it has to be reckoned with in the study of every aspect of psychism. The psychic waves that sweep over portions of the earth at cyclic times are caused, we are told, when through certain stresses and tensions in the earth's constitution, the protecting veils between the two planes grow thin, and contact with these finer substances is more easily made by peculiarly constituted individuals.

One of the chief characteristics of the astral light is its deceptive quality. Its whirling and eddy currents, its confused jumble of pictures, and its irresponsible as well as often evil denizens, bewilder

and lead astray all but the highly trained seer. The ordinary person is not developed along the lines that would allow him a safe entry into these realms. Nor does the mere ability to enter them guarantee one's safety therein.

## THE NATURE OF THE PSYCHE

Man, like the universe, has an inner nature ranging from the purely astral to the highest spiritual. For convenience we here reproduce a diagram showing this complex nature.

[[diagram]]

The monad (atman and buddhi) represents that high spiritual source of all that is noble and inspiring in our human existence. The lower three principles in the diagram (prana, linga-sarira, sthula-sarira) are the human body, both astral and physical, and the vitality that courses through them as long as our life on earth lasts. But what we are particularly concerned with for our present study is the intermediate portion of the diagram, for it is the seat of the ordinary individual, made up of mind (manas) and emotions (kama).

The Greeks sometimes called this part of us the *psyche*, and it is from this root that words such as psychic, psychism, and psychology have been formed. The use of this Greek root is accurate because the studies with which these words are associated all deal with the nature of the psyche: its relation to the body-part of man and to his spiritual nature, as well as to the world about him, including the astral light.

As a little study will show, our diagram suggests that mind partakes of the spiritual nature of its parent above, and forms with it the higher triad. Further, that desire when linked with the body-part of us forms a lower group of four, the lower quaternary. But what makes us as we are today is the union of manas and kama. It is this duad that holds the key position in our present evolutionary make-up. It is for this duad that life on earth is necessary, and its dual aspect explains the many contradictions, surprises, and disappointments of human nature.

This duad is the seat of our psychical nature. Our psyche is thus an undeveloped being. It has the use of all the powers of the human constitution to carve for itself a glorious destiny -- will, imagination, thought, desire -- but as yet it has not learned how to use them with wisdom. Its character is unstable. It is torn between its urge to understand and interpret through its own powers the will of its spiritual parent; and on the other hand its urge to identify itself with the animal nature below. It is drawn hither and thither by the attractions of the senses. Its purposes are divided. It is in fact that familiar part of ourself which needs no description.

In the normal, healthy individual this "conflict" is a natural stimulus to achievement. There is harmony and symmetry of development. Health means "wholeness," and where psychic health exists one finds those characteristics that belong to the well-balanced person: poise, clarity of thought, firmness of purpose, a sense of proportion, often a sense of humor tempered by a natural kindly feeling. We have in

fact what is often spoken of as a well-adjusted personality.

Psychic ill-health occurs when the harmonious working of all the factors in man is broken. This often occurs when the psyche attempts to assume a position in the general economy of the human being to which it is not entitled; and there is little doubt that, could we see the chain of circumstances through several lives perhaps that lead up to our present psychic ills, we should find that somewhere along the way we had, perhaps by imperceptible degrees, built up the condition we now are trying to overcome.

The particular phase of psychic ill-health that we are concerned with here is that serious aspect shown by many people who possess what are called psychic powers. In the ordinary medium, for instance, there is always an actual dislocation of the psyche. The danger of this state will be discussed in a later chapter; suffice it to say here that the involuntary disjunction of this intermediate principle is never a desirable thing, for it makes the unfortunate individual the prey of evil entities in the astral light which crave a vicarious existence on earth as a means to satisfy their unfulfilled desires. Though purity and natural goodness do act to a certain extent as a protection to the medium, still there is likely to be a progressive deterioration in the medium's character, and his weaknesses, however mild, may prove to be the entering wedge for undesirable astral visitants to control him.

## THE ASTRAL SENSES

Our true self has been evolving appropriate vehicles for growth and experience through long ages, and our inner economy is most marvelously regulated. Our spiritual nature provides us with the power to develop and express in ever greater degree our latent faculties. Our body serves as a means of contact with the outside world and with our fellows. It further acts as a protection, a barrier as it were, to the inroads of the astral plane. Our senses act in a selective and limiting way, and this is as much a blessing as it is an inconvenience. Until we are unaffected, at least in some degree, by the influences penetrating by means of our senses to our psychic nature, it were foolish to wish for this barrier to be broken. Yet this is what happens with those who crave to possess psychic powers. The ordinary person is to a certain extent imprisoned within his body. The psychic is in danger of breaking this guard, and finding himself in a realm where he is more or less helpless.

The fact is that for every one of our physical senses we have an astral counterpart which is the true center of sense perception. It is through these astral centers that the ego within really hears, sees, tastes, and touches. Without them, the physical senses would be useless. But at present these astral sense-centers are in their turn dependent upon their physical replicas. We cannot use them consciously and independently as yet. This will come in the future as a further stage of development. When that time comes it will be natural for us to use these astral senses *at will*, and then we shall know at first hand a great deal about the inner aspects of the universe which are now hidden from us. We must wait, however, until "the inner man has grown to maturity," as W. Q. Judge expresses it (*Culture of Concentration*).

This sort of thing fascinates the average person; but there is nothing more magical about it than the fact

that now we can look into the heavens at night and catch with our physical eye the light that started from the stars perhaps millions of years ago -- a marvel truly!

This future development of the astral senses is but a phase of a greater power that is to be ours: that of being able through conscious will and thought to travel where we will in a refined "astral body" of our own making, free from the burden of the "too too solid flesh." It was such a power that Apollonius of Tyana used when he suddenly vanished before the very eyes of Domitian and the crowd gathered at his trial in Rome, and appeared before his friend an hour later at the grotto of Puteoli (see *Isis Unveiled* 2:597).

Those who advertise to teach for a price the power of roaming at will in the astral have no idea of the difficulties involved, nor of the dangers they invite where even a partial success may be attained. There are also those who profess to know such dangers, but who do not sufficiently warn against them.

Psychics at the present time shadow forth this power that is to be ours in the distant future. They are not symmetrically developed, however, nor do they know anything about the true nature of their prematurely awakened ability. They may have one astral sense partially developed, as for instance the astral left eye or right eye; such being the case of the ordinary clairvoyant. Or they may be able to extend an astral arm, as some mediums do. But what they are able to see or sense is always one-sided, scrappy, and misleading; and as the power is used involuntarily, they have no guarantee that they can stop it when they will.

The theosophist does not consider it a fortunate thing for persons at the present time to have abnormally developed astral senses. It is in nearly all cases an affliction. It is always a responsibility.

## STUDY NECESSARY

It is necessary to study the subject of psychism in order to put the matter entirely on a rational basis. Too often the word "psychic" is veiled in a sort of mysterious atmosphere which enhances its attractions. People speak of having psychic experiences as though they were set apart from the ordinary run of mortals in some special, favored way. Or they have a dread of the very mention of the word, saying that it conjures up in their minds a host of vague terrors. Neither of these attitudes is desirable. One might as well be a rank materialist, scoffing at the very idea of the existence of invisible worlds, as to hold these false notions that cloud the understanding and lead one astray.

As a matter of fact, when we speak of the psychic world, we simply mean that invisible realm where our lower mind naturally functions. Here our psychic nature is active all the time; and it is this very psychic nature that provides us the means by which we can act on this physical plane. To be sure it is the seat of temptation and desire, of mental and emotional illusion; but it can also, when trained and controlled, be the transmitter of the vitality of the spiritual self into active expression in daily life. Nay, more, it is *the only means* the spiritual self has of functioning here on earth.

The abnormal development of the psychic nature, producing what are generally understood as the psychic powers, would be recognized, like all abnormalities, to be a mere side issue, if its nature and development were studied today as once they were studied in the ancient science of psychology, which H. P. Blavatsky speaks of as "the most important branch of the Occult Sciences" (*Studies in Occultism*).

---

## Chapter 3

### Psychology and Psychic Powers

The subject of psychology does not rightfully belong under the heading of psychic powers; rather should we say that the study of psychic powers rightfully belongs under the heading of psychology, as a branch of the general subject.

Some scientific investigators of psychic matters have evidently held the same view. In a letter to Sir William Crookes written in 1871, E. W. Cox says, in discussing the mysterious powers that "sensitives" possess:

I venture to suggest that the force be termed the *Psychic Force*; the persons in whom it is manifested in extraordinary power *Psychics*; and the science relating to it *Psychism*, as being a branch of *Psychology*.

Psychology is defined as "the science of the nature, functions, and phenomena of the human soul or mind." But H. P. Blavatsky gives a more inclusive and therefore more accurate meaning in *Isis Unveiled* (1:xxvii-xxviii):

*Psychology*, or the great, and in our days, so neglected science of the soul, both as an entity distinct from the spirit and in its relations with the spirit and body.

It is obvious, then, that every conceivable aspect of our make-up and activity, other than those aspects which are purely physiological (and it is a question whether there are any that could come under that category), could logically be included in some branch of the science of psychology.

But modern psychologists are just beginning the great task of developing a science; and they have limited themselves right from the start by trying to do away with the terms "soul" and "mind": the first, because as scientists they do not feel justified in entering the realms of metaphysics; the second, in an attempt to avoid the ever-puzzling problem of the relation of mind to matter. Descartes, it will be remembered, laid down the principle that mind and matter are two opposing substances having absolutely nothing in common. The modern psychologist prefers to think of the human being as a body-mind unity -- a theosophical concept also when freed from any materialistic implications. Instead of "the science of mind," he prefers to speak of "the science of individual experience." On this basis he tries to

analyze such phenomena as sensation, emotion, memory, imagination, aesthetic feelings, desire, understanding, belief, and all types of thought processes.

As a simple example: the ordinary person is not concerned with an explanation of his reactions to outward stimuli. For him there is no mystery in the fact that a gun-shot will make him start; that he finds certain kinds of music pleasing, and others not; or that an almost-forgotten tune may bring such a rush of unpleasant memories that he is put in a gloomy mood for the rest of the day. But the psychologist is concerned with the explanation of these things. He does not take them for granted. He wants to know why.

The effect of the gun-shot may undoubtedly be explained purely physiologically. But can the other two reactions? What, exactly, are moods? What are memories? Have they, indeed, any real existence? When the psychologist banishes any soul or mind from his scheme, any inner entity which *experiences*, he is hard put to it to explain even such simple reactions as the above. He must find some other explanation for obvious functions of mind and soul. The various schools of theoretical psychology have thus elaborated the most complicated systems and developed a difficult and highly technical terminology to explain the simplest phenomena of experience.

But whatever terms are used, the idea of an ego or self is implicit in all systems except the most materialistic. Some such conception is continually cropping up. The banished ego slips in by a back door and has to be reckoned with. As a matter of fact it is often only a sort of "temporary" ego that is postulated, a result of the interaction of brain and body. Little or nothing is known about the spiritual genealogy of the true egoic center in man and its progressive development through many lives on earth, bringing into each life what it had made of itself in the past.

Yet philosophies of the past have all taught of a "self" in man; sages have studied the constitution of our inner nature with scientific exactitude. It would seem foolhardy to ignore their testimony as to the existence of the self and the nature of the complex vehicles it uses for expression during its evolution on this earth. The very universality of such teachings, their intellectual profundity, and their ability to account for all the phenomena of human experience, both normal and abnormal, warrant their serious study; and it is one of the aims of theosophists today to bring this knowledge of our inner nature to the attention of the modern world.

Theosophy is, indeed, like a key to a code. Without the key a code is unintelligible, though one may make any number of observations about it and pile up a vast amount of data concerning it. The data may be absolutely correct, but they do not answer the question: "What does the code mean?" The modern psychologist has gathered a vast amount of such observable data about human beings. The key to the code is missing; but we notice that some of the more penetrating scientists are turning to the sacred books of the East to find the missing key.

It is naturally in the field of the abnormal human states that psychology and psychism meet; but the former confines itself mainly to research and experiment connected with such obvious states as dreams,

hypnosis, insanity, hysteria, and double personality, leaving untouched a far wider range of unexplained "powers." Perhaps this is just as well for the time being.

It is worthy of note that practical psychology brings out a whole new set of problems to be solved which are totally unsuspected in the theoretical systems. In the treatment of abnormal states the practitioner often proves himself much bigger than his theory. This is surely because he brings to bear upon his actual problems his natural love of his fellowmen and his keen desire to bring relief to those who suffer. The spontaneous qualities of his spiritual nature cannot be denied and are bound to exert an influence upon those with whom he labors. On the other hand, he can ill afford to ignore any sources of knowledge in regard to psychic powers, for the simple reason that he is using them himself to some extent. His good intentions will not save his patient from the possibly disastrous effects of a power used in ignorance.

The use of hypnotism in the cure of various afflictions is discussed in a later chapter, but it may be pointed out here that even where hypnotism is not directly used, there is a large element of *suggestion* (another form of the same power) in the emotional relationship that is often developed between doctor and patient. The negative patient who lays open to his doctor the secrets of his inner self is likely to leave his own will passive for the entrance into the psychic nature of whatever the doctor wishes to put there. Leaving aside all cases of unscrupulous behavior on the part of the physician, the negative condition into which the patient is thrown is never advisable.

Though no sweeping generalities or dogmatic assertions can be made in regard to the profound problems that the medical psychologist is faced with when he probes into the dark chambers of the unbalanced psyche, we can look forward to the time when the patient will be taught to find and to rely upon the center of strength within himself, the true spiritual ego from which, in the end, all power for recovery must spring. All outside help, however salutary, can only have a lasting effect if it becomes an aid to the patient's own latent capacity to correct, from within, his own unbalanced state.

Psychic derangements often accompany, and indeed are the cause of various nervous and mental disorders which the medical psychologist treats. For instance, it is well known that certain types of megalomania, or exaggerated egotism, are often accompanied by psychic lesions where the sufferer imagines that he is being led to the performance of great deeds by some angelic guide. He hears "voices," he is said to be "clairvoyant," and in touch with "spiritual" powers, while all the time his own hallucination is feeding his sense of superiority. It would seem that a knowledge of the true nature of the psyche and the possibility of its "dislocation" in the human constitution -- one of the commonest evidences of mediumship -- would be an enormous help to the psychologist in studying such cases.

While it is freely admitted by many that Western psychology is still in its infancy, in its application to the practical affairs of everyday life, such as education and industry, excellent work is being done. But it is obvious that, whereas "psychologization" is freely taught and used, very little is known of the true nature of this psychic power. It has become such a common thing now to believe that it is a good action and a sign of strength of character to force one's own ideas or convictions upon others, that clever

methods for doing so are ever on the increase. The very word "psychologize" has come to have this exclusive meaning, though its technical meaning is, of course, "to analyze psychologically." If it is argued that success in college or in business depends upon the use of this power, then we can only answer that that in itself is a sad commentary on present-day standards. A real psychologist might analyze this ignoble practice as an attempt, by illicit means, to bring about what the person of high integrity, character, and genius accomplishes through the compelling power of truth and of his innate spiritual strength. True greatness requires no psychological tricks to enhance it.

---

## Chapter 4

### Mediumship and Its Dangers

Mediumship of one kind or another is far more common than is generally supposed. It is by no means confined to "sensitives" in the seance room. And since a great many types of psychic powers are linked up with this matter, and their origin very little understood, it is worthwhile devoting a chapter to its study.

Speaking in a broad and general sense, we all act as "mediums" for the transmission of the thoughts and impulses originating in minds other than our own, to a certain extent at least. This is inevitable since we live and move in this world as parts of a great whole. The very law of life is a giving and taking. We are continuously exchanging and interchanging life-atoms -- gross, ethereal and spiritual. Ideas spread through the astral ethers unimpeded by time and space. They enter human minds, are there clothed in a million forms, and are sent forth again to touch new minds, which in turn become new centers of generation. Thought expresses itself in action. Action becomes the stimulus to more thought. The flow is never-ending.

But for all that we must admit that, in our unenlightened attempts to use our divine faculties of will and imagination, we have transgressed the natural law of giving and taking. The complexities of human relationships offer endless illustrations of this fact. From motives good, bad, or mixed, in a thousand different ways we impose our wills on others; or, we become the instrument for the carrying out of someone else's will, or are moved to action by some other outside agency. Such relationships are not necessarily evil, but when they become habitual, then to the extent that the outside energy controls us, we are actually "mediums" of one kind or another, using this word in its broadest sense.

In a penetrating article in *The Theosophist* (June, 1884, p. 211), H. P. Blavatsky enumerates various types of such mediums, showing how such types may vary from the most debased to the most sublime:

A person may consciously and voluntarily submit his will to another being and become his slave. This other being may be a human being, and the medium will then be his obedient servant and may be used by him for good or bad purposes. This other "being"

may be an *idea*, such as love, greediness, hate, jealousy, avarice, or some other passion, and the effect on the medium will be proportionate to the strength of the idea and the amount of self-control left in the medium. This "other being" may be an elementary or an elemental, and the poor medium become an epileptic, a maniac or a criminal.

This "other being" may be the man's own higher principle, whether alone or put into rapport with another ray of the collective universal spiritual principle, and the "medium" will then be a great genius, a writer, a poet, an artist, a musician, an inventor, and so on. This "other being" may be one of those exalted beings, called Mahatmas, and the conscious and voluntary medium will then be called their "Chela."

H. P. Blavatsky says further that the "medium" may or may not be conscious of the source of the influence which moves him. He may be unaware of what the actual being is like whose action is transmitted through him. He may really be getting inspiration from his own higher nature and imagine that he is in personal communication with Jesus. Or some adept may influence him to write a great scientific work and the writer imagine that he is in communication with the "spirit" of Faraday or Francis Bacon. On the other hand, a person may be moved to commit a crime which he considers entirely foreign to his nature, and not be aware of the fact that in this case he is being influenced by an evil denizen of the astral light to whom he has given hospitality.

It can be seen from the above that energies foreign to our own stream of vitality can use us at times in various ways. The playground of their activities is always the region of our psychic nature whether these energies come from "above" or "below." The dangerous and often evil cases of this psychological phenomenon occur when the psychic principle *passively allows itself to be numbed, paralyzed, or even ousted* by an intruder from outside. A large proportion of ordinary mediums are an outstanding example of this sort of usurpation; and a study of what is usually understood as "mediumship" will serve as a specific illustration of the above general remarks, and provide suggestive hints as to the enormous possibilities there are for loss of moral stamina as well as of psychic and physical health, where self-control is lacking.

## THE ORDINARY TRANCE MEDIUM

The term *medium* usually designates one who is abnormally sensitive to impressions from the astral light. Some people are born with marked mediumistic powers. A great many more, having slight tendencies in that direction, have developed these tendencies, ignorantly supposing that a heaven-sent gift has been conferred upon them. Spiritualists have been largely responsible for this. Since the rise of the Spiritualist movement in the middle of last century, they have never wavered from a sincere belief that by means of "sensitives" under trance, communications can be made with the spirits of departed loved ones.

Now, no true occultist would deny that communication of some kind is made. The question is: Communication with what? There are adepts in occult science who have answered this question. It was

they who instructed H. P. Blavatsky in that knowledge which she endeavored to share with the Spiritualists. The teachings of these adepts concerning the nature of spiritualistic communications bear the force and conviction of first-hand testimony: for that is exactly what it is. They have used neither guesswork, fancy, nor even philosophical speculation. At home in the invisible worlds, they have used the discriminating faculty of their own spiritual clairvoyance to test and observe what takes place therein. The theosophical teachings upon these matters represent the findings they have deemed wise to release for the present generations of mankind.

First of all, it is impossible to understand this subject of "communication" without a knowledge of what happens to our complex nature after death. Barring frauds -- of which, unfortunately, there have been all too many in the history of Spiritualism -- we might list types of contact made by the medium as follows:

(a) Elementals or nature spirits. These throng the astral light. Their will, such as it is, is not directed by purposive thought. They are irresponsible and mischievous, and will assume whatever thought-forms are most strongly present in the atmosphere of the seance room, impressed thereon by the medium or the sitters. Their lively action explains a large proportion of the phenomena of spiritualism.

(b) The "shells" of dead men, called *kama-rupas* in theosophical philosophy. These are of astral substance, and like the greater astral light, from which they draw their life, they are impregnated with all the passionate and lower emotional thoughts and feelings of the human beings who built them up during earth life.

Such kama-rupa is no fit body for the real self after death, who makes its escape out of the astral light as quickly as it may, leaving this "shell" to fade out as it will. It is this "shell" that is often revitalized in the seance room, its passions quickened into a false life, and its automatic memory made to rehearse again and again the words and acts of the ego that once ensouled it.

(c) Akin to these "shells" are the elementaries. These are the most evil denizens of the astral light. They are also kama-rupas of former human beings, but of

grossly materialistic ex-humans whose evil impulses and appetites still inhering in the kama-rupic phantom draw these phantoms to physical spheres congenial to them. They are a real danger to psychical health and sanity, and literally haunt living human beings possessing tendencies akin to their own. They are soulless shells, but still filled with energies of a depraved and ignoble type. -- G. de Purucker: *Occult Glossary*

Blavatsky describes such a kama-rupa as a vampire "feeding on the vitality of those who are so anxious for its company" (*Theosophical Glossary*, p. 172).

(d) Occasionally, under *very* rare and unusual conditions, and when death has just taken place, the true ego of the deceased may speak through the medium. (This sometimes can happen just before death also.) The rare event of such communication just after death is, in fact, only possible as long as the brain is still

functioning. Occultism has always stated what physiologists now admit, that the process of decease may last several days. When true death has taken place, the ego slips into unconsciousness from which no medium can recall it.

(e) Certain unusual cases exist where authentic communication has been made with the spirit of a departed friend. This does not mean the *descent* of such spirit. It implies that the medium's higher ego is *on the same high plane* as the disembodied spirit and can thus contact it. The medium must be absolutely pure, and then his higher ego, untrammelled by an impure psychic vehicle,

has the opportunity and facility of influencing the passive organs of its entranced physical body, to make them act, speak, and write at its will. The Ego can make it repeat, echo-like, and in the human language, the thoughts and ideas of the disembodied entity, as well as its own. -- H. P. Blavatsky, *The Key to Theosophy*, p. 30

(f) This last case would cover those likewise rare occurrences of contact between the medium and some spiritual being, the contact always made through the intermediary of the medium's own higher ego. It should be distinctly understood, however, that in cases (e) and (f) there can be no materialization in the seance room.

It might be added here that the adept can do this and similar things self-consciously and directed by his will. The unstable condition of the constitution prevalent among mediums is only too often a hindrance to communications of a spiritual nature.

Finally, we should include those numerous instances where the medium is merely reading the thoughts in the minds of the sitters. The technical or detailed information thus received has often been adduced by the unsuspecting investigator as irrefutable proof of true "spirit" communication. As a matter of fact, everyone present at a seance is likely to influence the type and extent of the phenomena presented, even though he may be taking no obvious part in the proceedings. It has even been pointed out that a skeptic present will act as a sort of "freezing" agent impeding the usual progress of affairs.

## MATERIALIZATIONS

Having enumerated the types of entities with which communication is made, there still remains to be given an explanation of just what it is that appears in the seance room. The word *materialization* is used in Spiritualism to denote the objective appearance of what purports to be the spirit of the departed one. The striking and sometimes photographic likeness of these shapes constitutes one of the surest proofs to the Spiritualist that it is indeed the dead friend or relative who has "returned." Since the actual state of affairs precludes the possibility of the return of the true spirit of the departed from higher realms, what explanation are we to give for this phenomenon?

The theosophical philosophy explains that the densest astral substance is very near indeed to the most tenuous physical, so that the appearance caught on the photographic plate and seen occasionally with the

human eye is that of a coarse grade of astral substance which has become partially objective through the concurrence of a number of favorable conditions. This should be no more difficult to understand than the various electric phenomena with which we are all familiar. Electricity is forever about us, yet only under certain conditions does its activity become visible. There is also an analogy in the transformations from the invisible to the visible and vice versa which take place daily in the test tube of the chemist. Or, again, where is our spark of fire before we strike the match that causes it to spring into visibility?

Evidently there is more than one grade of astral substance employed in materializations, and as there are a number of different factors involved, the matter is a very complicated one; but a few general principles can be stated.

Sometimes the apparition, if we may so call it, is formed by the actual astral eidolon or kama-rupa of the deceased which naturally bears the likeness of the body that once harbored it.

Whenever the strong desires of living men and the conditions furnished by the abnormal constitutions of mediums are combined together, these *eidola* are drawn -- nay, *pulled* down from their plane on to ours and made objective. -- H. P. Blavatsky, *Theosophical Glossary*, p. 210

Then there is the "double" or astral body which can be projected a short distance from the physical body of the medium. This gathers to itself particles of ethereal substance suspended in the atmosphere about it, and drawn even from the vital emanations of the sitters. It then takes upon itself whatever thought-forms are most strongly impressed from the minds of those present -- more often than not, the likeness of the deceased.

Another and more tangible process is the extrusion of material substance (ectoplasm) from the body of the medium, which substance, being highly plastic, molds itself into recognizable forms. In some cases this is like a flat plate upon which a picture is thrown. Obviously these images are not "spirits" of any kind; they are merely illusions foisted upon the ignorant sitters by sportive nature spirits.

In fact, only too often the Spiritualists, and even the more scientific researchers, are subject to the most deceptive illusions because of the activity of the mischievous denizens of the astral light.

## POLTERGEISTS

It is to these astral denizens that are to be attributed the crazy moving of furniture, violent breaking of household objects, ringing of bells and other strange noises, as well as the more intelligent "raps" answering questions by a sort of code, which are known both in the seance room and out of it.\* These phenomena are generally classed under the term *poltergeist*, a German word meaning literally "racketing spirit." This term is quite accurate, but scientists have adopted it without accepting its significance, since they do not recognize the existence of "spirits." When they do not dismiss such occurrences with some mechanical explanation which is often absurd and totally inadequate, they simply describe them as

"phenomena of an unexplained nature and of untraceable origin."

\*It is a recognized fact that these messages often start out in an incoherent manner, but by mediumistic encouragement a pseudo-personality is gradually developed, representing itself as a spirit known to the sitters. This is explained in theosophy by the fact that elementals collect the thoughts and images in the minds of those present -- which are usually centered upon the departed one -- until by degrees an artificial resemblance to the latter's way of thinking and method of expression is built up. If this line of investigation were followed out by psychic researchers, it would lead them to a fuller appreciation of the illusory nature of a great number of the phenomena of so-called spirit-return.

These phenomena, known in all ages and to all peoples from the most savage to the most highly developed, are explained in theosophy in accordance with the principles already set forth. The factors involved are first, a person of mediumistic tendencies, and second, the inhabitants of the astral light. The "medium" may be a person temporarily in an unbalanced state perhaps through some nervous malady or nervous shock. Often it is a young girl; and the household may be annoyed for some time by these disturbing happenings without the slightest idea as to who is acting as the "contact point" with the astral world. Such a person's constitution acts as an electric wire, so to speak, conducting astral forces onto the physical plane.

There are two general explanations for these disturbances, but, as in all such matters, each case under observation would have to be expertly studied for a complete understanding of all the factors involved. Sometimes it is the medium's own astral limbs, extruded in a sort of dream fashion, which lift books from a table, knock down pieces of china, and so on. More often it is frolicsome nature spirits which, attracted to psychically sensitive people, are unconsciously used by them to perform these various crazy acts. The medium serves as a sort of inferior type of magician -- not evil, but using nature forces as a magician does, though unconsciously and without the technical knowledge of the latter.

A more fully developed medium may attract the decaying kama-rupa of some former evil human being, or even a sorcerer who is reaching the last stages of disintegration but who has enough vitality left to permit him to act on the physical plane through the constitution of the medium. Thus the medium who develops his so-called powers by repeated attempts at contact with "the other side" is in a far worse state than the mere "sensitive" whose inner faculties may be temporarily out of control.

## MEDIUMSHIP AN UNDESIRABLE PROFESSION

This whole business of attempting to communicate with the dead has been traditionally considered as *necromancy*. Modern Spiritualists are saved from its more evil forms by their good intentions and perhaps even more because of their very ignorance of the occult laws for tampering with the dead which were known to evil sorcerers in the past. It is in their ignorance also that they are violating a law of nature which mercifully puts a veil of oblivion between ourselves and those who have passed from this plane. Though it is true that present-day attempts to communicate with the departed ego are not

successful, nevertheless the tampering with the being in the kama-loka delays the process of the ego's freeing itself from the lower astral realms. W. Q. Judge tells us that the ego may actually feel a twinge every time his shade is called up in the "charnel house of a living medium's body."

But the greatest danger in these practices is to the medium himself. His nature, in the first place, becomes a playground for elemental beings. Normally these beings look upon man as their master and they are quick to recognize and respect those superior moral qualities manifest in the controlled and balanced person. But when man drops to their plane and ignorantly invades their realm, then they become the master. Since they are quite without conscience and moral stamina, it is obvious that the very fiber of character of one under their influence is consistently undermined.

The medium also opens the door of his nature to elementaries who are forever seeking an entrance into earth-life in order to satisfy their unfulfilled lusts. In some cases these usurpers are successful in ousting the wavering psyche of the medium from its seat within the human constitution and then play havoc with his nervous system and mental and even moral stability. Deterioration nearly always results.

Even the "shells" of averagely good individuals, magnetically drawn to the seance room, are harmful. Since they are galvanized into a false life by drawing upon the nervous vitality of the entranced medium, the latter is always left bloodless and exhausted. In fact it is generally recognized that the nervous health of mediums is deplorably bad; and their usual psychic instability is also admitted. Note the accepted definition of a medium quoted in a modern book on Spiritualism:

One whose constituent elements -- mental, dynamic and material -- are capable of being momentarily decentralized. The innate tendency to dissociation in these peculiar constitutions is increased by the practice of mediumship, *which tends to render the primarily abnormal state more and more easy and normal* -- a fact that should cause one to pause before embarking on the career. -- *A Cavalcade of the Supernatural*, by H. H. U. Cross, 1939, p. 137

Blavatsky's emphatic warnings against the cultivation of mediumistic powers, as well as the words of other theosophical teachers, take on added force when one reviews the fate of the many human wrecks that modern Spiritualism has left in its train.

## MEDIATOR VERSUS MEDIUM

Fortunately this unlovely subject has another side to it -- the true occult science of which mediumship is but a counterfeit. In the highly trained human being, the psychic nature can be so absolutely under control, so free from the pull downwards towards things of matter, so pellucid, that it can act as an intermediary for the transmission of the lofty energies of the spiritual ego without distortion or misrepresentation.

The technical word to describe such an intermediary is *mediator*. The character of a mediator is the

antithesis of that of the medium. The former is highly spiritual, with a forceful personality often, and a firmness of will which could in no way be affected or turned aside by beings in the lower astral light. It is said, in fact, that the evil denizens of the astral currents surrounding our earth could not endure to be near one who radiated such spiritual vitality. Myths and stories of every land telling of those highly developed beings who seem to walk in the light and radiate it about them, and from whom "devils" and "demons" flee, have their originals in actual individuals. If we do not see many such in our day, we may well believe it is because we have not created an atmosphere congenial to their exalted natures (see *Isis Unveiled* 1:487-8).

A mediator is also able on occasion to step aside, so to speak, with full consciousness, in order to allow his brain and body to be used by one even greater than himself. This "stepping aside" in no way resembles the disjunction or dislodging of the intermediate nature which takes place in the case of the hapless and helpless medium, nor has it anything to do with Spiritualism or spiritualistic seances. It is done with the full intelligence and cooperation of the individual and for a divinely compassionate purpose.

There is value to the ordinary man and woman in this teaching of the infilling of the nature with the inspiration of the higher self. By studying the principles of both mediumship and mediatorship, we can learn in our every act to avoid the former while cultivating the latter state. A positive, alert attitude to the duties that life brings us, a practice of the power of concentration, and an attempt to lift even the commonplaces of our existence to a plane where they can be illumined by the light of our own spiritual nature, are the first steps in a training which must extend over many lifetimes before we reach the status of the mediator.

There is in very fact, wondrous mystery as it is, a continuous and unceasing effort of the inner god to lean downwards towards us, so to speak, in order to raise its 'lower self,' the human individual, up to higher planes towards a final consummation of self-conscious unity with itself. When the inner god thus leans from its highths and touches its lower brother-mind, there then instantaneously passes from the god a spiritual-electric fire into the being of the one thus divinely touched. -- G. de Purucker, *The Esoteric Tradition*, pp. 984-5

There is no normal human being who cannot learn to become such a mediator for the transmission of this "spiritual-electric fire" from the god within his own being.

## Foreword

[*Evolution & Creation* was originally published in 2003 as a three-part series of articles in *Sunrise* magazine, reproduced here in a slightly revised version. Issued since 1951 "for

better understanding among all peoples," *Sunrise* continues to offer theosophical perspectives on a wide range of religious, philosophical, and scientific themes and their application to daily living. For those who are new to theosophical thought or to *Sunrise*, the following comments by founding editor James A. Long (1898-1971) may be helpful, and are as applicable today as when they were written nearly fifty years ago. — W.T.S.T.]

*Sunrise* came into being, not for the purpose of "selling" an idea or body of ideas, but with the sincere hope that those who search might find a thoughtful medium of exchange whereby together we could explore those basic durable concepts that have been the spiritual bulwark of the ages. After all, civilizations grow and become strong and great as the result of an expanding consciousness; by the same token civilizations fall and go into decay as the result of a contracting consciousness. It is openmindedness, whatever the faith or philosophy, whatever the creed or no creed, that will insure mankind's spiritual health.

Over the years we have discussed several themes common to most sacred scriptures. Some may ask just what is the value of a knowledge of all these things? Do they help us to live better; more importantly, do they bring strength and vision to meet the pressures of a complex age? We shall miss the boat completely if we allow ourselves to become involved solely in the intellectual fascination that certain aspects of these ancient traditions have, for that is not their purpose. These sacred scriptures were not preserved for posterity simply to tickle our intellectual palates. They have been given out periodically, from age to age, because behind every aspect of universal workings there is an ethical concept that we must not only recognize, but exemplify in our day-to-day lives.

All of which points up the tragedy that for many centuries we have not sought the broad view, not alone of the structure of the universe, but more pointedly of mankind's unique yet natural place within a larger pattern of destiny. We have been wont to consider, by miseducation, that we are worms of the dust and not potential gods. We have not been taught of the natural cooperation that exists in all the kingdoms above and below the human, and that the human kingdom must rediscover the ways and means to become, in time, a self-conscious cooperator with nature. In simple words, we have not been educated to understand and to work with the fact that brotherhood is nature in action, and nature is brotherhood. Once the peoples of the world eliminate the separatism that would tear humanity asunder, and really work with the fact of brotherhood, we shall find that the time need not be far distant when we can foresee a workable peace and concord among the different but not separate peoples of the globe.

The framework of the ancient traditions comprises the most profound philosophy as well as the purest ethics. At the heart of all is divinity — within, without, above, below. That divinity seeks expression that it might enrich the environment into which its influence is born. In the long pattern of evolution, there is one law or habit of nature that is constant — the law of action and reaction, of cause and effect. In observing the working of this law, we intuit "a divinity that shapes our ends," and realize then how the experiences we meet from day to day and from year to year are signposts of what the soul requires for its growth. We have only to look into the "inverted bowl of night," as Omar Khayyam called it, to see the harmony there, and to recognize that each one of us has not only the potential but the sublime duty to become a conscious laborer in the field of human enlightenment. — James A. Long

## Chapter 1

### Intelligent Design?

Behind and underlying any discussion of evolution and creation is a question that takes us to philosophy's very heart: Why is there a universe at all? Certainly our answers both reflect and define the meaning and direction of our lives; and they are important because our beliefs affect the lives of others as well — profoundly so. Creation and evolution are fundamentally about our origins and ancestry, and about who we are and where we're going. Although many people see no basic incompatibility, creation and evolution have come to represent two antagonistic, mutually exclusive worldviews, largely because of restrictive definitions, either/or reasoning, and tacitly-held assumptions. *Evolution* is generally equated with Darwinism, *creation* with biblical creationism; one is physics, the other metaphysics, and never the twain should meet. This thinking has become so habitual that we may not realize how much it narrows our perception and understanding; nor does rejection of one imply adoption of the other. As mathematician and Darwin critic David Berlinski wrote, "It is not necessary to choose between doctrines. The rational alternative to Darwin's theory is intelligent uncertainty" ("The Deniable Darwin," Letters, 1996).

Other reasonable alternatives also exist, reminding us of Allan Bloom's perceptive remark in *The Closing of the American Mind*: "The most successful tyranny is not the one that uses force to assure uniformity but the one that removes the awareness of other possibilities, that makes it seem inconceivable that other ways are viable." Modern media, public education, and the internet have massively diminished the power of the old tyrannies; but challenges to reigning orthodoxies will always remain unwelcome. Such is true of the new intelligent design movement which makes a persuasive case against Darwinian explanations of how we came to be. Because it has originated with competent, well-credentialed scientists, many critics — wary of theological intrusions — label it "stealth creationism," and what could be a mutually beneficial collaboration has once again become adversarial.

While the concept of intelligent design is nothing new — it is found in ancient philosophy and virtually every spiritual tradition — modern writers often point to British clergyman William Paley, who in 1802 gave impressive intellectual force to the argument. Just as we infer from the complexity of a watch found in the forest that it was designed and fabricated by an intelligent someone who had a clear purpose in mind, so may we likewise infer design and purpose from many examples of complex structure and function in nature. Design implies an intelligent designer, Paley argued, and since no animal or man can design itself, which would mean acting before existing, who then could the universal designer be but God? (*Natural Theology*, p. 412). This remains a compelling argument for many; but because Paley burdened it with questionable theological assumptions and some poor examples from nature, the argument was criticized and eventually fell out of favor. For example, if God is proven good by the beneficial nature of his contrivances, it is reasonable to ask why imperfections and "suboptimal designs"

exist in nature. Why create a world which produces disease, deformity, and death in a ferociously competitive struggle for life? Any theory or hypothesis proposing intelligent design needs to address these questions, even if it must jettison dearly-held assumptions about the designer and the process by which things are made. But we need not reject the inference or concept of design because of faulty arguments. The same applies to evolution, which perhaps more than anything else has demonstrated kinship and unity-of-life relationships absent in notions of special creation, in which each kind or species is brought into being by a separate mystical act of God's will.

The concept of evolution — which simply means "unrolling" in the sense of change and development through time — has also been part of mankind's intellectual heritage since the beginning of recorded history. It is the *mechanism* or *process* of how things come to be and how they change that is debated. Darwin himself recognized major difficulties in his theory that even today — despite protest, denial, and far too many unkind words — remain unexplained: fossil gaps, hybrid limits, complex organs, the mechanics of instinct and, perhaps the greatest mystery of all, how the "simplest" of self-reproducing cells came into being.\* Darwin didn't speculate publicly about the origin of life but, anticipating modern biochemistry, he wrote to his friend Joseph Hooker in 1871 that "some warm little pond" might have supplied the chemicals and environment necessary to provide a foothold.

\*Cf. "Difficulties on Theory" and following chapters in his *Origin of Species*.

In its simplest formulation, the neo-Darwinian synthesis hypothesizes descent by modification: that natural selection acting on genetic mutations is sufficient to produce the diversity of creatures on earth. No guiding force or creative principle is required, no metaphysical intervention is necessary; and for many Darwinians there is no ultimate purpose or end to which evolution is directed. For them, evolution takes place fortuitously within the constraints of existing physical laws. Species descend and diversify from common ancestors, some survive for long periods, others fail in the struggle for life, and all will eventually be extinguished when the sun runs out of fuel and the universe "entropizes" into heat death or collapses in a big crunch. What modern evolutionary science tells us, according to Darwinian biologist William B. Provine, is that "there are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either" (Stanford University debate, 1994).

It is mainly because of these bleak, soul-denying conclusions that so many people have objected to the Darwinian worldview. But a majority of scientists and educators are persuaded that it explains the development of life on earth, and many of them lobby powerfully to have it taught in public schools as a proven theory, to the exclusion not only of any other theory or hypothesis, but — to avoid giving hostages to the creationists — of any critical discussion at all.

Yet right from the beginning reputable scientists have criticized Darwin's theory. For example, in 1871 zoologist St. George Jackson Mivart questioned whether natural selection could account for the incipient stages of useful structures such as a wing — how, for example, does nature develop and select as

reproductively advantageous a partial, nonfunctional wing? Steven J. Gould in 1985 acknowledged this as remaining "the primary stumbling block among thoughtful and friendly scrutinizers of Darwinism today." In 1877 anthropologist Armand de Quatrefages, while praising Darwin for "a complete and systematic theory," said he "found no difficulty in recognising the point at which the eminent author quits the ground of reality and enters upon that of inadmissible hypothesis." Agreeing with Darwin that selection results from the struggle for existence (although he felt "elimination" to be a more exact term), de Quatrefages strongly disagreed that these two factors have "the power of modifying organised beings indefinitely in a given direction, so that the direct descendants of one *species* form *another species* distinct from the first." Darwin, he wrote, had no clear idea of the difference between species and *varieties* within a species, and consequently confuses the preservative force of natural selection, which favors fit and healthy varieties, with the ability to produce new species. Citing hybrid limits, fossil discontinuities, and species stasis, de Quatrefages reiterated that "phenomena which *produce* are very different from those which *preserve*" (*The Human Species*, pp. 92-103).

This thought was echoed nearly a hundred years later by zoologist and former president of the French Academy of Sciences, Pierre-P. Grasse, who wrote in *Evolution of Living Organisms* (1973): "*To vary and to evolve are two different things; this can never be sufficiently emphasized.*" Even with the important extensions to the theory provided by modern genetics and biochemistry, Grasse held that

the explanatory doctrines of biological evolution do not stand up to an objective, in-depth criticism. They prove to be either in conflict with reality or else incapable of solving the major problems involved. . . .

Through the use and abuse of hidden postulates, of bold, often ill-founded extrapolations, a pseudoscience has been created. It is taking root in the very heart of biology and is leading astray many biochemists and biologists, who sincerely believe that the accuracy of fundamental concepts has been demonstrated, which is not the case. . . .

The code of conduct that the naturalist wishing to understand the problem of evolution must adopt is to adhere to facts and sweep away all *a priori* ideas and dogmas. Facts must come first and theories must follow. . . . Indeed, the best studies on evolution have been carried out by biologists who are not blinded by doctrines and who observe facts coldly without considering whether they agree or disagree with their theories. Today, our duty is to destroy the myth of evolution, considered as a simple, understood, and explained phenomenon which keeps rapidly unfolding before us. Biologists must be encouraged to think about the weaknesses of the interpretations and extrapolations that theoreticians put forward or lay down as established truths. The deceit is sometimes unconscious, but not always, since some people, owing to their sectarianism, purposely overlook reality and refuse to acknowledge the inadequacies and the falsity of their beliefs. — pp. 202, 6, 8

This forceful critique summarized a swelling wave of discontent from others in a variety of disciplines, including paleontology, biochemistry, mathematics, and physics. The absence of finely-graded

transitional fossils ultimately led Steven Gould to dismiss textbook Darwinism as effectively dead, and to propose with Niles Eldredge in 1972 the theory of Punctuated Equilibrium which postulates speciation from rapid change in remote sheltered environments, followed by long periods of stasis. In 1985 biologist Michael J. Denton issued *Evolution: A Theory in Crisis*, which reviews the principal scientific criticisms of Darwinian theory, driving home the point that complex interacting structures and systems cannot arise from mutation and selection alone. A year later, chemistry professor Robert Shapiro published *Origins*, a skeptical critique of soup-to-cell and other theories of biogenesis, showing the enormous gap between precursor chemistry and the micro-universe of even the simplest self-replicating cell. In the early 1990s, law professor Phillip E. Johnson, like attorney Norman Macbeth before him (*Darwin Retried*, 1971), subjected Darwinian theory to rules of evidence and logic in his book *Darwin on Trial*, only to reinforce the scientific criticisms.

After sorting through the arguments and rebuttals, perhaps the most persistent problem for Darwinian theory, and the one most resistant to purely physical explanations, is the appearance of design in nature. Grasse had also reached the same conclusion:

Evolution, a guided phenomenon, is not sustained merely by random hereditary variations, sorted out by a selection operating for the good of a population. . . .

*Any system that purports to account for evolution must invoke a mechanism not mutational and aleatory [random]. . . . The united efforts of paleontology and molecular biology, the latter stripped of its dogmas, should lead to the discovery of the exact mechanism of evolution, possibly without revealing to us the causes of the orientations of lineages, of the finalities of structures, of living functions, and of cycles. Perhaps in this area biology can go no farther: the rest is metaphysics. — pp. 245-6*

At the macro level, physicist Paul Davies affirmed a similar thought in *Cosmic Blueprint* (1988):

The very fact that the universe *is* creative, and that the laws have permitted complex structures to emerge and develop to the point of consciousness — in other words, that the universe has organized its own self-awareness — is for me powerful evidence that there is "something going on" behind it all. The impression of design is overwhelming. — p. 203

Two years after the publication of Denton's book, biochemist Michael Behe read it and came away thinking that he, like so many other professionals, had been beguiled by Darwinian theory — and "beguiling," said Steven Gould, "is often forever." Behe, too, had not questioned or examined the theory's premises, assumptions, and explanatory power. He went on to consider evolutionary problems in his own field, and began to realize that biological structures such as the bacterial flagellum — the rotating, tail-like whip which propels the cell — were in fact molecular machines requiring many different but integrated molecules to work. If an essential part is missing from the structure, function ceases — leading Behe to conclude that many of these molecular systems are "irreducibly complex" and defy not only a Darwinian interpretation, but any theory which does not invoke intelligent design. In

*Darwin's Black Box* (1996), Behe does not propose a mechanism of design or speculate on the nature and motives of the implied but unknown designer. He simply and effectively illustrates nature's staggering complexity with several detailed examples at the biochemical level — molecular synthesis, cilia construction and function, blood-clotting cascades, the chemistry of vision, cellular protein transport — and asks if it is still reasonable to conclude that these evolved fortuitously under principles of unguided gradualistic change: "The scientific obstacles discussed [here] serve as stark examples of the mountains and chasms that block a Darwinian explanation" (p. 161).\*

\*Behe's chapter on molecular synthesis — which is *not* an irreducibly complex process — indicates the problem at the most basic level of biochemistry. The relatively "simple" molecule AMP is an unbound form of adenine, one of the four nucleotide building blocks or links in RNA and DNA chains. AMP is assembled from thirty-three atoms of five different kinds: hydrogen, carbon, oxygen, nitrogen, and phosphorus. As most atoms do not lie about freely like parts awaiting assembly, these components must first be extracted from other molecules, and then reassembled in such a way that cross-reactions do not destroy the process. Thirteen sequentially-orchestrated steps are required to accomplish the synthesis of AMP, the work of which is carried out by twelve different enzymes — each of which also needs to be synthesized in order to catalyze the changes. To put this in perspective, a cellular RNA macromolecule ranges from about 70 to 50,000 nucleotides in length while a single DNA macromolecule ranges from several thousand to about a billion nucleotides in length.

And they raise the daunting question, How might these enormously-complex metabolic pathways and biochemical systems have evolved? Even if natural selection can somehow work on variation at the molecular level — though Behe, "genetic drift" theorists, and others contest it as the primary cause of evolution — are any random-based theories sufficient to explain the emergence and diversity of self-sustaining life? Is it not just as reasonable to apply what mathematician William A. Dembski calls the "Design Inference" — that nature's structures exhibit a specifiable level of complexity from which intelligent design must be inferred?

Taken as a whole, these are powerful arguments and, in view of them, Darwinian theory begins to resemble Newtonian physics, which explains and predicts phenomena at one level, but fails when applied to others. Some evolutionary biologists such as Lynn Margulis have already written about Darwinism in much the same way historians do about Ptolemy's geocentric universe: while it may appear to explain a few evolutionary phenomena, it is fundamentally flawed. "Neo-Darwinism, in the Gaian perspective, must be intellectually dismissed as a minor, twentieth-century sect within the sprawling religious persuasion of Anglo-Saxon biology" (*Slanted Truths*, 1997, p. 281). Nevertheless, it remains today the overwhelmingly dominant scientific paradigm.

A truly comprehensive theory of origins and ancestry requires a broader scope that includes not only biochemistry and biology, but also accounts for the origin and development of consciousness, its relation to force and substance, and the emergence of thinking, self-aware organisms such as you and me. In both physics and cosmology, the traditional boundaries separating science and religion (or physics and

metaphysics) are rapidly thinning as observational data and mathematics force radical new theories. In little more than a hundred years, physics has had to expand from Newtonian principles describing and predicting such things as the motion of planets and baseballs, to relativistic quantum dynamics explaining particles and quarks; and from there to theories proposing a more fundamental substance of quarks called strings, themselves described as "abstract energetic fields" having the property of occupying at least six "compactified" dimensions hidden within our familiar four dimensions of space and time. And now there is M-theory (standing for Matrix, Mother, or Murky — depending on your perspective) which hopes to unify all the forces including gravity and dark energy (sometimes called "quintessence").

At the cosmic level, astronomer Edwin Hubble's 1929 discovery of the red shift led to the development of big bang theory. Prompted by further observational data and the requirements of math and quantum physics, inflation theory was proposed as a modification by Alan Guth of MIT in the 1980s; and cosmologists are now seriously considering a number of "multiple universe" theories to explain the origin and development of our own cosmic home. According to Guth in a *New York Times* interview, "Inflation pretty much forces the idea of multiple universes upon us" (October 29, 2002). One interesting theory of cyclic universes was proposed in 2002 by astrophysicists Paul J. Steinhardt (Princeton) and Neil Turok (Cambridge). Based on M-theory, it postulates that

space and time exist forever. The big bang is not the beginning of time. Rather, it is a bridge to a pre-existing contracting era [mediated within an extra dimension of space]. The Universe undergoes an endless sequence of cycles in which it contracts in a big crunch and re-emerges in an expanding big bang, with trillions of years of evolution in between. The temperature and density of the universe do not become infinite at any point in the cycle; indeed, they never exceed a finite bound (about a trillion trillion degrees). . . . The seeds for galaxy formation were created by instabilities arising as the Universe was collapsing towards a big crunch, prior to our big bang. — "The Endless Universe," [feynman.princeton.edu/~steinh/cyclintro/index.html](http://feynman.princeton.edu/~steinh/cyclintro/index.html)

Even though current "multiverse" scenarios purport to solve many theoretical problems of the big bang, especially the mystery of its source and cause, scientists remain divided on the issue of design: Can a physics-only cosmological explanation account for everything? Or must metaphysical factors be invoked — ranging from an anthropic guiding principle which somehow orients the universe to produce life and thinking, self-aware beings, to an elaborated theory of intelligent design? And so the research and dialogue continue.

---

If the universe is designed, we may wonder who or what is the unknown designer? Leading design theorists, while generally limiting themselves to proofs of design and a designer, not the existence of God, nevertheless propose Christian theism as an "inference to the best explanation"— *theism* being the concept of God as the Supreme Being and creator of all things, who transcends yet remains immanent in

the world.\* But is this the best explanation when it is beset by the intractable problems of imperfection, disparity, and injustice? As with Paley's *theological* argument, the evident failures and mistakes in nature raise the further question: Is the universe designed intelligently? Or was it done perhaps by a committee, or by many designers including architects and builders, as a kind of work-in-progress?†

\*Science and Evidence for Design in the Universe, Ignatius Press, 2000, pp. 15, 226-32.

†Over twenty years before Paley's book, the argument from design as a proof of God was critically scrutinized in *Dialogues Concerning Natural Religion* by British empiricist and skeptical philosopher David Hume. Although Hume showed the insuperable difficulties raised by theistic concepts of an all-perfect and benevolent Deity, he nevertheless left the door open to some kind of design, resolved into "one simple, though somewhat ambiguous, at least undefined proposition, *that the cause or causes of order in the universe probably bear some remote analogy to human intelligence*" (Part XII — Hume's emphasis).

A multiple-designer theory is not as far-fetched as it may sound; not only has it been seriously proposed by a few in the intelligent design movement to explain imperfection, it is in fact a fundamental (though sometimes hidden) concept in both Eastern and Western spiritual traditions, including the Judeo-Christian. The word "God" in the first line of *Genesis*, for example, is a translation of the singularized plural noun *elohim* which, consistent with its polytheistic origin as well as with universal tradition, represents a collectivity of creative powers — the plural of majesty interpretation notwithstanding. And God/*elohim* said on the sixth "day" or period of creative activity: "Let *us* create man in *our* own image, after *our* likeness" (see further on, Chapter 3). In Hindu writings, the story is overt: Brahma, the manifest aspect of Brahman, who in turn exists within Parabrahman ("That which is beyond Brahman"), creates and evolves the universe from his own consciousness-energy-substance with the assistance of his ten mind-born sons, to whom he said: "From now on, you must produce all the creatures, as well as the gods, demons, and human beings" (*Matsya Purana* 3:1-47).

The testimony of history and common sense tell us that the opening chapters of *Genesis*, and the creation stories of virtually every spiritual tradition, are intended to be understood allegorically. If we do not have the keys to their interpretation, it is perhaps because they have been hidden away, forgotten, suppressed, or held secret; or we have not looked for them. One place to begin that search — and a solution to the problem of design — is suggested in the following passage from *Isis Unveiled*, published in 1877 when dominant Western thought held that atoms were indivisible, the Milky Way was the only universe, Christianity the only true religion, and God the only possible designer, who created everything out of nothing. Referring to the primordial tradition, the *theosophia* or divine wisdom common to all religions, H. P. Blavatsky writes:

The esoteric doctrine, then, teaches, like Buddhism and Brahmanism, and even the persecuted [Jewish] *Kabala*, that the one infinite and unknown Essence exists from all eternity, and in regular and harmonious successions is either passive or active. In the poetical phraseology of Manu these conditions are called the "day" and the "night" of Brahma [each comprising 4.32 billion years]. The latter is either "awake" or "asleep." . . .

The Buddhists maintain that there is *no* Creator but an infinitude of *creative powers*, which collectively form the one eternal substance, the *essence* of which is inscrutable — hence not a subject for speculation for any true philosopher. . . . Upon inaugurating an active period, says the *Secret Doctrine*, an expansion of this Divine essence, *from within outwardly*, occurs in obedience to eternal and immutable law, and the phenomenal or visible universe is the ultimate result of the long chain of cosmical forces thus progressively set in motion. In like manner, when the passive condition is resumed, a contraction of the Divine essence takes place, and the previous work of creation is gradually and progressively undone. The visible universe becomes disintegrated, its material dispersed; and "darkness," solitary and alone, broods once more over the face of the "deep." To use a metaphor which will convey the idea still more clearly, an outbreathing of the "unknown essence" produces the world; and an inhalation causes it to disappear. *This process has been going on from all eternity, and our present universe is but one of an infinite series which had no beginning and will have no end.* — 2:264-5

The convergence of modern cosmology with these ancient ideas, together with the inference of creative evolution, provide striking evidence that there have been those throughout history who, bridging the worlds of physics and metaphysics with extraordinary insight, appear to have understood the basic pattern of life. Like the inference of design, their existence may be intuited and inferred, for their philosophy is of record and tallies well with history and nature — a subject to be considered next, together with the neglected and often excluded issue of consciousness.

---

## Chapter 2

### The "Excluded Middle"

Those faculties which enable us to transcend time and space, and to realize the wonderful conceptions of mathematics and philosophy, or which give us an intense yearning for abstract truth, . . . are evidently essential to the perfect development of man as a spiritual being, but are utterly inconceivable as having been produced through the action of a law [natural selection] which looks only, and can look only, to the immediate material welfare of the individual or the race.

The inference I would draw from this class of phenomena is, that a superior intelligence has guided the development of man in a definite direction, and for a special purpose, . . . we must therefore admit the possibility that, if we are not the highest intelligences in the universe, some higher intelligence may have directed the process by which the human race was developed, by means of more subtle agencies than we are acquainted with. — Alfred Russel Wallace, "The Limits of Natural Selection"\*

\*In *Contributions to the Theory of Natural Selection*, London, 1870, pp. 358-9. Wallace is best known for independently proposing a theory of natural selection which spurred Charles Darwin to write and publish his *Origin of Species* (1859). Their ideas were jointly presented at the Linnean Society on July 1, 1858.

In April 2001 National Public Radio aired a program billed as "Evolution vs. Intelligent Design" during which a telephone caller noted the either/or nature of the controversy. He observed that there seemed to be an "excluded middle here . . . excluded by a large majority of the people debating this." The phrase is apt, not only because evolution and intelligent design have been cast as mutually exclusive, but also because alternative viewpoints such as Wallace's have been marginalized or overlooked. In the public debate especially, fundamental concepts of evolution and creation are frequently redefined, miscategorized, and stereotyped in a way that — to repeat Allan Bloom's words — "makes it seem inconceivable that other ways are viable."

For example, in November 2002 the American Association for the Advancement of Science announced a resolution "urging policymakers to oppose teaching 'Intelligent Design Theory' within science classrooms, but rather, to keep it separate, in the same way that creationism and other religious teachings are currently handled." Two days later astronomer-physicist Lawrence Krauss, expressing a widely-held view in support, said that "intelligent design, by all objective standards, has nothing to do with science."\* The problem with this exclusionary point of view is that it sweeps aside a question that has everything to do with science. For the question "Is the universe designed?" is one about knowledge — *scientia* — not philosophy or religion, however closely related. When an archeologist deduces intelligent activity from potsherds and fire rings, and from that data infers something about their designers, he or she is engaged in a scientific pursuit. Unless we redefine science, it is no less scientific to seek knowledge about whether or not intelligence drives the universe. Setting all assumptions and preferences aside, this is one of the most important scientific questions we can ask because, like the question of existence, the way we answer it influences all of us profoundly.

\*National Public Radio, "Talk of the Nation/Science Friday," Nov. 8, 2002.

In Chapter 1 we saw that both Darwinian theory and Christian theism pose intractable problems which only deepen the mystery of our origin and ancestry; and, moreover, that evolution and Darwinism are not equivalent terms, nor is intelligent design synonymous with creationism or incompatible with evolution. Yet these misleading stereotypes have been repeated so frequently that public discussion has for the most part been unable to step outside the box to consider evolution and creation from other scientific and religious perspectives.

Perhaps the most promising line of inquiry leading to broader insights is that of consciousness. It is partly because intelligent design implies a high order of consciousness that there has been renewed interest in the subject, though consciousness too poses fundamental research challenges. Owing to its inherently subjective nature, consciousness does not yield easily to the usual protocols of science: when mind is inspecting itself, objective, testable, and predictably repeatable phenomena are notoriously

difficult to observe and quantify. For that reason its study has heretofore been relegated to philosophy, religion, and the so-called "soft science" of psychology. However, in the last two decades a concerted effort to develop a science of consciousness has generated considerable research and discussion which has been reported extensively in academic conferences, symposia, articles, and books.\*

\*See for example the website of the University of Arizona's Center for Consciousness Studies, [www.consciousness.arizona.edu](http://www.consciousness.arizona.edu); also B. Alan Wallace, "The Intersubjective Worlds of Science and Religion," 2001 Templeton Research Lecture (video and transcript), [www.srhe.ucsb.edu/lectures/info/wallace.html](http://www.srhe.ucsb.edu/lectures/info/wallace.html).

Despite this trend, tension and discord continue between "first person" experiential studies, such as those reported in contemplative and mystical traditions, and "third person" empirical research which is intrinsically object-based and favors physical, behavioral, and environmental explanations. And the old "hard problem" of causation remains: whether consciousness — human, animal, or other — is a temporal byproduct of electrochemistry, an illusion created by "neural correlates" which disintegrate at death; or something primary and architectural, capable of existing independently of organic physical forms, and therefore originating and reproducing itself from prior states of consciousness. Or perhaps both, in a kind of reciprocal causation.

As in the intelligent design debate, the study of consciousness is rife with conflicting theories, assumptions, and unproven hypotheses which, as some researchers caution, can blind us with the "illusion of knowledge" — a seemingly endless labyrinth of ambiguous data and purely intellectual argument where valuable research is frequently sacrificed to the minotaur of reductionism. Reducing subjective phenomena to chemistry and physics is common enough, but there is also the problem of selectively interpreting data and trying to fit it into concepts of the dominant paradigm — whether scientific or religious — often overlooking its larger significance.

Said in another way, the problem of knowledge is not essentially different from that faced by Socrates over 2,400 years ago when Meno posed the Sophist dilemma: In the search for knowledge, how is it possible to discover the object of your search if you do not know it? Even if you find what you want, how will you ever know that this is the thing which you did not know? (*Meno* 80). This may strike us as pure sophistry (as Plato wished to illustrate), but it nevertheless highlights a limitation of scientific research, especially of human consciousness, which often perceives only what it wants or expects, as science historian Thomas S. Kuhn has effectively shown.\* We can wander to exhaustion in a maze of elusive phenomena filtered by our preconceptions, or instead, as Socrates might suggest, look for an Ariadne thread of intuition — the genius of scientific discovery — to show a way out.

\**The Structure of Scientific Revolutions*, 2nd ed., 1970, ch. 6, especially the Bruner and Postman study demonstrating the blinding effect of expectation, pp. 62-5.

Since 1871, when the distinguished chemist Sir William Crookes (following others before him) proposed the scientific investigation of psychic force, a number of reputable scientists have felt that

psychic research offers one such path. If paranormal phenomena and survival of the individual after death could be proven under test conditions, then surely these would be evidence that consciousness can exist independently of the body. But when we consult the annals of history, this path too, while offering much to think over, has led to other labyrinths and minotaurs, such as blind credulity, psychic vanity, delusion, and fraud on the one hand, and extreme skepticism and derision on the other, pushing serious consideration of these phenomena to the periphery.

To avoid these pitfalls, we might broaden our scope and turn to another "excluded" path of inquiry that squarely addresses the nature of consciousness and its relationship with matter, blending physics and metaphysics in a way that offers coherent solutions to the problems of evolution and creation. In theosophical literature such as *The Secret Doctrine* and *The Mahatma Letters to A. P. Sinnett*, as well as in older works, are several instances of scientific insight which suggest modes of consciousness not yet understood or recognized by today's science.\* Spiritual perception, intuition, enlightenment, and gnosis or knowledge of the Mysteries are routinely mentioned in the ancient wisdom traditions: from Gilgamesh who "saw secret things and opened hidden places" to Socrates' philosopher who beheld "the beautiful, the just, and the good in their truth," and Jesus in the *Gospel of Thomas* who said: "Recognize what is in your sight, and that which is hidden from you will become plain to you; for there is nothing hidden which will not become manifest."

\*See "[Creation, Evolution, and the Secret Doctrine](#)," *Sunrise*, April/May 1988, pp. 148-9; online at [www.theosociety.org](http://www.theosociety.org).

Theosophy literally means "divine wisdom" and its descriptions of cosmic and human evolution often begin with a number of prefaces. Although referring specifically to legislation but in a deeper sense to the divine law which calls forth and governs the universe, Plato calls them *proems*, adding that "it makes all the difference whether we clearly remember the preambles or not" (*Laws* 723); for these are meant to provide a necessary conceptual foundation to help orient us and clarify that which follows. H. P. Blavatsky's *Secret Doctrine*, a modern presentation of the ancient wisdom-tradition, begins with three such preambles — the Preface, Introductory, and Proem. When asked how to read the book, she replied, "The first thing to do, even if it takes years, is to get some grasp of the 'Three Fundamental Principles' given in the Proem," followed by the recapitulation, that is, the numbered points in the Summing Up section (1:14-18, 269 et seq.).\*

\*See "The 'Secret Doctrine' and Its Study," [An Invitation to The Secret Doctrine](#), pp. 2-3 online at [www.theosociety.org](http://www.theosociety.org).

A stepping stone to these three propositions from the standpoint of evolution is the *concept* of common ancestry: that all species on our planet derive from a common source and by implication are linked and rooted together in such a way that we may consider our earth as a living organism. While theosophy differs fundamentally from Darwinism in its description of that common ancestor, since it factors in consciousness and matter "not as independent realities but as the two facets or aspects of the Absolute," theosophy nevertheless shares with Darwinism the idea of the family relationship of all life. Yet it

extends this concept to the very boundaries of our comprehension, affirming that the essential individuality of every being is an eternal union of consciousness and substance rooted in absolute Oneness, a monadic entity that endures from universe to universe in a continually evolving self-becoming — from within outward. "Replicating" itself through the cycling eternities, each such monadic entity clearly falls within a definition of life; and each of its manifested expressions — whether particle, plant, animal, human, or anything beyond — is therefore conscious on its own plane of perception, and is an essential living component of our living universe.

Appealing to "those faculties which enable us to transcend time and space, . . . which give us an intense yearning for abstract truth," the Three Fundamental Principles begin with the source of existence: an omnipresent, eternal, boundless, and immutable Principle, the "causeless cause and rootless root of all that was, is, or ever shall be." It or That (the nameless Reality) is not a being or an anthropomorphic, gendered god, but is described as an abstract "Be-ness" beyond the range and reach of human thought, unthinkable and unspeakable, *symbolized* by absolute abstract space and absolute abstract motion, the latter sometimes called the Great Breath:

Considering this metaphysical triad [the One Reality, Consciousness, and Matter] as the root from which proceeds all manifestation, the Great Breath assumes the character of precosmic Ideation. It is the *fons et origo* [source and origin] of force and of all individual consciousness, and supplies the guiding intelligence in the vast scheme of cosmic Evolution.

Just as pre-Cosmic Ideation is the root of all individual consciousness, so pre-Cosmic Substance is the substratum of matter in the various grades of its differentiation. . . .

Hence it will be apparent that the contrast of these two aspects of the Absolute is essential to the existence of the "Manifested Universe." — 1:15

Here *The Secret Doctrine* emphasizes that consciousness derives from prior states of consciousness just as matter derives from prior states of substance, and that the two are eternally and inextricably linked. It then elaborates by explaining that consciousness and substance are bridged by the dynamic energy which impresses the ideas of divine thought, through the architects of our visible worlds, onto cosmic substance as the so-called laws of nature (1:14-16).

The second fundamental proposition extends this concept of duality and bipolarity, postulating "the Eternity of the Universe *in toto* as a boundless plane; periodically 'the playground of numberless Universes incessantly manifesting and disappearing,'" each of them being the parent of its successor. "This second assertion of the Secret Doctrine is the absolute universality of that law of periodicity . . . observed and recorded in all departments of nature"— alternations such as day and night, life and death, sleeping and waking (1:16-17, 43).

In speculating upon the night of the universe, that is, the passive condition of the absolute Essence when

"darkness was upon the face of the deep" (*Genesis* 1:2), nothing in the boundless infinitude of abstract space is said to exist that finite intellect can comprehend, except perhaps what the Kogi philosophers of northern Columbia call *Aluna*, whose two attributes are Memory and Possibility (or potentiality). Theosophy holds that there is no creation *ex nihilo* ("out of nothing") as usually conceived; but instead a periodically manifested "becoming" within the ever-existing absolute Principle from which emanates the totality of cosmos. While theosophy does "not deny a Creator, or rather a *collective aggregate* of creators," it refuses, "very logically, to attribute 'creation' and especially formation, something finite, to an Infinite Principle" (1:7). The task of "creation" belongs instead to the hosts of intelligent powers, often described as architects and builders:

The whole Kosmos is guided, controlled, and animated by almost endless series of Hierarchies of sentient Beings, each having a mission to perform . . . They vary infinitely in their respective degrees of consciousness and intelligence; and to call them all pure Spirits without any of the earthly alloy "which time is wont to prey upon" is only to indulge in poetical fancy. For each of these Beings either *was*, or prepares to become, a man, if not in the present, then in a past or a coming cycle (Manvantara). They are *perfected*, when not *incipient*, men . . . — 1:274-5

This thought leads naturally to the third proposition which postulates "the fundamental identity of all Souls with the Universal Over-Soul, the latter being itself an aspect of the Unknown Root; and the obligatory pilgrimage for every Soul — a spark of the former — through the Cycle of Incarnation (or 'Necessity') in accordance with Cyclic and Karmic law," ascending first by natural impulse from mineral, plant, and animal, then by self-induced and self-devised efforts from man up to the holiest archangel. "The pivotal doctrine of the Esoteric philosophy admits no privileges or special gifts in man, save those won by his own Ego through personal effort and merit throughout a long series of metempsychoses and reincarnations" (1:17).

To view this evolutionary ascent as a competitive struggle favoring those who are the most materially, intellectually, or spiritually "fit" would be to misconstrue its meaning and purpose. On the contrary, these three propositions are a statement of our evolutionary mandate which asserts the inherent rights of existence and of ancestry belonging to every living being: that everything in the universe, being divinely originated, is a co-participant and at some level a co-creator; and further, that we are intimately linked with one another in this universal partnership, however separate and disparate we may outwardly appear. As self-aware humans seeded with godlike potential, we each have the capacity to know ourselves and to choose our path into the future. That this implies both free will and the responsibility to act for the welfare of the *whole* cosmos is evident; that we are each an imperfect work-in-progress, equally so. We learn from our errors *and* our successes — and from those of others:

however many proofs [the universe] may exhibit of a guiding intelligence behind the veil, it still shows gaps and flaws, and even results very often in evident failures — therefore, neither the collective Host (Demiurgos), nor any of the working powers individually, are proper subjects for divine honours or worship. All are entitled to the grateful reverence of Humanity, however, and man ought to be ever striving to help the divine evolution of

*Ideas*, by becoming to the best of his ability a *co-worker with nature* in the cyclic task. The ever unknowable and incognizable *Karana* alone, the *Causeless Cause* of all causes, should have its shrine and altar on the holy and ever untrodden ground of our heart — invisible, intangible, unmentioned, save through "the still small voice" of our spiritual consciousness. Those who worship before it, ought to do so in the silence and the sanctified solitude of their Souls; making their spirit the sole mediator between them and the Universal Spirit, their good actions the only priests, and their sinful intentions the only visible and objective sacrificial victims to the *Presence*. — 1:280

Neither *The Secret Doctrine*, *The Mahatma Letters*, nor any other theosophical writing purports to offer the entire esoteric philosophy, or even a "final verdict on existence." Their authors claim only to give a few fragments as an outline to help "lead towards the truth." From eras long before Socrates, students of the perennial wisdom have been counseled that proof is left entirely to each individual, nothing written or spoken is to be assumed or accepted as the final word; for real knowledge cannot be communicated except by first-hand experience, ultimately by a direct beholding requiring perceptive consciousness of a higher order. Nor can the rugged ascent from ignorance to insight be accomplished by science alone, but requires a partnership with philosophy and religion — in other words, the ethical, intellectual, and spiritual disciplines which precede the Mysteries.

This brief summary of foundation concepts hardly does them justice, and from a theistic viewpoint will no doubt appear foreign. Yet impartial study of the origin and ancestry of mankind's spiritual traditions yields ample evidence that these ideas are neither heretical nor peripheral, but are central, fundamental, and universally expressed — a theme to be examined in Chapter 3.

---

## Chapter 3

### A Theosophic Synthesis

The net result of investigating any scientific theory or religious teaching which purports to explain the origins of the universe and man is to realize that the universe conceals far more than it reveals, and that dogmatic claims often hinder deeper insights. It wasn't so long ago that "comparative religions" meant demonstrating the superiority of one's own religion by comparing its best features with the worst of others. A far more beneficial approach is to compare the best with the best, and to try to view each tradition as a facet of a diamond, each helping to reflect, amplify, and reveal more fully the jewel's inner fire. This method is especially helpful when attempting to discern the original teachings of a tradition which, owing to imperfections of human nature and the erosive forces of time and politics, almost invariably become overlaid with an opaque crust of conventional interpretation.

If the world's religions are united by a common thread of wisdom-teaching, then one would expect to find glints of that inner fire reflected in them all. This has been the experience of many who have

undertaken such a study. For example, Joseph Campbell, building on Carl Jung's archetypes of the collective unconscious and his own extensive studies, concluded that there is but "one world mythology," each culture inflecting it with its own unique cycle of stories. Likewise Steuch, Leibniz, Huxley, and others have written of the "Perennial Philosophy" as representing the highest common factor uniting the world's spiritual-philosophical traditions. These unitary threads are discernable, pervasive, and well documented, demonstrating that no religion has a monopoly on truth, but that each is an expression of our universal spiritual heritage.

Many traditions tell a story that begins and ends with nameless mystery, within which all creation and evolution take place. "The Tao that can be described is not the eternal Way. . . . Nameless is the source of heaven and earth" (*Tao Te Ching*). To help us conceptualize That in which "we live, and move, and have our being," theology has named it God or Supreme Being. To help us reach beyond the stereotype, theosophy calls it an abstract *Be-ness*: an omnipresent, eternal, boundless, immutable Principle which, like Plato's Idea of the Good, is "beyond being," adding that it is the "source and origin of force and of all individual consciousness, and supplies the guiding intelligence in the vast scheme of cosmic evolution" (*The Secret Doctrine* 1:15). Yet It or That does not create or evolve anything, something which may be predicated only of a finite being. Rather, from its abstract essential consciousness-substance emanate the hosts of intelligent powers, a near infinitude of architects and builders, whose task is the formation and development of the manifested universe.

"In the beginning God created the heavens and the earth" says the language of Judeo-Christian theology, asserting that God created everything out of nothing. Jewish theosophy reexpresses the original Hebrew somewhat differently, expanding upon and hinting at what is meant by *nothing* or "No-thing." According to the 20th century's preeminent scholar of Jewish mysticism, Gershom Scholem:

the Zohar, and indeed the majority of the older Kabbalists, questioned the meaning of the first verse of the Torah: *Bereshith bara Elohim*, "In the beginning created God"; what actually does this mean? The answer is fairly surprising. We are told that it means *Bereshith* — through the medium of the "beginning," i.e., of that primordial existence which has been defined as the wisdom of God, — *bara*, created, that is to say, the hidden Nothing which constitutes the grammatical subject of the word *bara*, emanated or unfolded, — *Elohim*, that is to say its emanation is *Elohim*. It is the object, and not the subject of the sentence. . . . Elohim is the name given to God after the disjunction of subject and object has taken place, but in which this gap is continuously bridged or closed. The mystical Nothing which lies before the division of the primary idea into the Knower and the Known, is not regarded by the Kabbalist as a true subject. The lower ranges of God's manifestation form the object of steady human contemplation, but the highest plane which meditation can reach at all . . . can be no more than an occasional and intuitive flash which illuminates the human heart . . . — *Major Trends in Jewish Mysticism*, p. 221

Arranging this interpretation into a single grammatical sentence, *Bereshith bara elohim* may thus be rendered: "In the beginning, through the medium of primordial Divine Wisdom, the hidden Nothing emanated or unfolded Elohim," who then fashioned the heavens and the earth. Despite its usage with

singular verbs throughout the Hebrew Bible, *elohim* is nevertheless a plural noun and can be interpreted to mean a collective aggregate or pantheon of creative powers, as overtly hinted in *Genesis* 1:26 and 3:22 ("And Yahweh-Elohim said, Behold the man is become as one of *us*") and implicitly in *Job* 38:4-7 which informs us of the assembly of gods present at creation.

The idea of plurality is preserved in the oldest texts of Mandaean theosophy, derived from the same stream underlying ancient Jewish esotericism. Emigrating from Jerusalem over 1,800 years ago to southern Mesopotamia, the Mandaeans (the "Knowing Ones" who claim John the Baptist as one of their "crowned" or initiated priests) refer to the supreme divine principle as *Hiia*, "Great Life," the originating source as well as the creative and sustaining force of everything in the universe. The Great Life is described as *nukraia*, literally "other" in the sense of "remote, incomprehensible, ineffable." Because of its mystery the Mandaeans speak of it in the impersonal plural — the Great Life is not a "He" or an "It," but an abstract "They." From the Great Life emanates the vivifying dual power of Radiance-Burst-Forth and Mind, who in turn call forth and radiate their son *Yawar* ("Dazzler" or "Awakener") and entrust him *and his brethren* with the creative work of reproducing the cosmos. Note that theirs is a reproductive power, implying the seed of a previous universe. According to teachings formerly reserved for postulants, the Great Life is successively active and passive in the cyclic cosmic drama: after retiring into a period of quiescence, it (or "They") manifests again in the two great life-forces and in renewed creation of the universe — reenacted yearly on our terrestrial globe in seed, blade, leaf, and fruit. As above, so below.\*

\*E. S. Drower, *The Secret Adam: A Study of Nasorean Gnosis*, 1960, pp. 1-11, 88-9; *Canonical Prayerbook of the Mandaeans*, 1959, pp. 252-60; *The Thousand and Twelve Questions*, 1960, p. 5., 1960, p. 5.

Reflecting the older Canaanite/Ugaritic tradition in which Yaw is the son of El, *Deuteronomy* 32:1-9 "tells how when *El Elyon* ('El the Most High') parcels out the nations between his sons, Yahweh [Jehovah] received Israel as his portion" (Norman Cohn, *Cosmos, Chaos, and the World to Come*, 2001, p. 132). Yaw, Yawar, and Yahweh, moreover, share significant parallels with the Babylonian Ea (pronounced "ehyah"), the wise and mighty son of the high god Anu, "begotten in his likeness," who "had no rival among the gods his brothers" (*Enuma elish* i.16-20).

In the Sumerian-Babylonian traditions, on which *Genesis* is known to be partly dependent, creation is the work of several deities who fashion the heavens and the earth from preexistent substance. In comparing the Jewish and Babylonian creation stories, Mesopotamian scholar Alexander Heidel noted that the creation of the universe, including matter, from a vacuous nothing by the sovereign will and power of God "cannot be deduced from the Hebrew verb *bara*, 'to create' . . . there is no conclusive evidence in the entire Old Testament that the verb itself ever expresses the idea of a creation out of nothing . . . [It is only] a connotation which has been read into *bara*" (*The Babylonian Genesis*, 1963, pp. 89-90). Likewise, the identification of Elohim with Yahweh (Jehovah) is a connotation which superseded and eventually hid the term's original and far more philosophical meaning as a plurality of creative powers.\*

\*See also Margaret Barker, *The Great Angel: A Study of Israel's Second God*, 1992.

The importance of these concepts cannot be overestimated, for their contrast — the notion of a singular masculine jealous God who creates innocent souls at conception with no prior existence, predestined to disparity, injustice, and unmerited suffering — has only served to create "materialism and atheism as a protest against the asserted divine order of things" (*Secret Doctrine* 1:183). Had priests and theologians forthrightly explained that *elohim* is a plural noun; had they mentioned by way of illustration the biblical references which declare that we humans in our inmost essence are also *elohim* because we descend from them, as did Jesus who reminded his people, "Is it not written in your Law, 'I said, You are gods?'"\*; had they emphasized the allegorical nature of scripture, and that the mysteries and hidden wisdom of God are held to be ultimately knowable†; and, resisting the temptation to oversimplify deeply metaphysical concepts, had they gone back to ancient esoteric roots and perhaps likened the creative gods to a chorus as do the *Book of Job* (38:7) and Navajo tradition in which the "holy ones" sing the universe into existence, then the creation-evolution controversy might be far less polarized and divisive, and less of a hurdle for thoughtful inquirers. Taken together with the powerful evidence of design in nature, here at least would be a basis for a coherent spiritual and scientific dialogue about our origins and ancestry, and about the more important issues of meaning, purpose, justice, and compassion.

---

The story of creation and of the soul's evolutionary journey has been retold countless times by peoples the world over. Myths are meant to be reminders and liberators of forgotten truths, and one very compact version, a modern retelling of an aboriginal myth here pared down to essentials, is suggestive. Retiring then into the quiet of our imagination, into the forest and desert solitudes of the Australian outback, illumined by fire and sheltered by stars, we hear the timeless tale:

*Long long time before our Dreaming, the earth at our feet had no shape, it had no colour, there was no light, and nothing walked across it. It was dust without water, no river flowed, the earth was empty. Into the darkness came the Birirrk. They came from far away and made their tracks on the ground. The Birirrk were our great spirit ancestors. Their tracks across the earth made the Dreaming paths and painted it with light and shadows.*

*The Birirrk could enter the rock. They blew on its face and rocks opened to let them inside. Out of the dust they shaped our mountains and over the land they made the great rivers. When that was done, the Birirrk made the shapes of the animals to live in them. With the water came grass and trees, and the*

*animals to eat the grass, to shelter beneath the trees and to drink at the river. The Birirrk made the shapes of water lilies and the yams. They showed their children, our people, how to find and eat yams and said, "These are yams. Yams are also men."*

*When all this was done, the great ancestors taught their children, our people, about the shape of the kangaroo. "Kangaroo are also men." As the light filled the sky, the Birirrk made the shapes of the birds and taught them how to fly. "These are also men," they told us.*

*They showed us the charcoal from the fires of their great Dreaming tracks and told us, "With these colours you can keep the Dreaming. We will leave soon, but we will return at the Dreaming places through your songs and dances, your painting and your telling."*

*The Birirrk vanished. They became the waterholes, the hills, the rivers and the rocks of the earth, our Mother. They left the stories of making the canoe and of teaching our children. These stories are in the earth. They are the laws that are ours to keep and to keep us.*

*The Birirrk, our ancestors, are in the earth, our Mother. They are in us and in our children at the Dreaming places. These rocks and hills, these rivers and waterholes, are our great ancestors. They are the Birirrk, our spirit."*

(Condensed from *The Birirrk: Our Ancestors of the Dreaming*, told by Gulpilil, L & S Publishing, Cheltenham, Australia, 1983.)

This beautiful version is all the more interesting because so remotely ancient in its conception. Like *Genesis*, it begins at the beginning when the earth was without form, "empty," and without light. Yet the world was not created out of nothing, but shaped from a primordial "dust" by divine beings who came from the "far away," who made the Dreaming paths across the ethereal tracings of our preembryonic earth. Painting light and shadows into its silhouette, they *informed* the elements, breathed life into them, entering and actually becoming them. And so too with water. The Birirrk then projected the *shapes* of living beings ("animals"), water creatures to live in the rivers. And with water also came plants and fauna. One discerns an evolutionary biology here, emanating from the first paint of intelligent light which consciously dreams the universe.

Then an extraordinary statement: after "making the shapes" of water lilies and yams, the Birirrk said, "Yams are also men." Kangaroos are men, too, as are the birds. Although aboriginal tradition teaches reincarnation, these affirmations do not imply reincarnation of human souls into lower kingdoms, but allude to something else. The story speaks here in both present and past tense: plants, marsupials, and birds *are* men and, more subtly, "men" — our people, children of the gods — have been here from the beginning.

Theosophy offers a broad interpretive context for this essential set of ideas, frequently using examples from various traditions both to illustrate their meaning and to demonstrate their universality. As in the

Hindu teaching of the days and nights of Brahma, whose "day" spans over four billion years followed by a night of equal length, our universe is said to be but one in an infinite series cyclically alternating between activity and repose in endless duration. Being the progenitor of itself, each universe issues forth from its consciousness and substance the seed and mind pattern of all its kingdoms from elemental to human to divine. At the time of the last universal dissolution, the seeds of life encapsulating these kingdoms were freighted aboard the "boat of knowledge." Like Noah's ark, it plied the floodwaters of chaos, until Brahma reawakened and earth was raised up once again for a new evolutionary cycle. Manifesting as the trinity of Brahma-Vishnu-Siva, the godhead issued a series of creative impulses represented by the ten avatars or "descents" of Vishnu, who incarnates as a fish, reptile, mammal, and finally as humans of progressively growing self-awareness, ever striving to fashion a more perfected mankind — just as humans ever strive to become more godlike in substance, mind, and spirit: a triple evolutionary scheme.

In all these traditions, whether taught overtly, by hint, or in secret, "Man" is the Alpha and the Omega, the beginning and the end, for man has always existed. Humanities from previous universes have left their impress on the mind-fabric of nature, providing the architectural forces shaping not only modern man, but all developing life. As an evolving species, "Man" appeared at the beginning of our current world cycle and from his early prototypal forms — hardly sketched on the ethereal tracings of our garden planet — all the lesser kingdoms which people our earth have diverged and evolved. It is for this reason that Man is said to be the parent and repository of the kingdoms below him, the root and trunk of the Tree of Life, if not the tree itself — a microcosm in the macrocosm. This is a teaching echoed in traditions all over the world, giving us pause to wonder why.\*

\*Cf. Hindu Purusha-Prajapati-Narayana-Brahma, Egyptian Atum, Jewish Adam Kadmon, Mandaean-Nasoraean Adam Qadmaia, Eskimo Father Raven, etc., hinting or expressing an anthropic principle represented by most *anthropomorphic* creative deities. This seeming reverse evolution, which posits "Man" as the common ancestor of the kingdoms below him, is too broad and intricate a subject to develop in this brief essay. Readers are referred to *The Secret Doctrine*, Volume Two, and to *Man in Evolution* by G. de Purucker for fuller treatment.

The descent of spirit into matter and the ascent of matter to spirit, involution and evolution, is a fundamental theme of the perennial philosophy: the "Fall" of angels and men, of Adam and Eve donning "coats of skins," of Christ descending to the Underworld, of Prometheus firing nascent intelligence, of the steep and rugged ascent from the cave of ignorance, of the quest for the holy grail, the eternal return to the "great antique heart," the mystical union and companionship with our inner divinity, of samadhi, enlightenment, nirvana, and parinirvana — achieved only to be renounced yet inwardly retained as a guiding compassionate wisdom for the benefit of all.

According to theosophic tradition, the history of our own individuality resumed when the universe reawoke — when once again the One issued the Many — and *remembered* the more stately mansions that each of us may build. Wave after life-wave of monadic beings radiated forth in a majestically sonorous "Let there be light," designing and fashioning through imbodiment after imbodiment the

infinitudes of temples, kingdoms, and worlds — all built without sound of hammer, axe, or tool of iron. Hence the Sufi teaching:

I died as mineral, and became a plant,  
I died as plant and rose to animal,  
I died as animal and I was Man.

As humans we reach an equilibrium, a balance of spirit and matter, and a turning point in our evolution. Fired by an awakening self-awareness and the freed power of willing choice, we discover not only the power of mind, but also the arrow of time: a past we have somehow made, and a future that is ours to create — a daunting prospect perhaps, did we not feel the helping and guiding presence of those who have already trodden this ancient and eternal pathway. The poet continues:

Why should I fear, when was I less by dying?  
Yet once more I shall die as Man, to soar  
With angels blest; but even from angelhood  
I must pass on: . . . — Rumi, *Mathnawi*

In theosophic philosophy, there are no miracles or interventions which suspend the laws of the universe. We reap what we sow, and neither men nor gods can change that. But *we* can change our course and our destiny at any given moment, for we have the power to imagine and to choose intelligently, and thus to help create and evolve a better, wiser, and more compassionate future for us all. What makes man *man* is defined by the very word itself. Having nothing to do with gender, it links back to the root of the Sanskrit verb *man*, "to think." But as a compound of earth and starry heaven, we are far more than our intellect, our desires, or even our noblest inspirations. As emanations — offspring — of that nameless mystery which is beyond our human capacity to conceive, we have forever and eternally unfolding within us that infinite No-thing called memory and possibility: the memory of what we essentially are and can become, and the possibility to creatively fulfill our evolutionary mandate.

Looking to the future — not only to the far horizon of scientific and spiritual imagination, but to the immediate realities which unfold daily before us — the stories of our origin, ancestry, and inner potential help bring into focus what is most important in our lives, the values which endure through all our growing and changing, our living and dying. If our evolutionary journey is said to begin with love and end in wisdom, as the word philosophy implies, there is yet another boundless quality deepened and strengthened by the increasing realization of the oneness of life. Just as the ancient Mysteries recognized "communion and friendship with God" as the fruit of the highest initiatory rite, so Buddhists express it in more human terms: the enlightened ideal personified by the coming buddha called Maitreya, whose name means "friend." As Socrates suggested, many have yet to learn — and trust — that "no divinity is ever ill-disposed towards man," nor is any action on its part due to unkindness. When all is said and done, no matter what we may or may not achieve in a single lifetime or in an eternity of living, we all have the power to be a friend and brother: a thoughtful, caring presence to each and all in this magnificent, challenging, imperfect, yet ultimately harmonious symphony of universal life.

NOTE: In 1930 my mother, Dr. Grace Green Knoche (1871-1962), a profound student of Helena Blavatsky's writings, founded and edited *The Lotus-Circle Messenger*, a children's magazine. Every issue was intended to spark the child's awareness of beauty and harmony in nature. "The Adventures of the Atoms" series ran from 1931 to 1933 and in the 1940s the author prepared it for book form. Sixty-odd years later, in 1994-5, *Sunrise: Theosophic Perspectives* published this version, edited by Sarah Belle Dougherty. --

## The Adventures of the Atoms: A Cosmic Fantasy Inspired by the Stanzas of Dzyan

*These pages in the Book of the Universe are written in the guise of fantasy but with no part in untruth, for the atom is more than mere laboratory material. It is an evolving being, of infinite change and growth, yet inalterable and constant at its core which is divine.*

## Part I

In the long long *long* ago Mother Nature was planning for her children -- her life-atom children. They had been having a wonderful time all day on the grandest playground in the world, or even in the universe -- in fact, it *was* the universe; and now they were ready for sleep. Like the old woman who lived in a shoe, Mother Nature had so many children that sometimes *she* didn't know what to do. But tonight she knew very well. So she called them together, millions and millions of them, and billions and trillions -- dashing, flashing, flaming, dancing sparks of life. And she said to them:

"It's time for you to sleep now, but tomorrow, when you're rested, I'll send you out to seek your fortunes. Many and strange will be your adventures. Some will be hard for you to understand, but all will have a beautiful purpose, for deep within you is a radiant spirit, your Real Self. And like the golden thread in fairy tales, if you never lose hold of it, someday it will guide you back home.

"Never forget what I am telling you! If you remember, you will pass through all your adventures safely and happily and bravely. And when you come back, as you will someday, you'll not be just life-atoms. You'll be something greater and something more."

"How wonderful!" they sang, all together. "Please tell us what we'll be!"

"Time enough for that tomorrow. You like surprises, don't you? So good night, sweet dreams -- and many dreams! For it will be a long night." And she put them to bed.

As the new day finally began to dawn, the life-atom children were still in bed, and no wonder. Before Mother Nature told them it was bedtime, they were already tired, for they had had a long, long day -- not a little day such as we have, but much longer. How can that be? It's this way: we measure our day from sunrise, when Father Sun peeps up in the east, until he says goodbye to us at night in the west. The Sun doesn't go to bed then; it's only we who do. But there is a time when he really does get up in the morning to start his new day, and his morning, like his day, is very, very long. And he really does go to bed at night, and that night lasts a long time too. And it was after the Sun's long, long day that Mother Nature put her children to bed, to sleep through a night just as long.

Even that night had an end, and now it was time for day to break -- the great day of the solar universe. Everything was stirring, for it was beginning to get light. Things were beginning to rock and swing, vibrate and throb, pulsate and whirl. What was this, and what made it? Motion, just motion, waking all things and guiding them.

The life-atom children were wide awake now, and all about them was a filmy mist, radiant and bright and cool. And when they whirled out of their misty beds, and danced and floated and flew, they found that they were motion too, and light. For light was everywhere, darting glorious long beams in every direction. Heat was there too -- it was getting warm and cozy in this great cosmic dawn.

And color? Not color as we know it, yet. But Mother Nature knew there soon would be, for slowly, slowly forming in the mist were a trillion glittering prisms ready to break up the pure white light into jewels of color when the right time came.

Lovelier than all there was sound! Like soft, musical harp tones it was -- and yet more beautiful -- and all the while motion was keeping time. The life-atom children liked that best of all. They *were* motion; they *were* sound; and suddenly they knew there was something more, something in their hearts. "Who is it? What is it?" they said to each other. "We must know! Let's sing!"

And while they were singing they danced, but now in a different way. First they danced together, and then far apart, then together and then apart, again and again and again. And motion was everywhere -- in the sound and the light, in the gentle, friendly warmth, in the white misty promise of color. But most of all they heard it singing in their hearts.

They began to go faster and faster; things began to go round and round. "What makes things go round and round?" they asked. And when nobody answered, they said, "Come! Sing! We'll go round and round too!" A strange adventure was waiting for them.

"Look! Here comes Fohat!" sang the life-atom children. And there he was, cosmic electricity, moving, gliding, sparkling, scintillating, hissing as he traced long spiral lines. Winding his way through the filmy, radiant mist, he wakened life-atom children all along the way -- seven groups of them. He touched the sleeping atoms with cool light and cool fire.

Now the life-atom children understood. It was Fohat who had waked them up and taught them that wonderful dance. It was Fohat who had been making things go round and round.

"Now he's coming back again," they sang. "What does he want us to do? "

"You must learn to play," said Fohat. "You can't help me build worlds if you don't. You've ever so much work to do, and if you never learn to play, your work won't have any sparkle in it!" And he showered light-sparks all around. "Now, let's have some games. Don't you know this is your playground? Come! Let's play tag!"

Such games as they played with Fohat then, on the playground of great space -- a playground so big that whole universes played there too. And a right fine game they had. Fohat ran after them and set them all running and laughing; and oh, how warm they got! Then he blew on them and made them hard and cool and shining, like jewels. Never was anything so wide awake before as the little life-atom children, tracing with mighty Fohat great circles on the Playground of the Dawn.

Then Fohat gathered them together and shot great streaks and flashes of fire across their playground, with thunderpeals following after. Yet all the time the little life-atoms were singing, each one his own song. Some of the songs were in harmony, but other songs were not, for there were two hosts of atoms,

now rushing together, then rushing apart, as Fohat pushed or pulled them in this beautiful cosmic dance. And as they danced and circled and whirled, they knew that they *were* motion, that they *were* light.

"Now," said Fohat, "run along! I've lighted you, and started you, and shown you how to laugh and sing and dance. Now I must whirl away and wake up others . . ."

The little life-atoms paused. "What shall we do now?"

"I know! Let's fly up and visit Father Sun!" said one. And all the rest cried eagerly: "Yes, let's!"

But they couldn't. Something was holding them, carrying them along. They looked around, and there was a bright globe of fire whirling by, its long hair streaming out like a veil.

"Oh!" they said. "Why, what's happening to us now?" And before they knew it they were drawn right into the long misty hair or tail of this bright wandering comet.

What happened then was nothing so peaceful as playing tag with Fohat, for now here, now there, now on this side and now on that, swung and whirled the comet. Now he moved quickly, now slowly, sometimes moving by sudden starts, sometimes peacefully and gently.

And what sights to see! Huge misty masses -- nebulae just beginning to think about growing into worlds. Stars and planets and many, many suns, some of them large, some of them small; some with long hair like King Comet, some with two or even three long streaming tails. There went one, in shape like a huge bow; here was another without any tail at all -- millions, myriads, of these bright mysteries, sailing, rushing by! Not all of them were very polite, either, for King Comet, wandering about as he liked, did not suit them at all. Stars and suns are orderly beings, always going where they should. But comets are altogether disorderly, and the result was that the life-atom children had a rather bumpy time of it. Their king dodged this way and that, trying to find a path, and almost having an accident many times.

The life-atom children were frightened. They crept up close to the bright heart and center of this errant king of theirs. But when they got there they felt at home; it was really peaceful after being pulled around all over space in that long filmy swishing tail. How glorious to the life-atom children seemed the bright calmness at the center of this comet -- guiding it, and lighting it, and pouring out love and power all the time. The little atoms now knew why it was they felt at home. It was *their* comet -- they had found their king again!

But why was their king and master having so hard a time? What *was* he trying to do? He was trying to find a place where he could settle down and grow and build a world for himself, a place where everything could be in order. This is not easy to do by any means, but comets keep on trying. So faster and faster he whirled and swung, coming closer and ever closer to Father Sun.

At last he fairly whizzed by -- but not off into space again as before. The Sun had drawn the comet to

itself, and soon he was whirling *around* Father Sun. Like the life-atoms, he now had found his master, his king -- his Sun. He had also found his place in life, his path. Little by little the long streaming tail fell away. His great orbit around the Sun was becoming smaller, and more and more like a circle.

Something was happening to the life-atom children, too, for Fohat was coming near again. He was blowing on them like a mighty wind. He seemed to be urging them to -- to --

"What is it? Tell us!" said the life-atom children eagerly.

And Fohat replied: "We are going to be a world one of these days, you and I!"

"A world? What's that?" asked the life-atoms.

"You'll see!" said Fohat.

Looking around, everything was bright. Space, the great playground, was bright, for splendid light had come, a radiant essence, shedding glory everywhere. The little life-atoms were beautiful and bright too, for space was their playground and their school.

"But what is *happening* to us?" sang one, still swirling and dancing. "We're getting thicker, and heavier."

"And smaller and harder," sang another.

"Tell us, bright Fohat," sang a third. "What's happening to us *now*?"

"You will soon be passing through the Magic Door," said Fohat. "That's the first step to building a world!"

And so they were -- passing through the Magic Door at the heart of their comet. Like the life-atoms themselves, the comet also had a radiant essence in his inmost, ruling like a prince over the Magic Door at the very center of his being. It was through this door that the life-atoms were now streaming and showering, a rushing starry tide. Because of Fohat, to every life-atom that passed through something happened. What was that something? Did you ever go out of a cozy, bright room into another room, rather chilly, not so large and bright? You pulled your clothing around you a little tighter, and put on more clothes. Well, something like that happened to the life-atom children. They were now moving on to a new world, the one Fohat had told them they were going to be, for they would be its building bricks. Troops and legions of them were coming with Fohat blowing on them, hardening and condensing them and making them all very serious. The new world was already being made; it seemed to be something like a great web. And the life-atoms were a part of that web -- indeed, they found themselves woven into it.

"If you could only see what I see!" said mighty Fohat. He was still whirling and circling about them,

tracing long spiral lines of light, of coolness, and of warmth. "I see the world that is to be -- the rocks and plants and animals to be, and something very strange and wonderful called human beings! You have a long, long day before you now, with lots and lots of work to be done."

"But what are rocks and plants and animals and humans? What have they to do with us?"

"They have everything to do with you. You are building bricks, and you are going to build yourselves into all these beings, all these things. You are going to be part of them -- the whole of them, in fact."

Did you ever see an artist working over a design? For a long time he may have had that plan in his mind as an idea, thinking about it silently, helping it to grow. He knows that he must follow laws of order or his idea will not come to anything at all. So he begins just as Fohat did when he began in the dawn-mist to trace his spiral lines. He draws delicate curves and faint lines here and there. He makes dots and points here and there, too, just as Fohat did with his mighty pencil when he said: "Here we shall have Magic Doors! Here they shall open!" But gradually the plan or design grows less shadowy and delicate. The artist now makes strong dark lines, over and around the trial-lines, as he works on until at last here is the idea worked out, fully grown, a kind of little world itself.

So is it when a big world is abuilding. Delicate, shadowy, misty at first, it slowly, patiently, takes shape while Fohat traces spiral lines about it, spiral lines all through it, piercing it for Magic Doors here and there, with cosmic points and dots, with motion keeping order, keeping time. For this new world must not be disorderly, and it won't be. The artist-builders and their helpers attend to that.

No wonder the life-atom children were happy as they danced into their places in this new world -- they could already see that beauty and order were in it. Some of them flew to lofty places, drawn there because they were attracted to pure and lofty things. Others dropped lower down because heavier things attracted them -- each after his own nature, each finding his appointed place as though on the rungs of a ladder. In fact, it was a ladder: the ladder of life. Up and down this mighty ladder the life-atom children poured in a constant stream -- some going higher, others lower, but always through the Magic Doors. Fohat was moving about, gliding, hissing, breathing on them, hardening them more and still more, these life-atoms out for adventure.

"But why are we here, Fohat? Tell us!" And Fohat replied:

"You are here because you belong here. You couldn't grow any other way. It's just as simple as that. You *belong!*"

That was the happiest thing about it. They did belong. These little life-atoms were not just drifting about to stick and stop anywhere at all, like old broken straws in a stream. Each one had his very own place on some rung of this ladder of life.

Was this ladder a real ladder? Yes, but not like an ordinary one, with flat boards to step on, and only

empty space between. No! The real ladder of life is a cosmic ladder of living beings, whose steps and spaces grade into each other like the soft lovely tints of a rainbow, which also has seven steps or stages, marked by seven colors. Look closely at the next rainbow you see. You cannot mistake red for orange, or green for blue, and yet you cannot tell *exactly* where one color stops and another begins. So it is with the ladder of life, made up as it is of hosts upon hosts of life-atoms, some of them young, some older, but all of them wide-awake after their peaceful sleep, and all of them eager for adventure.

"But what are we going to do?" they all asked. "We want to help!"

"You shall help," Fohat said. "You are my little builders. I couldn't possibly build a world without you."

"Why couldn't you, when you are so big and wise?"

"It is the law that we should work *together* -- you and I. You, the firstborn of Mother Nature in this new day, and I, Fohat, from the god-world, yet not myself a god.

"It is *we* who are to work from the Architect's plan. It is *we* who are to lay out and smooth the evolutionary paths and trails which younger life-atoms, coming after you, will complete in terms of beauty."

---

## Part II

The little life-atoms were thinking over what they had just learned; they had had such amazing adventures! The first and greatest was when they found Fohat and played games with him on the Playground of the Dawn. Next, they found their wandering planet, King Comet, and the Magic Door at his heart. Best of all, they found new eyes, for there before them all the time had been the Ladder of Life, and they hadn't seen it. Then they found that they were growing; and that every thing and every being was growing, too. They didn't quite understand it. All they knew was that it was wonderful and true.

"Fohat, is there anyone, anywhere, greater than you?" they asked.

"The gods are greater. They commanded me to come to you and set you whirling in two directions, and start you singing all the time. Many of you were not life-atoms then, but just beginning-atoms trying to find yourselves and find your places in the great cosmic scheme. All I taught you, all I brought you, was at the gods' command."

"We understand. We see now why the worlds you build must be kingdoms of beauty and order. But where shall we find such a kingdom, and when shall we enter it?"

"You have been in such a kingdom all the time," said Fohat, "for it lies within you. But as yet you are not orderly and beautiful yourselves -- and so . . ."

The life-atoms made no reply. They were thinking as hard as they could when suddenly they looked around them and looked down to the next lower rung of the Ladder of Life that had suddenly become so real. And something stirred within them -- not in all of them, but in many. These turned and looked down at the next rung, and the rungs below. And they bent down to clasp the little ones that were reaching up -- why hadn't they looked down before! And a song came forth from their hearts:

"Come! don't be afraid! Reach up to us and we'll all come up higher together."

And Fohat heard it and said, "I have been waiting for just this. Now you are really ready to help me build a world -- you were not ready before. ATTENTION!" The word soared outwards like the peal of a golden bell hung high in the canopy of the skies. "To your places! You shall help me build the first globe of a planet to be called Earth."

This new globe was made up of the finest, thinnest mist -- so fine and airy that the air of our own rocky Earth is like a thick woolen blanket beside it. That world was so airy and transparent we could not have seen it with our eyes at all. But the atoms could, and to them it was as real as real. Trilling and caroling they looked about them as they whirled and danced. Below them were younger atoms belonging to the same great cosmic family. They too were happy, trailing along behind their older brothers, knowing they would be helped. For these were just beginning their adventures, and like human babies they needed love and care. Besides that, they were ready to be taught.

The misty, airy earth-globe, which now at last they were really building, was spinning round and round. It was slowly hardening, too, for Fohat was everywhere at once, breathing upon everything with his fiery, electric breath -- Fohat the Magician, cosmic electricity.

How did the life-atoms work when they built the first earth-globe? What were their tools like? They built the globes with music, for the power to create, to build, lies in harmony, in musical, pulsating sound. Atoms sing because it is their nature to sing. Every atom is in constant movement, vibrating at speeds which the human mind cannot grasp; and each such speed had its own note, and the life-atom sings that note. So, if we could hear it, the life surrounding us would be one grand song. We would hear as a song the opening of a flower, and its growing would be like a changing melody. We could hear the grass grow, and every hair on our head as it lengthens, for growth is movement. How could it be otherwise in a world packed full, as this world is, of life-atoms, bubbling over with the will to learn, the will to do, the will to help and share and build.

"Attention!" Like a deep bell the command boomed out again. The life-atoms looked to their leaders, and then they found themselves moving round and round the earth-globe in a vast company. Like a stream, like a river they moved, a river of lives. And like the vast flowing stream that they were, they moved in dignity and beauty.

Seven times around the misty earth-globe this river flowed -- this river made up of little lives who *were* that river in fact. They made seven great cycles spiraling round this first earth-globe, all the time learning and growing, until their work there was as complete as they could make it. It took them a long, long time.

Then the little atoms did just what you and I would do if we were traveling through the universe, helping to build it as we went. Their next adventure would be to move on ahead and, when the time came and Fohat called, to help him to begin *another* earth-globe, a second part of our living Earth. For planets, like people, are alive.

Flowing and streaming, eddying and surging and swirling in beauty, the life-atoms wondered what a globe was.

"I will tell you about the globes" -- and there was Fohat. "What do you wish to know?"

"*Globes?* Then there isn't just one globe of the Earth?"

"Every planet is made up of seven globes. The seven globes we are building will together form the planet Earth. All the earth-globes together form one planet. The same life plays through them all, but each has its own special work, its own destiny. They are seven and separate, though together they form one Earth -- one planet.

"You're going to build these earth-globes, and you'll see them, one by one, as they are built. The first one, as fine and transparent as a dewdrop, you are building right now. As you grow heavier, you will build the next globe. And the third one will be even coarser. The fourth globe, called Earth, will be the most material of all the seven because on this globe your clothes will be of the heaviest matter.

"But even so you will be invisible to Earth people. All their knowledge and all their microscopes will not give them the power to see or measure or weigh a single life-atom. All they can do with all their inventions is to see the tiny trail of light which you leave behind as you go whirling and singing on your way. But although these Earth-folk cannot see you *yourselves*, they know that you exist. But they have still to discover the ancient teaching, that at the heart of every atom is a spark of divinity."

"But after the fourth globe, what do we help you build? Still coarser globes?"

"No, that is the center and the pivot. From that time on, the earth-globes will be less heavy and more like the first one you have just built. Little by little all matter and weight will drop away until the seventh earth-globe shines forth like a sun."

And so this first day, filled with hard work and harder play and singing, reached its twilight. The next great adventure would be the building of the second earth-globe.

Have you ever read stories of pioneers -- of brave, heroic souls, who set sail upon unknown seas or go forth into a wilderness to map new pathways, build new homes? They make the roadways that others only tread, mark the trails that others only follow, build the homes that others are to dwell in. In the same way the life-atoms are also pioneers. With motion hurrying them ahead, with Fohat leading them in song and in whirling, vibrating dance, joyously, bravely, they go forward into the unknown -- atomic pioneers.

Now just as it takes billions of people to make a world, so also does it take trillions of life-atoms, and even more, to make the first of the pioneer kingdoms which sang the first earth-globe into being. For a globe is not built hit and miss, by trying this and trying that, without guidance or love. Nor could it be, for its destiny is to be, not just a name, but a place to live in, a home for souls to grow in.

What are souls? Life-atoms are baby-souls, taking their first look at a world just waking from its long, long sleep. The youngest are elementals, that is, beginning-souls that have sprung, as a plant springs from the soil, right from the heart of Mother Nature -- only the life-atom springs from Nature in an invisible world, while the plants are on our visible Earth, which we humans can see, touch, breathe in its fragrance, taste of its fruit and grain, and hear the voice of the waterfall and the wind in the pines.

Life-atoms, wherever they are or whatever they may be doing, always begin another lesson when the earlier lessons have been learned. In this universe of ours there will always be life-atoms, families and kingdoms of them, as long as Father Sun's universe is awake, for it too is learning *its* lessons. It too has its "days" and its "nights." On life's ladder there will always be beginning souls, and older, wiser souls to teach them -- for this universe is a cosmic school, and we are all learning and growing.

What do these elementals look like? What does electricity look like? A spark, a flash, and it's gone into its own invisible world. It could not be pictured as having a particular shape or form, for it has numberless shapes and forms. We can think of the elemental lives as energy, as beings of constant change, and forget about how they may look. Each in its own world is a tiny invisible point of light, in constant activity, radiantly alive, but by human eyes it cannot be seen at all.

Yet at the same time, we are seeing beginning souls all the time, for everything is a beginner to someone on a higher rung of life's ladder. Rocks and plants and animals and birds -- these are beginning souls to human beings. We can see them because they are going through the earth-stage of their cosmic journey just as we are, and so have earth-bodies as we do.

But elemental souls do not remain "elemental." They grow just as we do. After all, we are elemental beings to the stars. All things in the universe have souls of their own type and kind -- Nature would not be so unfair as to give little life-atoms souls and deny them to the animals, plants, or the radiant shining minerals, in which the atoms themselves are but building blocks.

These life-atom souls could not build a globe, however, without help from the gods. Some of the highest gods bent down and worked with the very youngest of the elementals so that the first earth-globe would

not be a failure. It was the gods' plan that Fohat was entrusted with, which the tiny life-atoms led by Fohat followed down to the last and simplest design -- a plan with divine thought behind it, with the life-atoms giving themselves proudly and gladly as the needed building blocks. How could it be any other way? Even with Fohat for a messenger, how could any but the loftiest of gods, the architects, carry out a plan as big as a world?

So at last the first earth-globe was built, shapely and beautiful, a worthy home for the next river of lives that would roll in. The life-atoms looked longingly at the next Magic Door, eager for their next adventure. But just as between two notes of music there is always a pause, a silence, even though so brief at times we cannot perceive it, so is there also a pause between the different stages of a cosmic plan. This time, however, was not a cosmic night. It was a twilight, a brief darkening, when Mother Nature pulls the curtains down and says to her life-atom family:

"Now children, no talking. I'm not putting you to bed, and of course you're not sleepy; but it's time for your nap. So lie down and shut your eyes, and be quiet."

And even a nap, when it's a cosmic nap, is not really short. But soon Mother Nature returns and pulls up the curtains to let the daylight in. In a twinkling the life-atoms were up, dressed in sunshine and dancing like merry stars. With good reason, for the greater part of her big atomic family would now leave the first earth-globe to help build the second one. What an adventure *that* would be!

"Come!" they sang. "Why wait? All we have to do now is to whirl through the Magic Door -- and there it is! All we have to do is just go through it!"

"Not so fast," sang Fohat who, for all his thunder and glitter, could be loving as well as stern. "Come here!" and he drew them close, millions and trillions of them. "What about the baby-atoms who are growing too? Have you forgotten *them*? Is this what I have taught you: to think only about yourselves?"

The life-atoms stopped singing and looked around. Everyone seemed to be helping -- Fohat, the builders, and the great one, the Architect, whom they had never seen. How could they be selfish and forgetful and just scamper on ahead?

"You know what you ought to do," said Fohat. "Look at the lovely kingdoms of life you made possible on the first earth-globe you have been building. You even built yourselves into the trillions of brothers of sea and earth and air that filled these kingdoms. Look at the nature-homes in which they are so happy. Do you want all this beauty to fall apart because you're too lazy to look after it?"

"Some day a life-wave, a river of baby-atoms will roll in, just as you did so long ago. Wouldn't you like to keep this nature-home so that when they do come in they will have a home ready for them, with the kingdoms all happy and in order? But there is only one way to do it -- "

"By staying behind! Of course we'll stay -- we'll *all* stay! We just forgot!"

"Not all of you will be needed, and besides, not all of you could be spared, for who would there be to build the second earth-globe? So only a few of you can stay. And which life-atoms shall I choose?"

"The wisest and oldest, and the best among us, of course."

"You're right. Those who are older, who have tried hard to learn and grow, those who are unselfish and kind -- they will be chosen to stay behind. And they shall be like the perfect seeds that are kept safe over the winter, from which, when springtime comes, new plants, new kingdoms, will arise."

So it came about that the finest and best of the little life-atoms remained behind as seeds. No more journeys now for them; no more growing, no more going to school or adventuring or climbing higher for a long, long, *long* time. just guarding the sleeping kingdoms -and waiting.

But what happened during the waiting time? How did the seed-atoms wait? It is what we are told in one of the oldest fairy tales -- a story known in oldest Egypt, in oldest India, which we call Sleeping Beauty. Like Princess Beauty, all the household falls asleep, and all the retainers of the palace, all the animals and birds, all the plants and trees, even to the roses on the sweet-briar hedge -- these too close their dainty petals to dream sweet dreams.

Just as the Princess is wakened by Prince Charming after a hundred years, so after ages come and go, the cosmic winter is over and the cosmic spring comes. Then the seed-atoms who stayed behind become wide awake again; and so the "palace" that we call the first earth-globe, and all the trillions of life-atoms come to this new home of theirs as the new river of lives rolls in. These also will be wide awake, eager to be welcomed and taught and led, eager to learn and grow, eager to *belong*.

The seed-atoms then knew why they had been chosen to remain. And they *were* chosen, for when the great ones set out to build a world nothing happens just by chance. Now they knew why it was grander to be seeds than anything else in the world, and why they were happier right there than they could possibly be anywhere else.

"Goodbye for a time!" said Fohat. "I must leave you for those who need me more. Others have gone ahead of you and higher, it's true: we call them pioneers. But you are greater pioneers -- in patience, humility, wisdom, and service. Their reward will come before too long, yours not for ages. That is why those who know love the seed-atoms, those who remain behind to help and guide the life-waves or rivers of lives of all the kingdoms that are to come."

---

### Part III

Did you ever wake up suddenly, with a feeling of surprise? Did you ever rise very early, with the

dewdrops still sparkling and the Sun coming over the hills? You felt as if a magic window had been opened, that you were something grander than you had ever been before.

In this mood the life-atoms woke up one day. They were not "just themselves" as they had always thought -- they were something greater, and something more. They were now parts of a grander life, helping to build it, helping it to grow. Not all of the life-atoms felt this, of course, but the brighter ones, the older ones, did, and these became leaders in their own right, under their great leaders, the architects whose plan they so closely followed.

At first they had been baby-atoms, wide-eyed, looking for someone to take them in hand, start them off upon some great adventure and tell them what to do until, cast off like sparks from a whirling sparkler, they found King Comet and crept into his heart. Then King Comet, having found his Sun-Father, stopped his wandering at last, and settled down into a smooth, nearly circular orbit around his Sun -- a planet was about to be reborn.

And all along, the life-atoms had been adventuring with Fohat who gave them life and energy, who started them singing and set them whirling and dancing, now rushing close to each other, now rushing wide apart, some of them whirling one way, some the other; Fohat there too, telling them how to help him build a world, and how they would indeed fit into that airy invisible world, as hewn stones fit into a castle wall.

Then down from the god-world, far above, great helpers came: the celestial architects with their well-drawn plan; with builders, too, to help them. And the mighty work of building a world began, and in due course here was the misty, beautiful, orderly first earth-globe. Ages and ages of work and effort and obedience -- but at last it was finished, a newborn world, teeming with life.

And then the second earth-globe had to be built, and the life-atoms were right there to build it, with their leaders and guides -- the architects and their builders. And so with all the other earth-globes. Then when they built the last, all the life-atom children took a long, long nap.

After they woke up, they began to travel around the earth-globes again, starting with the first one.

"Why is it so easy the second time around?" they sang to Fohat. "We won't mind working on the other earth-globes at all."

And Fohat replied: "That's because your pioneering days are over. You followed the divine pattern, you helped the builders lay out the roads and raise the homes, with Nature's help.

"All the hard work of doing that you finished on the first trip around the earth-globes. Now they are here, all ready for you to strengthen them, make them more secure and dense. You won't have to do it again from scratch. The seed-atoms have been keeping them ready for you. That's why the second time around is easy! But there are great things still for you to do. Globe by globe you will build a home for

human beings, with plants, trees, running brooks, oceans, and animals -- many kinds of them in time.

"So will it be with the third trip around the earth-globes -- only with a larger family of lives and Earth itself grown denser. And after that, a fourth trip, where you will learn to be human beings, and man, greater by far than man is now, will be the leader still."

For the human family on the third trip around the earth-globes were not human beings as we know them today. They were human, true, but only animal-human. The mankind of that day was huge and shadowy, airy and almost transparent -- not at all like the human beings of our present earth-globe.

Man was, nevertheless, the leader of the hosts of Earth. Even animal-man was higher than the plants and the animals -- more advanced than all the kingdoms below him; and he tried to lead, but in a blundering, feeble way. Mother Nature did her best, but Nature alone could not help man, for to be *real* human beings they must have what these earlier humans had not -- the light of mind.

They had mind, of course, just as animals have and indeed all the lower kingdoms, but mind asleep, with no power of awakened intelligence. Just as an unlighted candle has the possibility of light within it, yet has no light to share with others, no power to make a dark room light, until it itself has been lighted.

It was this great human family that our life-atoms had been building from the beginnings of earthly time. It was this human race that the brightest and noblest of the life-atoms on the fourth trip around were a part of. Fohat, with their help, had caroled the earth-globes, and all that was on them, into being. But the gods knew this was not enough: man must be *completely* man. Even though he was their messenger, Fohat could not do that. Only gods could accomplish this.

So now the life-atoms were to take part in adventures the strangest, the most inspiring, and by far the most beautiful that even the wisest and oldest life-atoms could ever hope to have.

"How wonderful to be part of the human kingdom from the very beginning!" said one of the older life-atoms. "In fact we are that kingdom. That's why the architects trusted us to help Fohat build the Earth. By that plan we built all the globes, each with its own special rivers of life, its own life-waves, its own races, its own kingdoms."

"Now we have come for the fourth time to the fourth globe. Already we are in the middle of the third great race of mankind," another life-atom said. "How dense and dark and heavy this globe is getting!"

"You can't complain of that," Fohat answered. "It's like a shell protecting the delicate inner parts which you, like fairy harpers, have been building with your music -- building so lovely, step by step, like notes of music marching across a page."

Yet, however dense and darkening, it was beautiful, the world of this third human race. Strange and lovely plant-life it had, and millions of little creatures of sea and sky -- and large ones too -- all looking

upwards to the human kingdom, all attracted to it.

That was the sad part of it all, for while the mankind of that time was human, it was not completely so; it was still animal-human. Man, looking about him at the only world he knew -- and no doubt looking up to powers above him that he could not name and could not see, because he yearned to go higher on the great ladder of life, but did not know how -- gazing into Nature as if to say:

"Lift me! Help me! I would go higher; I want to be like you!"

And Nature replied: "I cannot help you to rise, save very slowly, very slowly . . ."

What could this mankind do but look up to Fohat -- Fohat who was everywhere, in the lightning and the rain, in the thunder, wind, and storm -- and mutely say, "Help me! I feel that I have wings, but I cannot rise. I feel the stirrings of a better life within me, yet I am .chained, I am bound. Why, Fohat, why?"

And sadly Fohat: "I have no power to give you wings."

But while all this was going on and even the skies wept in pity, great beings, gods, were listening at the borders of their world so far removed. And they were talking to each other.

"What is that globe -- there? It must be Earth."

"Yes, Earth. With Mother Nature in its midst, longing to help its mankind to rise. Yet she has no power to help. Only we have that."

"Let us go down to man. Let us light that dormant mind. With our help all that mankind longs for will come to pass."

And here begins the story of the lighting of the mind of man. It is more beautiful than any story in the world, and older than the world itself, for it began in another and earlier world, and in an earlier chain of planet-globes. But we need not go back to the very beginning. It is enough to go back to the third great race of mankind on our present Earth, living on a vast continent that today has almost disappeared beneath the waters of the Pacific.

On that immense landmass there lived the human stock from which we all have come. But in that day, man was different from what we are now. He could not think as we do. He was gentle, trusting, like a little child. He was growing and learning but, animal-human, he could not go as the gods go, as an arrow, straight to the mark. He had desires, but he did not have awakened will.

He had not been forgotten, however, and the time came when on the loftier world of the gods, something generous and indeed magical was about to happen. For the great beings who dwelt there had passed through their human experience ages before. They had earned the boon of living in a heaven-world, and

when they saw these animal-humans, they understood their need and pitied them and said:

"Let us make them divine-human -- no longer animal-human only. Let us give them of our light. Let us give them a portion of ourselves." And so it was, and from that hour human beings had two natures, one of them divine, the other animal, sometimes indolent and selfish, even wicked and lower than an animal; at other times, inspired, loving, and compassionate.

"But how can you *light* human beings?"

How does one candle light another? How can it light, if need be, all the candles in the world, with its own light undiminished by a single atom? That is one of the mysteries which science has never unveiled.

But this is not all the story. Some of these godlike beings entered into a few of the nobler, more conscious human beings of that early day. As a light might enter a temple, by being carried in, and illumine the whole, the light of those godlike beings literally entered into mankind. The few whose minds were lighted, awakened and received the light because they were ready to receive it.

Most of those animal-humans received only a spark, a portion of the light. If they were unselfish as well as thoughtful, they became like candles -- shedding light all around. They began to help their brothers, especially their younger brothers, up the ladder of life as the gods had helped them. Some were not ready at all and they could not receive even a gleam of it, just as light cannot penetrate a thick wall, whether made of cement or of sluggish brains.

If this fire of mind is so godlike and wise, why are we ever bad or stupid? Because like the third great race we really have two minds and cannot always tell which is which -- selfishness makes people blind, and deaf also. We have not only the higher mind, a portion of the god within us, but also a lower, animal mind. And like a child, it must be taught. How many lives are often needed for such teaching! How often pain and suffering come to us, or worse still to others, because the animal-mind will have its way.

There is really no excuse for doing wrong if we have this divine light within us. Yet even if we received only a spark, with patient effort we can fan that spark and before long it will leap into flame. And many have done so. They are the real heroes, and like the life-atoms, they are in a true sense, pioneers.

"And what happens next?"

Just what happens to anyone, young or old, who after a good night's rest goes out to work or play -- in office, store, or factory, on a playground or in school -- and when weary returns home, because it is home. So is it with the life-atoms, only theirs is not a little atomic day, or even an Earth day. It is a cosmic day.

Happily indeed have the life-atoms worked and played on the Playground of the Dawn. But as the day of the planet Earth passed its noon, they saw that many of them were quite grown up. Those who were

found worthy had been helped to grow by great beings who stood beside them, all unseen, on that vast playground. At first they had only to obey these great beings who were invisibly watching them, and then these great ones had said to them at last: "You are grown now in body, and now we shall light your minds and you will be even as we are. You will still observe the rules -- but it will be by choice because obedience to cosmic law is service to the highest.

Yet in spite of that, you must take three more trips around the earth-globes before you find your way home again. Your cosmic day is not yet over. You have only reached the middle point now, on Earth, the fourth earth-globe.

"How do we get home?"

All worlds follow one great plan. In little things they may differ, and in grandeur of spirit and growth. But the plan remains unchanged. You differ among yourselves, don't you? This is because you can reason now, and you can talk. Earlier, you followed instinct only -- now you have intuition, mind, and spiritual will. So from now onwards you will choose for yourself the path you take.

Never forget that you have two natures: one that is godlike, ever urging you to follow the pathway to the gods; the other urging even more strongly those who listen, to choose the downward way. You are the builders of Earth's future. The gods trace only the cosmic outline -- you have to do the rest. "Tell us -- which of the two paths are we following now?"

You are now at the turning point between them. Swept along in the vast, turbulent river of lives, you are now just past the lowest point of the great cycle of the Earth's day, where you leave the downward way to begin the long climb up the path of light. There is a battle of the waters at all such turning points on every planet-globe, and it is here that the dividing of the ways must take place.

"Dividing? Are we still in this river of lives?" We are all in it now, for this great sweeping river is made up of lives: lives that are evil, lives that are great in goodness, and all degrees in between. Some go upwards into a greater light; a few are so heavy with selfishness and wrongdoing that their very weight pulls them down to even more material realms and holds them there. Others simply go to sleep right where they are, to wait until the next river of lives gathers and rolls in, when they will wake up, to begin life's earthly lessons over again. There is no punishment or suffering involved, nor anything unjust.

"What do the animals do, and the trees and plants and stones? They aren't bad."

They too will fall quietly asleep -- even now they are falling asleep before our eyes as the river of lives begins its upward course. Here is the picture in a nutshell: all the kingdoms are free to go as high on life's great ladder as they can, but instinct is never enough. There must be intuition as well as godlike mind. The unready ones naturally drop behind, but there is no blame. They simply wait for another chance to grow and learn on our Earth.

"But what about the ones who are awake, who strive and climb and help others all along the way -- the ones with the light of mind?"

It is they who will build the higher globes. If they never cease striving and never forget to be kind, a shining destiny will be theirs, a progress ever higher until, the seventh trip around the earth-globes completed, they will enter a divine home, a shining world where only gods may dwell.

Meanwhile over the mountaintops there shines another Magic Door inviting the life-atoms to go still higher -- achievement and "perfection" have no end. Refreshed and rested now, they turn away even from that godlike home. Tomorrow they are off for new adventures, loftier worlds -- all but a few who, remembering the kingdoms far below, stop at the entrance and turn back. These hear, like bell-tones, the immortal words:

*Never will I enter bliss alone. Always and forever will I stay until the last and weakest among those struggling below have reached their divine home.*

So will it be, unceasing and forever.

## Introduction

*The world is a Mirror of Infinite Beauty,  
yet no man sees it.  
It is a Temple of Majesty.  
yet no man regards it.  
It is a Region of Light and Peace,  
did not man disquiet it. -- Thomas Traherne*

The ancients taught that the Earth is a living being, and it is indeed so. They saw in the rising and setting of the Sun and in the cyclic sweep of the seasons a sacred drama in which all nature took part; as, like a musical symphony, the year and its lesser divisions progressed through the four seasonal movements. They had few books, nor did they need them, for life itself was an inexhaustible volume of revelation.

There is great need today to point out the spiritual side of nature, to teach the oneness of all life, and to restore to scientific knowledge the ancient, lost reverence for the "web of life" in which we live.

As a generation we are so blinded with knowledge that we do not see the wonder behind even the simplest things, but live in a world whose taste is as the taste of ashes in the mouth.

It is sometimes said by materialists that there is no law in nature, no plan or purpose; yet Nature is indeed a living demonstration of the laws of cycles, reimpodiment, and cause and effect, of which Theosophy teaches. These and other habits, or laws, of nature apply to all grades or degrees of existence. That which occupies billions of years on a cosmic scale, takes place in an instant of time within an atom. The great is repeated in the small and follows the same pattern.

We can know the life of vanished continents by the still surviving trees growing in our gardens and forests. We can discover the traces of a once more active plant-life in the microscopic plants that can be found in any stagnant pool of water, swimming and darting around for food like the animals. The scrubby desert tea, found on all continents, is but an after-thought of the same great stock which formed the giant redwoods, pines and cedars. The low club mosses we carelessly crush under our feet on some hillside were once huge trees that formed the coal forests of two hundred million years ago.

The simplest events of nature, when understood, are acts of white magic. The change of the dragon fly from the crawling, brown water-nymph clinging to the bottom of a pool to the glittering, winged adult of the air, is a living symbol of the transition of the human soul from plane to plane.

In fact everything, in its form and habits, reveals its inner nature, and in so doing becomes a living symbol of abstract and spiritual qualities. It is the recognition of this which has led to the adoption of natural forms as a kind of universal symbolic language. Thus, in ancient times, a white lily suggested purity; a red rose, Love; the spring anemone, Frailty; the crocus, Cheerfulness; the laurel, Victory; and the olive branch, Peace.

Even today, upon important occasions of happiness or sorrow, we instinctively feel the futility of words and resort to nature's symbolic language. The Christmas Tree, the Easter Lily -- all gifts of flowers or of precious stones -- carry a message, often beyond the power of words to suggest. .

The great mystic and philosopher of the sixteenth century, Paracelsus, said that:

He who wants to study the book of Nature must wander with his feet over its leaves. Books are studied by looking at the letters which they contain; Nature is studied by examining the contents of her treasure-vaults in every country. Every part of the world represents a page in the book of Nature, and all the pages together form the book that contains her great revelations.

To rediscover Nature's treasure-vaults, we need no seven-league boots to explore the far corners of the Earth, nor a time-machine to transport our consciousness to past eras of Earth-history. By a study of that which is near at hand, we may understand both far-off lands and the distant past. Sympathy and analogy are the keys to great treasures of understanding and an ever growing feeling of kinship with all that is.

Considered thus, the hush preceding sunrise, the golden glory of sunset, the changing tempo of the seasons, the turmoil of wind and storm, all these become illumined with an inner meaning.

There is no event in nature which does not mirror in the small those laws which are cosmic in their greater manifestation. Our words, even the letters of the alphabet, originated in the ancient and primeval language of nature.

The world around us provides the here and now by which we can understand the universe, knowing a teaching to be true from our own observation and experience.

The materials for this book have been drawn from nature and from an extensive scientific literature. The motif and the spirit which infuses it is due entirely to the precious treasures of wisdom given to the world by H. P. Blavatsky and G. de Purucker.

The great sages of all time have urged us to seek for the soul of nature, to prove their teachings for ourselves.

It is with such a quest in mind that the following has been written.

Superior numbers throughout the text refer to notes in the Appendix.

---

## Brotherhood in Nature

There is in each region of the Earth an invisible, intangible essence or spirit that makes each section what it is. It varies in different places, it divides: the continents into great natural provinces separated one from the other by life-boundaries. Mostly we recognize this inner character by the feeling of the locality, and by its resemblance to or difference from some other place.

Like some continually sounding musical chord this 'oversoul' causes all within its province to vibrate in harmony with the keynote. Trees transplanted from one natural area to another undergo certain changes, birds become darker or lighter, or may change in size; in fact all forms of life adapt themselves in various ways to the overtone.

This quality or characteristic of a place, which we sense but cannot describe, other peoples have personalized as a god or deva. We may call it the 'holness' (1) of a place, a term adapted from Ecology, spoken of as a quasi-organism of which the plants and animals are as cells in a body. They see in a forest a living, evolving 'holness,' changing through the ever-shifting cycles like a living thing.

Seen by the mystic, all life rests within an invisible essence, shaped, sheltered, taught by it. This essence varies in different regions; it divides the continents into natural life-areas, natural states, nations, empires, quite apart from the political divisions men are continually quarreling about. Do you doubt that this is so? Why is it then that Southern California, Southern Arizona, part of New Mexico, and Northern Mexico are bathed in lilac atmosphere; and that the Mediterranean countries, South Africa, and Southwest Australia, as well as the coast of Chile, also have the same tinted atmosphere? So striking is it that anyone going from California to one of the countries mentioned finds himself strangely at home. There is the same type of vegetation, similar characteristics in the people, and in general the same feeling. In a sense, all of the countries or areas above mentioned are colonies of the same empire; not a political empire but an empire of nature. Is it not that the same spirit presides over each, and has shaped the flora and fauna of all to similar patterns?

---

## The Poetry of Earth

It is only when we sense the poetry of the Earth that we become aware that she is, as the ancients taught, a living being, and begin to feel the oneness and interworking of all life.

Animal-life is either directly or indirectly dependent upon the plants, for they alone are able to

manufacture food-substances from the elements. The plants in their turn are dependent upon the nature and direction of the winds for their life-giving moisture. Thus the world pattern of climate and life is produced, a checkered design of many shapes and colors.

In Southern California the rains come during the cool winter months, leaving most of their water on the slopes of the high mountains. To the east of the mountains lies what is known as a 'rain shadow' where the great Mohave and Colorado Deserts are situated.

The higher peaks are clothed with pine and fir forests, and are covered with snow during the winter months.

Between the high mountains and the sea is a region of winter-growth where the hills are covered with a heavy blanket of low dwarf trees and bushes known as chaparral; or, as often called, 'Elfin Forest,' for it actually is made up of dwarf trees and small bushes which have small, hard-surfaced, evergreen leaves, well fitted to survive the long, dry summers. Most of them are strongly aromatic and were used in many ways by the Indians and Spanish-Californians.

Beneath the shelter of the rolling sea of chaparral which covers hundreds of square miles of the lower mountains and hills grow a multitude of lesser plants; lilies and other bulb plants, and a host of flowering annuals. In the broad valley lie almost unbroken stretches of orange and lemon groves and great vineyards.

The chaparral region corresponds in both climate and plant life with the Mediterranean countries of Europe where a similar growth occurs on both shores of the Mediterranean, extending east to the Caspian Sea. Here are found the laurel, olive, cork-oak, aromatic herbs and a great variety of bulb and tuber plants. From the plants of this region most of our fragrant garden herbs such as sage, thyme, lavender, and rosemary have been developed and carried all over the world. We also owe the greater number of our lilies, tulips, and other flowers to the same area. In Europe this dwarf forest is known as Maquis.

In the Southern Hemisphere, at the same latitude, is the Cape Region of South Africa, where the westerly winds bring winter rains and a climate and vegetation very similar to that of California and the Mediterranean. In each case Nature has taken different species and shaped them to the same pattern, producing landscapes which are very similar.

At the same latitude in Chile on the west coast of South America there is almost an exact replica of the valleys of California. Here the pines of the high mountains are replaced by the monkey-puzzle tree, the scrub-oak and holly of the north by dwarf evergreen beeches, which with mimosa, colletias and others produce a cover recalling the chaparral and maquis of the northern hemisphere.

Southern Australia also has a region of winter rains in which the dwarf Mallee appears, a boundless waving sea of yellowish-brown bushes composed chiefly of dwarf acacias and eucalypts.

Each of these areas is characterized by a Mediterranean climate, by similar types of plants and animals, and by a similar civilization among the people.

Can it be that in the anatomy of the world the lands bearing chaparral -- found on the 30th degree of latitude are more closely related than we know? Is there something about that 30th degree that we have not yet discovered? I remember crossing it once when in Baja California, and it was startling to see the abrupt change from desert to chaparral *on the exact line*. And suddenly it struck me that the Great Pyramid and the city of Lhasa in Tibet are also on this 30th degree. I wondered why.

We are slowly awakening to the mystical side of Nature, just as we are to the idea of One Humanity, One World; to the fact that even oceans can no longer separate us from each other. Yet Nature, not only in her chaparral-growth but in a thousand other ways has been trying to teach us the same thing all down the centuries.

---

## Music of the Spheres

It was an old belief that an inner spiritual strength grew and accumulated in the solitudes of nature, and declined amid the noise and confusion of cities. It is certainly true that the closer we live to unspoiled nature, the keener become our senses and understanding, and from this intimate contact has arisen much of our finer culture.

According to tradition, which is often folk- or race-memory, the arts and sciences were taught to man by divine beings during the childhood of the race. This ancient knowledge like seed planted in the ground, produces a new national impulse when the time is right. It may again be here.

In ancient Greece, Pythagoras taught that the planets in their rotation and circling about the Sun sang a song, each planet giving forth a note or vibration. The resulting harmony, varying with the movements of the planets, he called 'the Music of the Spheres,' and explained that the different planetary aspects produced corresponding effects upon earth.

We cannot hear this celestial orchestra, but according to the wise men of ancient India all the sounds of Nature are directly related to one or another of the seven sacred planets. Since each planet is an expression of one of the seven universal principles of Nature, every sound we hear represents that principle which is strongest in it. Thus the tone of our voice may express anger, desire, suspicion, love, or some other quality, quite aside from the words we use. Our dog or cat may understand us by the tone of our voice and what it conveys, rather than by the words.

Both the early Aryans and the Buddhists of China and Northern India taught that the union or blending of all the sounds of Nature produces a single dominant note, the fundamental note of Nature -- the Great

Tone or *Kung* of the Chinese mystics. It may be heard in the rustling of leaves in the forest during a storm, in the dashing of waves upon a rocky coast, in the distant roar of a great city, or in the mingled voices of a crowd. If you listen, you will hear this fundamental tone, which is the middle F of our western musical scale.

John Muir, in his *Mountains of California*, describes 'A great wind-storm in the Sierra Nevada Mountains. He says:

Even when the grand anthem had swelled to its highest pitch, I could distinctly hear the varying tones of individual trees -- Spruce, and Fir, and Pine, and leafless Oak -- and even the infinitely gentle rustle of the withered grasses at my feet. Each was expressing itself in its own way singing its own song, and making its own gestures.

He found a tall, sturdy tree into which he climbed, clinging like a bird to a swaying reed, and of this he says:

I kept my lofty perch for hours, frequently closing my eyes to enjoy music by itself, or to feast quietly on the delicious fragrance that was streaming past. (By permission of Appleton-Century-Crofts Inc.)

It is amid the deep forests and dashing rivers of Canada that the *voyageurs* sometimes hear voices and singing in the tumult of the waters, voices which, strangely, are never quite clear enough to be understood.

The celestial 'music of the spheres' is repeated in the sounds we hear on Earth, and the music of nature formed the inspiration from which the various musical systems originally derived.

In the melodies of Vedic India the Great Tone formed the starting-point, or keynote, and the other sounds were grouped around it. The seven chief sounds were found to correspond to the cries of the goat, peacock, ox, parrot, frog, tiger, and elephant.

Mythology contains many references to the significance of sound. There is the syrinx of Pan with its seven reeds, the lyre of Orpheus with its seven strings, and many others. According to old tales, it is because of the correspondence of sound with the forces of nature that music and song are able to produce magical effects.

Every time we speak, the tone of the voice produces an effect upon all who hear; it carries a message aside from the words spoken. Plato spoke of seven-principled man as "the seven-stringed lyre of Apollo."

Go into the woods, and with eyes closed try to identify the birds, animals, and insects by the sounds they make. Listen to the moods expressed in their voices, and you will know something of how animals talk and how they understand each other. Then hear the Great Tone of nature by the blending of all sounds in

one.

The Music of the Spheres is a very real thing, for everything that moves produces a sound and even the atom is in constant activity. In most cases the sound falls outside the limited range of our senses, but it is there just the same. As G. de Purucker has said:

The musical harmonies throughout Nature are going on all the time. Everything that moves, sings as it moves; and 'all things are moving, Nothing is absolutely inert, consequently everything sings, and the stars in their majestic cyclical motions, and the planets in their orbits, sing the Song of the Spheres; but our senses are not attuned to take it in. . . .

They sing, all these entities, from the music in their own spirit-souls; they can do naught else but sing. They are harmony in their inmost being, and this harmony wells up as from a fountain and comes out and expresses itself in song. -- *Questions We All Ask*, Series I, pp. 429, 430

---

## Opening the Book of Nature

Each part of the world is characterized by a particular kind of landscape and climate. It may consist of desert or grassland, steppe or woodland, or perhaps pine-forest. Or, in the far north, of barren lands or eternal snow. It would take years of travel, and great expense, to visit all these countries, but in Southern California -- and the same is true in large degree in other parts of the world -- we may see many of these types of life-zones within a day's ride.

Deserts can be studied not only in the desert areas of the Southwest, but among the sand dunes of a beach or on some barren, rocky hillside. The steppes of Russia become vivid to us if we visit the steppes of our homeland, for these regions are simply grassland, sprinkled with the brush-covered hills and having a few trees along the watercourses. A typical California landscape, one might say.

If there are high mountains near, so much the better. At Covina we may climb "Old Baldy" and pass through the same life-zones we would meet in going far north to the Arctic Circle. We would find flowers, trees, insects, and birds belonging to all the divisions from desert to Arctic, and be home in time for supper.

Nature has a habit of repeating herself everywhere. And so, if we know where to look, we may find examples of most of the regions of the world close at hand. Why? Because the world is very old, and climate has changed many times, so that California, for instance, has been in turn hot and moist, hot and dry, semi-desert, and even cold, not once but many times.

So it is that in the desert we find among the rocks clumps of bunch-grass, relicts (2) of a rich grassland known to have existed some 1500 years ago. On the mountains are pines, incense cedars and fir trees, descendants of great forests which migrated from the frozen North during the Ice Age. In the hotter portions of the desert we may find elephant-trees and tropical plants, relicts of a migration from the south at some far distant time.

The creeping club moss found growing among the rocks once formed great forests which in their decay became the coal we use today. These coal-forests flourished some 200 million years ago. The spry little fence-lizards -- "Sunny Jim" we sometimes call them -- resemble the stock from which the sixty-foot dinosaurs of the Age of Reptiles sprang, reached their climax, and passed away. The little lizard is still with us. Every living thing has its story to tell, if we will only open our understanding.

Relics (3) of Lemurian (4) and Atlantean (5) civilization may not be seen, today, but if you wish to know what a landscape looked like during the time of Lemuria, go into any forest of pine, fir, or other coniferous trees. The coniferous forests were developed, and spread over the entire Earth, during that period.

Later, in Atlantean times, broad-leaf flowering trees and shrubs, along with the mammals, had their Golden Age, and have been declining ever since. Still later, with the Fifth Root-Race (6) as the chill of the Ice Age came on, many plants became dwarfed, so annuals developed, for they could pass the cold winters in the form of seeds.

The native plant and animal life we see around our homes had its origin and climax ages and ages ago, and now survives as a slender stream of life, embodying and re embodying, while mountain-ranges have risen, are worn down to the plain, and have risen again.

---

## Our Atlantis

Atlantis was far more than a mythical continent which traditionally sank over night with all its inhabitants. Atlantis was in fact the entire land surface of the Earth as it existed over a period of many millions of years, and consisted of continents and islands, both large and small, much as it does today. Then when its time came, hundreds of thousands of years were required for its destruction and breaking up.

Today, as all through geological history, land is slowly rising in some places and sinking in others, bringing about a continual change on the face of the Earth. Yet at certain cyclic times these slow movements of the Earth quicken, and sudden destruction may overtake some fragments of ancient lands with their wayward populations. The folk memory of these cataclysms lingers on for ages, long after knowledge of the era itself has been forgotten.

With the gradual submergence of continental masses, portions remain to be built into other lands which are emerging from the sea. Thus it is that most countries have places which can be said to have once formed a part of the Greater Atlantis, and perhaps of Lemuria as well.

While we have little concrete evidence of Atlantean peoples save by tradition and myth, the plant and animal life of the era are still represented by living types, many still bearing Atlantean characteristics.

There lies a sunken land, off the coast of California, which is some 200 miles wide and 1,000 miles long, known to geologists as Catalinia. On it are mountains 12,000 feet high whose summits emerge from the sea to form the Channel Islands of California. There are great canyons, many river channels, and the depressions of ancient lakes. To the north near Carmel Bay a canyon extends out to sea which is larger and deeper than the Grand Canyon of the Colorado.

All this area is supposed to have been above water at a time when Atlantis was at its peak. Later it broke up and large portions submerged. Since then there have been periods of uplift and depression affecting various parts of the region.

San Pedro Hill near Long Beach, La Jolla, Mount Soledad, and Point Loma are all land-locked portions of this great island. Still clinging to the seaward slopes of what is now Torrey Pines Park, sixteen miles north of San Diego, are three thousand of the rarest and most interesting pines in the world. The Torrey Pines, scattered over the hills and canyons of the Park, beaten prone by continual winds in exposed places, overlook the ancient submerged land; while 180 miles to the northwest across the waters, on the Island of Santa Rosa, a colony of a thousand Torrey Pines still remain.

Beneath the pines is the luxuriant undergrowth of a chaparral, while creeping up from the sand dunes long arms of sand verbena, and beach primrose intermingle with the chaparral.

Botanists believe that these trees, now so rare, once covered much of the mainland of California, as well as the area now covered by the Pacific Ocean. During the latest sinking of the coastal islands, Santa Rosa Island was separated from the mainland; and today these two colonies of Torrey Pines are all that remain of a once great forest. Very interesting fossil remains of a pigmy elephant are also found on Santa Rosa Island.

The Torrey Pine is unique among pines in having the largest seeds and the largest needles, and unlike many pines it requires three years to mature a cone. The trees grow rapidly and do not live much over two hundred years; yet when we think of the continual stream of imbodiments by which a tree passes on its life essence through its descendants, we may think of these pines as existing on these wind-swept cliffs for many thousands of years.

In every section of the world there are to be found similar remains of ancient lands and life, awaiting the explorer.

---

## Dryad, Hamadryad, and Sequoia

Few have stood before the Big Trees, the giant Sequoias of the Sierra Nevada Mountains, who have not sensed and wondered at the brooding consciousness of these veterans which have seen the changing cycles of thousands of years pass, and themselves have stood unchanged, save for steady growth.

I well remember my first acquaintance with the Sequoia. The Big Trees seemed like something from a different age, with a suggestion of the oriental. Then, as I saw a hollow log which once had sheltered a troop of cavalry, and a little later a giant with a trunk 35 feet in diameter, I became aware of the great size of these living relicts. I learned that these giants had stood for three, or even four thousand years, and I thought of the many nations of men which had risen to power, and each in turn had crumbled before some barbarian invader during the life of this tree.

The earliest Sequoias known have lived in the Jurassic period of the Age of Reptiles when Dinosaurs sought their welcome shade. They saw the Age of Reptiles vanish and a new age of flowering plants and mammals appear, and still they thrived, reaching their climax in the Miocene, when they were spread over the world.

Then, several million years ago, they began to decrease, until today the genus is represented by the Redwoods of the California coast and by the grandest of their race, the Big Trees of the Sierra Nevada Mountains. Coming down the long vista of geologic time, these trees may well awaken memories of Lemuria and Atlantis.

Speaking of the Sequoia, Prof. E. W. Berry says: "We cannot but wonder at the persistence of this type, practically unchanged for eon after eon, while all around were dissolution and evolution."

*Sishtas* ([7](#)) these are; that is, 'remainders,' living relicts of a line which has endured for millions of years. It is in these terms that we must think of the consciousness of these veterans, embodying and re embodying through the ages, as continents and mountains rose and fell and rose again.

It is this sense of an overshadowing consciousness which led the Greeks to personalize it in the Dryads and Hamadryads, and weave stories and legends about them. But every race has had its tree-fairies, excepting those occasional peoples who think in terms of board-feet and wood-pulp, for about the inner consciousness of trees fancy has woven a poetic imagery of young and lovely wood-nymphs inhabiting groves and forests, and of Hamadryads embodied in individual trees.

In ancient times the Hamadryad was considered to be the tree itself, both the woody frame and the indwelling life, and this was symbolized by the Hamadryad as a tree-fairy whose lower portion was a woody trunk and roots. But the Dryad represented the soul of the tree, the tree's inner nature, for a tree like a man is composite, save that it has fewer principles unfolded. It is thus that great truths are

preserved in myth and fairy-tale, which would otherwise be lost.

---

## Vernal Pools

The coastal mesas of Southern California, for a distance of several miles from the sea, enjoy the refreshing moisture of the fogs which frequently sweep inland from the Pacific during the night.

In this coastal belt, much of which is covered with chaparral, there are many flat basins or depressions blown clear of the topsoil, exposing a compact clay which prevents the water from sinking into the ground. These depressions are filled with water by the winter rains, forming shallow ponds which are called Vernal Pools, and in the life of these pools we may see demonstrated some of the most interesting teachings of Theosophy.

We may see in their changing life an analogy to the successive life-waves of a globe. We may see the seeds of the life of a previous year, as in a minor manvantara, (8) earth-cycle, springing into renewed activity as the climate and soil are prepared, each stage from water-filled pond to desert-dry lake bringing forth its special life from seeds hidden within the ground. All cooperate and work together, each in its proper place, even as on the earth continents rise and fall, and climates change, to provide suitable homes for the different Races, the hosts of lives which follow one after the other.

I once took a spadeful of earth from one of the vernal pools of Kearney Mesa, and placed it in a bird-bath where the following spring the whole series of plants could be seen coming into flower each at the proper time.

In the early spring when the pools are full, pond-scum, duckweed, and a little water-fern appear. Water insects crawl over the bottom, and little frogs ('spring peepers') lay ribbons of transparent eggs which soon hatch into swarms of small black tadpoles. These little creatures soon become frogs and make the night vocal, if not clamorous, with their shrill bag-pipe music.

In the next stage, slender rushes spring from concealed, rootstocks and these with other marsh-plants crowd the margins. The dragonfly and damselfly nymphs crawl from the water and emerge from their cast-off skins to fly about with shining, glittering wings.

As spring advances, the water-plants having completed their cycle wilt, and a new type of plant-life fills the now half-dry pool with a dense carpet of the Blue Lobelia. The blue in its turn changes into a Vivid golden yellow as flowers of the Gold-Fields appear, and with the complete drying of the pool all succulent growth dries up and is blown away. Now in the place of water-filled depressions reflecting the sky are many miniature dry lakes, filled with the vivid crimson of the pungent Pagogyne or Mesa Mint.

The pools are now completely dry, and deep cracks and fissures cut far into the sun-baked clay. In these

fissures little frogs spend the day, coming out at night to feed; and so survive until the winter rains. The final step in the series from water to desert occurs in summer when the spiny Shepherd's Needle and the Turkey Mullein take possession. It is significant that the plants of these pools are different from those of the surrounding mesa and will not grow there, nor will the mesa-plants grow in the pools.

Whence came the plant-life of the Vernal Pools? Individuals of the various kinds occur *scattered* throughout Southern California, but here they grow in dense masses. A count made one April showed from 800 to 20,000 individual plants growing in a single square meter (9) of ground. Here they form an association, or a series of interblending associations, in which the little lives cooperate as though part of a living organism.

After the Ice Age, when the coastal mesas first rose from the sea, the climate gradually became warm and dry, but in a narrow strip along the coast many forms of life continued to live on, as in the Vernal Pools. So every year the Greater Cycle passes in review, from water to marsh, from marsh to desert, within these colorful plots of ground -- had we but eyes to see it.

---

## Timberline

On a high shoulder of 'Old Baldy' at an elevation of 9,500 feet, a mountain juniper is sleeping through the long winter. Almost covered with drifting snow, it is well protected from the icy wind. Battered and split by lightning, twisted and gnarled by constant winds, its spreading roots still cling to the grey granite ridge.

One inch of radial growth in sixty years! How many men live to be sixty? And this tree is six feet in diameter! How many of our proud nations last a third of the life of this tree?

At some distance from the tree large root-trunks heave out of the ground, only to vanish beneath the surface again; suggestive of nothing so much as the smooth coils of a Chinese Dragon.

Unlike the Giant Sequoia, there is here no overwhelming size to impress one, but as one meditates beneath its shade there grows the conviction that here is a life which has endured and endured for ages. For the occupancy of the populous San Gabriel valley far below, with all its eucalyptus and orange trees, might be recorded in two inches of growth on this great trunk, growing not in some sheltered and well-watered valley, but on an exposed and storm-swept granite ridge.

On various pilgrimages to the mountain, for it is more than a mere climb, I have often sought out this ancient tree and breathed the delightful aroma of its foliage, while letting my mind search back through the ages during which it has lived.

As a species the junipers are far older than the pines, being among the earliest of the coniferous trees to

develop. They are also more widely distributed, being found from the Arctic Circle to the Highlands of Mexico, as well as in the West Indies, the high mountains of Africa, in Sikkim and Central China, in Formosa and Japan; usually under conditions calling for endurance of bitter cold, intense heat, drought, and severe wind. The juniper is often used as a symbol of fortitude and endurance under continual difficulties, and was the name chosen by the Franciscan, Junipero Serra, when he took orders and came to California to found the first mission there.

We must not think however that the plants and animals we find in the desert and on mountaintops would be happier anywhere else; for they would not, but would in fact probably die. Those in any kingdom who have chosen the borderlands of ordinary existence cannot turn back to the soft and comfortable life without disaster to themselves.

---

## The Water Ouzel

It was a wild night just before Easter, and at Camp Baldy, at an altitude of 4,300 feet, several inches of snow had fallen.

Early the next morning I went down to where the bridge crosses the turbulent San Antonio Creek, and was immediately attracted by the ecstatic melody of a Water Ouzel who was flying around and around beneath the bridge, and singing as though unable to contain himself.

The song of the Ouzel has never been described so beautifully as by John Muir, in his book, *The Mountains of California*:

The more striking strains are perfect arabesques of melody, composed of a few full, round, mellow, notes, embroidered with delicate trills which fade and melt away in long slender cadences. In a general way his music is that of the streams refined and spiritualized. The deep booming notes of the falls are in it, the trills of rapids, the gurgling of margin eddies, the low whispering of level reaches, and the sweet tinkle of separate drops oozing from the ends of mosses and falling into tranquil pools. (By permission of Appleton-Century-Crofts Inc.)

As I watched, the Ouzel would often dive headlong into the icy stream, and after a few moments reappear some distance away. It was rather startling to see a bird flying in the air suddenly dive into the water, fly upstream under water, and then emerge and continue his flight in the air.

Then he did something I had never seen done before. Starting at the margin of the stream, the Ouzel began, walking upstream; entered the water and, still walking, now with outspread wings, he was soon completely submerged in the full strength of the torrent as he continued walking under water for perhaps twenty feet. Then he sprang into the air, singing as he flew, to where I suspect a nest was hidden up

under the bridge-timbers. In the meantime the mother bird was a quiet though admiring spectator, standing low on a foam-swept rock, or higher up under the bridge.

How could a bird do this, in the full force of that swollen stream? The spread wings appeared to be slanted against the current, and forced downward by the pressure so as to press against the bottom. If this were so, the bird was using his wings as a canoe-man uses his pole to force his way up the rapids. But the Ouzel was also using the swift current against which he was moving to help him, for, in fact, had it not been for the current he could not have remained on the bottom an instant.

The Ouzel, in appearance resembling an oversized wren, has none of the characteristics of a water-bird, but by intelligence and skill he has learned to excel them all. Without webbed feet the Ouzel swims (or rather flies) under water with his wings; he walks upon the bottom of the swiftest stream, and when he is submerging, transparent eyelids fold over the eyes from side to side to protect them from the swift water. His song compares with that of the wren and mockingbird, who are near relatives, and the family to which he belongs has been traced to the Himalaya Mountains, whence it is supposed to have spread to many other of the mountain-systems.

He who would make the acquaintance of this bird must seek the foaming, cascading streams of the high mountains, where he will find the Ouzel dipping, or bobbing upon some rock, flying below the water, or perhaps diving to some mossy nest behind a waterfall. He seems the very embodiment of the spirit of the mountain waters.

---

## Mountain Sanctuary

I remember a hill in western Oregon, isolated, worn down to a mere thousand feet of height; yet never have I stood upon its summit that I did not feel myself to be on holy ground. I could find no tradition or history regarding it; only an ancient stone wall on the summit, built by some one unknown, and about its base a number of sandy beaches, where a long forgotten sea once lapped.

On another occasion I camped beside a little-known lake and mountain meadow in the "High Cascades," and all the time I was there I was unable to shake off the feeling of being surrounded by many people, friendly but strange.

Twice on the chaparral-covered slopes of Point Loma, California, I came into an area on which a peace beyond the power of words to suggest lay like a benediction. . . .

There is an atmosphere about certain mountains, something which in an older age would be looked upon with reverence; some inner fire which touches one with a sudden twinge of nostalgia, of longing for the spirit. It is like some unwonted fragrance bringing with it a flood of childhood memories. We are separated from the inner worlds by veils, largely of our own weaving, and it is small wonder if in

regions unspoiled by man, glimpses are now and then caught of inner truth and beauty.

It is not only a haze of smoke and gases which hovers over our great cities like a pall: there is a much more potent miasma of human emanations, thoughts, fear, hates and passions which literally poison the inner man, and against which he instinctively hardens himself.

It is reasonable to suppose that many localities affect people for good or for ill, according to the thoughts and acts of the people who have lived there before and whose subtle influence still lingers. But this does not explain all. The earth itself is a living being and has not only currents in the air and in the sea, but also spiritual currents and forces following their own course and bringing to certain focal points conditions favorable for inner growth. Such places of natural peace and quiet may have been chosen in ancient times as locations for shrines and temples and later impressed by the thought and meditation of many generations of wise and holy men.

Only now and then does one find a peak which awakens a feeling of reverence. Size apparently has not much to do with it, nor has mere beauty. Yet where the currents flame forth, there one knows and pays respect. He may sense the prickle of awareness and the feeling that just around the corner he may come upon heaven knows what stately presences, or perhaps if he be one of uneasy conscience, merely the suspicion of being watched.

It is this which made the Irish poet "A. E." exclaim,

Earth-breath, what is it you whisper? As I listen, listen, I know it is no whisper but a chant from profoundest deeps, a voice hailing its great companions in the aether spaces, but whose innumerable tones in their infinite modulations speak clear to us also in our littleness. Our lips are stilled with awe; we dare not repeat what here we think. These mountains are sacred in our Celtic traditions. Haunt of the mysteries, here the Tuatha de Danaans [\(10\)](#) once had their homes. -- *The Mountains*

America, like the Celtic lands, has many hills and mountains long revered by the Indian peoples. We once stopped at a service station in Tecate on the California-Mexico border, and as an old Mexican passed I asked the name of a high mountain to the west -- Mt. Tecate on the maps. He replied, "It called Coochma, very high." I said, "What does the name mean?" and he answered, "It means high sacred place, place of initiation." And such it was, for no one knows how many centuries. Formerly a grove of very large cypress grew on the cloud-capped summit, but the white settlers soon cut down the grove and sold it for firewood. Fortunately, most of the mountain is now owned by those who fully appreciate its beauty and traditional significance.

In ancient times the student of the mysteries had few books; in many places books were not known at all. He lived close to nature and knew himself to be a part of nature. His traditions were written not on paper but on the mountains and lakes of Earth, and in the starry constellations of the heavens. The stories were told over and over again, and it is small wonder if sometimes the meaning was lost, the

spirit fled. Where is a race which has not its symbolic Mount Meru, ([11](#)) its Olympus, its sacred mountain? Where is the people who have not venerated the Sun and the Stars, the Wind and Rain?

---

## Reverie

Gradually I became aware that the trees were talking. "What is that strange being so near to us?" asked a slender young pine.

With a rustling of foliage a storm-battered veteran replied:

"That is a man. He lives at the bottom of the world beneath that ocean of haze. He comes up here in order to see the sun and the blue sky and the mountain pines."

"I wish we could go and see things too, but I am rooted here, and can't move!"

"We too travel," replied the veteran, "only you don't remember. We are not this wood and bark that is rooted in the earth; we are the life which imbodyes and reimbodyes in tree after tree for untold ages. Once we lived in the far north. Then came continuous cold and snow, and we traveled during life after life ever southward, spreading over this land in great forests.

"This mountain-range was not here then. An older range stood in its place, one so old that it had worn down almost to the sea, which then lay where the haze now hides the valley. Then during the Ice Age the present range arose, and after a long time the climate again became warm, destroying most of the pine-forests whose seeds, excepting where they fell into the cooler canyons, could not grow. Those of us who were left then slowly crept up the mountains to where we are now, for here we have winter snows, plenty of rain, and clear pure air."

The little tree again had a question. "But why do we *stay* here? Why do we stay in the *south*? Why didn't we return to the cooler north when the climate became too warm?"

After a long pause the older pine began: "We stay because we have a duty here. We are the Seeds of Life from which new forests will grow and spread when the cycle for that returns. It is here and on other high mountains that the colonies of northern life are preserved until that time."

The cry of a mountain jay startled me; I heard no more, but reached for my pack and started the final climb to the summit.

---

## Angels of the Sea

'Angels of the Sea' -- those gentle fogs which come stealing inland from the sea of an evening in certain desert places, and leave the trees dripping with moisture when they depart.

In Lower California, which is very arid, a condition known as a fog-desert exists. Here for long periods of time -- sometimes and in some places for several years -- there is no rain whatever. Yet the plant-life there is like that of a jungle, composed as it is of giant cactus, festooned with streamers of air-breathing plants which obtain all their moisture and all their nourishment from the air.

Here one finds a dense undergrowth of great variety, because through much of the year a fog-cloud sweeps in from the ocean every evening and remains until mid-morning the next day. For this period of time each day the vegetation is wet, in fact dripping, with life-giving water.

Is it any wonder that the Ancients personified the winds and clouds and looked upon them as agents of Divine Beings? Nay, as Divine Beings themselves. Vayu, the Vedic God of the Air -- the Indra of a later day -- with his 'daughters' the Maruts, who bring rain and hail, the tornado and the summer breeze, the life-giving fog or mist -- 'angels' indeed these are, making 'the solitary place glad' and the desert to 'blossom like a rose.'

---

## The Fog Sea

One calm evening in western Oregon, I lay on a grassy hilltop and watched the earth-breath stream upwards from a freshly plowed field in the valley. Many ribbons of vapor, like smoke from burning incense, were rising and expanding to form a film cloudlet hovering above the ground.

As I watched, this grew and spread to mingle with similar cloudlets from other fields and bits of marsh, weaving a netted veil over the land from which it rose. Meanwhile the Sun was sinking behind the western hills, and night soon dropped a curtain over the scene.

The following morning I returned, climbed the hillside through dense and dripping fog, to break through it into brilliant sunlight as I neared the summit. As far as eye could see lay a billowing sea of cloud, a silent ghostly sea, now dashing against the hilltop islands, now silently falling back. Overhead a few lazy clouds were drifting in a deep blue sky. The illusion was so perfect that the city and populous valley, hidden beneath the cloud-sea, seemed but a half-forgotten memory.

Just as I entered the fog on the way down, in taking hold of a rock for support I was surprised to see that it contained a number of sea-shells. These shells, now fossils imbedded in sandstone, marked where an ancient beach once lay, just where the present sea of fog dashed against the hillside.

I later learned that this fragment of beach had been formed by the Willamette Sound, a body of water which filled the valley thousands of years ago, and I was able to trace the beach for some distance, collecting many shells and leaf-impressions left in the rocks.

Curious piles of granite near the base of the hill were said by a visiting geologist to have been left by icebergs floating from the distant Cascade Mountains. Long ago glaciers cut deep canyons in the high mountains, and granite rock fell on the surface of the ice, to be carried down to the Willamette Sound. Here it floated off on icebergs broken from the glacier, until the mass of ice melted and turned over, dumping the rock on the bottom of the Sound.

Bit by bit the story began to unfold, but I shall always wonder if Earth does not hold a memory of her past and sometimes use old patterns in her drama of the clouds.

---

## The Cloud

One hot dry summer day I climbed a 5,000-foot peak in the Oregon Coast Range, camping on the summit over night. The next morning a gentle rain was falling, and I found the peak covered with a cloud. Glimpses of the sunlit valley were seen, while far away other peaks, each with its own moisture-giving cloud-cap, appeared, marking the Cascade Range for a distance of 150 miles.

The wind was blowing hard, and the cloud was not composed of the same particles for any two successive minutes. Moreover, the air over the mountains as well as that over the plain must have contained the same amount of moisture. At times, the cloud even moved for a short distance against the wind.

Out of the visible into the invisible for a brief instant; then, 75 miles away, into the visible again it moved for another brief instant of time. Then once again into the All.

Look beneath each cloud-cap and you find pointed alpine-firs, mountain- and moisture-loving pines, ferns, and mosses. 'Arboreal islands' some have called the mountaintops, these areas of northern life, within a warmer, dryer climate -- life which could not exist without these messengers from the sea, these 'angels of the sea,' as John Ruskin called the clouds.

Let those who wish speak of temperature, rising air-currents, etc. But these do not explain all, for Nature is a wonderland of mystery in which the simplest event is often the least understood.

All trees, flowers, clouds and the droplets of rain that compose them, have their analogies in the invisible world, and if we will observe, reflect, and compare, we shall know the *Reality* behind the Appearance that we call 'Nature.'

---

## The Kingdom of the Clouds

We all know how dew condenses on the ground. In the case of fog, when the temperature falls below dew-point, the surplus of water vapor which the cool air can no longer hold condenses about innumerable specks of dust floating in the air, to form a cloud or fog. These minute particles are all similarly electrified and so repel each other, which is one reason why a fog never rains; although the moisture will often collect in abundance on the leaves and trees and blades of grass. Indeed, under some trees condensations and dripping is often so rapid it may appear at times to be raining.

Science calls these land fogs "radiation fogs," and explains that they occur when the night is clear, with sufficient water vapor in the air, a high dew-point, and a gentle breeze. As the lower air is chilled below the dew-point, it condenses into a mass of visible cloud, which *seems* to move and spread as more and more air is cooled.

Once the process of fog formation has begun, it continues through the hours of darkness, and as more and more air is cooled, fog lakes and fog seas are formed, often hundreds of feet in depth.

With the coming of morning, the sun's rays warm the ground and the lower air, which can again reabsorb the surplus water vapor, now clear, thus giving the appearance of the fog lifting. Then, as the warm air begins to rise, more and more space is cleared of fog, until finally the remainder is broken into fragments and carried upwards on the rising air currents.

If one climbs a hill through hundreds of feet of cloud to the sun-drenched summit, and notes the temperature as he climbs, he will find a continual cooling of the air as he rises, until at the top of the sea of fog the air becomes increasingly warmer as he continues to ascend. This elevation at which the air ceases to become cooler, and instead becomes warmer, is known as a temperature inversion, and determines the upper limit to which the fog rises.

Those who have studied the upper atmosphere tell us that the troposphere, or region of storms and clouds in which we live, extends to about seven miles above the surface of the earth. The air steadily decreases in temperature throughout this belt, as one ascends, to some eighty degrees below zero Fahrenheit. Above the troposphere lies the stratosphere, in which clouds do not appear and in which the temperature not only ceases to become colder but, as we ascend, actually becomes warmer, reaching at a certain high level 750 degrees.

The belt or line of division between the troposphere and the stratosphere is called the tropopause, and corresponds on the large scale, to the temperature inversion on top of the fog sea in the small. We may, if we wish, think of our fog-swept hillside as a small division repeating many of the characteristics of the troposphere, and as we look at far distant clouds high in the sky we may know that they, too, are located on similar invisible temperature inversions, and understand why so many are at the same height. Often

we may see several levels of clouds in the sky at the same time.

There are few things which illustrate so clearly the illusion of appearances as a study of the clouds. The commonest of sights, they still contain the greatest mysteries.

---

## **The Rhythm of Life**

Beginning with the first, faint coloring of the eastern sky there is a period of morning song among birds which continues until the sun has risen, when the serious business of finding food begins.

All through the course of a warm sunny day, the chatter of bird-calls and an occasional snatch of song may be heard in the woods. But as the sun sinks below the horizon there falls a strange hush. Not a note is heard. Then comes the silvery voice of the Veery, the Eastern thrush, singing, "Oh, holy, holy, spiritual, spiritual," as meadowlark, robin, bluebird, oriole, and a host of smaller birds burst into their evening song.

The day is a cycle, and sunrise and sunset are times when the veil between the inner and outer worlds thins; something from within touches the heart and all Nature responds. The birds respond with their morning and evening song, the plants with the opening and closing of their flowers and other forms of life in other ways. To quote Katherine Tingley in *The Gods Await* (p. 161):

The first three hours of the day . . . are the great opportunity. He who does not rise with the sun loses an immense amount of power. He who rises before the sun, and by daybreak has finished with the duties of this plane and what may be necessary for the care of the body, and, is ready to step out with the sunrise and work with the sun -- he has the cooperation of a force he little knows of -- the vibrant blue light behind the sun.

The four sacred seasons of the year are repeated in the four quarters of the day, and every rising of the sun brings with it a renewed life -- indeed, a new Spring for the cycle of that day.

In Spring, the sunrise of the year, songbirds begin to arrive from the South. Soon flowers appear, and there is a stir of new life everywhere.

In ancient times, man knew the inner meaning of Nature, knew himself to be one with Nature, and lived in harmony with the Great Mother. Spring is the time to study bird migration, and in doing so, to keep in mind that we are studying one of the great mystery-dramas of the Earth.

Records of bird migration over a number of years show that the time of arrival of any species is closely linked with the growth of vegetation. If the plants are late, the birds will be late also. So it is that by watching the life about us we come to sense the rhythm and pulse of nature, which, like an undertone,

binds all things together.

There are many unsolved problems connected with the migration of birds. How do they know the proper time? How do they find their way over thousands of miles, flying as they do at night? And how are they able to travel for such long distances?

The Golden Plover, for instance, flies without stopping from the Aleutian Islands of Alaska to Hawaii, and then from there to the Marquesas Islands, returning over the same route in the Spring.

Bird migration has its touches of humor also, for recent evidence shows that small birds sometimes ride pick-a-back on larger species, their little chatter mingling with the call-notes of the others.

In California many birds migrate up the mountains in Spring, where they find the same conditions that exist far to the north.

Migration has many forms. It is universal. There is the seasonal migration of birds, the metamorphic migration of insects, such as the dragonfly, from a life in the water to a life in the air. Then there are great racial migrations of plants, animals, and men, brought about by climatic changes and other causes.

The peregrination of the human soul between incarnations through the globes of the earth-chain and the seven planets may be classed as the supreme form of migration. There are wheels within wheels, and cycles within cycles for the rhythm of life pulsates everywhere.

---

## **Robin Round-the-Year**

It is a strange thing how certain sounds, or perhaps the fragrant odor of pine or sagebrush, or the salt tang of sea air, will sometimes open floods of almost forgotten memories. To each one are his own keys of recollection, according to his experience.

Winter had been unusually warm and dry for Southern California and migrating birds few, when one night in mid-January the temperature dropped to 31 degree, bringing an increased briskness to the step of even the elderly. As I was walking across the campus that morning, a peculiar chirp I had not heard for years caught my attention. Could it be, or was my memory playing tricks? No, there it was, a single robin in that live-oak, chirping in a characteristic manner not to be mistaken for any other bird.

. . . I was again back in my boyhood days in northern Ohio; working out the life story of the robin, watching for the first arrival in the spring,, noting how the mother bird shaped her nest, studying the rearing of the young, the first lesson in flight, the gathering into large flocks in summer and the sudden departure in autumn.

Seen as a whole, the annual cycle of the robin displayed a structure and movement in striking harmony with the changing tempo of the seasons. In fact the impression received was of some unseen and unheard orchestra, to whose every mood the birds responded.

First, with the arrival in the spring there was a period of exuberant song, of mating, the establishing of individual rights to feeding grounds, with many bloody combats. This activity soon quieted into the sober business of nest-building and the endless task of gathering food for the nestlings. The male was now too tired to do much singing, save at the ceremony of morning and evening song, in which all birds take part either with chirping or song.

After the young robins were ready to fly, the male bird took them to a nearby swamp where they spent the night, returning in the morning to the nest where the mother was incubating a second set of eggs. In early summer, when the second brood was ready to fly, the entire family joined the rapidly increasing flock which now numbered about a thousand. During the day the flock broke up into a number of smaller flocks and family groups, to roam merrily about the country harvesting fruits of many kinds, as fancy chose. As the season advanced, the desire for companionship became stronger, disagreements fewer, and the flock became more and more a unit.

The robin roost was very interesting. It consisted of a five acre field near the swamp, which had grown up to a dense mass of brush and young trees. This field was joined on three sides by a forest of tall trees. The first robins would begin to arrive shortly before sunset, alighting in the nearby trees where they sang and chattered noisily. Every few minutes new arrivals would come flying in from all directions. Then shortly after sunset, as though upon some signal, there fell a hush. Not another sound was heard, as group after group flew down into the brushy roost and took their accustomed place for the night. I frequently slept rolled up in a blanket beneath the roost, with notebook and pencil at hand. Before sunrise the birds were all in the trees, and after a short morning song, departed in small flocks to some favorite feeding-ground.

With the coming of autumn a new phase appeared. The family groups were completely merged in the flock, now numbering nearly two thousand. Frequently a dozen kinds of birds might be seen accompanying the robins as they roamed through the woods. A spirit of expectancy and suppressed excitement seemed to animate the flock, which often did strange things, much of which was suggestive of spring. There was a minor period of song, but in sporadic snatches rather than the full-throated outpouring of spring; many birds made halfhearted attempts at nest building, only to abandon the work and dash madly after the drifting flock.

Finally one night in October, the robins flew to their roost as usual, but some time during the night quietly departed for the South. The next day a sudden storm of sleet later turning into snow swept most of the leaves from the trees, and left the countryside covered with white.

Somehow the long-awaited message had been received, for next day not a single robin could be seen, and I was left with the feeling of having seen a fleeting glimpse of one of Nature's mysteries. Each stock

of her children as a hierarchy is cared for, in ways not explained in books. . . . In California the robin, unlike his Eastern brother, is a bird of the high mountains, whose song is rarely heard, and who descends into the cultivated valleys only during times of winter storms.

---

## Trail Blazers

In the autumn the Unseen draws close to the creatures of the wild and they, inwardly listening, often do strange and even marvelous things. This is especially so among the birds in the Fall when they start on their long migrations to the South.

The Golden Plover which nests in the Arctic region of Alaska migrates along two routes. One follows the coast as far as Patagonia in South America; the other group leaves the Aleutian Islands, makes a direct non-stop flight over the trackless ocean to the Hawaiian Islands 2500 miles away, and then after a short rest flies an additional 2000 miles to Tahiti and neighboring islands.

Another species, the Long-tailed Cuckoo, at a certain time each fall flies some 2500 miles from Tahiti to New Zealand, where they nest and return the following spring along the same path.

There are many such air routes linking island to island throughout the Pacific, but we will mention only these two and what came of them.

Maori legend credits Kupe with the discovery of New Zealand in the Tenth Century A.D., and it is a matter of history that in 1350 A.D. a considerable party set forth from Tahiti in great canoes loaded with seeds, young plants and animals and all the necessities for establishing a permanent colony in New Zealand over 2000 miles away.

The question is -- how did the Maoris know land existed in that direction in the first place? Here is one explanation:

When a land bird leaves an oceanic island at a certain time of year, and year after year, returning each spring along the same route, it is natural to suppose land lies in that direction and at a distance within the bird's power of flight. This also is found in Polynesian tradition, which further states that range markers were set up to show the direction of flight, while the arrival and departure of the birds were eagerly watched for, and made occasions for celebration.

Indeed it must have taken rare courage for the first man to leave his home on a voyage of unknown length, with only the migrating birds for guide and encouragement.

During the two or three weeks of migration, the speeding birds could be seen by day and heard by night, and once the directional stars were noted these fearless Vikings of the Pacific were able to continue

independently.

As the Polynesians followed the airy trails of the Long-tailed Cuckoo to New Zealand, so they are supposed to have followed the flight of the Golden Plover to Hawaii and to many another island.

After the double canoes and outriggers of the Polynesians, there came the steamships of the Europeans, and in our own day great glittering aircraft speed along the same trails, first known to the migrating birds -- but who or what taught them is not recorded.

The sun sags down on Tamas\* path, across the changing sky;  
New stars do leap across the deep to meet the wondering eye;  
New seas are spread on every side, new skies are overhead;  
New lands await the sea-kings, in the vast grey seas ahead. -- Maori song (After Best).

\**Tamas*: (Maori) a star used in the Polynesian system of navigation.

---

## The Saga of a Monarch Butterfly

If after a century of scientific bird study there are still unsolved mysteries in the migration of birds, how are we to explain the migration of the butterflies? By what means are migrating butterflies able to pass on from adult to offspring for several generations the insistent urge to fly northward, ever northward, as soon as the wings are dry? And how, once there, do the newly hatched know when to band together and begin the long journey south?

Is it any wonder oriental peoples use the butterfly as a symbol of the soul?

The Monarch or Milkweed Butterfly is common throughout North America. It has migrated and established itself in New Zealand, and is occasionally wind-borne to Europe and Asia. This butterfly winters in the southern United States, and, on the Pacific Coast, in California. During the spring it begins its journey northward, frequently stopping during flight to lay its eggs on the tender leaves of a certain species of Milkweed. The eggs soon hatch into small, slender white caterpillars, whose bodies are ringed with black. The young feed upon the leaves and grow very rapidly, and when fully grown each spins a silk pad on the under side of a leaf, from which it hangs by its hind feet. Gradually the softer parts of the body descend to cause an enlargement of the lower portion, finally splitting the skin, which is then wriggled off. The upper portions soon become broader than before, and the whole appearance slowly changes. Then, as the chrysalis stage is reached, the outer tissues harden into a transparent green case, beautifully decorated with rows of metallic golden spots.

The chrysalis stage lasts for nearly two weeks, after which time the structure of the butterfly begins to show through the plastic covering. At any time now the transparent case may burst open, and the

butterfly emerge with short and crumpled wings; but as it hangs there limp, the wings almost visibly grow. When fully expanded, the butterfly crawls to the upper portion of the leaf, and slowly fans its wings in the sunlight for an hour or two before flying.

The whole process of change or metamorphosis from young caterpillar to adult butterfly takes about three weeks and, once seen, is never to be forgotten: Fortunately, anyone can easily watch this interesting cycle, by searching for a caterpillar or chrysalis on partly eaten milkweed plants, and by keeping it in a perforated cardboard box covered with glass watching it daily. Caterpillars require feedings of young leaves regularly.

The young butterfly is now a-wing and headed north, laying eggs in its turn, eggs which will, in a few short weeks, themselves be butterflies. So the cycle goes on, generation after generation, until the insects reach the northland -- it may be Oregon, Canada, in a few cases the Arctic. Later, as the chill of autumn approaches, the Monarch Butterflies begin to band together and slowly drift southward, to spend the winter in some eucalyptus grove in southern California, perhaps, flitting about on sunny days through neighboring gardens.

---

## Autumn Tapestry

In autumn there is much to be seen in nature which reminds us of the inbreathing of the Great Breath [\(12\)](#) at the close of the Manvantara, and of the periodic withdrawal of life into the inner worlds.

With the close of the year, in northern countries, great changes take place. Deciduous trees after a brilliant display of color, shed their leaves. Other plants withdraw their sap to succulent bulbs buried safely beneath the ground. Annuals scatter their seed and wither away. Insects wrap themselves up within warm, silken cocoons or lay their eggs in protected places and die. Birds, after a bit of song and play, fly thousands of miles to the South, while some animals hibernate through the long winter months.

There are many analogies between the four seasons of the year and the four quarters of the day, and as we associate the spring of the year with the dawn, so is autumn closely linked with sunset and twilight.

In the lesser cycle of a day, during the hours of sunlight plants are actively engaged in manufacturing starch, sugar, and other substances, taking water from the ground and carbon dioxide *from* the air, while rejecting, giving off, and returning oxygen *to* the air.

With the setting of the sun the process is changed. The manufacture of carbohydrates ceases. Oxygen is now absorbed, and carbon dioxide is given off as the materials which were manufactured during the hours of daylight are changed and used in various ways during the night. Day and night are both necessary to the growth of plants.

It is very fitting that September should be represented by the zodiacal sign of Libra, the Balance, for around the 21st day of September the autumnal equinox occurs, when, as around March twenty-first, the day and night are equal, balanced. From this date until the winter solstice of December twenty-first, when the year is again reborn, the hours of darkness steadily increase in length. But not everyone realizes that the changes taking place at this time, and indeed at the beginning of each of the seasons, are universal in their scope, and affect both visible and invisible Nature.

In the world as a whole, we find that as autumn advances and life ebbs in the northern hemisphere, spring begins with a flood of life in the southern hemisphere.

But there is a still greater cycle than that of the year. It is hinted at in ancient myths and legends. In this greater cycle, according to the myth of Demeter and Persephone, a Golden Age of continual spring existed until Pluto seized Persephone and carried her into the underworld to become his queen, where she was obliged to spend a portion of each year. May this not refer, perhaps, to the great changes recorded in the strata of the earth?

In geology we learn that the climate of the earth during the greater part of its history has been much warmer and more uniform than it is at present, and that during these times subtropical forests of palms, breadfruit and camphor trees flourished in Greenland and Spitzbergen.

The childhood of our Fifth Race occurred in the last of these long, warm geological periods, when for ages the Race grew and developed. Then, nearly a million years ago, the Great Ice Age came, changing the climate, bringing cold and destruction to great areas, and sharply defining the seasons all over the world.

Scientists of modern times do not agree among themselves as to the causes for these great climatic changes. But an explanation is given in *The Secret Doctrine*, where the statement occurs that the axis of the earth is slowly approaching a position perpendicular to the plane of the ecliptic. This position would, when attained, again bring continual daylight to the polar regions, and continual spring to the rest of the world.

Even today there are many places, such as Florida and Southern California, in which the difference between the seasons is very slight.

In the cyclic wheelings of these yearly events we have the key to many well-known myths of antiquity, for it is a mistake to think that these refer merely to the yearly progress of the sun or of the seasons. The wise men of antiquity used the symbols of Nature because they knew that all things, both in the visible and in the invisible spheres, are working together and are inter-related. Therefore, they used the symbology of the minor cycles of life, which we call 'seasons,' to illustrate the sublime experiences of that Child of the Cosmos and "Son of the Sun," the Inner Spiritual Man. For them, every event in Nature held an inner significance.

---

## November Alchemy

It had been a busy time for the Maple at Cold Spring, high up on Sunset Peak. For many days the leaves had been making sugar, until now the sap was almost thick enough to resist the winter cold without freezing; for although this was Southern California, winter temperatures are often bitter in the high mountains.

At the same time, at the base of each leaf, a leaf-bud was growing, well wrapped up in bud-scales within which the new leaf -- one might almost say a reimpodiment of the old leaf whose 'body' would soon fall -- would sleep until the coming of spring.

Often during the last week migrating birds from the Far North had rested in the branches of the Maple, and since the lives of birds, trees, and insects are so closely linked in their cyclic periods, who knows what hint of coming change they might not have brought?

It was now late in November. The air was clear and calm, but with a mystic quality suggestive of coming change. That night the wind shifted to the North, and the temperature fell and fell. With the coming of sunrise the Maple stood a glory of yellow, orange, and red. We shall have to examine the tree itself, to find how the wonder came about which glorified it that November night.

Trees do not have a consciousness such as man has, yet without eyes they respond to a wider range of light than the eye of man perceives; without ears they sense vibrations in the air; and without their moving over the earth that which they need comes to them, brought by the sun, wind, and clouds.

If you were to examine a leaf through a microscope you would see thousands of tiny pores on the surface called *stomata*, through which air reaches the interior of the leaf. There the carbon dioxide of the air combines with water from the ground to form sugars and starches.

Now each opening or *stoma* has two semicircular guard cells, as they are called, in which are small particles containing *chlorophyll* (a Greek word which means simply 'a leaf that is green.')

These guard cells serve as electric eyes, and under the sun's light the sugar-content in them increases, distending and thus opening the pores or *stomata*, And admitting more air. But when the sun's light becomes dim these cells collapse; and the *stomata* close. This is the way the tree breathes and regulates the process of food-manufacture.

Now, with the chill of approaching winter, the food substances produced by the leaves, instead of being made into woody fibre remain dissolved in the sap, thickening it, and preparing it to resist the cold without freezing, expanding, and bursting the cell walls.

During the period of actual growth, chlorophyll is continually being formed and destroyed; but with the

first frost that November night, the green chlorophyll, its work finished, disappeared; and with the removal of the green pigments the yellow, orange, and red pigments could be seen. In addition, the increase of sugar made possible the development of the vivid red dye which splashed the foliage so brilliantly.

It would take a volume to tell all that occurred that night, and at the end you might well exclaim, "This is indeed alchemy, but where is the alchemist? For surely the complex parts of a tree could not do all these wonderful things without some over-seeing intelligence." And you would be right.

The mystics of medieval times saw in them colorful changes the 'signatures of the Seven Planets' who build and protect the tree throughout its life. The Greeks of old spoke of Dryads and Hamadryads and their hosts of fairy helpers, the soul and the invisible builders of the tree. The modern scientist, with microscope and test tube, searches within the plant cell for the secret of its existence.

Whether we personify the forces of Nature, as did the Greeks, or symbolize them by the stars and planets, or use the terms of the modern chemist and botanist, this fact remains: Mother Nature indeed looks after her children, the trees, and they in their turn heed her instructions.

---

## Winter in Nature

Those who have lived in cold regions know that birds and the smaller animals are found grouping themselves together on the approach of winter. They roam about from place to place, reveling in the abundance of autumn-food. The serious business of nesting is over, and the different family-groups seek companionship. It is as though the period of individuality had served its purpose and was for a time laid aside as of secondary importance and a realization of brotherhood had taken its place.

One may wander though the winter woods sometimes for hours, scarcely finding a living creature, and suddenly quite unexpectedly, a woodpecker, half a dozen jays, a number of chickadees, and a host of sparrows drift slowly past, with now and then a snatch of a song. Perhaps a curious squirrel or chipmunk and a number of cottontail rabbits follow the merry assemblage.

Here is no strife. Life seeks life for the companionship it gives. Many large flocks have gone to warmer climates. Certain of the animals have gone to their winter-sleep, or hibernation. The trees are leafless -- but during the winter the roots are growing.

In man, to his sorrow, separateness is the rule. But among birds and animals it appears to function primarily during the time they are rearing and caring for their young. When these cares are over they seek companionship, as those who visit the woods in winter know.

In winter, when the snow lies deep, the 'little brothers of the forest,' draw near to man as well as to each other, trusting that the friendship which they feel, he must feel also. And often it is so.

---

## **The Architecture of the Snow**

Everyone has admired the simple and beautiful crystals of quartz, amethyst, topaz, garnet and other gems of the mineral kingdom. Few realize that water and ice are also classed as minerals by geologists; and that while it cannot be preserved in a cabinet, the snowflake is as truly a mineral crystal as any gem in the jeweler's display.

There is a magic beyond understanding in many of the simplest processes of Nature, a mystery which baffles the most profound science to explain. Such is the case in the forming of a snowflake. This much, however, is known.

High up in the intensely cold layers of a storm-cloud, small triangular and hexagonal plates and needles of ice begin to form, condensing directly from the water-vapor in the air about a nucleus of dust. But this is not ordinary dust. It consists of cosmic dust, fine ash from volcanoes, and particles of smoke present in the upper atmosphere.

In any storm-cloud there are great movements of air-currents which often whirl from top to bottom of the cloud and back again, at speeds of over a hundred miles an hour.

The small ice crystals in moving to lower levels serve as centers about which the snowflakes form -- first as a flat, six-sided plate. Then, as warmer regions are reached where water-vapor is more abundant, ice-plumes form, one to each angle of the crystal.

As the snowflake continues to descend, smaller plumes, or plumules, are added to each side of the plumes first formed, and, as the snowflake flutters to the ground, it receives still finer additions to the already beautiful design.

Catch one on a black cloth and try to read the story of its brief flight to earth. That central plate was formed in the high cold levels of the cloud. The six principal rays were added within the lower portion of the cloud where the cold was not so intense and water-vapor was more abundant, while the finer plumes condensed as the snow fell to earth.

On very cold days one may sometimes find three- or six-sided flat crystals without plumes or rays. These are also well worth study, for jewelers and designers obtain some of their best ideas from these high-altitude snowflakes.

In most rain-clouds, snow forms in the same way, but soon melts and falls as rain. Sometimes the rain is

carried upward to refreeze -- not into snow, for that never happens, but into hail.

The showers of ice-spicules which occasionally fall on the high mesas of New Mexico are called by the Indians 'seed of the snow,' which shows an intuitive knowledge of what science is just now discovering. How much it will discover, to our lasting good, when the Ancient Wisdom of the Indian tribes of the Americas is discovered also.

But it is not alone in the snowflake that we may study the beauty of ice-design. The frosted window on a cold morning displays a variety of design that is truly amazing -- here one may find forms suggestive of ferns, plants, trees, flying birds, and landscapes.

H. P. Blavatsky says that ice is the great magician, for "it is occultly connected with the astral light, and may, under certain conditions, reflect certain images from the invisible astral regions." (*Transactions of the Blavatsky Lodge*, p. 109)

These images, she explains, may be of astral forms which are *preparing* to form future ferns or plants, or may be impressions of actual plants which had been reflected in the astral light and their image preserved.

But who or what is responsible for the great beauty and variety of ice-crystals whether of a snowflake or on frosted window?

---

## Seeds Go Traveling

Growing in the fields and pastures and along the roads of California today are 526 species of alien plants which have come from Europe, Asia, South America, and many more far places. How did they reach here? By hitch-hiking, clinging to the fur of livestock, hidden in crevices and angles of stage coach, train, automobile, or airplane, and concealed in shipments of fruits and seeds. In fact, along every highway, railway, steamship, or airplane route there is a constant stream of stowaway passengers of which few are aware and which pass no Customs Inspection.

Starting with the erection of the first mission in San Diego, in 1769, the earliest migrants appear to have been the wild oats and similar grasses. Then, year by year, increasing as the stream of human traffic increased, the number of migrants grew, until now over half of the uncultivated plant life of many broad valleys in the state is of foreign stock.

A study of the adobe bricks in the old Mission ruins shows seeds of the plant life present at that period, and thus the time, of arrival of many of our aliens is dated. Europeans are accompanied by European plants, Asiatics by oriental plants. From every section of the world, each people have brought the plants

karmically (13) identified with them. Weeds, we say in disgust, and dig and pull and burn, and the more we destroy, the more vigorously they seem to thrive. But what are these weeds? Many, perhaps most of them, figure in folk-lore and medicine, and are traditionally ruled by the Sacred Planets. Some are dedicated to god or goddess, or perhaps are the favorite of the fairy races. They offer, and offer in vain, the healing and strength which we, in discarding, must need supply by other and costly means.

Can it be that thousands of years of use as food and medicine has forged a karmic link, (14) between certain plants, perhaps through an exchange of life-atoms, (15) or in some other way? However it may be, there seems to be a subtle affinity between the races of men and particular types of plants.

But seeds are not dependent upon our aid alone. They have their own way of traveling. Some seeds, like the maple, have wings, and are borne by the wind for considerable distances. Other seeds, like the dandelion, parachute and, rising on the air currents, sometimes float far away. Still others, like the stick-tights, have many hooked fingers which cling to the fur of animals. A few hard-coated seeds are able to float immense distances on the ocean currents. Nearly every plant has its own device for traveling, some for short distances, some longer, but when aided by man, there is no limit to the distance, save the limitation of man himself. Weeds, as said before, are more interesting than many suppose, since most of them have history, grown out of millenniums of use by our ancestors. Their study leads us to the fascinating old herbals and cook books of our great-grandparents, and frequently unsuspected historical sidelights are revealed.

"Wild" Mustard, native to Europe and the Mediterranean countries for ages and mentioned in the Bible, was brought to California by the early Spanish colonists. In California the Camino Real highway extending from San Diego to San Francisco was originally marked not by painted road signs as at present, but by the yellow bloom of wild mustard which had been sown by the plodding Franciscan Padres as they walked from mission to mission. Dandelion (Lion's tooth), Lamb's Quarters, Curly Dock, Horehound, Plantain, Purslane, and a host of others which have for ages figured in the folk-lore and herbals of our race, now the outcast among plants, are all worth study.

---

## **Our Sevenfold Earth**

In the folklore and myth of all peoples throughout the world -- savage, barbarian, civilized -- there are found references to a storied or layered Earth, with one or more under-worlds and often a series of heaven-worlds, usually seven in number. They are explained by H. P. Blavatsky as the separate globes (16) of our Earth, or the layers or planes upon which they are located. The fact of there being seven globes in the Earth's system, instead of one, is something the average person has to accept on trust, for he cannot prove it for himself, except as it seems reasonable.

However, the principle of the multiple character, or layering, of our Earth is general throughout nature and may be studied by anyone. Furthermore, the Earth does not exist apart from the lives composing it.

It is made up of lives of many grades, all of them evolving and progressing, endlessly. In the human kingdom this evolutionary journey is accomplished through imbodiment in a series of Root-Races, Family Races, National Races, Tribal Races, and Tribal Generations. (17) The evolution of the elemental, mineral, plant, and animal kingdoms is accomplished by imbodiment in a series of races closely analogous to that of the human. We may think of this evolutionary journey as a vast musical symphony, in which each life, from atom to globe, plays its part, each working in harmony with the rest.

Each one of the globes, including our own Earth, contains, or is composed of, seven interpenetrating planes or spheres of existence, ranging from the most material to the most spiritual. If we take these statements regarding realms beyond our power of investigation and apply them to the world and the localities we do know, we will find these same laws or habits of nature illustrated in some degree everywhere.

With the sevenfold pattern playing so important a part in the structure of both inner and outer nature, it is to be supposed that the physical structure of our Earth followed the same scheme, as indeed it does. Geology states that the Earth consists of a central dense, solid core surrounded by a plastic envelope enclosed within a series of rocky shells, upon which, like a layer of dust, lies the crust of land, water and mountains which we know as Earth.

Furthermore, aeronautical specialists and radio engineers have shown that the upper atmosphere of the Earth is built in a series of layers which have been investigated by radio waves, sound reflection, and surrounding balloons.

The first of these atmospheric layers, that zone of clouds, storms, and moisture which surrounds us to a height of seven to ten miles, is known to science as the *troposphere*. In the figurative terminology of the ancients, this is the sphere of water.

The second layer, in which ozone, a triatomic form of oxygen occurs, is known as the *ozonosphere*. This we may call the sphere of air.

The third layer of the upper atmosphere of the Earth is known as the *ionosphere*. It is the sphere of fire, an intensely heated layer of ionization without which we on earth would receive such an amount of ultra-violet light that life for us would be almost impossible.

Above the ionosphere lies the vast reach of space in which the auroral displays occur. This is the sphere of *aether*, the realm of Fohat, (18) or Cosmic Electricity.

The surface of the Earth, from the Equator to the Arctic, is divided into zones of temperature which are also zones of life. These are seven in number: Tropical, Lower Sonoran, Upper Sonoran, Transition, Canadian, Hudsonian, Arctic Alpine. These life zones are also found on all high mountains. A tree native to the Hudsonian zone, growing in northern Canada at sea level, is found at increasingly higher altitudes as one travels southward, growing at about 9,000 feet in California.

But, to return to the sphere with which everyone is familiar, most of our forests are galleried, or layered, each layer having its own sub-climate, its own insect, bird and animal life. The soil is densely populated with soil bacteria and earthworms, without which the trees could not grow. The ground cover of low vines and grasses keeps the soil cool and protects the tender roots. The low bushes, the medium sized maples and oaks, and the tall, slender pines each provide a home for an association of living beings which require those particular conditions. Some birds spend most of their lives, build their nests, and find their food in the tallest trees. Others keep to the lower trees, others to the bushes, and still others to the ground level. There is here no competition, but cooperation only, as each community level is necessary to the whole.

In reverse order, the life of the lakes and seas descend in belt after belt, from surface to the desert depths, each belt having its appropriate plant and animal life, temperature, chemical and physical conditions.

The sevenfold structure of the seven planets, the seven globes, the planes and sub-planes, as well as that of the races and sub-races, is composed of lives in various stages of evolution. Each unit, from atom to planet, is a living being. Each follows the same evolutionary pathway, as far as is possible. All are interwoven, interlocking, working together.

---

## **Deserts and Evolution**

One whose campfire had made fragrant many a little known desert canyon once told me of an experience he had in an unspoiled palm-grove at the foot of the Laguna Mountains in California.

The sun had set and the full moon was rising over a shoulder of Pinon Peak. Not a breath of air was stirring, and the silence was complete, as sometimes happens in the desert. Suddenly in the air and all around there sounded the silvery tones of innumerable little gongs, the undertones throbbing away into silence.

It takes a lot of living to understand the desert, and those who love it have "worked through" the sham and glitter of city life to seek and enjoy the peace and quiet the desert offers. To such there sometimes comes a glimpse behind the veil, in some rare experience.

The deserts occupy one-sixth of the land surface of the world and the area is steadily increasing, yet few realize the important part deserts play in purifying the air, heating it and sending it upward to redescend over the oceans and the inhabited parts of the earth. These "waste lands" form an essential part of the world's air-conditioning system, without which life would be very difficult.

There is another part deserts play in the life of the world which is even more important. It is a teaching of Theosophy that a planet, our own globe Earth for instance, after its cycle of life and activity, passes

into a state of obscurity, of rest and preparation for the coming cycle of renewed activity. We may compare it to a school, which the children leave during vacation; only a few officials and workmen remain while the rooms are repainted, repaired and refitted for the opening of the term in autumn.

What is true of the Earth is also true to a lesser extent of the continents. Once the crest wave is passed, those areas which supported teeming populations and an abundant vegetation slowly become desert, or otherwise uninhabitable. Much of this is caused by the wasteful habits of man himself. At a certain stage the multitude of lives move on to reembody in other and fresher lands.

The old order changeth, yielding place to new,  
And God fulfills himself in many ways,  
Lest one good custom should corrupt the world. --Tennyson

Meanwhile, the stream of monads (19) pass on to play other parts on the stage of life, yet through it all there runs a purposeful plan of evolution, in which all kinds of life, and even the world of men cooperate.

To understand nature we must consider it as a whole. A race of men involves not only the human family, but all life as well, for the impact of racial character affects both plant and animal. Their appearance changes, some characteristics are increased, others reduced; in other words, they become modernized. Think, for instance, of the extent to which European peoples have changed the appearance of native vegetation with the weeds and wild grasses which they brought, and which kill out the native plants.

With the lessening of outer activity in the desert, there comes a closer approach to inner and more spiritual planes of consciousness. The character of desert lands, then, is essentially one of purification by sun and wind and other invisible forces whose duty it is. Is it any wonder people entering the desert feel an unusual freedom and vitality, and come away cleansed?

But what, we may ask, is the nature of the plants and animals which remain in these arid regions? Is their evolution stopped?

All the life there is about us comes from far distant ages as slender streams of what were once great rivers of life. On the snow-topped mountains bordering the desert are pines and firs, relicts of once-great forests. In the deserts are remains of bunch-grass, flowers and bushes whose ancestors once covered vast areas of the desert floor with green, while rivers and lakes supplied the district with life-giving water. On the hot desert slopes on the other hand, there still grow Elephant Trees and other plants, which during a period still more arid migrated from the lowlands of Mexico.

The desert is balanced between past and future, between times of cooler temperatures and increased rainfall and those of hotter, drier conditions. With every shift of climate in either direction, one plant association expands, and the other withdraws. I once had a little cactus plant (*Mammillaria*.) Under rather unfavorable conditions, it flowered for two years, but did not develop any fruit; the third year, however the fruits of all three years came out at the same time, soon after the flowering of that year.

Of special interest are the many devices by which plants and animals manage to survive under extreme desert conditions. Some animals, like the Kangaroo Rat, never drink any water, obtaining all they need with their food. Many plants, like the Palo Verde and the Smoke Tree have abandoned their leaves, and manufacture their food by means of the green chlorophyll in the bark. The Cactus family are known to have developed from a leafy vine still in existence in the jungles of Central America.

In short, desert plants may be described as indrawing instead of expanding. It is the same story in and regions anywhere in the world: for in each country the plants native there are modified by increasing arid conditions, in much the same way as the plants of the California deserts have been.

Much more would be clear, could we but realize that man in his sevenfold constitution is a small duplicate of the Universe, and is linked with all the kingdoms of nature.

We build the houses in which we live of brick, stone, metal, wood, and other substances. So the re embodying consciousness uses materials from the various departments of nature to build the body in which the soul of man lives.

There are, in the human body, cells belonging to each of the lower kingdoms. The mineral kingdom is represented by the twenty-four mineral salts, without which the body would have no support, and would also be unable to absorb fluids. Cells belonging to the vegetable kingdom with the bacterial flora contribute to the digestion of food. The animal kingdom provides the body of flesh through which we are able to live in this physical world.

In all there are some twenty-six trillion cells in the human body; of these only one kind produces a human being. The remainder produce no new creature as they are under the dominance of the human ego, and so, only divide and subdivide to form multitudes of single cells, which, like building blocks, unite in forming the human body.

Each of these cells, however, has latent within it the possibility of someday evolving into a new creature. While this is impossible now, long ago, the stream of life which later became man, as we know him, was loosely knit together, in fact not yet physical. Under these conditions, a cell separating from the body might, according to the age of the earth and stage of evolution, begin a new line of evolution.

The physical cell is but a temporary form in which an inner being contacts the physical world. This inner being is that which evolves and passes from form to form for untold ages.

This it is which explains to a large degree the affinity between the plant, animal and human life of the earth. They are knitted together, and what affects one affects all, to a greater or less extent.

The impact of a new human race brings about certain changes in both the plant and animal kingdoms; for them a new era has struck.

Sometime in the future, perhaps through the lowering of a mountain range in the west, permitting life-giving rain clouds to sweep over into the rain-shadow of the desert, or by an invasion of an arm of the sea, or by some other means the desert will once again become luxuriant. Here, exultant with the surge of a new cycle, civilization will again flourish. Then the plants of the desert will expand, develop leaves, become larger and undergo other changes. The birds and animals likewise will respond. It is all part of the universal inbreathing and outbreathing which every part of nature undergoes.

---

## Appendix

1. HOLNESS -- (*Gr. kdos* - whole) An ecological term used to express the inter-relations between all the organisms of a community, and their relationship to environment, climate, etc. A community, large or small, considered as a quasi-organism, in which the different units bear somewhat the same relationship to the association in which they live as the cells and organs do to the body. It is nature considered as a *universal brotherhood*, in which every part is affected by every other part, and no portion can be injured without injuring the whole. The same idea is sometimes expressed as a "web of life," or as an "earth symphony." ([return to text](#))
2. RELICT -- A technical term in botany to indicate groups of living trees or plants growing in a restricted area, which belong to an earlier and once widespread species. ([return to text](#))
3. RELICS -- Ancient objects; ruins of civilizations, etc. ([return to text](#))
4. LEMURIA -- Home of the Third Race. Particularly the great land mass which once covered the South Pacific during the Mesozoic Era in geology. ([return to text](#))
5. ATLANTIS -- Home of the Fourth or Atlantean Race. A system of continents, islands, and peninsulas covering the face of the earth during the Cenozoic Era. Poseidonis, the last remnant occupying the North Atlantic, sank according to tradition about 11,000 years ago. ([return to text](#))
6. FIFTH RACE -- Our present Aryan Race, whose Mother Land was in Central Asia. (See RACES below). ([return to text](#))
7. SISHTAS -- (Sanskrit word, pronounced *sheesh-tas*) Superior classes of each type of creature, left behind on a planet when it goes into obscurity, to serve as *seeds of life* for the next incoming Life-Wave, or manvantara, when life upon the planet will become fully active once more. ([return to text](#))
8. MANVANTARA -- A time-period of life and activity, during which planetary evolution moves forward, and innate faculties and powers are most fully manifested; contrasted with *Pralaya*, a time of

cosmic rest and inactivity. The two are analogous to day and night in our daily cycle. ([return to text](#))

9. METER -- A French measure of length, equal to 39.370 English inches, or 39.368 American inches. ([return to text](#))

10. TUATHA DE DANAAAN -- Ancient Irish Gods. ([return to text](#))

11. MOUNT MERU -- Mystical mountain related to the polar axis of the earth; symbolic of the highest spiritual attainment. ([return to text](#))

12. GREAT BREATH -- The rhythmic inbreathing and outbreathing, contraction and expansion, everywhere present in nature, bringing about the manifestation and dissolution of universes, the involution and evolution of worlds, and beings of every degree. According to the Hindus, the inbreathing and outbreathing of Brahma, an aspect of the incognizable Principle of the Universe. ([return to text](#))

13. KARMICALLY -- An adverbial anglicized form of KARMAN, a Sanskrit term from the root *kri*, "to do"; the law of cause and effect. Karman is a combination of two factors: "Of energy acting upon Nature and Nature reacting against the impact of that energy." ([return to text](#))

14. KARMIC LINK -- Karman is actually a chain of causation, stretching back into the infinity of the past and stretching into the infinity of the future. ([return to text](#))

15. LIFE ATOM -- The ensouling power in every primary or ultimate particle -- in every atom. ([return to text](#))

16. GLOBES -- The Ancient Wisdom teachings divide the Universe into seven great planes, or worlds of beings. Each one of these is called a Globe. Every planet in the heavens has its six invisible companion globes forming what is known as a Planetary Chain. ([return to text](#))

17. RACES -- During evolution on our Earth (and on the other six manifest globes of the Planetary Chain of Earth correspondentially), mankind as a Life-Wave passes through seven evolutionary stages called Root-Races. One Root-Race is formed of seven Primary Sub-Races, seven Secondary Sub-races, seven Family, National, and Tribal Races, seven Tribal Generation, and seven of Individual Man (say 72 years). ([return to text](#))

18. FOHAT -- An extremely mystical term used in the Occultism of Tibet to signify "Primordial Nature" or "Primordial Light," the vital force of the Universe. ([return to text](#))

19. MONADS -- Divine consciousness-centers at the heart of all beings and all things. ([return to text](#))

*Once, as I sat alone writing, a mysterious Visitor entered my study, unannounced, and stood beside me. I forgot to ask who he was or why he entered so unceremoniously, for he began to tell me of the Gates of Gold. He spoke from knowledge, and from the fire of his speech I caught faith. I have written down his words; but, alas, I cannot hope that the fire shall burn so brightly in my writing as in his speech. -- M. C.*

## PROLOGUE

EVERY man has a philosophy of life of his own, except the true philosopher. The most ignorant boor has some conception of his object in living, and definite ideas as to the easiest and wisest way of attaining that object. The man of the world is often, unconsciously to himself, a philosopher of the first rank. He deals with his life on principles of the clearest character, and refuses to let his position be shattered by chance disaster. The man of thought and imagination has less certainty, and finds himself continually unable to formulate his ideas on that subject most profoundly interesting to human nature, -- human life itself. The true philosopher is the one who would lay no claim to the name whatever, who has discovered that the mystery of life is unapproachable by ordinary thought, just as the true scientist confesses his complete ignorance of the principles which lie behind science.

Whether there is any mode of thought or any effort of the mind which will enable a man to grasp the great principles that evidently exist as causes in human life, is a question no ordinary thinker can determine. Yet the dim consciousness that there is cause behind the effects we see, that there is order ruling the chaos and sublime harmony pervading the discords, haunts the eager souls of the earth, and makes them long for vision of the unseen and knowledge of the unknowable.

Why long and look for that which is beyond all hope until the inner eyes are opened? Why not piece together the fragments that we have at hand, and see whether from them some shape cannot be given to the vast puzzle?

## PROLOGUE

Have you ever, when walking in the forest, listened to the trees as they whispered among themselves? If you have, then you must surely have remarked how the whisper increased until you believed you could detect these words: "Who are you, Stranger? What do you seek here in our green home?" And your heart must have hastened to answer: "I seek peace and rest for my thoughts in your green home. Fear not that I break the harmony reigning among you! I come but to listen to the singing of the birds and to your soft voices." And at that the whisper sank to a low murmur, which, though wordless, you understood to mean: "Welcome, then, Stranger! Come and hearken to the singing of the birds and the rustle of our leaves, and you will surely be filled with the peace of the forest."

It was in this manner that the great forest near the source of the river Sophia in Pilgrim's Land held communion with the man on horseback who slowly made his way between the trees. He heard the wondering whisper of the heavy pines as they waved their shaggy arms about agitatedly, and he perceived how the whisper passed from tree to tree, from the haughty oak to the dainty birch, from the cheerful beech to the stately elm: "A stranger has come to our forest! A stranger!" And the man filled his lungs with the pure, fragrant air and murmured: "Ah, the peace! The utter peace of the forest!" And from this the forest understood that he was a friend, and the murmur of the trees became softer, and he heard them all rustle: "Welcome! Welcome!" -- or so it seemed to him.

On and on he rode through the rows of the tall, gaunt, green-clad giants that surrounded him, and then, unexpectedly, he came to an opening in the forest, and before the charmed gaze of the youth -- for he was scarce older -- there lay a lake as clear as crystal, on which floated countless water-lilies. The sun's rays stole in through the tree-tops and danced and chased one another on the surface. All around it grew slender weeping-willows which bent over the water and contemplated their own graceful forms in permanent ecstasy. Shimmering dragon-flies flew to and fro, skimming the surface with their transparent wings. It was, in truth, a marvelous picture and well worth looking at, but the eyes of the youth looked past all this and right across the lake, for there, on the opposite side, he perceived a maiden of such unearthly beauty that he forgot all *else as* he gazed upon her. She stood immovable and calmly returned his look, and he noticed with wonder that her body emitted a faint radiance -- or was it only the

sunbeams nestling in her gleaming, golden hair? This he was unable to say.

An overpowering desire to approach her, to stand beside her and drink in the full spell of her loveliness seized him, and without more reflection he rode around the lake to where she stood -- or rather had been standing, for when she saw him approaching she turned and ran, light as a doe, into the thickest part of the forest. Frantically the youth urged on his horse after the fleeing form, releasing his hold of the reins in his agitation, but at this something unexpected occurred. The unruly animal, feeling a complete relaxation of the masterful grip on the reins, suddenly threw back its head, and then turned and made for the opposite direction. Hastily the youth reached for the reins, but before he could put his intention into practice he was swept off the saddle by the heavy, overhanging branch of a tree, and then all was darkness around him.

When he came to himself he was lying in a cave on a pile of dry leaves and twigs. His head felt curiously dizzy and there was an unpleasant ringing in his ears. He tried to sit up but found himself unable to do this because of a strange weakness in all his limbs. Then he felt a soft arm around his shoulders, and a voice sweeter than any he had yet heard said: "Let me help you!"

And he turned his head quickly and looked up into the face of her who had spoken. It was She -- the maiden of the calm gaze and the golden hair! Painfully he sat up, leaning against her arm, but at that she immediately moved away from him and stood and leaned against the entrance to the cave.

"Who are you, maiden?" he then asked her wonderingly. "It seems to me that I know you already; that I have seen you before. But where? . . . Where could I have seen you? In some dream?"

"Perhaps," she said with a smile, "you have indeed seen me before -- in some dream. Are dreams not windows looking out on vaster tracts of land than any awakening state could ever show?"

But the youth shook his head with a dissatisfied air. He looked at her fixedly, the deep wrinkles on his forehead betraying the mental effort he was making to remember. Then his eyes lit up with a sudden gleam of recollection, and he exclaimed:

"I know now where I have seen you before. Many a night have I gazed upon the sky, and there have I seen your eyes, looking down upon me. I have seen your hair waving in the breeze upon the cornfields, and undulating on the moonlit sea. I have heard your footstep at even when the wind passed through the slumbering trees. I have seen the faint flush of your cheek when the sun crimsoned the snow-capped mountains in the distance. Small wonder that I was filled with longing at the sight of you! I stretched out my hand after the stars and pursued the immortal dawn!"

She smiled but said nothing. And he went on speaking.

"How could I have dared to pursue you as did?" he said. "Well did I deserve to be thrown off my horse! I had never thought him capable of so much contrariety: he had grown to be so much a part of my own

self that I believed him to be an obedient servant and friend in every enterprise we undertook together. I see that I was greatly mistaken. But a greater marvel still have I seen to-day. When I pursued you, you turned and fled from me -- and now, when I believed you lost to me for ever, you are here beside me."

And his face expressed a great wonder. But the maiden came up to him without a word and knelt down by his couch and proceeded to tend to the wound in his head, which he had received in his fall.

The following morning the youth was awakened by a clear voice in his ear which said:

"Arise and mount your horse. See how impatient he is to leave! You have had a good night's rest, and there is nothing to prevent you from proceeding on your way."

And there stood She beside him, holding his horse by the bridle. Slowly he rose and went up to her. His face grew dark as he looked at his impatient horse, stamping and prancing before him. Then he turned resolutely towards her, and said:

"Maiden, will you not come with me? Will you not follow me to my home and be my bride? I will do all to make your life bright and happy. I will be your shield and your armor, that none of the evils of life may touch you. I will serve you most devotedly, so that your every wish shall be my law and each of your desires a most sacred task for me to carry out."

And he looked at her eagerly. But she shook her head and sighed deeply. Then she spoke and said:

"I would I could indeed become your bride, most valiant knight, but this I may not do, for you and I are not alike. I am the Nameless One, the daughter of the Great King of the Seven Sacred Lands, and you are but a mortal. Him alone among the mortals may I wed who finds the Secret of Existence: such is the Law."

"The Secret of Existence?" he repeated in amazement. "What man can ever hope to find this most elusive of realities? Almost impossible is it to win you, most exquisite of maidens, but this will I do. I will leave no stone unturned in the wide world in my search for the Secret of Existence, if I have to live countless centuries to find it. To win you I could accomplish anything -- even the impossible."

"It is not an easy task," she said gravely; "indeed, it is impossible of achievement unless you be filled with perfect courage, patience, and faith. Have you all these?"

"Yes," he said; "they shall be my banner and my sword."

"Go, then, Beloved, and know that whatever happens I shall be ever waiting for your return. And when you will have found that which you are now setting out to find, you will know your way back to me -- but not until that day. Until then, Vincent, farewell!"

"You know my name!" he cried.

She smiled. "Perhaps I have heard it before -- in some dream!"

And she handed him the reins of his horse. Lightly he jumped into the saddle, without daring to touch even her hand in parting -- so wonderful did she seem to him -- and with a last, long look at her he turned and rode away.

"Farewell! Farewell!" whispered the trees as he rode by, "Farewell!"

## PREFACE

NOTES ON THE BHAGAVAD-GITA, by T. Subba Row, B.A., B.L., was first published in *The Theosophist* -- the magazine founded by H. P. Blavatsky and Col. H. S. Olcott, at Madras, India. The first lecture, entitled 'Introductory,' was delivered at the Convention of the Theosophical Society held in Madras in 1885, and was published in the February, 1886, issue of *The Theosophist*, Volume VII, No. 77, page 281, with an editorial note stating that it was the introduction to a series of lectures on the *Bhagavad-Gita* which Subba Row promised to deliver at the next Convention of the Theosophical Society, scheduled for 1886. Thus the four lectures themselves were delivered and published a year later, namely in Volume VIII of *The Theosophist*, and the discourses were delivered to the delegates attending the Convention of the Theosophical Society, December 27-31, 1886.

In 1888 the lectures were published in book-form by Tookaram Tatya at Bombay, India; but as there are several omissions in this publication, the present edition is reproduced from the lectures as originally published in *The Theosophist*; however, two footnotes which were added to Lecture I in Tookaram Tatya's edition (pp. 5 and 18 therein) have been included in the present edition -- on pages 15 and 31.

On page 511 of *The Theosophist*, Volume VIII, May, 1887, following an article by Subba Row on 'The Constitution of the Microcosm,' he requested that six corrections be made in his third lecture (indicating page and line), and these have been incorporated in the places designated by him. (These corrections were not made in Tookaram Tatya's edition.) Scholars and students are assured that a faithful reproduction of the original has been made, typographical errors alone being corrected. As regards Sanskrit spellings: the words appear as originally printed; likewise in respect to capitalization, hyphenation, and italicization, even though these vary in the course of the series of the lectures as printed in *The Theosophist*.

## INTRODUCTORY

In studying the Bhagavad Gita it must not be treated as if isolated from the rest of the Mahabharata as it at present exists. It was inserted by Vyasa in the right place with special reference to some of the incidents in that book. One must first realise the real position of Arjuna and Krishna in order to appreciate the teaching of the latter. Among other appellations Arjuna has one very strange name -- he is

called at different times by ten or eleven names, most of which are explained by himself in Virataparva. One name is omitted from the list, *i.e.*, Nara. This word simply means "man." But why a particular man should be called by this as a proper name may at first sight appear strange. Nevertheless herein lies a clue, which enables us to understand not only the position of the Bhagavad Gita in the text and its connexion with Arjuna and Krishna, but the entire current running through the whole of the Mahabharata, implying Vyasa's real views of the origin, trials and destiny of man. Vyasa looked upon Arjuna as man, or rather the real monad in man; and upon Krishna as the Logos, or the spirit that comes to save man. To some it appears strange that this highly philosophical teaching should have been inserted in a place apparently utterly unfitted for it. The discourse is alleged to have taken place between Arjuna and Krishna just before the battle began to rage. But when once you begin to appreciate the Mahabharata, you will see this was the fittest place for the Bhagavad Gita.

Historically the great battle was a struggle between two families. Philosophically it is the great battle, in which the human spirit has to fight against the lower passions in the physical body. Many of our readers have probably heard about the so-called Dweller on the Threshold, so vividly described in Lytton's novel "Zanoni." According to this author's description, the Dweller on the Threshold seems to be some elemental, or other monster of mysterious form, appearing before the neophyte just as he is about to enter the mysterious land, and attempting to shake his resolution with menaces of unknown dangers if he is not fully prepared.

There is no such monster in reality. The description must be taken in a figurative sense. But nevertheless there is a Dweller on the Threshold, whose influence on the mental plane is far more trying than any physical terror can be. The real Dweller on the Threshold is formed of the despair and despondency of the neophyte, who is called upon to give up all his old affections for kindred, parents and children, as well as his aspirations for objects of worldly ambition, which have perhaps been his associates for many incarnations. When called upon to give up these things, the neophyte feels a kind of blank, before he realises his higher possibilities. After having given up all his associations, his life itself seems to vanish into thin air. He seems to have lost all hope, and to have no object to live and work for. He sees no signs of his own future progress. All before him seems darkness; and a sort of pressure comes upon the soul, under which it begins to droop, and in most cases he begins to fall back and gives up further progress. But in the case of a man who really struggles, he will battle against that despair, and be able to proceed on the Path. I may here refer you to a few passages in Mill's autobiography. Of course the author knew nothing of occultism; but there was one stage in his mental life, which seems to have come on at a particular point of his career and to have closely resembled what I have been describing. Mill was a great analytical philosopher. He made an exhaustive analysis of all mental processes, -- mind, emotions, and will.

'I now saw or thought I saw, what I had always before received with incredulity, -- that the habit of analysis has a tendency to wear away the feelings, as indeed it has when no other mental habit is cultivated. \* \* \* Thus neither selfish nor unselfish pleasures were pleasures to me.'

At last he came to have analysed the whole man into nothing. At this point a kind of melancholy came over him, which had something of terror in it. In this state of mind he continued for some years, until he

read a copy of Wordsworth's poems full of sympathy for natural objects and human life. "From them," he says, "I seemed to learn what would be the perennial sources of happiness, when all the greater evils of life should have been removed." This feebly indicates what the chela must experience when he has determined to renounce all old associates, and is called to live for a bright future on a higher plane. This transition stage was more or less the position of Arjuna before the discourse in question. He was about to engage in a war of extermination against foes led by some of his nearest relations, and he not unnaturally shrank from the thought of killing kindred and friends. We are each of us called upon to kill out all our passions and desires, not that they are all necessarily evil in themselves, but that their influence must be annihilated before we can establish ourselves on the higher planes. The position of Arjuna is intended to typify that of a chela, who is called upon to face the Dweller on the Threshold. As the guru prepares his chela for the trials of initiation by philosophical teaching, so at this critical point Krishna proceeds to instruct Arjuna.

The Bhagavad Gita may be looked upon as a discourse addressed by a guru to a chela who has fully determined upon the renunciation of all worldly desires and aspirations, but yet feels a certain despondency, caused by the apparent blankness of his existence. The book contains eighteen chapters, all intimately connected. Each chapter describes a particular phase or aspect of human life. The student should bear this in mind in reading the book, and endeavour to work out the correspondences. He will find what appear to be unnecessary repetitions. These were a necessity of the method adopted by Vyasa, his intention being to represent nature in different ways, as seen from the standpoints of the various philosophical schools, which flourished in India.

As regards the moral teaching of the Bhagavad Gita, it is often asserted by those who do not appreciate the benefits of occult study, that, if everybody pursued this course, the world would come to a standstill; and, therefore, that this teaching can only be useful to the few, and not to ordinary people. This is not so. It is of course true that the majority of men are not in the position to give up their duties as citizens and members of families. But Krishna distinctly states that these duties, if not reconcilable with ascetic life in a forest, can certainly be reconciled with that kind of mental abnegation which is far more powerful in the production of effects on the higher planes than any physical separation from the world. For though the ascetic's body may be in the jungle, his thoughts may be in the world. Krishna therefore teaches that the real importance lies not in physical but in mental isolation. Every man who has duties to discharge must devote his mind to them. But, says the teacher, it is one thing to perform an action as a matter of duty, and another thing to perform the same from inclination, interest, or desire. It is thus plain that it is in the power of a man to make definite progress in the development of his higher faculties, whilst there is nothing noticeable in his mode of life to distinguish him from his fellows. No religion teaches that men should be the slaves of interest and desire. Few inculcate the necessity of seclusion and asceticism. The great objection that has been brought against Hinduism and Buddhism is that by recommending such a mode of life to students of occultism they tend to render void the lives of men engaged in ordinary avocations. This objection however rests upon a misapprehension. For these religions teach that it is not the nature of the act, but the mental attitude of its performer, that is of importance. This is the moral teaching that runs through the whole of the Bhagavad Gita. The reader should note carefully the various arguments by which Krishna establishes his proposition. He will find an account of the origin and destiny of the human monad, and of the manner in which it attains salvation through the aid and

enlightenment derived from its Logos. Some have taken Krishna's exhortation to Arjuna to worship him alone as supporting the doctrine of a personal god. But this is an erroneous conclusion. For, though speaking of himself as Parabrahm, Krishna is still the Logos. He describes himself as Atma, but no doubt is one with Parabrahm, as there is no essential difference between Atma and Parabrahm. Certainly the Logos can speak of itself as Parabrahm. So all sons of God, including Christ, have spoken of themselves as one with the Father. His saying, that he exists in almost every entity in the Cosmos, expresses strictly an attribute of Parabrahm. But a Logos, being a manifestation of Parabrahm, can use these words and assume these attributes. Thus Krishna only calls upon Arjuna to worship his own highest spirit, through which alone he can hope to attain salvation. Krishna is teaching Arjuna what the Logos in the course of initiation will teach the human Monad, pointing out that through himself alone is salvation to be obtained. This implies no idea of a personal god.

Again notice the view of Krishna respecting the Sankya philosophy. Some strange ideas are afloat about this system. It is supposed that the Sutras we possess represent the original aphorisms of Kapila. But this has been denied by many great teachers, including Sankaracharya, who say that they do not represent his real views, but those of some other Kapila, or the writer of the book. The real Sankya philosophy is identical with the Pythagorean system of numerals, and the philosophy embodied in the Chaldean system of numbers. The philosopher's object was to represent all the mysterious powers of nature by a few simple formulae, which he expressed in numerals. The original book is not to be found, though it is possible that it still exists. The system now put forward under this name contains little beyond an account of the evolution of the elements and a few combinations of the same which enter into the formation of the various tatwams. Krishna reconciles the Sankya philosophy, Raj Yog, and even Hatta Yog, by first pointing out that the philosophy, if properly understood, leads to the same merging of the human monad in the Logos. The doctrine of Karma, which embraces a wider field than that allowed it by orthodox pundits, who have limited its signification solely to religious observances, is the same in all philosophies, and is made by Krishna to include almost every good and bad act or even thought. The student must first go through the Bhagavad Gita, and next try to differentiate the teachings in the eighteen different parts under different categories. He should observe how these different aspects branch out from our common centre, and how the teachings in these chapters are intended to do away with the objections of different philosophers to the occult theory and the path of salvation here pointed out. If this is done, the book will show the real attitude of occultists in considering the nature of the Logos and the human monad. In this way almost all that is held sacred in different systems is combined. By such teaching Krishna succeeds in dispelling Arjuna's despondency and in giving him a higher idea of the nature of the force acting through him, though for the time being it is manifesting itself as a distinct individual. He overcomes Arjuna's disinclination to fight by analysing the idea of self, and showing that the man is in error, who thinks that *he* is doing this, that and the other. When it is found that what he calls "I" is a sort of fiction, created by his own ignorance, a great part of the difficulty has ceased to exist. He further proceeds to demonstrate the existence of a higher individuality, of which Arjuna had no previous knowledge. Then he points out that this individuality is connected with the Logos. He furthermore expounds the nature of the Logos and shows that it is Parabrahm. This is the substance of the first eleven or twelve chapters. In those that follow Krishna gives Arjuna further teaching in order to make him firm of purpose; and explains to him how through the inherent qualities of Prakriti and Purusha all the entities have been brought into existence.

It is to be observed that the number eighteen is constantly recurring in the Mahabharata, seeing that it contains eighteen Parvas, the contending armies were divided into eighteen army-corps, the battle rages eighteen days, and the book is called by a name which means eighteen. This number is mysteriously connected with Arjuna. I have been describing him as man, but even Parabrahm manifests itself as a Logos in more ways than one. Krishna may be the Logos, but only one particular form of it. The number eighteen is to represent this particular form. Krishna is the seventh principle in man, and his gift of his sister in marriage to Arjuna typifies the union between the sixth and the fifth. It is worthy of note that Arjuna did not want Krishna to fight for him, but only to act as his charioteer and to be his friend and counsellor. From this it will be perceived that the human monad must fight its own battle, assisted when once he begins to tread the true path by his own Logos.

## Foreword

Most Theosophists are aware of the fact that it was H. P. Blavatsky's especial wish that a selection from the *Bhagavad-Gita* should always be read at commemoration services held on the day of her passing, which she desired to have known as White Lotus Day. There must have been a potent reason for thus singling out this ancient work, and we have her words stating that the 'Gita' is an esoteric work. A clue to this is the fact that the very first word of the *Bhagavad-Gita* (in the Sanskrit text) is *Dharmakshetre*, meaning 'on the field of Dharma,' and indicating that what is about to be recounted occurs not only 'on the field of the Kurus' (i. e., *Kurukshetre* - the second word of the text), but on the field of moral law (*dharma*), and is to be interpreted in a cosmic sense.

W. Q. Judge's high regard for the book is well known, and an interpretation is suggested by him in his 'Antecedent Words' to his recension.

Readers of the *Bhagavad-Gita* have doubtless pondered upon the signification of the many Sanskrit words and names appearing in this philosophical work. Perhaps some, having been deeply impressed by the teachings inculcated, have commenced a study of the background of the work, and have thus acquired a knowledge of the main events in the great epic of India - the *Mahabharata* - in which the episode of the *Bhagavad-Gita* occurs. But the task of looking up all the characters mentioned, and finding a satisfactory meaning of the terms, is a difficult one. To meet this need the present book is offered, as a means of gaining a deeper understanding of the work.

The *Bhagavad-Gita* is pre-eminently an ethical treatise. It inculcates teachings applicable to daily life, suited to the time in which it was written. These are considered from the standpoint of two highly philosophical systems of thought which were then prominent, namely, the Sankhya and the Yoga. Furthermore there is a philosophical and religious background which is not very prominent in the theme, yet is always present: this is the mythology of ancient India, a consideration of which is necessary for a complete understanding of the *Bhagavad-Gita*. It is information along this line that the present handbook supplies.

It would seem from a study of the mythology of Hindusthan that it may be divided into three main

periods: (1) the Vedic period, containing the original exposition of the deities, etc., as found in the Vedas; (2) the post-Vedic period, consisting of *The Laws of Manu* and the two great epics, the *Mahabharata* and the *Ramayana*; (3) the post-Mahabharatan period, as found in the Puranas.

Pursuing this line of thought one finds that along with the modifications which the deities undergo during these three periods, there is a corresponding change in religious outlook. As religious ideas and beliefs do not change suddenly but arise slowly and only after considerable lapses of time, the conclusion naturally follows that great periods of time must have elapsed between the production of the Sanskrit works above enumerated; and the works themselves indicate the trend of thought of the time in which they were written.

The characters and terms used in the *Bhagavad-Gita* represent the religious outlook and mythology of the Mahabharatan-period. Nevertheless the information given in this handbook in regard to the deities comprises the three periods above outlined. This plan has been followed in order to give as complete an explanation as possible.

Although there are voluminous commentaries upon the ancient Sanskrit literature, written by Eastern sages, the keys to an interpretation of the mythology of India were not known in the West until Helena Petrovna Blavatsky (the founder of the modern Theosophical Movement) published her books. Such keys are not easily accessible, however, as they are scattered throughout her works. The effort in this handbook has been to place this information before students. Wherever possible the inner meanings which H. P. Blavatsky gave to terms or to deities have been included herein (with references subjoined). These esoteric explanations are of inestimable value, as they give a means of understanding the *Bhagavad-Gita* in a new light. Witness the following citation: the author is referring to the story about Vaivasvata-Manu as told both in the *Mahabharata* and the Puranas:

All this, which seems a jumble to the profane, is full of philosophical meaning to the Occultist. On the very face of the narrative a secret and sacred meaning is perceivable, all the details, however, being so purposely mixed up that the experienced eye of an Initiate alone can follow them and place the events in their proper order.

The story as told in the "Mahabharata" strikes the key-note, and yet it needs to be explained by the secret sense contained in the Bhagavad Gita. It is the *prologue to the drama* of our (Fifth) Humanity. - *The Secret Doctrine*, II, 139

The best information about the characters occurring in the *Bhagavad-Gita* is the *Mahabharata* itself, for the stories about the gods and heroes are therein told in detail. This epic was used for the background of the compilation. Verification was made by use of Monier-Williams's *Sanskrit Dictionary*, and the systemic spelling for the names and terms adopted; also the orthography. The labor of preparation has been materially aided by access to this standard authority. Further, material has been drawn from Dowson's *Classical Dictionary*. Due acknowledgment is given to these works, as well as to the Theosophical works of H. P. Blavatsky and G. de Purucker for the illumination and clarification which

Theosophy brings to an understanding of the Sanskrit terms employed in its literature.

Root-meanings of Sanskrit words have been placed in parentheses at the conclusion of articles, because the root-meaning of a Sanskrit word provides the key to its correct understanding.

The names and terms in this book are those that appear in the recension of the *Bhagavad- Gita* made by William Q. Judge (the work principally known to Theosophists), and his latest edition (the sixth) was used in regard to pagination - which the 1939 Point Loma edition also follows.

## Abbreviations

adj. = adjective

B.G. = *Bhagavad-Gita* (W. Q. Judge's Recension). B.G. followed by a number has reference to the page in which the word first appears in W.Q.J.'s edition of 1896, and Point Loma edition of 1939

comp. = compound

dict. = dictionary form or 'crude form.' Sanskrit words when not used in sentences (i. e., when isolated without grammatical form) have a special form; this is the manner in which they appear in dictionaries (e.g. Atman - dict.; Atma - nominative case.)

lit. = literally - the literal meaning of the word

m. = meaning of the word itself

*Manu* = *The Laws of Manu (Manava-Dharma-Sastra)*

N.B.G. = *Notes on the Bhagavad-Gita* by Subba Row

nom. = nominative case

q.v. = quod vide ('which see')

S.D. = *The Secret Doctrine* by H. P. Blavatsky

Theos. Gloss. = *The Theosophical Glossary* by H. P. Blavatsky

\* (asterisk preceding a Sanskrit word) = derived from the verbal root

---

## **Favorite Quotations from The Bhagavad-Gita**

(Recension of W. Q. Judge - in order of occurrence)

[Taken from *Gods and Heroes of the Bhagavad-Gita*, pp. 121, 124-127]

With the loss of virtue, vice and impiety overwhelm the whole of a race. p. 7

Those who are wise in spiritual things grieve neither for the dead nor for the living. p. 11

I myself never was not, nor thou, nor all the princes of the earth; nor shall we ever hereafter cease to be.  
p. 11

As the lord of this mortal frame experienceth therein infancy, youth, and old age, so in future incarnations will it meet the same. p. 11

He to whom pain and pleasure are the same, is fitted for immortality. p. 12

It (the Spirit) is not a thing of which a man may say, 'It hath been, it is about to be, or is to be hereafter'; for it is without birth and meeteth not death; it is ancient, constant, and eternal, and is not slain when this its mortal frame is destroyed. p. 12

As a man throweth away old garments and putteth on new, even so the dweller in the body, having quitted its old mortal frames, entereth into others which are new. p. 13

Death is certain to all things which are born, and rebirth to all mortals; wherefore it doth not behoove thee to grieve about the inevitable. p. 13

Make pleasure and pain, gain and loss, victory and defeat, the same to thee. p. 15

Be free from the 'pairs of opposites' and constant in the quality of Sattwa. p. 16

Let, then, the motive for action be in the action itself, and not in the event. p. 16

Do not be incited to actions by the hope of their reward, nor let thy life be spent in inaction. p. 16

Equal-mindedness is called Yoga. p. 17

Yoga is skill in the performance of actions. p. 17

The man whose heart and mind are not at rest is without wisdom or the power of contemplation. p. 20

Do thou perform the proper actions: action is superior to inaction. p. 23

The man who doeth that which he hath to do, without attachment to the result, obtaineth the Supreme. p. 25

Whatever is practised by the most excellent men, that is also practised by others. The world follows whatever example they set. p. 25

It is better to do one's own duty, even though it be devoid of excellence, than to perform another's duty well. p. 27

It is better to perish in the performance of one's own duty; the duty of another is full of danger. p. 27

Both I and thou have passed through many births. Mine are known unto me, but thou knowest not of thine. p. 31

I produce myself among creatures, whenever there is a decline of virtue and an insurrection of vice and injustice in the world. p. 31

In whatever way men approach me, in that way do I assist them; but whatever the path taken by mankind, that path is mine. p. 32

That man who sees inaction in action and action in inaction is wise among men. p. 33

There is no purifier in this world to be compared to spiritual knowledge. p. 36

The man of doubtful mind hath no happiness either in this world or in the next or in any other. p. 36

Renunciation of action and devotion through action are both means of final emancipation. p. 38

The devotee who is engaged in the right practice of his duties approacheth the Supreme Spirit in no long

time. p. 39

Whoever in acting dedicates his actions to the Supreme Spirit and puts aside all selfish interest in their result is untouched by sin. pp. 39-40

The man who is devoted and not attached to the fruit of his actions obtains tranquillity. p. 40

He whose heart is not attached to objects of sense finds pleasure within himself. p. 42

Action is said to be the means by which the wise man who is desirous of mounting to meditation may reach thereto. p. 44

He who seeth me in all things and all things in me looseth not his hold on me and I forsake him not. p. 49

Never to an evil place goeth one who doeth good. p. 51

The man whose devotion has been broken off by death goeth to the regions of the righteous. p. 51

In whatever form a devotee desires with faith to worship, it is I alone who inspire him with constancy therein. p. 55

All worlds up to that of Brahman are subject to rebirth again and again. p. 60

There is that which upon the dissolution of all things else is not destroyed; it is indivisible, indestructible, and of another nature from the visible. p. 61

Light and darkness are the world's eternal ways. p. 62

All this universe is pervaded by me in my invisible form. p. 64

I accept and enjoy the offerings of the humble soul who in his worship with a pure heart offereth a leaf, a flower, or fruit, or water unto me. p. 68

I am the origin of all; all things proceed from me. p. 71

## Preface

This little volume with its foundation-stones of Truth is an effort to further the second object of the Theosophical Society as it was originally expressed by H. P. Blavatsky in *The Key to Theosophy*:

To promote the study of Aryan and other Scriptures, of the World's religion and sciences, and to vindicate the importance of old Asiatic literature, namely, of the Brahmanical, Buddhist, and Zoroastrian philosophies.

The translations herein are reprints from the *Oriental Department Papers* published by William Quan Judge in 1894, 1895, and 1896, as well as from Judge's Magazine, *The Path*. In introducing Charles Johnston, then a member of the Theosophical Society, as the translator of the Sanskrit works to be produced in his Oriental Papers, Judge writes:

Of his qualifications there is no doubt, as he has had experience in this field, has also for some time been teaching Sanskrit, and brings to the work a sincere sympathy with Indian thought as well as devotion to the Society which will without question make the matter furnished of value as well as of interest.

In Sankaracharya (the blessed teacher) we have an example of the statement that "Masters are living facts." Mankind needs such assurance these days, and needs not only the inspiration of the story of a man who has lived divinely, but also his kindly and strengthening words of wisdom. What greater gift could the Hindu sage have left us than that of a collection of soul-stirring thoughts?

For those who, with hearts fervent with compassion, seek the holy path that brings to birth a "sage of boundless vision," Sankaracharya's *Crest-Jewel of Wisdom* will be a practical and inspiring guide to life. Its teachings, the shared realizations of an enlightened god-man, tell us the laws by which we may "untie the bonds of unwisdom," and thus, evermore free, with minds calm and pellucid and hearts purified of reward-desiring actions, come to know and partake of the majestic power, light, and universal kinship of the Divine within us, our birthright as humans, and our passport to grander attainments in vaster spheres of consciousness.

Just as the sun with its splendor and its glories greets us every morning when we awake and silently through the day nourishes us in all parts of our being, and later as it sets at night, leaves a glow of rich color suggesting a spiritual mystery to be grasped somewhere, somehow -- maybe in the morn's returning light -- so the challenging message of Sankaracharya's jewel-thoughts braces the spirits of world-weary ones as they turn to its radiant wisdom. They become illumined by the divine fire permeating its words, and as they turn from the study of its verses enriched for another of life's experiences, the glow of the gleaned awakenings will become a haunting memory leading them back to its precepts for another sunrise and sunset of the spirit.

# Introductory: Sankara, the Teacher

By Charles Johnston

The Upanishads, Buddha, and Sankara: these are the three great lights of Indian wisdom. The Upanishads far away in the golden age; in the bright dawn that has faded so many ages ago. Buddha, the Awakened One, who, catching in his clear spirit the glow of that early dawn, sought to reflect it in the hearts of all men, of whatever race, of whatever nation; sought to break down the barriers of caste and priestly privilege; to leave each man alone with the Universe, with no mediator between. But scattering abroad the rays of wisdom, Buddha found that the genius of each man, of each race, could only reflect one little beam; and that in thus making the light the property of all men, the purity and completeness of the light might be impaired.

Then followed Sankaracharya -- Sankara the Teacher -- who set himself to the preservation of the light; to burnishing the casket that held the lamp of wisdom. Busying himself chiefly with India, he saw that the light must be preserved, as far as its completeness and perfection were concerned, within the Brahman order, where the advantages of heredity, of ages of high ideals and rigid discipline could best secure the purity of the light; could best supply a body of men, fitted by character and training to master the high knowledge, to sustain the moral effort that made the glory of India's Golden Age.

This task of fitting the Brahman order to carry the torch of wisdom was undertaken by Sankara the Teacher in three ways. First, by commenting on the Great Upanishads and the Bhagavad Gita, he rendered the knowledge of the Golden Age into the thought and language of the Brahmans of his day. Second, by writing a series of preparatory works, of catechisms and manuals, he made smooth the path of those who would take the first steps on the path of wisdom. Thirdly, by a system of reform and discipline within the Brahman order, he did all that sound practice could do to second clear precept.

The system formed by Sankara within the Brahman order largely continues at the present day. The radiant points of this system are the monasteries founded by the Teacher, where a succession of teachers, each initiated by his predecessor, carry on the spiritual tradition of the great Sankara unbroken.

Of commentaries on the Upanishads and the Bhagavad Gita, many, perhaps, were written in a gradual series leading up from the simple truths to the more profound mysteries; so that, with one after another of these treatises in hand, the learner was gradually led to the heart of the mystery which lies "like a germ of generation" well concealed in these matchless theosophic documents. These commentaries were followed by others, the work of Sankara's pupils; and though these works of explanation are very numerous, all those that are published seem to belong to the earlier stages of learning, and leave the deeper passages and problems of the Upanishads still unsolved.

But the other part of Sankara's work, the manuals and catechisms for learners, are complete and perfect. They really teach, quite plainly and lucidly, the first steps on the path of wisdom; they point out, with clear insistence, the qualities that are necessary to make these first steps fruitful; qualities without which

the learner may remain, hesitating and halting, on the threshold, through lack of the force and sterling moral worth which alone make any further progress possible.

Nor are these necessary qualities difficult to understand. They are not queer psychic powers that only flatter vanity; they are not mere intellectual tricks that leave the heart cold; they are rather the simple qualities of sterling honesty, of freedom from selfishness and sensuality -- which have formed the basis of every moral code; the virtues so common and commonplace on the lips, but not quite so common in the life and character.

These treatises of Sankara speak to the common understanding and moral sense in an unparalleled degree. They are an appeal to the reason that has hardly ever been equalled for clearness and simplicity by the sages of the earth. Their aim is Freedom (Moksha), "Freedom from the bondage of the world." This aim speaks to every one, awakens an echo in every heart, appeals to the universal hope of common humanity.

But it is not enough for the mind to follow the lucid sentences of Sankara. "Freedom from the bondage of the world" demands something more. "Sickness is not cured by saying 'Medicine,' but by drinking it; so a man is not set free by the name of the Eternal, but by discerning the Eternal." The teaching must be woven into life and character if it is to bear fruit; it is not enough to contemplate the virtue of freedom from selfishness and sensuality in the abstract.

One of these treatises, "The Crest-Jewel of Wisdom," will be translated here. It will be divided according to the natural sections of the text, beginning with the first steps on the path and ending with the complete teaching of Sankara's philosophy so far as that teaching can be put into words. Hardly any notes will be necessary, as the language of the teacher is lucidity itself. Every word is defined and every definition enlarged and repeated.

It is not, however, the object of these papers to put forward a presentation of eastern thought merely to be read and forgotten. We shall spare no pains of repetition and amplification to make the thoughts of the East quite clear. But much remains to be done by readers themselves. They must make the thoughts of Sankara and the sages their own spiritual property if they are to benefit by them, and as a preliminary for this first chapter of Sankara's teaching, the "four Perfections" should be learned by heart and taken to heart.

## **Appendix**

### **A Symposium on the Life of Sankaracharya**

Prepared for presentation by the Theosophical Club in the Temple of Peace at Point Loma  
(adapted from many sources).

I love to think of those great beings, those royal-hearted Ones, who return to earth to shed their divine compassion in order to lift the veil into those inner realms of light for those who are ready to look within. Could we not recount among ourselves here tonight some of the strange legendary tales that have been woven about the life of Sankaracharya, who lived from 510 BC to 478 BC? For all that mystic lore is a magic tapestry woven of Truth itself.

Have you ever heard of the portents that attended Sankara's birth? It is said that the whole celestial host gave forth paeans of gladness. With no selfish or partial joy, but for the sake of religion they rejoiced, because creation, engulfed in the ocean of pain, was now to obtain perfect release.

The mountains themselves were swayed by the wind of his perfect merit. On every hand the world was greatly shaken, as the wind drives the tossing boat; so also the minutest atoms of sandal perfume, and the hidden sweetness of precious lilies floated on the air, and rose through space, and then commingling, came back to earth; so again the garments of Devas descending from heaven touching the body, caused delightful thrills of joy; the sun and moon with constant course redoubled the brilliancy of their light, whilst in the world the fire's gleam of itself prevailed without the use of fuel. Pure water flowed from springs self-caused, and rare and special flowers in great abundance bloomed out of season.

And more marvelous still, whatever wealth was requisite, there did it appear upon earth. From the midst of the pure snowy mountains a wild herd of white elephants came of themselves without noise, not curbed by any, self-subdued, and every kind of colored horse, in shape and quality surpassingly excellent, with sparkling jewelled manes and flowing tails, came prancing 'round, as if with wings.

Among men enmity and envy gave way to peace. Content and rest prevailed on every side; whilst there was closer union amongst the true of heart. Discord and variance were entirely appeased, and all possessed themselves in harmony.

Who was this babe that heaven and earth should thus give forth their bounty? Were not similar tales told of the childhood of the great Buddha? And have we not also been taught that Buddha and Sankaracharya are most closely connected? Both were Avataras of a high mystical order, though not belonging to the same class of these superior Beings.

But to return to the marvelous boy himself. It is said that in his first year he acquired the Sanskrit alphabet and his own language. At the age of two he learned to read. At three he studied the Puranas and understood many portions of them by intuition. And in his seventh year, having attained all that his preceptor could teach him, he returned home.

Nor was he lacking in occult powers at an early age. Once when his mother lay in a swoon, as he stood beside her he drew the river that flowed on the hither side of the field up out of its bed that its pure waters might refresh her.

Kings and others of high birth and intellect sought him even at this early age that he might teach them of secret wisdom never uttered except in guarded places.

Do you know the tale of how he gained his mother's consent to letting him become a holy ascetic? It runs in this wise: She with her mother's pride in his lofty attainments of soul and mind, could not endure the idea that he should shut himself away from the beauties and pleasures of life, and firm was she in her refusal of his request. But the young Sankara could sometimes act with the wile of a young and clever god. So going down to the river one day to bathe he soon was alarming his mother by his cries for help. She ran to the river's brink and saw that a great alligator held the boy's foot in a deadly grip. In helpless agony she stood by the edge of the stream. Then said the boy, "The beast has imparted to me that if you will grant my request and let me become a holy ascetic, he will loosen his hold." Whereupon the mother gave her consent, and the alligator with great tranquillity opened its jaws and released the youth, who clambered out of the river and lost no time in preparing to leave his home, giving over his mother into the care of friends and relatives, and telling her he would come back to her whenever she should need his presence.

There was living at this time in a cave in the hillside near the Nerbudda River a sage, Govind Yati by name. Years ago Vyasa had appeared to him telling of the coming of a youth who would demonstrate the most miraculous powers. And so it came to pass. When Sankara left his mother he traveled for many days through forests, over hills, by towns and across rivers, led by an irresistible force, he knew not what. After a time he found himself at the opening of the cave in the hillside where dwelt the sage Govind Yati. Straightway he became the pupil of the wise man and was taught the four great truths of Brahma, namely: *Knowledge is Brahma, the soul is Brahma, Thou art That, and I am Brahma*. Then one day as Govind Yati was immersed in contemplation a furious tempest arose. Violent thunder shook the heavens, the ethereal vault was riven with tongues of lightning; rain deluged the earth, and Sankara, without awaking his master, quelled the storm, as quietly as a child is soothed by the sound of sweet music. And when the sage returned to consciousness and learned of what had befallen, he was filled with great joy and said: "Thus has the prophecy of Vyasa been fulfilled."

Then the sage blessed Sankara, and knowing that the youth's sojourn with him had come to an end, bestowed his benediction upon him and bade him proceed to the holy city of Benares that he might there receive the blessing of the Deity. "Go," said he, "on thy glorious work, then enter, and begin to save mankind!"

Thus admonished, Sankara turned his steps to Benares, and here it was that he received his first pupil, Sanandana, the same who afterwards became celebrated as his greatest favorite under the title of Padmapada, he for whom the enlightened youth reserved his greatest powers of instruction.

Is there not a tale connected with the acquiring of the name Padmapada by this dear pupil?

The chroniclers of old tell the story thus: There were among Sankara's disciples some within whom envy was aroused at witnessing the unusual attachment that existed between the youthful sage and his

cherished pupil. Sankara wished to dispel these envious feelings and show them that it was through superior merit alone that Sanandana was chosen among them for higher instruction and closer communion with the Teacher. So standing one day on the banks of the river which ran near his dwelling-place, he called to Sanandana who stood on the other side among his companions, to come over to him directly. Sanandana forthwith without any hesitation and with dauntless spirit stepped upon the flowing waters of the river and moved towards his Teacher with steadfast and graceful mien. And lo! At each step a lovely lotus sprang from the bosom of the waters, trailing a starry line of blossoms behind him as he stepped lightly upon the bank. Then said Sankaracharya, as he embraced Sanandana: "Henceforth shall you be known among us as Padmapada, 'He of the Lotus-path.' "

But tarry a moment. Have we not run ahead of our story? It was many years ere this, indeed when he was but twelve years of age that he made his dwelling upon the banks of the Ganges and there wrote the great works that men who seek wisdom have studied ever since: his Commentaries on the Sutras, the Upanishads, and on the *Bhagavad-Gita*. In later years when Padmapada came to him bewailing the loss of one of his precious Commentaries which as it chanced had been destroyed by his uncle, Sankara without any perturbation recited the contents of that which had been destroyed in the exact words familiar to all his pupils while Padmapada rewrote them as he spoke.

Nor did such feats as this mark the limit of his mental powers. He was so wise and so well versed in the vast learning of the Vedas, that his name was sounded as victor in all philosophical discussions and debates. Once he went to the city of Mahishmati where dwelt the sage Mandana Misra. He was led towards the house of this wise man by a number of parrots miraculously endowed with human speech, who, so the story runs, discoursed upon weighty philosophical questions. But when he reached the door of the dwelling he found it fast shut. Undismayed he arose in the air and entered from above, alighting just beside Mandana Misra in his spacious hall. Then began an animated discussion between the astonished host and his unexpected guest. The sun rose high in the heavens and found them deep in their debate; it sloped down the sky in its westering course and yet the two, each of redoubtable intellect, continued. At length as evening crept upon them they called on the wife of Mandana Misra to act as umpire between them; but she, busy housewife that she was, deemed it not thrifty to let the hours pass attending to the discourse of word-spinners, so with ready wit she brought two garlands of fresh flowers saying: "Wear these as you talk, and he whose garland does not wither shall be deemed victor." So the two each put on his garland and in no long time Mandana Misra's was limp and faded like the leaves of a delicate tree beneath the rays of the summer sun. But Sankara's remained fresh as when first brought in at dewy eve.

And that is but the beginning of the story, for the victor claimed his opponent as a disciple. And the wife -- she we learn was none other than Sarasvati in corporeal form. Nor would Sankaracharya be content until he had held debate with her. Many were the questions put to him by his fair adversary, but always was he to the fore with a ready answer. Then Sarasvati, for so we may now call her, turned into a path of thought to which Sankara was an utter stranger. She asked him a question on the science of love! For the first time no answer was forthcoming, yet even such a question must be solved by the sage. So he left Mandana Misra's city in search of an answer. He traveled for some time with his disciples and came at length to a forest.

Now it so happened that a certain king named Amaraka lay dying here at the foot of a tree surrounded by many friends mourning his departure. As the soul of the dying man took flight an unusual thing happened. Sankara left his own body, entrusting it to the care of his disciples. He entered that of the dead king, and the monarch's followers, seeing their chief rise once again with the light of life in his eyes, were overjoyed beyond words, and went out of the forest of death back to the throne of royalty.

There king Sankara, standing as it were in the shoes of Amaraka, and indeed Amaraka himself as far as the eye could discern, learned all that pertained to the science and art of love, and so fitted himself to answer the probing questions of Sarasvati. Meanwhile, however, the Ministers of State, finding their resuscitated rajan a far wiser and better man than ever before, suspected that there had been some such change of souls as we have described. They were loth to part with their new and wonderful king, so they issued a decree that the bodies of all those who had just passed on into the inner realms should be burnt. They hoped thereby that the mortal frame of this strange and beautiful being, now deserted, would be destroyed with the rest, and that thus he would remain a captive within the body of their king.

Time sped on, and Padmapada and the other devoted disciples, knowing not of the decree of the Ministers of State, left the body of their beloved master entrusted to their care, and journeyed towards the king's city. "Let us," said Padmapada, "appear before the king as singers, and weaving a message around our sweet music, let us tell him how we long for his return." It all came to pass as they had planned; for as they stood before the supposed King Amaraka in the great hall of the palace, not only were those who listened spellbound by their marvelous music, but its pellucid strains stole into the inner consciousness of Sankaracharya. Before the bewildered attendants knew what had befallen, Sankaracharya gratefully dismissed the singers and released himself from the corporeal chains that bound him. His own body he found already upon the funeral pyre surrounded by angry flames that seemed to reach to the very heavens. But it remained untouched by their destructive power, and entering it, Sankara, shining with the illumination which streamed from his own being, descended from the pyre and rejoined his devoted pupils, and together they made their way to the house of Mandana Misra, who became a disciple of the young sage after hearing the last question of Sarasvati answered with keen wit and wisdom.

From this time on the beautiful messenger of the gods, for such in truth he was, journeyed from city to city with his faithful followers, spreading wherever he went his teachings of the Vedanta. It was indeed a spiritual and intellectual conquest. His words among the populace, in the great cities or among the smaller towns and hamlets, in the forests or along the highways, were like the falling of the gentle rain after a season of drought and famine. His presence was like the glory of the morning sunlight when the curtains of mist roll away from before the face of the sun.

Many are the stories told of his godlike powers, but were we to recount these tonight, dawn would find us still gathered here telling tales -- tales of his bringing back to earth the spirit of one departing, of his power to produce fire from the palm of his right hand, of his ability to send his consciousness whithersoever he willed. Those who are ignorant call these wonder-works miracles. Those who have knowledge of things behind this veil of illusion about us, know Sankara to be the greatest Initiate living

in historical ages; and to the Initiate Nature makes obeisance, laying at his feet the key to her innermost secrets.

You have heard the words of one of the Wise Ones of the earth: "A few drops of rain do not make the monsoon, though they presage it." Thus does Sankaracharya, unlike the ordinary mortal, perfected in wisdom, master of rare and occult powers, in appearance even like a god, stand as a prophecy of what we shall one day become in the far aeons of the future, yea, in that far distant time when the human host shall have made its long, long journey again and yet again through the seven spheres of its present home.

Until his thirty-second year this Sage of the East journeyed, carrying from land to land the blessing of his divine philosophy. Then his term of life was at an end, and into those heavenly realms where in joy the gods awaited him he disappeared in this wise: he absorbed his gross body into the subtle one and became existent; then destroying the subtle one into the body which is the cause of the world, he became pure intelligence; then attaining in the world of the Isvara full happiness, unbroken, like a perfect circle, he became the intelligence which pervades the whole universe. Even now does he exist as the all-pervading intelligence. From above rang the grand paeon of the gods echoing within the sacred places of the earth: "Victory!"

I can imagine no scholar in this country or elsewhere, who could produce a better rendition of *Dhammapadam* than Dr. Harischandra Kaviratna. Early in life he acquired a knowledge of Sanskrit, Prakrit, Magadhi, Hindi, English, German, Latin, and other languages and arts. Dr. Kaviratna has contributed immensely to our Sinhala literature on a multiplicity of subjects such as Yoga, Indian philosophy, Mahayana, Theravada, Zen, Tantrikism, Peruvian and Mayan cultures, pre-Christian European cultures, and Egyptology. The present version of *Dhammapadam* is a verbatim translation which has carefully preserved the true spirit of Buddha's very word. This anthology may be regarded as a Buddhist encyclopaedia in miniature.

-- Rt. Ven. G. Punnasara Maha Thero  
Spiritual Instructor, Government Central College, Madamba, Sri Lanka

## Palm Leaf Manuscript

*Photo:* Courtesy of K. D. Paranavitana, Assistant Archivist, Department of National Archives, Colombo, Sri Lanka.

Outer wooden covers ("Kamba") and the first and last pages of the Pali text of the *Dhammapada* in Sinhalese characters. This palm leaf manuscript (17 1/2" X 2 1/2") is believed to be the oldest extant copy of the scripture.

The upper cover depicts the Bodhi tree in green, under which the mendicant Gautama is said to have attained supreme enlightenment, and eight stupas colored amber against a red background. The lower cover shows a relic casket and two stupas beside the Sri Pada Mountain with the Buddha's footprint, and portrays also the Great Passing of the Buddha into Parinirvana.

---

## FOREWORD

Buddhist tradition has it that shortly after the passing away of the Lord Buddha five hundred of his Arhats and disciples, led by Kasyapa, met in council at Rajagaha for the purpose of recalling to mind the truths they had received from their beloved Teacher during the forty-five years of his ministry. Their hope was to implant the salient principles of his message so firmly in memory that they would become a lasting impetus to moral and spiritual conduct, not alone for themselves and the brethren in distant parts of the land, but likewise for all future disciples who would seek to follow in the footsteps of the

Awakened One.

With the Teacher no longer among them, the monks found themselves with the responsibility of handing on the teaching and discipline of the Order as faithfully as possible. Having no written texts to rely on, they did as their forebears had before them and prepared their discourses "for recitation," that is, basic themes were repeated with variations in order to impress the ideas on their hearers. At that time, according to the Sinhalese, the *Dhammapada* was orally assembled from the sayings of Gautama given on some three hundred different occasions. Put in verse form the couplets contrast the vanity of hypocrisy, false pride, heedlessness, and selfish desire with the virtues of truthfulness, modesty, vigilance, and self-abnegation. The admonitions are age-old, yet they strike home today, their austerity of purpose fittingly relieved by gentle humor and earthy simile.

Subsequently, several renditions of the *Dhammapada* in the Sanskrit and Chinese languages came into circulation; likewise, a number of stanzas are to be found almost verbatim in other texts of the canonical literature, testifying to the esteem in which its content was anciently held. Since first collated, the *Dhammapada* has become one of the best loved of Buddhist scriptures, recited daily by millions of devotees who chant its verses in Pali or in their native dialect.

It was inevitable that differences in interpretation of teaching as well as of disciplinary practices would arise, with the result that about a century after the First Council was held a second gathering was called to affirm the purity of the doctrine. It was at this Second Council that the Arhats divided into two main streams, namely, the *Mahasanghika* or "Great Assembly" and the *Theravada* or "Doctrine of Elders." These gradually developed into the Mahayana or Northern School of Buddhism espoused chiefly in India, Tibet, China, and later Japan, and the Hinayana or Southern School whose stronghold is Sri Lanka, Burma, and the countries of Southeast Asia.

The range of Buddhist literature is vast, and much is made of the difference in emphasis between the Mahayana and the Hinayana: *Mahayana* or the "great way or vehicle" is the large "ferryboat" or fuller doctrine of the Lord Buddha that will ferry all beings across the ocean of births and deaths to the "other shore"; *Hinayana* or "incomplete or deficient way or vehicle" is, the Mahayanists say in contempt, the "ferryboat" of inferior quality because it contains less of the vital essence of the Master's wisdom. The Theravadins, the largest branch of Southern Buddhism, repudiate the title, and never refer to themselves as Hinayanists, because they hold that as the Pali Canon represents the oldest records of Buddha's life and message they are closer to the source than are the later and more elaborate doctrines of the Mahayanists. In fact, the Theravadins reverently state that the *Dhammapada* preserves the *buddhavacana* or "word of Buddha." Without doubt it carries the spirit of the Master's teaching, but there is no firm assurance that the Pali texts represent the most primitive Canon, for there appears to have been more than one collection of scriptures at a very early stage, from which both Pali and Sanskrit Canons may have developed.

With the passage of years, although both derive inspiration from the same source, the two Schools diverged rather widely. To put it almost too simply, the basic difference lies in this: the goal of the

Theravadin is to transmit in utter fidelity the teaching and example of Buddha-Gautama and by the steadfast practice of the virtues to become, in the course of time, an Arhat, one "worthy" of attaining the supreme nirvana or bliss of omniscience; the goal of the Mahayanist is to become a Bodhisattva, one whose "essence is bodhi or wisdom," and when nirvana is reached to renounce it for the sake of the world and the "weal of gods and men." In this sublime act of compassion is the promise that all beings are potential Buddhas, having the same intrinsic capacity for enlightenment.

Significantly, the same character training and purification process must be undergone by all devotees, by those who would become Buddha and enter nirvana, and by those who would refuse nirvana, as did Gautama Sakyamuni in the manner of his predecessor Buddhas. But let it not be thought that because the Theravadins do not explicitly delineate the Bodhisattva ideal they lack compassion. In actuality, the power of the Compassionate One is implicit in every word and incident recorded in the Pali Canon, the *Tripitaka* or "Three Baskets," the second of which, namely *Sutta-Pitaka*, includes the *Dhammapada* and the famed *Jatakamala* or "stories" that relate the previous "births" of Buddha.

One has only to read a little in this extensive literature to feel the depth of love that filled the Tathagata. He comes through not as a god or far-off divinity, but as a wonderfully wise and compassionate friend who understands human weakness yet has the gift of inciting the least of us to noble endeavor. His very presence on earth was witness of the "earnest resolve" he had made "a hundred thousand cycles vast and four immensities ago" to join the line of Bodhisattvas who periodically fulfill their dhamma of bringing light and hope to a troubled humanity. Were this still not a potent influence in every Buddhist land today the populace would not gather in villages and groves, as they do in Sri Lanka, on full moon nights of their holy days, particularly in the month of Vesak (April/May), to hear once again the monks chanting the sacred verses of how Prince Siddhartha became Gautama-Bodhisattva out of love for all beings everywhere.

The present translation of the *Dhammapada* by Dr. Harischandra Kaviratna originally appeared as a serial in Sunrise magazine from August 1970 through September 1971. It has been revised by the translator where needed, and a Glossary of Pali philosophical terms with Sanskrit equivalents added.

Dr. Kaviratna, a native of Sri Lanka, is equally versed in Sinhalese, Pali, and Sanskrit, and since youth has been a dedicated researcher into the esoteric implications behind the Vedas, Vedanta, and Buddhist canonical and noncanonical literatures of both Northern and Southern Schools. It is our sincere hope that readers will find food for contemplation in this ancient devotional scripture which for more than twenty centuries has inspired in its hearers a genuine conversion, a "turning about" of the soul from the limitations of the personal toward the light within, the light that is our Self, our refuge, and our strength.

## INTRODUCTION

Ballads and folklore are the most precious remnants of a glorious and prolific culture that disappeared from the surface of our globe many centuries prior to the dawn of our present civilization. Embedded in age-old legendary poems are the loftiest speculations of our most ancient forebears and, although their culture vanished in the prehistoric past, we may discern its indelible impress upon the extant literature that is the universal heritage of mankind. The *Dhammapada*, the *Bhagavad-Gita*, and the ascetic poems of the Jains, for instance, perpetuate ethics and norms that were promulgated by the sages of an age that is still shrouded in mystery. Valmiki and Vyasa of Aryavarta, Homer and Pindar of Greece, Druid bard and Mayan priest, Chinese lawgiver and Egyptian hierophant -- all echoed these moral values in their epics and systems of thought.

It is evident that even in the earliest dawn of prehistory men used a universal system of signs and symbols to transmit ideas and impressions -- without doubt a symbol can more adequately represent a philosophical conception than the written word. Among ancient peoples, such as the Indo-Aryans, literacy and education were not considered of primary importance but merely as aids to interior illumination and religious insight. And indeed, throughout the centuries, mystics of both East and West have attained enlightenment and union with supreme Reality not through scholastic study, not through dialectic discourses, but through self-abnegation and intuitive direct comprehension. Rarely do those of great intellectual stature alone penetrate to the deepest esoteric truths embodied in the symbology of scriptural texts. With this in mind, we can better understand the conviction of the Brahmans that the sacred knowledge would be perverted when put into writing: the Vedas had to be *heard*.

The art of writing, therefore, did not become popular, as the emphasis of education was on the development of memory and its retentive power. If the expounder of a special branch of knowledge wished to protect his system from falling into oblivion, he rendered it into verse, to be sung or chanted; only on rare occasions did he commit it to writing. Paleographic evidence indicates also that writing, in its earliest stages, was used mostly to chronicle historic events; it was not used to impart instruction in mysticism and philosophy, exorcism and religion, for Druid bard and Brahman sage alike considered this a profanation of the esoteric wisdom. In that golden epoch of intuition and memory culture no teacher ever attempted to hand down the sacred knowledge through the medium of script. The immortal epics of poet-philosophers, such as the *Iliad* of Homer and the *Ramayana* of Valmiki, were learned by professional bards and minstrels who recited them in the courts of kings and in the pleasure gardens of the great cities where they drew large cosmopolitan gatherings. They wandered from land to land reciting the traditional ballads in order to entice a zealous following from among the curious. In those days erudition was judged not by a scholar's literary achievements, but by his ability to inspire his bearers to seek wisdom. It was customary also in every court throughout the world for a professional royal minstrel to chant the dynastic history from its beginning up to the time of the living king. For example, in pre-Columbian America, in the palaces of the Incas and Aztecs, reciters were employed who had memorized the genealogy of the solar rulers from the most remote eras.

In this way the hoary wisdom of the Vedas as well as of the non-Vedic literature of India was safely

passed from generation to generation by word of mouth for many thousands of years with the utmost preservation of their purity, until in later times they were recorded and printed in book form. Even today in traveling through India, Sri Lanka, or Burma, one may come across numerous individuals who can dictate for days the great works of scripture, grammar, astrology, medicine, and those of other branches of ancient knowledge. Some of this ancient lore is still being orally transmitted, having never been recorded. In Sri Lanka and Burma it is customary for every Buddhist novice to learn the Pali grammar, lexicons, and the *Dhammapada* by heart. Of course, most of these works are metrical compositions which makes the memorizing of them quite easy. It is rare to find a Buddhist monk in those countries who cannot recite the *Dhammapada* verbatim. It is well known that even the physical philosophers of Miletus and Athens presented their speculations in poetic form. The versification of the *Dhammapada* was done in the Audience Hall of Jeta's Grove at Sravasti to enable the followers of Buddha to learn them by rote. Most people think that the versification of these discourses was done after the demise of the Great Master, but my own research leads me to question this.

Although at a certain phase of human culture, learning by rote and oral transmission as a mode of preserving knowledge were admired by the philosophers both in East and West, we cannot underestimate the magnitude of the disadvantages involved. Natural catastrophe, pestilence, war, or other large-scale disasters could destroy the line of priests, bringing to an abrupt end the collective wisdom of untold centuries. This is the exact cause of the disappearance of most of the spoken languages of the archaic past, before the emergence of Sanskrit, Sumerian, Hamitic, and Semitic which, according to our modern philologists, can rightfully claim to be of very early antiquity. How many languages with their literary treasures have vanished from the surface of our planet is still an unsolved question. Dialects which we now know only by name have left us no more than their imprint on the grammatical structures and vocabularies of our modern tongues.

While the age-old method of oral instruction had intrinsic esoteric merit, the ancient philosophers caused neglect of the written word, which did not reemerge before the sixth century B.C. at the dawn of the new intellectual epoch in India. Throughout the Buddhist canon are passages which presuppose the existence of that very ancient religious tradition known as the Vedas, of which the Great Mendicant, Buddha, had acquired mastery under the renowned sage Visvamitra, "the universal friend." Yet the source of this literature is lost in the mists of time. Although its system of philosophy differs vastly in some of its cardinal tenets from Brahmanism, any critical student is aware that Buddhism contains many of the teachings of the earliest Upanishads. For a fuller understanding of Buddha's spiritual teachings, a regard for the atmosphere in which they developed at the convergence of Vedic and non-Vedic streams is indispensable.

The sacred tradition of the Vedas was already in the possession of the Aryans (1) many millennia ago. Its mystic religio-philosophy was not only closely related to that of their relatives in Iran (where it took the form of the Avesta), but is also similar to the Eleusinian and Orphic traditions of the Western Aryans who migrated to and established their cultural empires in Greece, Central and Northern Europe, and the Emerald Isle. It should be noted, however, that the seeds of desuetude had been germinating in the Aryan religion before that great family divided.

Orthodox Hindus hold that the Vedas existed even before the creation of the world, coeternal with Brahman. Consequently, most of the hymns of the *Rig-Veda* are not just odes to the beauty of nature, but are musings about a transcendental reality *beyond* visible natural phenomena. It is said that the rishis, while in spiritual trance, came in direct contact with celestial beings of whom they sang, and whom they considered as expressions of the cosmic intelligence, manifestations of the immanent divine principle. Thus they conceived of nature as a living organism controlled by conscious, intelligent entities. To denote these deities, the poets coined a special appellative term, *deva*, for which there is no adequate equivalent in modern European languages. It literally means the "shining one" or the "donor." The rain, therefore, is a deva, because it gives nourishment to all life on earth. Sun, moon, and stars are devas, because they shed light throughout the solar system and universe. The Ganges, Indus, and Sarasvati are deified rivers, because they irrigate the arable lands of Aryavarta. In addition, many gods of the pluralistic pantheon once were great heroes, warriors, or philanthropists, who later were venerated as devas for their valor or benevolence.

The religion of the Vedas is neither naturalism nor anthropomorphism, neither polytheism nor monotheism, but a unique mysticism, a synthesis of religious streams known to the ancient Aryans. But when esotericism was ousted by exotericism, symbolism by ritualism, idealism by sacerdotalism, this early spiritual vision dwindled into a polytheistic sacrificial creed, and the cultural life of the Aryans became completely dominated by a priesthood. The Brahman priests made every effort to monopolize for themselves the religious hymns of the Vedas and the ballads which the Aryans sang in praise of the deified natural forces, thus arrogating to themselves as much power as possible. Dr. T. W. Rhys Davids writes in *Buddhist India*:

We cannot, therefore, be far wrong if we suppose they [the Brahmins] were not merely indifferent to the use of writing as a means of handing on the books so lucrative to themselves, but were even strongly opposed to a method so dangerous to their exclusive privileges. And we ought not to be surprised to find that the oldest manuscripts on bark or palm leaf known in India are Buddhist; that the earliest written records on stone and metal are Buddhist; that it is the Buddhists who first made use of writing to record their canonical books; . . . -- p. 119

And so it was that with the advent of the Buddha the art of writing was given renewed impetus, and began to rise again from the gloomy limbo where it had been concealed for so long by the Brahman priesthood.

For a genealogy of Prince Siddhartha Gautama Sakya Muni, full-blown lotus of the solar dynasty, Lion of the Sakya clan, prince and heir-apparent of the city state of Kapilavastu, we have to rely mostly on the literary material embedded in the immortal Sanskrit poetical works of Avaghosha and Kshemendra. Avaghosha flourished in the second century A.D. at the court of the Kushan King Kanishka in Northern India and recorded the Buddhist chronicles which had been handed down through oral tradition. Kshemendra, a great Buddhist poet of Kashmir in the eleventh century, wrote a poetical chronology of the dynastic history of the Sakya clan in his *Avadana Kalpalata*, an epic work which was translated into

Tibetan in 1272 A.D. by Savi-rton Lochava under the supervision of Phags-pa, spiritual instructor of Kublai Khan. The original Sanskrit text was lost for many centuries but recovered in 1882 by the Buddhist scholar Sri S. C. Das in the Tibetan printing establishment at Potala. The Sakya-utpatti ("Birth of the Sakya clan") of Kshemendra, as well as Pali commentaries and Tibetan legends, together give a comprehensive account of the origin of the Sakya clan.

Almost thirty miles to the south of the foothills of the Himalayas, a rolling plain extends for hundreds of miles along the Nepalese frontier, verdant and picturesque, rich in scenic delights and silent forest glades through which flow sparkling streams. In this ideal retreat Buddhist tradition has it that a bodhisattva, Kapila Gautama Muni, lived about three centuries before the advent of Gautama Buddha.

Sometime between 950 and 900 B.C. there reigned a mighty king named Virudhaka, lord of a vast confederation of vassal states, and descendant of the Ikshvaku dynasty. On a pleasure trip he beheld a most charming young princess and felt himself compelled to make her a matrimonial proposal, which the princess accepted only on condition that the king appoint her youngest son, instead of her eldest, to be his heir to the throne of Kosala. In due time the queen reminded her lord of the promise he had made; the king was distressed by the demand that he break the Vedic convention, but the four older sons volunteered to accept banishment. They loaded their chariots and rode towards the Himalayas whose snow-covered peaks glittered on the far horizon. After some days they reached the monastery of the celebrated sage Kapila Gautama.

The princes were well received and, instructed by the sage, they founded a flourishing metropolis which became known as Kapilavastu. After many centuries of benign rule, the sovereignty of the Sakya kingdom fell to King Sinhaharm. During his reign Kapilavastu became a center of international trade, learning, and spiritual culture. (2) King Sinhahanu had four sons and four daughters. The oldest son was Prince Suddhodana. He became known as King of Law, for he governed in accordance with the rules prescribed by Manu for righteous kings, and was loved by all his subjects.

King Suddhodana married his cousin Maya and, after her death, another cousin, Maha-Prajapati. Queen Maya was the personification of beauty and purity, compassion, cosmic love, and intelligence. In esoteric schools she was considered the materialization of a divine vision: Queen Maya had all the virtues to become the mother of the universal Lord of Compassion, and yet after several years of married life the royal couple had not been blessed with a child. The account of the annunciation of the Sakya prince who was to become Buddha, known to every Buddhist in Sanskrit, Pali, or his native vernacular, is charmingly rendered into English by Sir Edwin Arnold, one of the great poets of the nineteenth century who spent a large part of his life in India. His classic, *The Light of Asia*, relates:

That night the wife of King Suddhodana,  
Maya the Queen, asleep beside her Lord,  
Dreamed a strange dream; dreamed that a star from  
heaven --  
Splendid, six-rayed, in color rosy-pearl,

Whereof the token was an Elephant  
Six-tusked, and white as milk of Kamadhuk --  
Shot through the void; and, shining into her,  
Entered her womb upon the right. Awaked,  
Bliss beyond mortal mother's filled her breast,  
And over half the earth a lovely light  
Forewent the morn. The strong hills shook; the waves  
Sank lulled; all flowers that blow by day came forth  
As 'twere high noon; down to the farthest hells  
Passed the Queen's joy, as when warm sunshine thrills  
Wood-glooms to gold, and into all the deeps

A tender whisper pierced. "Oh ye," it said,  
"The dead that are to live, the live who die,  
Uprise, and hear, and hope! Buddha is come!"  
Whereat in Limbos numberless much peace  
Spread, and the world's heart throbbed, and a wind blew  
With unknown freshness over lands and seas.  
And when the morning dawned, and this was told,  
The grey dream-readers said "The dream is good!  
The Crab is in conjunction with the Sun;  
The Queen shall bear a boy, a holy child  
Of wondrous wisdom, profiting all flesh,  
Who shall deliver men from ignorance,  
Or rule the world, if he will deign to rule."  
In this wise was the holy Buddha born.

It was the age-old custom that the first confinement of a young mother should take place in the home of her parents, so, when Queen Maya felt that the blessed day was drawing near, she intimated her desire to go to her childhood home for the great event which the whole world was anticipating. The Lord of Kapilavastu caused the road connecting the two cities of the Sakyas to be swept and decorated, embellished with festoons and garlands. It was the month of flowers; the day was Vaisakha (Vesak) Full Moon Day in the year 623 B.C. (3) Between the two cities lay the famous pleasure garden Lumbini, and it was here, as the cortege paused on the journey, that the holy child saw the light of day among blossoming trees and warbling birds, while strains of heavenly music filled the air and soft breezes enriched with a celestial aroma blew throughout the Sakya kingdom.

Buddhist tradition records that as soon as Prince Siddhartha was born, King Suddhodana summoned the most erudite scholars and astrologers to the palace of Kapilavastu to cast the horoscope of the newborn babe. After examining the planetary positions, seven of the eight astrologers announced that the prince would become either the universal monarch of the present cycle, or he would retire from the world and become Buddha. Kaundanna alone, youngest member of the Astrological Council, predicted that Siddhartha would indeed abdicate the throne of the Sakyas and become omniscient Buddha to save

suffering humanity. Later, when the prince renounced the throne, Kaundanna also gave up the "householder life" and joined a small group of contemplatives in the forest. It was this community of five ascetics with whom Gautama-Siddhartha spent six years practicing austerities so severe that, when near death, he perceived that enlightenment was not to be attained by this means. It was then he adopted the system of moderation that came to be known as the Middle Way. After Gautama's illumination under the Bodhi tree, these five monks became his earliest disciples.

Another who correctly foresaw the infant's destiny was the venerable sage Asita (or Kala Devala), who was spiritual guide and mentor to King Suddhodana and to his father before him. On learning of the birth of Siddhartha, the sage hastened to the palace and, observing the distinguishing marks on the child, the aged Asita wept -- not for the prince, but for himself, as his great age would prevent him from seeing the child grow up to become Buddha.

As King Suddhodana strongly believed in the prediction that his son would be a world monarch, he had him instructed by Visvamitra in the extensive curriculum befitting such a prince, including the Vedas and all systems of mysticism then current. It is noteworthy that the young man was taught to decipher pictographs as well as the sign language of cave dwellers and those plying the seas. In fact, from the vivid descriptions in ancient Sanskrit and Tibetan Buddhist works, and even from those in the rival literatures of the Jains and Vedantins, we may safely deduce that the Buddha had mastered all the sciences, arts, and languages known in India at that time.

We have here an interesting parallel between King Suddhodana of Kapilavastu appointing the sage Visvamitra as teacher to Prince Siddhartha and the selection by King Philip of Macedonia of the great philosopher Aristotle to be preceptor to Prince Alexander. In both Aryan princes the age-old dream of establishing an invincible brotherhood of peoples was ingrained in their racial soul; but while Alexander spent most of his short life in military expeditions in an effort to expand the borders of his empire, Prince Siddhartha bade adieu to a worldly realm in order to establish an imperishable, eternal kingdom of the spirit.

The seventh-sixth centuries B.C. marked a new historical epoch in the religious evolution of Northern India. The racial intellect of the time was compelled to face two opposing psychological trends. The solution lay in the emergence of a magnetic individual who could successfully synthesize the realism of the physical philosophers with the idealism of the ancient Vedas, one who could blend the best of the old with the vigorous and constructive elements of the new. This mighty task, undertaken by Gautama Sakyamuni, was successfully accomplished by setting the "Wheel of the Sacred Law in motion" -- that eternal Law which is forever valid, for the past, the present, and for eternities to come. This Law is preserved for posterity in the *Dhammapada*, a sublime ethical treatise of twenty-six cantos, which is to millions of Buddhists what the *Bhagavad-Gita* is to Hindus. Although it is not known when it was first committed to writing, its content suggests a direct descent from spiritual instruction given by Gautama Buddha. Extensive research confirms that these teachings express a universal wisdom, a rediscovery of the eternal Buddha Dharma which could rightly be termed the Sanatana Dharma or "eternal wisdom."

*Dhammapada* -- the path of *dhamma* (Sanskrit *dharma*, a word comprising the essential ideas contained in the words truth, virtue, and law) -- was compiled at the First Council of Buddhist Elders three weeks after the Master's passing. It is therefore the oldest anthology on Buddhism extant. The work consists of a systematic collection of stanzas, terse yet elegant, giving the quintessence of Buddhist wisdom. These stanzas were the distillation of various sermons delivered by Buddha to kings and queens, to ministers and merchants, cowherds and peasants, to grieving mothers, distressed lovers, monks, paupers, saints, and criminals. The first verse of the *Dhammapada* is a direct attack on the dialectical materialism prevalent at the time of Buddha. Mind is not a by-product of physical elements; according to Buddha, mind precedes everything that exists. Nor is the destruction of the physical body the end of human existence. The external cosmos is a creation of mind integrated into a cosmic order of cause and effect.

The Master admonished his leading Arhats not to compel his followers to learn Ardha-Magadhi in order to understand his doctrine. Therefore, when Buddhism expanded, as it rapidly did, beyond the frontiers of Aryavarta, the missionaries began to translate the Dharma into numerous dialects and vernaculars. We know, for example, that *Dharmapadam*, an early Prakrit treatise, was composed during the fourth century B.C., and that about a century later, the first Buddhist king, Asoka, sent his son, Arhat Mahinda, to Sri Lanka, where he and his disciples made the first Sinhalese version of this ethical manual, titled *Dhampiya*. Unfortunately, this earliest rendition of *Dhammapada* in Sinhalese-Prakrit fell into oblivion soon after Buddhist prelates retranslated it into Pali along with the other works of the *Tripitaka* in 88-76 B.C.

It may be noted that Pali, like most European languages, has no alphabet of its own; in Sri Lanka it was written in Sinhalese script, while Burmese Buddhists used their own characters to write the Pali text. The language used by Buddha, Ardha-Magadhi dialect, is very similar to the literary language of the Jains. Pali has the coloring of this dialect. Because in a living language terms undergo continual modification as the thought life of the nation changes, the Theravada scholars tried to retranslate the Buddha Dhamma from Sinhalese back into Pali, which has the Sinhalese idiom unaltered with very little Sanskrit influence upon it. Most of the Indian versions are no longer extant, either in printed or manuscript form, in any of the museum libraries of the world. Only a few birchbark manuscripts in Prakrit were discovered in the early part of the nineteenth century in northwestern India.

A Chinese *Dhammapada*, translated from the Sanskrit, was not lost; it was the first book, along with the rest of the *Tripitaka*, ever to be produced in a printing press and was made from wooden blocks in 972 A. D. But not until 1885 was the Pali *Dhammapada*, which had been lost to India for twenty-two centuries or so, reintroduced into that country in Devanagari transliteration by my paternal uncle, Ven. B. Sri Dharmapala Nayaka Thero of Batapola, under the guidance of Rt. Ven. C. A. Silakkandha Nayaka Thero of Dodanduwa, Sri Lanka.

Thirty years earlier, in 1855, a young Danish scholar, Victor Fausboll, published the first European edition of the *Dhammapada* in a Latin translation, with Pali text, and selections of native commentary. Subsequent renditions in German, English, and French followed, making the scripture more readily available to Western students. Later, Dr. E. W. Burlingame's three-volume translation of the voluminous commentary on the *Dhammapada*, written by the renowned Indian scholar Buddhaghosha in the early

part of the fifth century A.D., provided the modern reader with a wealth of legendary and historic details regarding the various episodes and circumstances which led to the utterance of these verses. Were Buddha to come to the world today, however, he would probably not countenance some of the stories that accompany his ethical teachings. For instance, he did not totally deny the existence of spirit in his and anatman (*Pali anatta*) doctrine, but used negative terms to illustrate and clarify the state of spirit.

The volumes on the *Dhammapada* in my possession are mostly in the Devanagari and Sinhalese scripts, the Pali text of which has undergone very little distortion, although the commentaries and translations differ greatly. Some commentators have curious and artificial renderings, which are not akin to the streams of Buddhist and Vedic thought prevalent in India during the time of Buddha. Most of the European and Indian translators have based their renditions upon these artificial commentaries without any deep penetration into the philosophic currents of that early period.

For this present small volume, I have diligently compared the best European translations of the *Dhammapada* with Sanskrit, Burmese, and Chinese versions. Special care has been taken to bring out a faithful word-for-word rendition that is lucid, free of bias and, as far as possible, true to the wisdom and pristine grace of the original Pali texts.

## **ACKNOWLEDGMENTS**

Acknowledgment is hereby made to Sunrise magazine for permission to publish this translation in book form; to the editorial and printing staffs of Theosophical University Press for their untiring labors during the preparation of the manuscript and through every stage of publication. I have a deep sense of gratitude to the late James A. Long, Leader of the Theosophical Society, Pasadena, California, who, prior to his death, inspired me to embark upon this rendition. I am also indebted to his successor in office, Grace F. Knoche, for many valuable suggestions.

Grateful thanks are extended to the Rt. Ven. G. Punnasara Maha Thero, Spiritual Instructor at the Government Central College of Madamba, Sri Lanka; also to K. D. Parnavitana, Assistant Archivist, Department of National Archives, Colombo, for supplying the photograph of the wooden covers and first and last pages of the palm leaf manuscript of the *Dhammapada* which is considered the oldest

extant copy of the scripture in the National Archives of Sri Lanka. (see illustration [above](#))

Lastly, a special word of appreciation to my beloved wife for her unfailing support and to my daughter Savitri who did the several typings required for the entire manuscript in Pali and English. --  
HARISCHANDRA KAVIRATNA

#### FOOTNOTES:

1. This word, as here used for the peoples of Aryavarta, is derived from the Sanskrit *arya* (Pali *ariya*) meaning "noble." ([return to text](#))
2. The precise location of this city is not firmly established, though excavations in 1971 at Piprahwa, in the northeastern corner of the Basti district on the Nepalese frontier, uncovered a monastery constructed in four stages. Also at Piprahwa is a stupa erected in the time of King Asoka (273-232 B.C.), which bears an inscription suggesting that relics found therein are those of members of the Sakya family, close relatives of Gautama Buddha, possibly including those of Buddha himself. ([return to text](#))
3. The dates of Sakyamuni's birth, death, and parinirvana have been variously calculated. Buddhist scholars have used at least three different calendars to compute these dates, as well as various astrological configurations. In addition, Western scholars have employed their own calendric ways of reckoning. With such diversity of opinions, no exact date can be determined. ([return to text](#))

## Foreword

This book was first published in the Spanish language in Mexico City in 1948. It has since gone through three editions in French, one Italian, and four Spanish editions. The present translation, from the 1972 Mexico City edition, is the first to appear in English. *Esotericism of the Popol Vuh* is published by Theosophical University Press as a service to all English-speaking students of the ancient wisdom of humanity.

A Swiss-born ethnologist, Raphael Girard came to the New World in 1919 as the director of a six-man French scientific mission to study the native forest peoples of Honduras. He returned in 1924 to live in Guatemala and begin an archaeological and ethnological survey of the country, which resulted in a lifetime of association with and research in Amerindian cultures ranging from Patagonia to Canada. From the eminent anthropologists, Dr. Eugéne Pittard of the University of Geneva, and Dr. Paul Rivet, then director of the Musée de l'homme in Paris, Girard learned the interdisciplinary method of analysis -- employing mythology, ethnography, archaeology, and linguistics -- which has characterized and enriched his many published works.

In his early career the author was active in forming and participating in professional bodies in Switzerland, Honduras, and Guatemala to further the study of native American cultures. Over the years he has represented the Government of Guatemala at a number of international Americanist congresses, on four occasions serving as honorary vice-president of the congress. A distinguished Americanist whose work is well known throughout Europe and the Americas, Professor Girard has received fifteen honors and decorations. The latest of these is the Diploma of Merit awarded him for his more than 50 years of research and publication by the Organization of American States in October, 1978, at a ceremony in Washington, D.C. In 1977 he was nominated for the Nobel prize in Literature for his pioneering methods of study of native American cultures and his monumental writings clarifying their prehistory and history.

With regard to his analysis of the meaning of the *Popol Vuh*, the Mayan "Book of the Community," Professor Girard's comments from a recent letter to me are revealing:

My first experiences disclosed that the *Popol Vuh* constitutes a key document for understanding the spirituality, culture, and history of the Quiché-Maya. But no exegesis

had been made of that celebrated document owing to the disregard of its esoteric meaning, and so it was never employed as a research tool. Much the same held true for Quiché-Maya religion and its symbols which, it was claimed, were completely inaccessible to our mode of thought. . . .

It was vital and necessary to study their sacred way of life. Only this method, in my view, would allow us entry into the mental universe of the Mayas and bring comprehension of their mythology and thus of their culture.

To accomplish this, the author went to the tribal elders of the Chortí and Quiché-Maya tribes, where he quickly encountered the barriers of impenetrable reserve which those spiritual leaders -- guardians of their sacred traditions -- erect to defend these precious values from the unworthy and the potential despoiler. Only after more than twenty years of direct association with the elders was Girard able to obtain the fundamental aspects of their secret doctrines which he reports upon in this work. *Esotericism of the Popol Vuh* demonstrates beyond question that at the heart of Maya religion and custom there is a sophisticated spiritual philosophy with clear correspondences not only to ancient Mexican as well as Andean cosmogony and creation mythology, but also to the mythoi and cultures of other parts of the world.

The author fully credits the "native gnostics," as he respectfully calls the Mayan elders, with enabling him to distill and elucidate the hidden sense of the *Popol Vuh*. But I believe he would be the last person to claim any ultimate finality for his work. His findings, nevertheless, comprise a genuinely authoritative approach to the solution of many of the so-called enigmas surrounding our knowledge of pre-Columbian Mesoamerican cultures, and are unprecedented in American ethnography. In his exposition, the author takes us behind the elliptical wording of the text into the spiritual heights and depths of conception that form the archetypes on which Amerindian metaphysics is modeled.

We begin to realize that we are looking at a magnificent expression -- unchanged in essentials during thousands of years -- of that archaic wisdom-religion which in one or another measure can be found at the core of all the world's religions. The *Popol Vuh*, properly understood, sheds light on the whole reach of native American spiritual thought. A true Mystery-document, it has strong and definite links with every other Mystery-tradition, and belongs in the highest class of scriptural literature. At present there are German, French, Spanish, and English language editions of the *Popol Vuh*, all of which are, as Professor Girard notes, acceptable literal translations of the original codex. The best English rendition is perhaps that of Delia Goetz and Sylvanus G. Morley, from the Spanish translation made by Adrián Recinos, published by the University of Oklahoma Press in its series titled *The Civilization of the American Indian*.

For the Maya the universe is a multilevel, multiplane production or emanation of primeval sevenfold creative forces or "gods," which continue to inspire their production. Thus, there are a number of other "worlds" or "planes" "above" as well as "below" our physical world of the five senses, and closely linked with it. There is always a multiplicity within and behind the unity of our material world, which can be

compared to one octave in a complete piano keyboard representing the total manifested universe. To retain this perspective is absolutely necessary for an understanding of the Indian's metaphysics. The various combinations of the creative forces and their worlds are allegorized in the god-Seven, god-Five, god-Thirteen, and god-Nine, etc., described by the author from Mayan sources. Each allegory thus has a range of meanings, standing for the complex workings of these forces and the relations among the "worlds," fully known only to the adept of the tradition who is accustomed to raise each basic idea in the allegory to progressively higher orders of conceptual magnitude.

Employing the same method with the textual contents of the *Popol Vuh*, we can understand that the four "Ages" with their respective humanities which it discusses, refer not alone to the ancestors of the Quiché-Maya but more correctly to the whole of mankind in existence on earth in each of those periods of time. For example, the *Popol Vuh* calls the latest, or Fourth-Age mankind, Quiché Mayas: that is, those who had achieved conscious spiritual linkage with their creative progenitors through the mediation of the man-god Hunahpú. Here we have an Amerindian expression of the better known Promethean allegory of classical Greek myth which explains the origins of man's self-consciousness, distinguishing him from an animal. The Christian biblical statement of this momentous experience is the allegory of the casting out of Adam and Eve from the Garden of Eden as a result of their having tasted of the knowledge of good and evil. In Hindu scriptural record, the same event is hinted at in the descent of the *mânasaputras* or "sons of mind," spoken of in theosophy as having come from higher worlds to awaken in man his mental potential. Some sort of allusion to this destiny-laden happening in early human history can be found in almost every spiritual tradition.

Readers acquainted with authentic presentations of modern theosophy, as in the writings of H. P. Blavatsky, principal founder of the Theosophical Society in 1875, will recognize much in this book that is familiar, albeit having its own form and language. The *Popol Vuh* clearly teaches, for example, that the simians sprang from an early humanity's racial experience, and not the reverse as asserted by the Darwinism of our day. Moreover, on page 227 Professor Girard explains the esoteric Mayan doctrine that the individual cannot realize the perfected state of True Man, or Hunahpú, except when the whole community shall also have attained that divine perfection. This is an unmistakable reference to the doctrine of compassion, its path, and the hierarchy which sustains it.

The concept of advanced men, or man-gods, beings of the evolutionary grade or rank of what Oriental tradition terms the bodhisattva or buddha of compassion, is not foreign to native American spiritual tradition. As seen, it is present in the *Popol Vuh* in the figure of Hunahpú as the paradigm of the spiritually perfected, illumined human being who sacrifices himself for the community, a word that here stands for the race or for humanity as a whole. We have only to examine the iconography of the magnificent carved stone figure of the young Maize god which once adorned the facade of a temple at Copán, to find it.

The young Maize god. Limestone sculpture from a temple at Copán, Honduras. The British Museum, London. (*Reproduced by courtesy of the Trustees of the British Museum*).

Above the serene countenance of that personage can be seen a pointed crown of maize leaves. This is a form of the protuberance of the Oriental ushnîsha, Sanskrit for "crown," a sign of the spiritually perfected one who is buddha, "awakened," such as is found in numerous buddha and bodhisattva figures in the Far East. The hands of the Mayan young Maize god are, moreover, extended palms outward, one raised and one lowered, in a classical teaching gesture or *mudrâ* characteristic of the bodhisattva and buddha as seen in Oriental iconography. Professor Girard emphasizes the spiritual nature of Mayan ethics and the Indian's recognition of their importance in his aspiration to achieve human perfection. In fact, he regards the Mayan ethical system as one of the most beautiful in the world.

But the author has done more than just elucidate the esotericism that is in the *Popol Vuh*. The illuminating objective vision of the Amerindic cultures that the reader obtains from his presentation is not accessible through the unilateral approach of archaeology. This work takes a great deal of the mystery out of our view of Mayan and, by extension, Amerindian culture in general, correcting some of the false assumptions still prevailing. A gifted ethnologist as well as a man who gained the respect and confidence of the Indian elders, Raphael Girard shows us the vital connections between the millennial mytho-history of the Quiché-Maya epic and the monumental structures, codices, glyphs, symbols, and customs of classical Mayan civilization, and therefore of present-day Mayan life and religion, its descendant.

The translation of *Esoterismo del Popol Vuh* into English has benefited greatly from a painstaking and challenging review and reading of it by my wife, Ida Postma, and by Sarah Belle Dougherty, Elsa-Brita Titchenell, and, last but far from least, by Grace F. Knoche. All of these have helped to give it whatever literary polish it may have, and I thank them and also William T. S. Thackara, who was responsible for the production of this book, for their manifold labors. Eloise Hart devoted many hours to typing and retyping the manuscript, and I. M. Oderberg and Ingrid Van Mater to reading proofs, and I am most grateful to them for their help. A special word of appreciation is due to my friend James H. Bothwell, a native Spanish speaker and professional translator, who reviewed the translation and made valuable suggestions for its improvement. For greater ease in using the book, several lengthy word lists have been moved from the text and placed in Appendices A and B, and a glossary and index have been added.

Miss Dora Marina Luna, secretary to Professor Girard, helped me correct several puzzling references in extracts from the *Popol Vuh*, and was unfailingly helpful in assembling and furnishing Theosophical University Press with reproducible photographs from the author's personal archives. The translation itself has been prepared in the atmosphere of regular contact with the author, who lives in Guatemala City, both by telephone as well as by correspondence over many months. It goes without saying, however, that any errors of fact or interpretation which may be found in the translation are mine and mine alone, and I shall be grateful to have them brought to my attention.

## **FOREWORD.**

WITH the greatly increased interest in the subject of theosophy during the past several decades it is felt timely to reprint this work of some 18th century "theosophers," as representative of a movement active since the commencement of our racial experience. Even though most serious students today, including those in the lay category, approach their researches from the critical point of view, few are aware of the full scope of theosophic effort put forth in the centuries previous to the 19th, when H.P. Blavatsky once more revived its active dissemination.

Louis Claude de Saint-Martin, Cagliostro, and the Count Saint Germain in their respective ways exerted

a major influence on the thought of their time as did Jacob Boehme in an earlier period. Old and crystallized molds of dogmatism were broken through, at least in the field of the best educated researchers. The courage of their followers, risking 'burning at the stake' for their heresies, has given us, however, some fruits of their labor that we of the 20th century may benefit by their efforts.

In this volume, containing as it does the correspondence between two active "theosophers," the one a pupil, will be found the fundamental background of the original *Theosophia*, divine wisdom, from which all progressive thinking springs. It is reprinted in the hope that it will reach the serious-minded theosophists of our time who find themselves in the same stream of expansion in which were those earlier exponents of the ancient mystery teachings.

### [Book I -- Peace](#)

1. In the Beginning
2. The Eve of Teotleco
3. The Arrival of the Gods
4. The Chalchiuhite Dragon
5. Eagle Mountain
6. Nopal in the North
7. The Master
8. Rainflower Reminiscences

### [Section 2](#)

9. Nopal's Homecoming
10. A Funeral and After

11. The Feast of the Mountains
12. The Votaries and Tlalocan
13. A Huitznahuattec Market Day
14. The Toltec Ambassador
15. The Audience
16. The Ambassador of the Gods
17. Passing

## Book II -- The Road

1. The Hierarch of Teotihuacan
2. Ahuacatl Glade
3. The God of Puma Rock
4. Forest Voices
5. The Ib Quinames
6. On the Hill of Derision
7. The Ib Quinames' Pilgrimage
8. The Republic of New Otompan
9. Yen Ranho, Disappointed
10. Acamapitzin's Plan

## Book III -- War

1. The Little Gods of Forgotten Plain
2. The Toltec Topiltzin Arrives
3. Exploration
4. Cohuanacotzin's Adventure
5. The Hierarch Acquires Information
6. Cohuanacotzin's Return
7. Nopal Returns
8. Nonohualcatl's Anger
9. Road and Barrier

### Section 2

10. Civacoatzin's Message
11. The Rocks Fall
12. The Tzo Family Reunited
13. A Place of Refuge
14. Quauhtli's Journey
15. The Kings Meet
16. Nonohualcatl's Debt
17. Teotleco -- The Arrival of the God

## Preface

On Christmas afternoon in 1925, the one in this world to whom I owed the most asked me to write on a pre-Columbian subject, and when, after some three months of thought and research, I submitted to her the idea of a book on Quetzalcoatl, Katherine Tingley approved. Then Bancroft became my study; a poor authority perhaps, but historicity was not the chief aim. Bancroft disentangled, or thought he had disentangled, from the masses of legend the story of a Great King; this author tried to disentangle from Bancroft the story of a Great Teacher.

The result of Bancroft's labor is as follows: Ceacatl Quetzalcoatl was the son of the Toltec Topiltzin (Divine Emperor, or Pope-Emperor), Nonohualcatl Totepeuh Camaxtli and Chimalman, queen of Huitznahuac (which means the South), whom, at the head of her army of unclad and barbarous Amazons, Nonohualcatl defeated and conquered.

When Ceacatl was nine years old, his father was assassinated by three nobles: Cuilton, Zolton and Apanecatl. King Huemac of Tollan, Nonohualcatl's brother, besieged and captured these three in their lake fortress, and Ceacatl inflicted, or witnessed, their cruel punishment. He was brought up by the Princess Civacoatzin, an elder sister of his father, who seems to have been revered in after ages as the Possessor of a Wisdom.

Grown up, Ceacatl became king of Tollan, and soon after, the Toltec Topiltzin. Then he put down the custom of war, preaching to his people from a mountain top through a "loudspeaker" that caused his voice to be heard over many hundreds of miles and ordaining peace, a life of love, the doctrine we know.

However, Prince Huemac, probably Ceacatl's cousin, was ambitious; his ambitions were fanned by the priesthood of Teotihuacan, the old established church, now San Juan Teotihuacan, seat of the head of the Catholic hierarchy; or it was until the days of Don Plutarco Elias Calles and his successors. For they too have found themselves opposed by the priesthood of Teotihuacan. Huemac raised an army and marched

against Tollan; now, would the Prince of Peace belie his teachings? Quetzalcoatl -- that was Emperor Ceacatl's God-name, the name of the god he incarnated -- would not belie his teachings; truth meant more to him than empire, and he "fled" (if you like the word) to Cholula, halfway eastward to Vera Cruz and the Gulf.

The Cholultecs welcomed him as their king, and there, it would appear, his activities as Teacher were intensified during the following nine years. Then Huemac, having consolidated his empire at Tollan -- Tula, now; not far northwest of Mexico City -- marched against Cholula; and Ceacatl, leaving the city in charge of four of his disciples, "fled" once more.

Whither? Some say to the Serpent's Hole in Goazacoalco. H. P. Blavatsky mentions this place; one gathers from her reference that it was the headquarters of the American branch of the Great White Lodge. Some, on the other hand, say that Ceacatl took ship and crossed the sea, and here it is interesting to note that in Mayapan in Yucatan, there appears a king counterpart to him, with the same character and teachings, by the name of Gucumatz, which name is being interpreted from Maya to Nahua as Quetzalcoatl; and the meaning of both is Plumed Dragon or Serpent.

Quetzalcoatl was the great and consistent pacifist of history. Ah, but you say, he failed; he was driven out, as pacifists always will be. But did he fail? We read that Huemac, swelled now with his easy victories, went conquering far and wide; that the Anahuacs, having tasted the peace of Quetzalcoatl, grew mighty tired of it; that Huemac, somewhere far in the north, was assassinated by his officers; and that the whole empire passed into the power and rule of the four disciples whom Quetzalcoatl had left in charge at Cholula.

That was the plot of the book that was intended at first, but I found the preliminaries too interesting -- the matter of Quetzalcoatl's parentage and birth, the Serpent's Hole, Huitznahuac and it became apparent that the life of Quetzalcoatl must be left for another book. It was enough for this one if I brought him to birth, rearranging things and resifting the legends, endeavoring to see through the crude stories -- which the Spaniards, after all, gathered only from the bloodthirsty Aztecs -- to the spiritual and the beautiful which might be historically possible, too. For the Aztecs knew well that the Toltecs were far more cultured and gentle than themselves. I would go at least halfway to the stake for it that my city, Huitznahuacan, existed; I know my way through all of its streets and gardens. . . .

When did these things happen? Some think they knew that it was in the eleventh or the sixth century of Christianity, but the truth is that we don't know. Quetzalcoatl was born in a year Ce Acatl; he always is born in a year Ce Acatl. Cortes arrived in Mexico in a year Ce Acatl, which fact helped to paralyze Montezuma's will. Ce Acatl -- Reed One -- was the fourteenth year in any year-bundle of fifty-two years. It will be noted that the book never says that that particular Ce Acatl was the year of the birth of another of Quetzalcoatl's order, Lao-tse of China, in 604 B.C. but here I am confessing that that is this author's belief. Toltecs were to Aztecs much as Greeks are to ourselves: Quetzalcoatl was the Pythagoras of the Toltecs, and I would let him live in Pythagoras's time, had I my way. A plague upon this foreshortening of history!

The days of a theosophical propagandist, at least in Wales, are not conducive to continuous literary effort, and the novel on the life of the Mexican Prince of Peace is unlikely to be written by this pen.

---

## Afterword

It is rather unusual that a novel, completed and ready for publication a few years before its author's death, should make its debut some fifty-odd years later. Such an event demands at least some brief explanation; in this instance, it necessitates a biographical exploration of the author, Kenneth Morris. However, as space here is limited, I must refer the interested reader to my introduction to the forthcoming volume of the collected short stories of Kenneth Morris, where a more extended study will be found. Here, I am restricted to a brief sketch.

Kenneth Vennor Morris was born at his grandfather's manor house in South Wales in 1879. There he lived until after the deaths of his father, in 1884, and grandfather, in 1885, and the failure of the family business. Rosa Morris, with her two young sons, Ronald and Kenneth, moved to London, where, in 1887, Kenneth was enrolled in the school at Christ's Hospital. He graduated in 1895 with a thoroughly classical English education, yet he retained a strong loyalty to his own Welsh background.

In 1896, Morris visited Dublin, where he encountered a group of writers and mystics associated with the Dublin Lodge of the Theosophical Society, including George Russell (AE), Violet North, William Butler Yeats, and Ella Young. This encounter shaped the rest of Morris's life. He enthusiastically joined the Theosophical Society and began contributing to the Society's publications -- poetry, essays, dramas, and short stories. Over the next forty years, nearly all of Morris's writings would be found in theosophical publications.

Morris stayed in Dublin for only a few months, after which he returned to Wales, where he became active in the Cardiff Lodge of the Theosophical Society. He continued writing, and attracted the notice of Katherine Tingley, leader of the Universal Brotherhood and Theosophical Society. Tingley's great vision of an ideal community and international headquarters, where the theosophical life could be realized, was already being fulfilled in Point Loma, California, a picturesque and peninsular headland between San Diego and the mountains to the east, and the Pacific Ocean to the west. Tingley invited Morris to join the staff of the headquarters, and in January 1908 Kenneth Morris arrived at Point Loma. He would spend the next twenty-two years of his life there, and it was at Point Loma that Morris would write and publish the majority of his output.

In addition to his duties as Professor of History and Literature at Point Loma's Raja Yoga College, Morris managed to contribute numerous essays, poems, and short stories to the theosophical publications. His first novel, *The Fates of the Princes of Dyfed*, a retelling of parts of the Welsh *Mabinogion*, was published in a handsome edition by the theosophical press at Point Loma in September 1914. The Welsh form of his name, Cenydd Morus, appeared on the title page, and the volume was

illustrated by Reginald Machell, another distinguished Point Loma resident, who also illustrated many of Morris's short stories as they appeared in the Point Loma periodicals.

Other book-length lecture series by Morris appeared in the Point Loma magazines, including "Golden Threads in the Tapestry of History" (1915-16; collected in book form in 1975), "The Three Bases of Poetry -- A Study of English Verse" (1917), and "The Crest-Wave of Evolution" (1919-21). Ten of Morris's short stories were collected in England in November 1926, in a gorgeously produced volume published by Faber & Gwyer entitled *The Secret Mountain and Other Tales*.

Sometime in the late 1920s, Morris became reacquainted with Ella Young, whom he had known in Dublin. She, too, had come to California, where she lived and lectured and wrote. Her children's books were published in America by Longmans, Green and Company. She convinced her editor, Bertha L. Gunterman, to consider for publication Kenneth Morris's second recension of Welsh legends, *Book of the Three Dragons*. It was accepted, and when it was selected by the editors of the Junior Literary Guild as the selection for "Boys and Girls between the ages of 8-12 years," upon publication in September 1930, it reached a larger audience than had any previous book by Kenneth Morris.

But by this time Morris was back in Wales. After Katherine Tingley's death in July 1929, followed shortly thereafter by the stock market crash, the Point Loma headquarters found itself in a desperate financial situation. The new leader encouraged members who could do so to leave Point Loma, to "earn their living in the outside world, and if possible to contribute part of their earnings to Point Loma."

Kenneth Morris returned to his beloved Wales. There in the next seven years before his death in 1937, he would found seven Welsh theosophical lodges. His output dwindled, but he began in January 1933 a publication of his own, *Y Fforwm Theosoffaid* (the Welsh "Theosophical Forum"), a four-page, stenciled, monthly publication (in English) of theosophical instruction and philosophy.

Morris's health, never good, worsened under a heavy lecture schedule. Part of this was due to a malfunctioning thyroid gland, and in April 1937 Morris entered a Cardiff hospital. To friends he confided that without an operation, he stood to live only a year at best, but if he could stand the operation itself, he would have a new lease on life. It was performed on 20 April 1937; Morris regained consciousness for only a few minutes afterward and gradually slipped into a deeper coma. He died at 4:00 A.M. on 21 April 1937.

His passing was mourned mainly in theosophical periodicals, but notices appeared in the general papers in Wales and in San Diego. Over the years, his memory has been venerated principally in the theosophical communities, where his writings have continued to be published and republished. Morris's lecture series, "Golden Threads in the Tapestry of History," achieved book form from Point Loma Publications in 1975, and three of his Chinese stories, together with a long Taoist poem, were collected by the Ben-Sen Press under the title *Through Dragon Eyes*, in 1980.

Morris's name among the general readership has long been forgotten, although his name is not unknown

among those of the most assiduous and persistent readers of fantasy literature. Lin Carter included a small section from *Book of the Three Dragons* in his anthology *Dragons, Elves, and Heroes* (1969), in the acclaimed Ballantine Adult Fantasy Series. But it is to Ursula K. Le Guin that we owe the most credit for calling Morris to our attention, for it is in her landmark 1973 essay on style in fantasy literature, "From Elfland to Poughkeepsie," that she has singled out Morris along with J. R. R. Tolkien and E. R. Eddison as the three master stylists of fantasy in the twentieth century. Perhaps as a result of this, *Fates of the Princes of Dyfed* was reprinted by Newcastle in 1978, and *Book of the Three Dragons* was reprinted in a library edition by Arno Press in the same year.

Several short stories by Morris were soon thereafter reprinted in various anthologies, most notably in the excellent series of fantasy anthologies edited by Robert H. Boyer and Kenneth J. Zahorski (1977-81). Zahorski and Boyer also pioneered the study of Morris's bibliography in their collective study, *Lloyd Alexander, Evangeline Walton Ensley, Kenneth Morris: A Primary and Secondary Bibliography* (1988), which also includes the only published information to date about Morris's life. More recently, David G. Hartwell included three previously uncollected Morris stories in his superlative anthology, *Masterpieces of Fantasy and Enchantment* (1988). Still, however, only about half of Morris's excellent short stories have been reprinted since their original appearance. This imbalance will be rectified with this novel's forthcoming companion volume, which will contain the collected tales of Kenneth Morris, including thirty-three of his mature tales and five of his previously unrecorded early stories.

Kenneth Morris during his life never sought any acclaim or renown, and little found him save for that within his theosophical circle. His indifference, I think, accounts for some of this neglect. To a number of people, including Ella Young and Morris's young friend and Point Loma student, W. Emmett Small, Morris expressed the desire that he be discovered, if at all, some hundred or so years after his death. We needn't wait so long, especially with a major work, newly published, and a long-needed omnibus of his best work, his short stories, coming soon.

Kenneth Morris's last major work, *The Chalchiuhite Dragon*, was written for Katherine Tingley, after her request on Christmas Day of 1925 that Morris write something on a pre-Columbian subject. Evidence suggests that Morris had finished the book before he left Point Loma in January 1930, for on 27 November 1930, he wrote to W. Emmett Small's mother at Point Loma that he was "busy with *The Chalchiuhite Dragon* again, and am able to shorten and concentrate it with very good results." However, it wasn't until 1935 that he sent back to Point Loma the final version. Typescripts of the novel have been carefully preserved by the Society librarians, and by W. Emmett Small, foreseeing eventual publication.

For assisting in the preparation for this publication, it gives me great pleasure to acknowledge the help and friendship of John P. Van Mater, Head Librarian of the Theosophical University Library (Pasadena); Kirby Van Mater, Archivist of The Theosophical Society (Pasadena); William T. S. Thackara, Manager of the Theosophical University Press (Pasadena); W. Emmett Small, of Point Loma Publications (San Diego); and Alex E. Urquhart, friend and literary executor of Kenneth Morris (Cardiff, Wales).

Douglas A. Anderson

## Glossary

In compiling this glossary, I have found it expedient to follow Kenneth Morris's own example in his two novels *The Fates of the Princes of Dyfed* (1914) and *Book of the Three Dragons* (1930). In these imaginative expansions of Welsh mythology, Morris provided succinct glossaries of the major characters and place names, with enough information to remind the reader of the referent without giving away any of the story. I believe this an admirable principle, and I have tried to follow it.

The glossaries were necessary in Morris's two earlier novels owing to the confusing and eye-splitting Welsh names. A glossary is necessary with this novel because of the bewildering complexity of the Nahua names. Nahua (or Nahuatl) represents a group of languages of the Uto-Aztecan family, spoken by various native peoples of North and Central America.

Morris used as his primary source for this novel, in all matters of myth, history, language and culture, the works of Hubert Howe Bancroft (1832-1918). Bancroft, whose voluminous "works" bore his name alone even though he depended heavily on the research and writing of numerous assistants, became known as the first great historian of the West Coast with his *Native Races of the Pacific States* (5 vols., 1874-5), *History of the Pacific States* (28 vols., 1882-90), and other works. Today his work has been superseded and is largely confined to the shelves of university libraries.

In the five volumes of *Native Races of the Pacific States*, Morris found all of the basics for his story. And I have found it a useful resource in providing collateral information about the entries in this glossary. However, this glossary remains primarily based on the material as used by Morris, and I have not felt it necessary to elaborate on just how Morris used (or did not use) Bancroft, or on how Morris used the Nahua language as presented in Bancroft.

I have also resisted the temptation to provide the story with a map. To pick precisely where Morris might have situated his mythical Huitznahuac seems to me wrong-headed. Huitznahuac should remain just off the map. Suffice it, simply, to describe the general area.

The Toltec League was centered in and around the Anahuacs, in the valley of central Mexico, where were located the cities of Tollan (Tula), Culhuacan, and Teotihuacan. The Otomi lands were to the east and southeast. Goazacoalco, near which could be found the Serpent's Hole, centered around the modern Coatzacoalcos, at the lower tip of the Bay of Campeche. The Zapotecs lived to the north of the Gulf of Tehuantepec; the Chiapanecs, to the east of it; the Quiches and Maya farther to the east (and northeast). Huitznahuac, therefore, would be somewhere in or around the southernmost part of Mexico, or perhaps farther to the southeast.

A few general comments should be made concerning the pronunciation of the names of places and persons, which as given here can only approximate the complex Nahua sounds.

*c (in ca, co, cu) is pronounced k.*

*(in ce, ci) is pronounced as in 'city.'*

*hu (or uh) is pronounced as w or hw.*

*qu (in qua) is pronounced kw.*

*(in que, qui) is pronounced k.*

*tl is pronounced as in 'atlas.'*

*x is pronounced sh.*

*z is pronounced s as in 'song.'*

The accent nearly always falls on the penultimate syllable.

Last, I should mention that I have listed personal names under the most commonly used form, and included variations of the names in parentheses immediately afterward. Thus under "Nopal" will be found his full name, Nopaltzin, and the affectionate and familiar derivatives, Nopaltón and Nopaltontli.  
-- D.A.A.

-----

**Acamapichlii (Acamapitzin)**, son of King Ashokentzin, and great-uncle to Chimalman.

**Acatonal (Acatonatzin)**, the Tezcatlipoca-teacher, eldest son of King Ashokentzin and great-uncle to Chimalman, joint head of the Calmecac with his brother, Amaqui.

**Amaqui (Amaquitzin)**, the Quetzalcoatl-priest, second surviving son of King Ashokentzin and great-uncle to Chimalman, joint head of the Calmecac: with his elder brother, Acatonal.

**Ameyal (Ameyatzin)**, the Tlaloc-priest, the oldest man in all Huitznahuac, cousin to King Ashokentzin.

**Anahuacs**, the area around the valley of Mexico in the northern world, with its three most important cities, Culhuacan, Teotihuacan and Tollan.

**Ashokentzin**, previous king of Huitznahuac, great-grandfather to Chimalman and father of Acamapichtli, Acatonal, and Amaqui.

**Ashopatzin**, father of Nopal.

**Been**, one of the Saltmen, a trader from Chiapas who visits Huitznahuac.

**Calmecac**, the college where the Huitznahuac boys were educated (the girls went to the Girls' College).

**Camaxtli**, the Toltec God of War.

**Catautlish**, a young lad at Rainflower, a xylophone player.

**Ce Acad**, a year (Reed One), the fourteenth in any year-bundle of 52 years. Quetzalcoatl is always born in a year Ce Acad.

**Centeotl**, the Maize-queen, a goddess of Huitznahuac.

**chalchihuite**, a precious green stone, variously identified with green quartz, jade or turquoise.

**Chiapas**, land to the north of Huitznahuac.

**Chiapanec**, a person from Chiapas.

**Chimalman (Chimalmatzin)**, queen of Huitznahuac, great-granddaughter of Ashokentzin.

**Cipactli**, the great Sea-creature of the Wave beneath the Sun.

**Citlalicway Teteoinan**, the Mighty Mother, a goddess of Huitznahuac.

**Civacoatli (Civacoatzin, Civacoatl)**, elder sister of Nonohualcatl, the Toltec Topiltzin.

**Coadantona**, a flower goddess of Huitznahuac.

**Cocotzin**, a Culhuatec noble and general.

**Cohuanacotli (Cohuanacotzin)**, a Culhuatec and favorite of Nonohualcatl and Huemac.

**Copil**, a young lad at Rainflower, a flute player.

**Coshcana**, servant of the Hermit of Puma Rock.

**Coshcosh**, a young lad at Rainflower, a gardener.

**cozcaquahtli**, a vulture; also the name of a regiment in Huemac's army.

**Cuetzpalin (Cuetzpaltzin)**, name given by Nonohualcatl to the Otomi Nratzo, who saved his life.

**Culhuacan**, city in the Anahuacs, capital of the power of the Toltec League, whose king was Nonohualcatl, the Toltec Topiltzin.

**Cuthuatec**, a person from Culhuacan.

**Eeweesho (Eeweeshotzin)**, servant to Queen Chimalman, wife of Ocotosh.

**Ghuggg**, one of the chieftains of the Ib Quinames, used by Yen Ranho.

**Guaish**, one of the chieftains of the Ib Quinames, used by Yen Ranho.

**Hax**, one of the Saltmen, a trader from Chiapas who visits Huitznahuac.

**Huanhua**, ancestor of Chimalman; he who came to Queen Ulupi of Huitznahuac from beyond the western sea.

**Huehuetzin**, the Master at the Serpent's Hole.

**Huemac (Huetzin) Tezcatlipoca**, king of Tollan and brother of Nonohualcati. Huhu, Otomi sentinel, founder of the Republic of New Otompan, and member of the Tzo family.

**Huitznahuac**, kingdom of Queen Chimalman.

**Huitznahuacan**, capital city of the kingdom of Huitznahuac, on the lower western slopes of the mountain Mishcoatepetl.

**Huitznahuatec**, a person from Huitznahuac.

**Ib**, one of the chieftains of the Ib Quinames, used by Yen Ranho.

**Ikak**, one of the Blue-Hummingbird Pygmies.

**Ilanquey**, daughter of Ketlasho and Shaltemoc.

**Ishcash (Ishcatzin)**, the village priest of the Mountain (Teotepetl) at Rainflower. He was also a cousin and good friend to Nopal and his family.

**Ishmishutzin Teteoinan**, healing woman of Huitznahuac.

**Iyaca**, disciple and servant to Ameyal, the Tlaloc-priest.

**Iztaman**, son of Ketlasho and Shaltemoc.

**Ketlasho (Ketlashotzin, Ketlashton)**, sister of Nopal and wife of Shaltemoc. koo, a truncated pyramid with a temple at the top.

**macuahuitl** swords, heavy wooden swords with a line of sharp stones firmly set along the two edges.

**Mahetsi**, secretary to Yen Ranho.

**mashtli** (or maxtli), a loin cloth eight yards long and nine inches wide, worn in and about the middle, with fringed and painted ends hanging down before and behind.

**Matlalqua**, *see under Mayavel*

**Maxio (Maxiotzin)**, wife of Shollo.

**Mayavel**, one of the Four Votaresses of Tlaloc, who, with a fifth votary, a youth, would climb Mishcoatepetl at Tepeilhuitl, the Feast of the Mountains. The other three votaresses are the Tepos, the Shochiteca, and the Matlalqua. The fifth, a young man chosen from the Calmecac, is the Milnaoatl.

**Mictlantecuhitli**, king of Hell (Mictlan).

**Milnaoatl**, *see under Mayavel*.

**Mishcoatepetl**, the Cloud-Serpent Mountain, on whose western slopes was the city of Huitznahuacan.

**Nahua** (or **Nahuatl**), a group of languages of the Uto-Aztecan family, spoken by various native peoples of North and Central America.

**Nayna** the Aged, healing woman.

**Natzo**, an Otomi sentinel, founder of the Republic of New Otompan, and member of the Tzo family (brother of Nratzo).

**Nauhyo (Nauhyotontzin, Nauhyotontli)**, young boy sent to Nopal by the Master at Eagle Hermitage.

**nequen**, a coarse fabric woven of the agave, or century plant.

**Nonohualcatl (Nonohualton) Totepeuh Camaxtli**, king of Culhuacan and head of all the Toltec race, with the title Toltec Topiltzin, whose god-name is Camaxtli, the Toltec God of War. All other kings are his subordinates.

**Nopal (Nopaltzin, Nopalton, Nopaltontli)**, son of Ashopatzin, brother of Shollo and Ketlasho, and husband of Chimalman. During his travels in the north, he used the name Quanez.

**Nratzo**, Otomi name of Cuetzpalin, brother of Natzo and member of the Tzo family.

**Ochpaniztli**, month-name of the last month of the year.

**ocotl**, a type of pine.

**Ocotosh**, servant to Queen Chimalman, with his wife, Eeweesho.

**Ometochtli**, God of Drunkards and Drunkenness, whose name means "tworabbits"; also the name of a Culhuatec regiment.

**Opochtli**, an old man at the Huitznahuacan market.

**Otompan**, city of the Otomis, near Teotihuacan.

**Otomis**, the race of people dwelling in the Otomi Republic, around Teotihuacan.

**Otomitl**, military head of Otompan.

**Panquetzaliztli**, a month-name.

**Papantli of Quauchinanco**, cook who befriends Quahtli on the Road.

**Pelashil**, daughter of Ketlasho and Shaltemoc.

**Pfapffo**, one of the three Little Gods of Forgotten Plain.

**pulque**, a fermented drink made from the juice of an agave.

**Pweeg**, one of the three Little Gods of Forgotten Plain.

**Pygmies**, a forest race, including the tribes of Blue-Hummingbird Pygmies and Viridian Pygmies.

**Quahh**, a youth among the Viridian Pygmies.

**Quauhtepetl**, Eagle Mountain, on which could be found Eagle Hermitage.

**quauhtli**, an eagle; also the name of a regiment in Huemac's army.

**Quauhtli (Quauhtzin, Quauhton)**, fellow disciple with Nopal at Eagle Hermitage, the tallest and strongest of the Huitznahuatecs.

**Quanez (Quanetzin) of Quahnahuac**, disguised name of Nopal in the north. quechol, a large aquatic bird with plumage of a scarlet color and a black neck.

**Quecholli**, a month-name.

**Quetzalcoatl**, the Plumed Dragon, God of Huitznahuac, periodically reborn among men (always in a year Ce Acatl) to teach peace.

**Quicab**, one of the Saltmen, a trader from Chiapas who visits Huitznahuac.

**Quinames**, a giant race of a previous age; the surviving tribes of the Quinames may possibly be descendants of this ancient race; these tribes include Gholb, Appa, Hlun and lb Quinames.

**Quinatepetl**, a mountain in Huitznahuac.

**Rainflower Manor**, home of Nopal and his family, at the foot of Teotepetl.

**Saltmen**, the name given to Chiapanec traders by the Huitznahuatecs.

**Shaltemoc (Shalernotzin)**, husband of Ketlasho.

**Shelwa**, son of Shollo and Maxio.

**Sbewtecuhtli**, the Fire-god of Huitznahuac.

**Shilonen**, a corn goddess of Huitznahuac.

**Shochill**, spinster nurse to the children of Shollo at Rainflower Manor.

**Shochiteca**, *see under Mayavel*

**Shollo (Shollotzin)**, brother of Nopal and husband of Maxio.

**Shuquentzin**, queen of Huitznahuac previous to Chimalman.

**Tata**, Commander of the Escort of Yen Ranho.

**Tatzin** ("Lord Father"), honorific used by Nopal to his father, Ashopatzin.

**Tecpatl**, the Flint-stone hurled at the earth by Citlalicway Teteoinan, the Mighty Mother, whose sparks kindled the gods.

**tecuhtli**, a title meaning lord.

**Teotepetl**, "the Mountain that was God," near Rainflower Manor; on it could be found the Serpent's Hole.

**Teotihuacan**, city in the Anahuacs, the capital of religion in the Toltec League. The people there are called Otomis, and they have been in the Anahuacs much longer than the Toltecs.

**Teotleco**, "the holiest of festivals," in the month of the same name.

**Tepelhuatl**, "the Feast of the Mountains," in the month of the same name, which follows the month of Teotleco. It is the festival and holy season of the Tlalocs.

**Tepos**, *see under Mayavel*.

**Teteo**, the gods.

**Teteoinan**, *see under Citlalicway Teteoinan*.

**Tezcatlipoca**, the Soul of the World, a god of Huitznahuac.

**tilmatli**, a piece of cloth about four feet square, worn tied over one shoulder and covering the other, or tied over the breast and covering the shoulders.

Women wore tilmatlies over long, sleeveless gowns.

**Tlacotzontli**, one of the Huitznahuac gods of the roads.

**Tlalocan**, the paradise of the Tlalocs, which was the essence of the beauty and wildness and exaltation of all mountains everywhere.

**Tlalocs**, the gods of water and rain in Huitznahuac, a few of which are named:

**Tlaloc Quitzetzelo**, the Down-scatterer of Jewels, and Tlaloc Tepahpaca Teaaltati, the Purifier.

**tlapalizqui bush**, a red-flowered plant.

**Tlaxochirnaco**, a month-name.

**Tlilcuetzpalins**, a regiment of the Otomis.

**Tollan**, city in the Anahuacs, capital of culture of the Toltec League. Its king was Huemac.

**Toltec League**, dominion of the Toltec Topiltzin.

**Toltec Topiltzin**, title of the head of the Toltec race; *see Nonohualcatl* topillies, the men who keep order in the streets of Teotihuacan. Topiltzin, title of the Toltec king.

**Toshpilli**, drummer at Rainflower.

**Tozcaykech**, drummer at Rainflower.

**Tzang**, one of the three Little Gods of Forgotten Plain.

**tzinitzcan**, a bird with splendid plumage.

**tzitzimitl**, an evil spirit, or demon.

**Tzontecoma**, lord of the Northern District of Huitznahuac.

**Ulupi**, ancestral queen of Huitznahuac, to whom Huanhua came from beyond the western sea.

**Xocotlhuetzi**, a month-name.

**Yacacoliuhqui**, the god of merchants in Huitznahuac.

**Yacanex (Yacanetzin) of Tollan**, ambassador from Huemac.

**Yanesh (Yaneshton, Yanetzintli) the Straw**, the very old gardener at Rainflower Manor, who had designed the great Rainflower garden.

**Yaotzin**, the Dark Tezcatlipoca, the dark shadow of the god Tezcatlipoca.

**Yen Ranho**, the Hierarch of Teotihuacan, sent to Huitznahuac by Huemac of Tollan.

**yetl**, a pipeweed.

**Yetsu**, an Otomi cook.

**Zacatzontli**, one of the Huitznahuac gods of the roads.

## CONTENTS

[Preface](#)

*The Three Branches of the Bringing-in of it, namely:*

### [The Sovereignty of Annwn](#)

- I. The Council of the Immortals
  - II. The Hunt in Glyn Cuch
  - III. The Slaying of Hafgan
- 

**The Story of Pwyll and Rhianon, or The Book of the Three Trials**

*The First Branch of it, called:*

### **The Coming of Rhianon Ren Ferch Hefeydd**

I. The Making-known of Gorsedd Arberth, and the Wonderful Riding of Rhianon

II. The First of the Wedding-Feasts at the Court of Hefeydd, and the Coming of Gwawl ab Clud

*The Second Branch of it, namely:*

### **The Basket of Gwaeddfyd Newynog, and Gwaeddfyd Newynog Himself**

I. The Anger of Pendaran Dyfed, and the Putting of Firing in the Basket

II. The Over-Eagerness of Ceredig Cwmteifi after Knowledge, and the Putting of Bulrush-Heads in the Basket

III. The Circumspection of Pwyll Pen Annwn, and the Filling of the Basket at Last

*The First Branch of it again:*

III. The Second Wedding-Feast in the Court of Hefeydd, and the Enchantment of the Story of the Sons of Cleddyf Cyfwlch

*The Third Branch of it; and the Name of this Branch:*

### **The Coming of Ab Cilcoed, and the Three Trials of Pwyll Pen Annwn**

I. The Forge of the Immortals

II. The Hosting of the Armies of Malen Ruddgoch Ren

III. The Machinations of Ceridwen Ferch Hu, and the Falling of the Sorrow of the Dimetians

IV. The Council of the Immortals, and the Declaration of the Fates of the Princes of Dyfed

---

## **The Story of Rhianon and Pryderi, or The Book of the Three Unusual Arts of Pryderi fab Pwyll**

**The First Branch of it, namely:**

## **The Mare and the Foal of Teyrnion Twrf Fliant**

- I. The Dropping of the Three Drops of Wisdom on the Lips of Teyrnion
- II. The Mare and the Foal of Teyrnion Twrf Fliant, and the Finding of Gwri Gwallt Euryn

## **The Story of Dienw'r Anffodion**

- I. The Misfortunes of the One Without a Name, and the Merriment of Gwydion fab Don
- II. The Four Herbs that were in the Cauldron of Regeneration, and the Naming of Manawyddan Son of the Boundless

[The Second Branch](#) *of it, called:*

## **The Three Unusual Arts of Teyrnion and Gwri Gwallt Euryn and the Freeing of the Birds of Rhianon**

- I. The Art of War in the midst of Peace, and the Freeing of Aden Lanach
- II. The Art of Peace in the midst of War, and the Freeing of Aden Lonach

### [Second Branch, part 2](#)

- III. The Quest of Aden Fwynach the Third Bird, and the Opposition of the Hosts of Bargod y Byd
- IV. The Three Kinsmen of the Ferryman of the Lake of the Bargod, and the Spell of the Three Places in Wales
- V. The Spell of the Wood, the Field and the Mountain, and the Freeing of Aden Fwynach at last

[The Third Branch](#) *of it, that is to say:*

## **The Return of Pryderi**

- I. The Peculiarities of the Ring and the Fillet of the Family of Hefeydd, and the Three Primitive Bards of the Island of the Mighty
- II. The Petulant Impatience of Pendaran Dyfed, and the Maintaining of the Sovereignty of Rhianon
- III. The Coming of Pryderi

## PREFACE

*Ac y mae bodau sydd gymaint yn fwy na dyn ag y mae dyn yn fwy na'r bacillyn lleiaf welir drwy y chwyddwydr cryfaf. Mae y galluogrwydd i ymddadblygu hefyd yn anfeidrol. Mae y meddwl dynol ar y ffordd mawr i ymddadblygu yn dduw. Dyma ffordd Duw o greu duwiau, sef drwy ymddadblygiad. Mae Duw erioed yn eu creu. -- Index*

How far the story is taken from the Four Branches of the Mabinogi, and to what degree it has elected to go its own way, need not be enlarged on here; now that that great old Welsh book has become a popular classic, with cheap editions both in Welsh and in English. Suffice it to say that from that source come the main framework of the plot, and, I hope, the whole spirit and atmosphere; and that there is a mint of phrases recurring through the chapters, which have been boldly lifted from Lady Guest's translation, and set in here without quotation marks, footnotes, or other acknowledgement. Why not? Such phrases were probably a part of the stock in trade of all the old story-tellers: "Names of Adornment," such as we find listed in the Triads; and belonged rather to Wales and bardism than to any one author. Other phrases, again, have been taken from Llywarch Hen and Taliesin, and from the druidical writings of the School of Glamorgan. Further, if Morgan Llwyd o Wynedd had not called his book *Llyfr y Tri Aderyn*, "The Book of the Three Birds," it is doubtful whether the various parts of this story would have found subtitles with so native a flavor as the ones that have been given to them. As to how much of it may be borrowed from Irish sources: it would be difficult for the writer to say; since it is rather a long time since he had access to books of Irish mythology, and the latter presents itself to his memory rather as a rainbow-hued and beautiful illumination, than in any detail. To read the Mabinogi aright, one must read it in the light of that ancient, proud and beautiful civilization which the Irish stories reveal so much more fully, and with so much less admixture of foreign and medieval elements; just as, to reconstruct the Celtic pantheon at all, one must work by the light of all Aryan mythology. In the days of Pwyll Pen Annwn there was little distinction between Cymro and Gwyddel, or between the Clan of Hu Gadarn in the Island of the Mighty, and the Family of Dana in Ireland.

The Mabinogi, as it comes down to us, and as it appears in Lady Guest's wonderful translation, remains such a classic, such a masterpiece of style, such a storehouse of ancient treasure, that it may be asked: What right has any one to imply that such and such an incident goes unrecorded in it, or is recorded incorrectly? But one must remember that the Mabinogi was very old before it was written down; that bards had told and retold these stories a thousand times between the days of their prechristian origin and the twelfth or thirteenth century when they were written in the form in which we have them. Would they have suffered no change during those ages? It is certain that they would; from being the record and exposition of a mythology, they would have become mainly a source of entertainment; their pristine purpose would have become obscured; their day star would have dwindled to a rushlight. Supposing we knew nothing of the Greek mythology, but what might have remained as a tradition with the troubadours?

The deepest truths of religion and philosophy had their first recording for the instruction of the peoples, not in the form of treatise, essay, or disquisition, but as epics, sagas, and stories. I do not know what better form could be found for them. It is the soul of man that is the hero of the eternal drama of the

world; "the Universe exists for the purposes of the soul." From the beginning of time, events, circumstances, and adventures are unfolding themselves about the human soul; it is weaving them about itself. Man enmeshes himself as in a web in the results of his own thought and action; and by his own action and thought he must make himself free. The Great Ones of old time knew well that there is a "small old path that leads to freedom": a path of action, of thought, of wisdom. They related the Story of the Soul; leading it from the first freedom of Gwynfyd, down into the depths of Abred and incarnation, to the gates of that path of freedom, and then onward to the heights. They that had ears to hear, heard; and found in the great stories the indication of the path for themselves; as for the multitude, there was entertainment for them; and the mere outward teaching of the sagas would be their incitement to virtue, to courage, to a sound, generous, and magnanimous life.

The stories long survived the time when their real meaning had been forgotten. Druidism, as a state religion, might not withstand the legions and proscription of the Caesars; if it lived on, it was in secret. But the druid-born stories that had been the amusement of the chieftains in the evenings of winter; that were for inculcating the traditional virtues in the young men and maidens -- there would not cease to be a need for them. The winter evenings were no shorter than of old; the virtues taught by the new religion were of another order; the feast times would still be incomplete without bards and story-tellers; and these must have their old capital to draw upon: they must have the outward and visible sign, if not the inward and spiritual grace. Perhaps all the ancient stories we have, Celtic or Scandinavian, Greek or Persian or Indian, are but the retelling of the sacred Mystery tales, by bards who had forgotten their meaning: forgotten something of it, or most of it, or all of it. For nothing dies until it has lost its first virtue; if the religions of antiquity had been true to themselves, had remained uncorrupted, they would not have passed away. Does not history prove to us -- this little fragment of history that we possess -- that the history of religion is always the story of the waning of a Light, and its rekindling elsewhere when too dim for further utility?

The generations of story-tellers, then, would add a little to their traditional material here, or leave out some detail there; they would modify this or that incident to suit their own ideas or the views of their audience. In general they would tend to introduce personality where before there had been merely the vast and impersonal; sex in particular would offer them a wide field for "improving" upon the ancient models. Do but contrast the Irish, or the purely Welsh tales, with those Welsh tales that have come to us in a Normanized and be-troubadoured form. Contrast the story of Pwyll and Rhianon with that of Tristan and Esyllt. In the former, which is far the older, there is no "love interest"; in the latter, there is nothing else. Some one has claimed that "romantic love" is altogether a growth of Christian times; not true in one sense, for men have experienced youth at a certain stage of their lives for quite a number of ages; but the claim is true to a certain extent, of romantic love considered as a theme for fiction. It came in, at any rate, whenever fiction ceased to be a method of teaching by symbology the sacred truths of the Mysteries, and became a mere minister to entertainment.

So too the ancient masters of fiction -- their names are lost to us -- had little concern with character-painting. The story of the human soul unfolds itself in action, and again action: actions, events, sufferings, deeds and deaths and sacrifice; battle and ruin and victory: these are the language in which the thoughts, experiences, and growth of the soul express themselves. What character-painting there

was, was done in sweeping lines and prismatic colors: "he was a man from whom no one ever got any good"; "noble and excellent are the men of whom this is spoken." Naturally; since the characters were but symbols of characteristics: of virtues or vices; of subtle powers within that may aid, or subtle lures and weaknesses that may overthrow us.

That is to say, they did not seek to tell you things *about* the soul -- which is the method of philosophy; but to present in great pictures that soul itself -- which is the true method of art. So the love story of Pwyll and Rhianon is simplicity itself: man comes in contact with that inward and divine light which is to make a god of him at last; how should you enlarge upon "love" in such a connection? She will take queenhood in the Island of the Mighty, in Dyfed, sharing the throne of the man who has made conquests in the Underworld; he will share his throne with her, will become as it were her disciple; since she is the brightest and most beautiful vision of his days. It is the revelation of the divine to the personal principle in man; it is not, and does not pretend nor desire to be a love story. Not the husks and externalities of life are recorded; but symbols are given of the inward and eternal things. And if in certain of the ancient mythologies -- not in the Mabinogi -- there are incidents which offend our sense of decency, we should still remember that these were never intended as the record of physical fact and action; they were symbols of inward happenings, which perhaps could only find their recording in that way.

The Red Book of Hergest, in which the Mabinogi appears, was written in the twelfth century or thereabouts; but the stories themselves are admittedly prechristian in origin. Would they not have lost much of their pristine significance during that time, and gathered accretions from the troublous and uncertain ages? It is certain that the Gods would have appeared in them originally; as the Gods appear in the Greek and Irish stories, or in the sagas of the North. It is certain that some of the characters in them, who appear now as mere men, were Gods when the stories were first told; the Children of Don, Gwydion and his brothers, are cognate with the children of Dana in Ireland, and were Gods as surely as were the latter. Gods figure in all the old mythological tales: Gods, men, and demons; because in the battle of the world, the eternal warfare of the Gwynfydolon, good is perpetually at war with evil: man is the battlefield whereon the divine and the devilish are at conflict; and we, our conscious selves, stand between the two hosts, and ally ourselves now with one, now with the other. Is not that, almost, or quite, a truism? Will any one quarrel with it?

So in this attempt to retell the Mabinogi, the Gods had to be restored. For the endeavor has not been to bring the stories up to date, as down through the centuries so many have done with that other Welsh saga, the Arthurian legend; the endeavor has not been to make an acceptable modern novel of them, or to charge them with any criticism of life -- twentieth century life; as Tennyson charged the Arthurian legend with criticism of nineteenth century life; or as Malory charged it with criticism of the life of the Middle Ages. Malory and Tennyson both attained wonderful results, no doubt, from the literary standpoint; but I think that from the standpoint of a lover of ancient Wales and ancient Welsh traditions and ideals, they both made a failure of it, on the whole. The atmosphere of our mountains calls for some older glamor, some magic more gigantic and august: you must have Gods and Warriors and great Druids, not curled and groomed knightlings at their jousts and amours. Those treasure-laden pages in *Culhwch and Olwen*, in which the list is given of Arthur's men -- there you have an indication of the great things that were in the ancient Celtic or preceltic mind: voices call there from peaks which have

since been wrapped in silence; in all Welsh and Welsh-inspired literature, I find nothing so Welsh as that. Tennyson indeed, occasionally forgetting the nineteenth century and his purpose, which assuredly he had a right to work out in his own way, did speak now and again in a kindred language, or in one as truly echoing the ancient world.

But his purpose and standpoint were other than those of the old bards who first told these stories; whose purpose and standpoint, be the result what it may, it has been sought to use here. The life that those old bards criticized belongs to no age, has not changed since they wrote or sang: since it is the inner life of the soul struggling towards freedom. It is proper to the days of prehistory, the age of the Italo-Celtic unity and the flowering splendor of the Celtic empire; it is proper to the time when our ancestors were defending their hills against the Norman invaders; it is proper to our own time, and to tomorrow. For to any of us, today, tomorrow, next year, it may happen to behold from the heights of our own inward Gorsedd Arberth, Rhianon mystically riding through the twilight and beauty of the valley; we may hear at any time the music of the Three Singers of Peace. We may at the moment of attainment lose through rashness or fear the Goddess we have so nearly won; we may be compelled to go forth seeking such another basket as Pwyll Pen Annwn sought and found; to us, as we watch upon the sacred hill, the Gods will come with their lures and wiles and machinations, striving against their own will as it were to draw us away: to defeat their own immediate, for the sake of their own ultimate ends; who would make us, too, divine; who would prepare us to wage their warfare with them, where they are camped out against chaos on the borders of space. For the ancients did not posit omniscience or omnipotence as qualities of those whom they called the Gods: they saw evil in the world, and were logical. I think the truest idea they had about them was, that the Gods were the great generals and battle-captains in the eternal war against evil: wiser and stronger a thousand times than we are, they yet stood in need of us as a general stands in need of his private soldiers. (Only the difference would be far wider than that between general and privates.) So the effort would have been, not to obtain help from the Gods, but to give help to them.

The Gods had to be introduced then; but our Welsh Gods have not been remembered as the Greek, Irish, or Scandinavian Gods have been. So one might have either taken the God-names that appear in Gaulish or Brythonic inscriptions of Roman and perhaps preroman days; or sought what was required in the great mass that exists of Welsh tradition, bardic verse, triads, and the writings collected by the ever-to-be-honored Iolo Morganwg and the bards of the School of Glamorgan. This latter is the course that has been followed. The names from the inscriptions lack that Welsh ring, that strange combination of the familiar and the infinite, the homely and the poetically wonderful, the intimate with the far and marvelous, which I think will mark our Welsh contribution to art and literature, when we shall have attained self-consciousness as a nation. Teutates, Tarannis, and the like, though they sound scholarly, and no doubt meant something at one time, if only to Romanized Gauls and Brythons -- bring no pictures with them, breathe no subtle music, seem to represent no spiritual reality, as do the names of Apollo, or Angus Oge, or Balder the Beautiful. But turning to the triads, one found something different. Hu Gadarn, sniffed at by the scholars and critics, has credentials of his own for the intuition and imagination; Plenydd, Alawn and Gwron -- the Light-bringer, the Lord of Harmonies, the Heartener of Heroes -- they form so perfect a symbol of powers that lie latent in ourselves and in the universe, that if they were invented by Iolo Morganwg, or by Meurig Dafydd, or by Llewelyn Sion, one would say that the invention was rather a discovery: that they were Gods and Welsh Gods before those men were born;

just as the blood circulated before Harvey's time, and America was in the west of the world before Columbus sailed. No matter whether such names are ancient, medieval, or comparatively modern; one would have been put to it to invent them oneself, if one had not found them ready to hand.

There is Tybie of the Fountain, for example. What? -- make a pagan nymph or Goddess of Saint Tybie ferch Brychan Brycheiniog, canonized by the Celtic Church! But why invent a new name, when the scent of the mint-beds of Llandybie, the brightness of the kingcups and the sweet music of the waters have been clustering round the old one during all these centuries? And one might well suspect that she has but been restored to her rights. Once a sacred well, you may say, always a sacred well; the church, recognizing the sweet influences of such places, adopted them from its druid predecessors; you had but to make a saint of the old-time Goddess guardian, and the sweet influences needed not to be wasted because the religion had changed. Whether you call her Tybie ferch Brychan, or Tybie of the Family of Hu, she is there, *she is there!*

So with all the God-names used in this story. None of them is the invention of the present writer (though the epithets attached to them often are); they all occur somewhere in the tangle of traditional literature that has come down in Wales. Of this it may be said, that if any part of it first appeared in the thirteenth, or in the sixteenth, or in the nineteenth century, it does not follow, as the critics appear to think, that it originated then; it may have flowed on beneath the surface of written literature since Druid and even predruid days; and indeed, much of it carries a stronger and sweeter odor of antiquity than any of the data served to us as strictly historical by the great scholars and archaeologists of modern times.

There are two methods of criticism: the analytical and the synthetic. The former is all the rage these days, at least in Wales. Its end would seem to be a barren scholarship: one analyses the Good, the Beautiful, and the True into the dust-heap; one disproves everything, laying the axe of a merely intellectual research to the roots of the creative imagination. There is no finality in this tendency: the last word has not been spoken. Modern modes of thought, and our modern civilization, are not, as we too often suppose, the fruit and perfection of the ages, up to which all past human activity has led, as to a supreme goal. We shall react from it, and turn to synthetic methods. We shall take what material comes down to us, and make use of whatever in it is beautiful, appeals to the imagination, or shadows forth some spiritual truth; and of this we shall build that great imaginative literature which we are longing for and feeling after even now. The Irish, using the materials they have to hand, have laid the foundations of a great Irish drama, and have made the peculiar Irish note heard in the symphony of the literature of civilization. Our materials, somewhat more shadowy and disorganized it is true, we are at present mainly engaged in trying to analyze off the face of the earth. But to produce an imaginative literature we must fortify the imagination, not starve or stultify it; we must put our paints on the canvas, not perpetually submit them to the test tube and the crucible until there is no health nor color left in them.

This analytical rage is the reaction, natural enough, from old methods of syntheticism that lacked all discipline, were wholly uncritical and directed toward no goal; and which therefore spent themselves without ever producing anything in art or literature capable of passing the boundaries of our small nationality, and becoming a part of the art or literature of civilization. If the reaction from our present analyticism is not to carry us back to the old condition, some new element, some new knowledge, some

new discipline, must come in. Wales has given just one work to world-literature; has produced just one work which by its innate vitality was bound to be translated sooner or later: the Mabinogion -- we use the word as including the twelfth century romances translated by Lady Charlotte Guest. We have had many fine writers of the second rank: Dafydd ab Gwilym and Rhys Goch Tir Iarll; Morgan Llwyd o Wynedd; Goronwy and Ceiriog and Islwyn, to name a very few of them. Of these, Islwyn and Morgan Llwyd did indeed make some original contributions to thought, for which perhaps the literature of civilization may find a certain place. The others, I think, will inspire Welsh poets to come who will speak directly to the world; will teach them their art, provide them with a treasure of music and color. But they wrote nothing that must inevitably be translated into other languages; they wrote nothing that will influence the world at first hand. It is just the music and color, which they used so well, that must be lost in translation, unless the translator is himself a poet equal to those whose work he may be translating.

Why then do the Romances stand in a class by themselves? Why are they for the world and all time; while the poetry of that age was, mainly, only for that age; and only for Wales -- or indeed, only for Gwynedd, or Powys, or the South?

The answer is, because the Romances came down from a much older time; because when they were first written, they were still near enough in spirit to that older time to carry with them some of its force; and because in that older time there did exist such a discipline, such a knowledge, such a purpose as we stand in need of now. The knowledge is the knowledge of the spiritual laws of life; the purpose is the purpose of the human soul on its evolutionary journey; the discipline is that discipline which tends to subject the brain-mind and animal man to the domination of the divine part of man, the deathless and birthless soul.

So-called Realism concerns itself with but the froth and spume on the surface of life, the sordid play of the passions, the externalities that pass. Such Dead Sea Fruit has a great vogue in this age of slums and materialism; but we and civilization will evolve; the world will be cleaned up a little; men and nations will forgo their predatory habits; and we shall forsake this making of mud pies. Above all I would urge that there is no message for Wales in it; realism will never call forth the genius of a race that has always been nearest greatness when most leaning towards spiritual and imaginative ideals.

The true function of Romance, on the other hand -- we need not say how sadly it has fallen away from it -- is to proclaim indestructible truth in terms of the imagination: to use the symbols provided by the poetic or creative imagination for showing forth those truths which are permanent, because they lie at the heart of life, not on its surface; and which belong to no one age, but to all ages, because all eternity is the birthday of the soul.

Traces, shadows of these truths are to be found in the traditions of almost every race under the sun; Welsh traditional literature is peculiarly rich in them. Indeed, if Iolo Morganwg and his compeers and predecessors really invented all that they claimed merely to have collected and handed down, then let their names be written far above any other names in our literary annals; for what they gave to the world contains that which is original, permanent, and splendid: as Welsh as Snowdon or the Cymraeg, it yet

achieves being universal; if we but understood it, it ranks with, or outranks the Mabinogi itself in value. But this, not until we have applied to it a certain criterion; not until we have fitted it into its place among the traditions of the whole world; pruning and restoring it in the light of such traditions.

We owe it to Madame H. P. Blavatsky, the Foundress of the Theosophical Movement of modern times, and to William Q. Judge and Katherine Tingley, her successors in the Leadership of that Movement, that the criterion exists effective for this work: that there is accessible a compendium, an explanation, a correlation and explicit setting forth of those inward laws: the knowledge, the purpose, and the discipline out of which all religions drew their origin, and which are the heart of all true religion; which proclaim this to be the end of all existence: that that which is now human should be made more than human, divine. We may call this Druidism, we may call it Theosophy; it is also Christian and Buddhist; whatever name may be applied to it, it is a trumpet-call to the Divine in each of us, the Grand Hai Atton of the Immortals; it is the Dragon Warshout of the ages: "Y Ddraig Goch a Ddyry -- Gychwyn!" -- *The Flamebright Dragon has arisen* -- the Dragon that of old was the symbol of spiritual wisdom, spiritual courage, of mastery of the forces of the lower world -- *Go forward!*

.....

I take this opportunity of acknowledging most gratefully the help so kindly given by Mr. R. Machell, my fellow student of Theosophy here at Point Loma, in making the splendid drawings with which the book is illustrated.

## Foreword

A good many people hearing of the Edda or of the Norse myths think mainly of Balder, the sun-god, who was slain by a twig of mistletoe; or they may conjure up mighty Thor, hurler of thunderbolts and lightning, whose footsteps make the earth quake. Or perhaps they remember Loki, trickster, mischief-

maker without malice, who seems constantly to stir up trouble, yet as often by imaginative wit and intelligence resolves the difficulties he has caused.

*The Masks of Odin* is a provocative study of "the wisdom of the ancient Norse." While it portrays the various aspects and forms that Odin assumes in order to gain knowledge of the nine worlds inhabited by gods and giants, humans, elves, and dwarfs, Elsa-Brita Titchenell has a larger purpose in view. As a serious student of both Edda and Theosophy her loom is cosmic in reach, its warp representing the *theosophia perennis* or enduring god-wisdom and its woof the Edda, whose many-colored threads she weaves into colorful and often inspiring patterns of interpretation.

The world's oldest traditions hold that long ago all peoples, however widely separated, were the common inheritors of a body of sacred truths initially imparted to the earliest humanities by divine beings from higher regions; and, further, that myth-makers of every land were in greater or less degree transmitters of this archaic wisdom/science. Against this backdrop the author undertakes to interpret some of the more important sagas of the Norse Edda, retranslating them from the Swedish text and comparing it with the original Icelandic. Her aim is not to hammer out just another version of the Edda when already several in English are available both in prose and verse, but rather "to penetrate to the core of inspired meaning" hidden within the world's mythic lore. To attempt this would have been out of the question, she believes, but for two radical changes in the general thought life: first, the disclosure about a century ago of a significant portion of the universal theosophic philosophy by H. P. Blavatsky and its emancipating effect on the human spirit, and second, the new developments in Western science.

In Part I Elsa Titchenell outlines the broad features of the principal characters involved in the drama of cosmic and terrestrial creation as recorded in the Edda, including the gifts to early mankind of spirit, mind, and vitality by three Aesir (gods) so that we humans in time might become "godmakers." Relating theosophic teachings and current findings of astrophysics and physics to traditional mythic symbols she depicts the ancient mythographers as philosophers and scientists of stature. To the Norse bards or *skalds*, the interplay between gods and giants represented the continuous interaction of spirit and matter on a series of "shelves" or planes as "rivers of lives" moved, each after its own manner, through mansion after mansion of planetary and solar spheres within Allfather-Odin's domain.

In Part II, the author's *Notes* preceding the translated lays provide the reader with an invaluable guide through the often bewildering maze of metaphor and symbolic allusion. The opening saga is the well-known *Voluspa* or Sibyl's Prophecy, that tells of the formation of worlds, of Odin's search for wisdom in the spheres of matter, and of the "toppling of the world tree" when the gods withdraw and earth is no more -- until the Vala (Sibyl) sees another earth rising from the sea as old ills are resolved and the Aesir return. In the High One's Song, we read of Odin's consummate experience when for nine whole nights he "hung in the windtorn tree," the Tree of Life, so that he might "raise the runes" and drink the mead of omniscience.

There is much to delight and instruct in the retelling of lay after lay, each with its own story and truth to impart. Admittedly only a portion of the available material is treated, and this is drawn chiefly from the

Poetic or Elder Edda of Saemund the Wise. Cognizant, moreover, of the challenge posed by the mystery-language of symbolism in use by the poet-philosophers of old, the author is hopeful that others will find in this "fragment of runic wisdom" the stimulus to pursue further and more complete studies of the ancient Norse records.

Whether writing as Eddist or theosophist, amateur scientist, mythographer, or translator, Elsa-Brita Titchenell by lucid and perceptive scholarship has earned for *The Masks of Odin* an honored place among Edda literature.

GRACE F. KNOCHE

## Preface

It was in the early 1950s when the writer picked up a book at random in the Theosophical University Library in Altadena -- a beautifully bound volume of the *Edda* in Swedish. Though familiar since childhood with at least some portions of the Norse "god-stories" this was the first time I had read the poetic lays of the Elder Edda. Browsing through the verses and delighting in their picturesque "kennings," I was enjoying the quaint turns of phrase when suddenly, as by a lightning bolt, I was struck by a dazzling flash of meaning, a hint of basic truth. Skeptical at first, I began to read with greater attention and soon became convinced that the Edda ranks among the world's sacred traditions as a genuine scripture, a goldmine of natural history and spiritual treasure. This is connoted also by its Swedish name: *gudasaga* -- a divine story or *god-spell* -- the archaic form of the word "gospel."

Many years later, after much scrutiny and comparison with other myths, enough evidence of the Edda's scriptural content had accumulated to warrant collating at least a few fragments that seem to have secreted in them a discernible esoteric meaning. Among the great wealth of material in the Norse myths it has been necessary to be selective, partly because there are several versions of many of the tales, partly because the purpose of this book is to bring out and suggest interpretations of those myths which are of particular relevance in our time.

Most of the lays and stories herein are translated from the *Codex Regius* -- the "royal codex" -- which was written down by Saemund the Wise a thousand years ago, though their content has doubtless been known much longer than that. Today they are luminous with meaning due to two seemingly independent circumstances: first, the disclosure of a generous portion of the universal theosophic philosophy in the late nineteenth century and the broadening influence this has exerted; and second, following closely thereafter, the development of a more enlightened science in the West.

The story of *Codex Regius* is itself a fascinating one. King Frederik III of Denmark sent Thormod Torfaeus to Iceland with an open letter dated 27 May 1662 which empowered him to purchase ancient manuscripts and other material containing information on Icelandic history. He delivered it to Bishop

Brynjolv Sveinsson, an ardent collector of memorabilia since his accession to the bishopric of Skalholt in 1639. Soon afterward the bishop sent the king a gift of several manuscripts; Torfaeus made a catalogue of these which Gudbrand Vigfusson lists in his Prolegomena to the *Sturlunga Saga*. In this collection the manuscript cited as No. 6 is titled "Edda Saemundi; quarto." It was a treasure of the Royal Library at Copenhagen until a few years ago when it was returned to Iceland, where it is now housed in the Arna Magnussonar collection. No one knows how Bishop Brynjolv came in possession of it, but he must have acquired it some twenty years before Torfaeus' arrival as he had inscribed the first page with his own name in Latin, Lupus Loricatus (contracted to [[symbol]]) -- cf. plate 1 of the photographic reproduction of Voluspa from the Codex Regius manuscript), with the date 1643; he also had a copy made on white parchment.

Several versions of the Edda are extant in part. One collection of handwritten texts is that of Arne Magnusson, believed to emanate from the same source as Saemund's; another is the *Codex Wormianus* (from which are taken the Songs of Rig and Waywont), and *Flatoboken*. The Spells of Groa, Verywise's Exchange, and the Lay of Odin's Corpse are from Swedish translations of paper copies; these do not occur in *Codex Regius*. The Song of the Mill is from Snorri's *Edda*.

The lays, rendered here were first translated into English from the two Swedish versions of Godecke and Sander, with frequent reference to the commentaries of the Swedish scholar Viktor Rydberg; thereafter the result was compared with the Wimmer and Jonsson *Saemundar Eddu*, a photographic facsimile of the old Icelandic *Codex Regius* manuscript with a printed transliteration facing each page. It is a continuous text with no divisions and only an inserted title to mark the beginning of each lay. Most translations break it into verses of six or eight lines as indicated by the rhythm, but we have chosen in many cases to write the verses as quatrains. There is no rhyming, but an alliterative pattern which with the distinctive tetrameter used in many very early epics gives the lays a peculiar charm.

The Edda consists of two main divisions, as do most scriptures that deal with the creation of cosmos and the evolution of mankind. The first applies to the surrounding world, the second to the "heroes": races of humanity and their development through stages of immaturity into the thinking, self-conscious men and women we have become. The latter tales sometimes make use of geographic features and of actual historic events to illustrate the much larger picture they disguise. This work concentrates mainly on the earlier portion, which deals with grand principles and universal events, searching out the basic philosophy of divine nature which is valid throughout the vicissitudes of the human venture.

In translating, both alliteration and meter have unfortunately very often had to be sacrificed, as our purpose is to convey the philosophic and scientific import rather than merely reproduce the poetic style. There already exist several English renditions in verse and prose, many of them accompanied by detailed analyses of the verse forms used in the original. In brief, our aim is not to produce merely another translation but to attempt to penetrate to the core of inspired meaning often concealed within myths. Interpreting and clarifying that inner sense in the Edda is made possible by resorting to the foremost elucidating work of our time, *The Secret Doctrine*, whose author, H. P. Blavatsky juxtaposed a prodigious array of myths relating to cosmogony as well as human history and the destiny of living beings. In that work are keys showing that the same majestic pattern underlies the varied expressions of

different mythic scriptures; we are given an overview of the universe, its periodicity of function and repose, and we discern how divine consciousness reflects itself periodically as a kosmos in space and time.

To find the information the Edda contains we must examine the etymology of names and their connotations, which in some cases are numerous. For this Cleasby's *Icelandic Dictionary*, completed by Gudbrand Vigfusson in 1869, has proved of inestimable value for it contains copious quotations from the original manuscripts and sometimes presents a strikingly intuitive perception. *Undersokningar i Germansk Mitologi (Teutonic Mythology)* by Viktor Rydberg also contains scrupulous examination of terms and much information.

One great problem with a book such as this is to arrange the material in a practical manner without necessitating undue repetition. The lays are reproduced in English with the flavor as nearly unchanged as may be and each one is preceded by explanatory notes. In addition certain themes are given special attention; inevitably some of these will occur more than once though each approach is somewhat different. In the notes, verse numbers are given to indicate whence an interpretation has been derived. Needless to say, many meanings are often contained in a single passage, and frequently they are mere hints requiring some personal insight on the part of the reader, for it is not always possible to elucidate each symbol adequately, nor is it necessary. The spelling of names is intentionally inconsistent, some being given in Icelandic (e.g., Aesir), others in Swedish (e.g., Ager), both to make them easier to distinguish visually by the English-speaking reader and because in many cases the root of a name has a suggestive meaning in one language but does not occur, or has a slightly different connotation, in the other. There are also many instances where the Icelandic grammatical variants, or a Swedish plural or definite form, would make an otherwise familiar word all but unrecognizable, necessitating inevitable compromises in an English rendition. When possible, names have been translated into English to enable a reader to find his own interpretation. A glossary and index have been provided.

---

## Acknowledgments

Many thanks are due to a number of people who have helped bring this book into being: first to the late James A. Long who, during his leadership of the Theosophical Society, encouraged my study of the Edda and included eight articles on its theosophic content in Volume IV of the magazine *Sunrise* during 1954-5, with some half dozen more appearing later over a period of years; also to Kirby Van Mater, without whose prodding this book would never have been begun; thereafter to Sarah Belle Dougherty, who read the manuscript and proposed shuffling the material into better order, to Gertrude (Trudy) Hockinson who typed and retyped large portions of the manuscript; to Rod Casper of Millikan Library at the California Institute of Technology, who helped me procure research materials; A. Studley Hart, who performed some editorial magic; my dear friend Ingrid (Binnie) Van Mater, who not only read the work with a clear and critical eye but also checked the entries of the index and glossary and assisted with all the ticklish unavoidable tasks that must precede completion of a book. Thereafter she, Manuel Oderberg,

Eloise and Studley Hart proofread it. In addition I must thank the production staff of Theosophical University Press, notably Will Thackara, Raymond Rugland, Mark Davidson, and John Van Mater, Jr., who took endless pains with the craftsmanship of the work. Above all, my grateful thanks are due to Grace F. Knoche, without whose constant support none of the above would have come about.

## Pronunciation Guide

Each language really has an alphabet all its own; even though the same written symbols may be used, the sounds they represent are subtly different in each spoken tongue. Particularly is this true of the vowels, whereof English has five, Swedish nine, and Old Icelandic seventeen. Many of the names of the Edda's characters have several spellings, all equally valid, some Icelandic, others Old Norse, others Swedish, Danish, or Norwegian. We have used Swedish or Icelandic spelling, substituting for the extra Icelandic letters the closest English equivalents. Thus þ is commonly *th* as in Thor, while ð is given as *d*. The following pronunciation guide is a compromise giving merely an indication of the actual sounds. The vowels:

*Vowel - Long / Short Equivalent*

a as in father / sat

e as in say / set

i as in fatigue / sit

o as in move / soot

u as u minus the "ee" sound / hut

y as in French tu / Gluck

á as in corps / sot

ä as in care / set

ö as in French deux / neuf

Consonants are pronounced approximately as in English. The *g* is hard before hard vowels (a, o, u, a), but soft, like *y*, before the other (soft) vowels; *r* is trilled as in Scottish speech or like the French.

**WELCOME** to the home page of The Theosophical Society, International Headquarters, Pasadena, California. The Society was founded in 1875 in an effort to promote the expressed awareness of the Oneness of Life.

**THEOSOPHY:** The word is derived from the Greek *theos* (god, divinity) and *sophia* (wisdom). Its philosophy is a contemporary presentation of the perennial wisdom underlying the world's religions, sciences, and philosophies.

*We are not brought into existence by chance nor  
thrown up into earth-life like wreckage cast along the  
shore, but are here for infinitely noble purposes.*  
— Katherine Tingley

## Ordering Information

### Order publications through:

[Theosophical University Press](#)

Post Office Box C

Pasadena, California 91109-7107

Telephone: (626) 798-3378; Fax: (626) 798-4749; Email: [tupress@theosociety.org](mailto:tupress@theosociety.org)

**Bookstores: Please contact us for terms.**

### Orders:

Please specify title(s), quantity, and binding (books only: paper or cloth), and include your postal shipping address and telephone number.

### Shipping:

**USA:** Add \$2.50 for first volume, 50 cents each additional volume. Books are shipped promptly via US Media Mail, but allow 2-3 weeks for delivery. Contact us by email for Priority Mail or UPS rates.

**Canada:** Contact us for shipping charges.

**Other Countries:** Airmail only. On 14 May 2007 the US Postal Service discontinued Economy surface rates. Contact us for shipping charges. Overseas orders may be placed with the TUP [overseas agency](#) in your region. If there is none in your area, you may order direct from Pasadena. (Selected Titles from Other Publishers are not ordinarily stocked by TUP agencies but may be ordered from Pasadena.)

### Payment -- USA & International Orders:

All orders sent to Pasadena must be prepaid in US funds. Sorry, no CODs. California residents must add 7-1/4% sales tax (L.A. County 8-1/4%). Magazine orders are exempt from tax and include postage. Payment accepted by personal check, money order, bank check, Canadian Postal Money Order in US dollars, or international bank draft (all checks must be payable on any US bank or banker's agency; checks drawn on foreign banks will be returned).

We also accept all major credit cards (include number, expiration date, and billing address if different from shipping). Please note: Emailing credit card information is risky, and we cannot be held liable for loss resulting from it.

**Class Adoptions:**

Examination copies of TUP titles will be sent to teachers at accredited educational institutions for evaluation as a text. Billing at 20% professional discount will be canceled on request if an order for ten or more copies is received.

## Life's Riddle

By **Nils A. Amneus**

Filled with explanations and examples of the relevance of ancient wisdom, this conversational presentation of timeless principles is a perfect book for beginners,

In stimulating essays the author addresses life's dilemmas as he sheds light on karma, death, reincarnation, the composition of the human character, and our various states of consciousness. Drawing widely from nature, world mythology, and religious scriptures, he portrays the relationship of the human ego to the higher self as an eternally evolving and hopeful one.

## The Letters of H. P. Blavatsky to A. P. Sinnett

Transcribed and compiled by A. Trevor Barker

A companion volume to [The Mahatma Letters](#), this correspondence from the 1880s is a profoundly moving documentary of [H. P. Blavatsky's](#) life and character. In the words of A. Trevor Barker:

"The reader is therefore left to form his own conclusions as to whether the heroic figure which stands out so vividly in these pages was . . . what she claimed to be -- no medium indeed, but the conscious Agent of the Masters who sent her forth, performing her prodigious task under conditions which would make the bravest halt; an occultist pledged to silence as to the true reasons for most of her actions, ever fearful of giving out too much, but yet through it all labouring so fiercely and wholeheartedly." -- pp. vii-viii

*Photographic facsimile editio*

## The Mahatma Letters to A. P. Sinnett

Transcribed and compiled by A. Trevor Barker

No other book is quite like this private collection of letters. Preserved in the British Library, they were written between 1880 and 1884 to Alfred P. Sinnett, editor of a leading Anglo-Indian newspaper, *The Pioneer*. His correspondents were two Mahatmas whom [H. P. Blavatsky](#) has acknowledged as her teachers and the inspirers of her [Isis Unveiled](#) and [The Secret Doctrine](#).

First published in 1923, this important volume is filled with sublime philosophical and ethical instruction, revealing not only far-reaching concepts of religious and scientific thought (since proven in large degree prophetic), but also practicality, warmth of heart, patience, and ripeness of humor. These letters, moreover, yield a clearer understanding of H. P. Blavatsky, the early [history of the TS](#), and of the Mahatmas' aim in fostering a real universal fraternity.

"The term 'Universal Brotherhood' is no idle phrase. Humanity in the mass has a paramount claim upon us. . . . If it be a dream, it is at least a noble one for mankind: and it is the aspiration of the true adept." -- p. 17

*Photographic facsimile of the compiler's 2nd edition*

## The Mahatma Letters to A. P. Sinnett in Chronological Sequence

Arranged and edited by Vicente Hao Chin, Jr.

Based on A. T. Barker's transcription and the Linton/Hanson *Reader's Guide* chronology, this edition includes brief notes by Virginia Hanson regarding the circumstances of each letter. 626 pages, cloth \$28.00

## Esoteric Buddhism

By A. P. Sinnett

Based on teachings in the Mahatma correspondence; one of the first presentations of modern theosophic philosophy. 240 pages, paper \$10.00

From [Theosophical University Press](#)

## Combined Chronology

(For use with the Mahatma and Blavatsky Letters)

By Margaret Conger

By reading the Letters chronologically, the student is better able to follow the flow of events, personalities, and teaching that marked the formative years of [The Theosophical Society](#). Two important letters, not contained in either volume, are included: the first letter from K.H. to A. O. Hume, and the "View of the Chohan on the T.S." as reported by K.H. to A. P. Sinnett.

- 5 7/8 x 8 3/4, 61 pages
- \$4.95 paper ISBN 978-0-911500-17-2

**Special Offer** Free *Chronology* with retail purchase of both *The Mahatma Letters* (cloth or softcover) and *The Letters of H. P. Blavatsky to A. P. Sinnett*.

## H. P. Blavatsky

Helena Petrovna Blavatsky was born on August 12, 1831, at Dnepropetrovsk (Ekaterinoslav), Ukraine, daughter of Colonel Peter Alexeyevich von Hahn and novelist Helena Andreyevna (née de Fadeyev). In 1849 she married N. V. Blavatsky, and shortly thereafter began more than 20 years of extensive travel, bringing her into contact with mystic traditions the world over.

In 1873 Blavatsky arrived in New York from Paris where, impelled by her teachers, she began her work. At first she attempted to interest the Spiritualists in the philosophy behind phenomena but they resented her refusal to accept their standard explanations. In July 1875 she was urged "to establish a philosophico-religious society," and in the Fall of the same year she became the principal founder, along with [H. S. Olcott](#) and [W. Q. Judge](#), of [The Theosophical Society](#). She devoted the rest of her life to its humanitarian and educational [objectives](#).

About the time the Society began, she started to write her first major work, *Isis Unveiled*, and after its publication in 1878 she and H. S. Olcott left for India. There they worked to re-establish Oriental philosophical and religious ideas, largely through the pages of *The Theosophist*, a magazine which Blavatsky founded and edited.

In 1884, while Blavatsky was traveling in Europe, disgruntled TS employees in India went to the missionaries with forged documents, bringing charges of fraud against her. The Society for Psychical Research (SPR) then sent Richard Hodgson to investigate the charges, and subsequently published an unfavorable report. (In 1986 the SPR published an analysis of the Hodgson Report by Dr. Vernon Harrison, an SPR member expert in forgery and handwriting analysis, who concluded that the Hodgson Report was biased, unscientific, and completely unconvincing.)

Under the strain, Blavatsky's health had broken down, and in 1885 she left India for Europe, where she continued to write *The Secret Doctrine*, her masterwork. In 1887 she settled in London, and began a new magazine *Lucifer* ("Light-bringer"). In 1888 *The Secret Doctrine* was published and, in the same year, aided by W. Q. Judge, she formed the Esoteric Section of The Theosophical Society. Shortly afterwards she wrote *The Key to Theosophy* and *The Voice of the Silence*. In 1890 she became head of a newly-established European Section. She died in London on May 8, 1891 after many years of chronic illness. (Link to [Biographical Sketch](#)).

## H. P. Blavatsky to the American Conventions: 1888 - 1891

By [H. P. Blavatsky](#)

These messages are not only of historical significance, but address many issues confronting us today: the growth of psychism, our spiritual development, the need for brotherhood and altruism, and the role of theosophists and The Theosophical Society in the modern world.

An essay by Kirby Van Mater provides the setting in [theosophical history](#). Sketching important events from the founding of the Society to HPB's death in 1891, it gives the reader a better understanding of the major currents affecting H. P. Blavatsky and her lifework.

## **Gems From The East:**

### **A Birthday Book of Precepts and Axioms**

Compiled by [H. P. Blavatsky](#)

Writing from London to [William Q. Judge](#) in late 1889, Constance Wachtmeister announced, "We have now in the Press a Theosophical Birthday Book with 'Gems from the East.' H.P.B. has written down all these axioms and the book will I think be a popular one."

A precept or axiom, compiled chiefly from Oriental sources, is given for each day of the year, while more lengthy selections from poets and philosophers introduce the months. Attractively bound, with original pen drawings, this perennial calendar book makes a thoughtful gift.

## An Invitation to *The Secret Doctrine*

By [H. P. Blavatsky](#)

To those who would like to explore the essence of [The Secret Doctrine](#), or who have had difficulty penetrating its two large volumes, *An Invitation to The Secret Doctrine* should prove welcome. Based on Blavatsky's study suggestions given to her personal students, it is a succinct and appealing statement of the *SD*'s principal teachings in her own words. Included are the Bowen notes of HPB's comments, relevant pages from *The Secret Doctrine*, photographs of HPB's manuscript, a historical account of "The Writing of *The Secret Doctrine*" by Kirby Van Mater, and a glossary of terms.

## Isis Unveiled

By [H. P. Blavatsky](#)

"One of the most remarkable productions of the century." -- *New York Herald*, 1877

H. P. Blavatsky's first major literary effort, a critical response to the growing materialism in both scientific and religious institutions, is a vindication of the ageless quest. In the author's words, *Isis* "is the fruit of a somewhat intimate acquaintance with Eastern adepts and study of their science. . . . They showed us that by combining science with religion, the existence of God and immortality of man's spirit may be demonstrated." Supported by extensive evidence from religious and mystical traditions, classical scholarship, and the testimony of nature, these volumes aid the student in detecting the vital principles which underlie the philosophical systems of old.

Volume I focuses on the prevailing scientific theories of the time, balanced against the "anciently universal Wisdom Religion," while Volume II examines the creeds of religions past and present, alongside the myths and symbols of various cultures. Throughout, the author strikes at the root of dogma and affirms the "paramount importance of re-establishing the Hermetic philosophy in a world which blindly believes it has outgrown it."

This edition also includes two articles by H. P. Blavatsky on the writing of *Isis Unveiled*: "My Books" (1891) and "Theories About Reincarnation and Spirits" (1886).

Topics include:

Comparative Buddhism and Christianity -- Egyptian Wisdom -- Masonry and Kabbala --  
The Astral Light -- Mediumship vs. Adeptship -- The Inner and Outer Man -- Psychic  
Phenomena -- Oriental Cosmogonies -- Platonic Philosophy -- Savior Legends -- Cycles in  
Nature -- Gnosticism -- The Ancient Mysteries

## The Key to Theosophy

By [H. P. Blavatsky](#)

Written in the form of question and answer, *The Key to Theosophy* is an excellent introduction for the inquirer. After the publication of [Isis Unveiled](#) and [The Secret Doctrine](#), the author was deluged with questions about the human constitution, spiritual and psychological; the mysteries of periodic rebirths; and the difference between fate, destiny, free will, and karma. These and many other questions on the [basic theosophical concepts](#) are answered simply and directly. The work is enhanced by a 60-page glossary of philosophical terms drawn from Sanskrit, Hebrew, and classical literature.

## The Secret Doctrine:

### The Synthesis of Science, Religion, and Philosophy

By [H. P. Blavatsky](#)

"This massive study of man, of nature, of spiritual evolution, of the essence of reality is an astonishing document. . . . Blavatsky synthesizes science and spirituality into an exhilarating journey of spiritual awareness." -- *The Book Reader* (1988)

Continuously in print for over 100 years, the *SD* remains today the most comprehensive sourcebook of the esoteric tradition, outlining the fundamental tenets of the "Secret Doctrine of the Archaic Ages." Challenging, prophetic, and strikingly modern, it directly addresses the perennial questions: continuity of life after death, purpose of existence, good and evil, consciousness and substance, sexuality, karma, evolution, and human and planetary transformation.

"The aim of this work may be thus stated: to show that Nature is not 'a fortuitous concurrence of atoms,' and to assign to man his rightful place in the scheme of the Universe; to rescue from degradation the archaic truths which are the basis of all religions; and to uncover, to some extent, the fundamental unity from which they all spring." -- Preface

Based on the ancient Stanzas of Dzyan (see link below) with corroborating testimony from over 1,200 sources, these volumes unfold the drama of cosmic and human evolution -- from the reawakening of the gods after a "Night of the Universe" to the ultimate reunion of cosmos with its divine source. Supplementary sections discuss relevant scientific issues as well as the mystery language of myths, symbols, and allegories, helping the reader decipher the often abstruse imagery of the world's sacred literature.

## Index

From [Theosophical University Press](#)

## The Secret Doctrine Index

Prepared by **John P. Van Mater**

H. P. Blavatsky's masterwork, [The Secret Doctrine](#), comprises a virtual encyclopedia of the "anciently universal wisdom-tradition" -- scarcely an issue of consequence in the broad range of human experience is left untouched.

As part of the Secret Doctrine Centenary project, this 441-page Index provides ready access to the vast quantity of material from many cultures set forth in the *SD*'s original two volumes published in 1888. Due to the topics covered, it is as much an index of *ideas* as it is of subjects, works, persons, and proper names.

To aid the reader, major subject entries are cross-referenced; foreign terms are identified by language and, where possible, given in both their 1888 spelling(s) and as modernly transliterated, often with one or two word definitions. Subentries are arranged alphabetically. Cited works and authors, whose titles or names are not given in the *SD* are placed in brackets for convenient identification.

Also included is an Appendix of foreign phrases with translation and source reference -- all helping to make this Index an invaluable reference tool for students of *The Secret Doctrine*.

*Available separately or with the 2-volume set*

## Secret Doctrine Commentary / Stanzas I-IV:

### Transactions of the Blavatsky Lodge

By [H. P. Blavatsky](#)

In response to the demand for further light on the Stanzas of Dzyan which form the basis of [The Secret Doctrine](#), H. P. Blavatsky answered a variety of questions at weekly meetings of the Blavatsky Lodge of [The Theosophical Society](#) in London. Her replies illumine many important facets of the teachings that are often difficult for students and inquirers.

The discussions cover the first four stanzas of Volume I and treat such topics as cosmic genesis, universal mind, man's inner nature, the relation between consciousness and substance, religious symbolism, and the evolution of worlds and men. Of particular interest is a section on dreams.

## Studies in Occultism

By [H. P. Blavatsky](#)

Occultism (from the Latin *occultus*, meaning "hid") as presented here refers primarily to the esoteric theosophy concealed in religion and nature. In this series of articles, Blavatsky clarifies the "essential difference between theoretical and practical Occultism," and the gulf that separates harmful occult practices from the occult path of altruism.

Also included is a timely three-part article on "The Esoteric Character of the Gospels" which casts revealing light on the mystery of Jesus -- as man and as Christ -- and also upon the succession of messianic ages.

- 5 1/8 x 7 5/8, 218 pages
- \$16.95 cloth ISBN 978-0-911500-08-0
- \$ 10.95 paper ISBN 978-0-911500-09-7

Link to [Full-text online](#) edition

### Definition of "occult" from Back Cover:

The term OCCULT has noble, but largely forgotten origins. Derived from the Latin 'occultus' meaning 'hidden,' it properly defines anything which is undisclosed, concealed, or not easily perceived. Early theologians, for example, spoke of "the occult judgment of God," while "occult philosopher" was a designation for the pre-Renaissance scientist who sought the unseen causes regulating nature's phenomena. In astronomy, the term is still used when one stellar body 'occults' another by passing in front of it, temporarily hiding it from view.

Writing a century ago, when the word had not acquired today's mixed connotations, H. P. Blavatsky defined OCCULTISM as "altruism" -- the divine wisdom or hidden theosophy within all religions. Occultism is founded on the principle that Divinity is concealed -- transcendent yet immanent -- within every living being. As a spiritual discipline occultism is the renunciation of selfishness; it is the "still small path" which leads to wisdom, to the right discrimination between good and evil, and the practice of altruism.

From [Theosophical University Press](#)

## The Voice of the Silence

By [H. P. Blavatsky](#)

"Here is the real Mahayana Buddhism" -- *D. T. Suzuki*

"I believe that this book has strongly influenced many sincere seekers and aspirants to the wisdom and compassion of the Bodhisattva Path." -- *14th Dalai Lama*

Translated from the Book of the Golden Precepts, which shares a common origin with the Stanzas of Dzyan of [The Secret Doctrine](#), the rules and ethics presented in the *Voice* contrast the two paths of spiritual attainment: the one pursued by those seeking knowledge for their own enlightenment; the other chosen by those whose aspirations are prompted by compassion for all.

## **H. P. B.: The Extraordinary Life and Influence of Helena Blavatsky**

**By Sylvia Cranston**

In her quest for truth and universal brotherhood, [H. P. Blavatsky](#) opened a new realm of ideas to the world, influencing poets, writers, artists, philosophers, and scientists alike -- among them Yeats, James Joyce, L. Frank Baum, Kandinsky, Mondrian, Scriabin, Gandhi, William James, Thomas Edison, and Einstein. Social historian Theodore Roszak ranks her "among the modern world's trailblazing psychologists of the visionary mind."

A product of 14 years' research and writing, "this book portrays HPB's supporters and detractors, using newly uncovered materials to present as complete a biography of this enigmatic woman and her wisdom as possible" (*Booklist*, American Library Association). An important addition to [theosophical history](#).

*Published by Path Publishing House*

## Reincarnation: The Phoenix Fire Mystery

Compiled & edited by Sylvia Cranston

The classic anthology, offering ancient and modern perspectives on Job's question: "If a man die, shall he live again?" Spanning over 5,000 years of world thought, the selections invite consideration of an idea that has found hospitality in the greatest minds of history.

"Filled with encouragement, with the extraordinary eloquence of poetry, myth and religion . . . A massive encyclopedic gathering from the religions of both East and West, from science, psychology, philosophy."

— Robert Kirsch, *Los Angeles Times*

- 6 x 9, 640 pages, notes, index
- \$22.95 softcover ISBN 978-1-55700-026-2

## Reincarnation: A New Horizon in Science, Religion, and Society

By Sylvia Cranston and Carey Williams

"This volume is unique in its ability to pull together all aspects of the theory. Moreover, the text is written so lucidly and with such flavor that even the most die-hard skeptic will come away with much to think about." — *Booklist*, American Library Association

This comprehensive presentation examines scientific evidence of reincarnation, case histories, near death experiences, heredity, genius, etc. Explores social and religious issues, and includes lectures delivered at Harvard and Columbia.

## Colonel Arthur L. Conger

By Alan E. Donant

Humanitarian, scholar, musician, and military officer, Colonel Conger was Leader of the Theosophical Society from 1945-1951. This biographical essay describes his education, military career, and theosophical activities, where "we observe theosophic principles taken beyond the books and into daily life." Originally appearing in *Theosophical History* magazine, this monograph has been revised and enlarged. Those looking for insight into this period of theosophical history, or who enjoy exploring the life of a remarkable man, will find this well-documented booklet of interest.

## Esotericism of the Popol Vuh

By Raphael Girard

Translated from the Spanish by Blair A. Moffett

The *Popol Vuh*, an ancient American spiritual epic, is the Quiche rendition of Mayan cosmic philosophy. In allegorical form it describes the origin of the universe and of the gods, as well as their offspring — mankind — and the complex evolutionary cycles they experience. Professor Girard spent many years among the Mayas in Central America learning much from direct association with their Elders, and offers a unique approach to the mysteries of native American thought.

## Sanskrit Pronunciation:

### Booklet and Audio

By **Bruce Cameron Hall**

Designed to help students pronounce Sanskrit words accurately, this booklet and 45-minute audiocassette, read by the author, consists of four parts: (1) instructions for pronouncing Sanskrit letters and words, (2) over 160 Sanskrit terms from theosophical and Indian philosophical literature pronounced and defined, (3) a short pronunciation summary, and (4) sample verses from the [Bhagavad-Gita](http://www.theosophicaluniversitypress.com) in devanagari script, roman letters, and in English translation by the author.

Bruce Cameron Hall studied Sanskrit at the University of Hawaii, in India, and at Harvard University, where he received his Ph.D. in Sanskrit and Indian Studies in 1983.

*For the record . . .*

## **H. P. Blavatsky and the SPR:**

### **An Examination of the Hodgson Report of 1885**

**By Vernon Harrison, Ph.D.**

In December 1885 the Society for Psychical Research (SPR) in London, England, published a 200-page report by Richard Hodgson, perhaps best known for its denunciation of H. P. Blavatsky as an "impostor," and often featured in encyclopedias, reference books, and biographical works.

In April 1986 the *SPR Journal*, "in the interests of truth and fair play," published a critical analysis of the Hodgson Report by handwriting expert Vernon Harrison, who found it "riddled with slanted statements, conjectures advanced as fact or probable fact, uncorroborated testimony of unnamed witnesses, selection of evidence and downright falsity." Since then Dr. Harrison continued his research, including a line-by-line examination of 1,323 color slides of the Mahatma Letters, and in a second monograph (1997) concluded that "the Hodgson Report is even worse than I had thought."

*H. P. Blavatsky and the SPR* combines both of Dr. Harrison's papers with his Opinion, Replies to Criticism, formal Affidavit, and 13 full color plates of sample pages from the Mahatma and Blavatsky letters.

*About the Author:* "His expertise is of special relevance in this instance since much of the Hodgson Report concerns the authorship of certain letters which Hodgson claims were forged by Mme. Blavatsky herself. Dr. Vernon Harrison, a past President of the Royal Photographic Society, was, for ten years, Research Manager to Thomas De La Rue, printers of banknotes, passports and stamps, etc., so there is probably not much that he does not know about forgery. He is not a member of the Theosophical Society but he is a long-standing member of the SPR." -- John Beloff, Ph.D., Editor

## William Quan Judge

William Quan Judge was born in Dublin, Ireland, on April 13, 1851. His family emigrated in 1864 to New York where he specialized in corporate law (New York State Bar, 1872). A co-founder with [H. P. Blavatsky](#) and [Henry S. Olcott](#) of [The Theosophical Society](#) in 1875, he later became General Secretary of its American Section and Vice President of the international Society. In this capacity he organized and presided over the Theosophical Congress at the World's Parliament of Religions held in Chicago during the 1893 Columbian Exposition. Through his writing and extensive lecturing around the United States, he helped make theosophy known and respected. He died in New York City on March 21, 1896 at the age of 44. ## Bhagavad-Gita

### Combined with Essays on the Gita

By [W. Q. Judge](#)

The *Bhagavad-Gita* is probably the most influential work India has produced. In the form of a dialogue between its hero Arjuna and the avatara Krishna, this Hindu classic is an allegory of Man in his evolutionary development — a searching look at the "field of dharma."

In 1890, responding to many requests for a nonacademic exposition of the *Gita*, Judge published the present recension, and also wrote several illuminating essays on the *Gita*. These essays, issued together with his recension, make this volume unique among the many renditions of this ancient classic now available.

## **Practical Occultism:**

### **From the Private Letters of William Q. Judge**

Edited by [Arthur L. Conger](#)

Selected from the private files and Letterbooks of [William Q. Judge](#), these letters combine directness and strength with sympathetic understanding. A guide to the application of esoteric truths to daily living, they are the fruit of knowledge and long experience in the philosophy and practice of altruism.

The correspondence highlights the period from 1882 to 1891, when the Theosophical Society was undergoing rapid growth, particularly in the West. A valuable source book also for those interested in the early [theosophical history](#).

## Dhammapada:

### Wisdom of the Buddha

Translated by **Harischandra Kaviratna**

The *Dhammapada*, long perpetuated through oral tradition, is a synthesis of the Buddha's ethical teachings. The present English translation by the noted Sinhalese pandit, Harischandra Kaviratna, with the original Pali text (in roman script) on facing pages, was produced after comparison with Sanskrit, Burmese, and Chinese versions. A glossary of Pali philosophical terms with Sanskrit equivalents and English definitions is included. In his introduction, Dr. Kaviratna discusses the history of the *Dhammapada* and its place in the Buddhist canon together with its relation to the Vedas and Brahmanical literature.

## Grace F. Knoche

Grace F. Knoche was born in 1909 at the theosophical headquarters, then at Point Loma, California, and attended the Raja-Yoga School and Academy founded by [Katherine Tingley](#). She joined the TS in 1929 shortly before Mrs. Tingley left on her last tour to Europe. Under [G. de Purucker](#) as Leader, she worked at the headquarters as a compositor in the Press, in the Secretary General's office, and on the Leader's secretarial staff. She assisted Dr. de Purucker in revising the [Encyclopedic Glossary](#), and was on the committees responsible for reorganizing his Esoteric School materials, later published as [The Dialogues of G. de Purucker](#) (1948) and [Fountain-Source of Occultism](#) (1974). She continued her studies at Theosophical University, receiving a Ph.D. in 1944. At various times from 1933 to 1946 she taught violin, Greek, Sanskrit, Hebrew, Bible translation, and Qabalah at Theosophical University, and painting and sculpture at the Lomaland school.

During the Cabinet administration after Purucker's death in 1942, Grace served as private secretary to the Chairman of the Cabinet, continuing as private secretary to the next two Leaders, [Colonel Arthur Conger](#) and [James A. Long](#). She worked closely with James A. Long on his new magazine, [Sunrise](#), begun in 1951.

On Mr. Long's death in 1971, Grace assumed leadership of the TS and became editor of *Sunrise*. For almost 35 years she encouraged the membership to assume responsibility for directing the course of their lives along universal principles, stressing that the same compassionate life currents that build and shape the evolution of the cosmos also inform the patterns of everyday experience. Always a collaborator at heart, Grace worked to establish a spirit of cooperation among the various theosophical organizations. She died in Altadena, California, on February 18, 2006, at the age of 97.

## The Mystery Schools

By [Grace F. Knoche](#)

Behind the world's religions, philosophies, and sciences lies the hidden source of humanity's inner life and spiritual sustenance. Through the intellectual awakening of infant mankind millions of years ago, to the subsequent misuse of knowledge which led to the foundation of Mystery colleges by great sages and seers, *The Mystery Schools* traces this movement back to the earliest times. It describes the role of the brotherhood of adepts in discovering, disseminating, and preserving the truths of nature and man, and discusses the purposes and methods of the Mysteries, the pattern of esotericism, routes of initiation, and the Mystery schools today.

A Mystery school is a university of the soul, a school for the study of the mysteries of the inner nature of man and of surrounding nature. By understanding these mysteries, the student perceives his intimate relationship with divinity, and strives through self-discipline and devotion to become at one with his inner god.

This book attempts to present certain fundamental lines of teaching which it is hoped will give a more or less clear picture of what a Mystery school really is. Full and specific knowledge of the Mystery schools - where they have been, where now they function, what are their chief characteristics - has not been given out. The student can find, however, a generous amount of information scattered here and there in the literatures of the past and can build up for himself a coherent picture of the pageantry of the Mystery schools, a picture which will turn into the reality of experience only as he becomes inwardly prepared through lifetimes of dedication and the study and practice of the ancient wisdom. --  
Foreword

Grace F. Knoche has been leader of The Theosophical Society and editor of Sunrise magazine since 1971.

## **Theosophy in the Qabbalah**

**By Grace F. Knoche**

What are the essential teachings of Qabbalah, the Jewish esoteric wisdom passed on for millennia from teacher to pupil? In this clear presentation, Grace F. Knoche concentrates on principal Qabbalistic themes: the emanation of the universe, the Sefirothal Tree of Life and its cosmic and human symbology, the Four Worlds of creation, the Four Adams or Heavenly Archetypes, and the composite structure of our being and its bearing on sleep, death, and initiation. To elucidate their meaning, the author compares Qabbalistic concepts and symbols with equivalents in modern theosophy, particularly in the works of H. P. Blavatsky and G. de Purucker, revealing Qabbalah as one stream of the universal wisdom tradition of mankind.

## To Light a Thousand Lamps: A Theosophic Vision

**[By Grace F. Knoche](#)**

Written with directness and warmth, this book shares a universal perspective on the central questions of human existence, while providing practical insights on daily living and spiritual growth. Offering a thoughtful critique of religious and scientific views and current practices in light of theosophy, the author presents the foundation ideas of mankind's spiritual heritage, addressing our responsibility as partners in a oneness that reaches to the core of each and every being. In so doing she suggests how we can live with dignity, purpose, and compassion, whatever our circumstances.

Chapter titles include: What is Theosophy?, Evolution, The Quickening of Mind, Reincarnation, Death: A Doorway to Light, Karma and/or Grace, The Christian Message, Psychism, The Two Paths, H. P. Blavatsky and The Theosophical Society, Who Will Save Us?, and A new Continent of Thought.

## James A. Long

James A. Long was born on August 27, 1898, at York, Pennsylvania. Following a career in private business, he served as a management consultant during W.W.II in the office of the Quartermaster General in Washington, D.C., and was later transferred to the Department of State where he assisted in the changeover to peacetime responsibilities. While there he was sent as an Advisor to the U.S. Delegation to the United Nations at the opening of the Second Session in 1946.

Mr. Long joined [The Theosophical Society](#) in 1935 and in 1939 became business manager of its American Section. He worked closely with [Arthur L. Conger](#) whom he succeeded as leader of The Theosophical Society in 1951. His administration was marked by an emphasis on the practical expression of theosophy in daily living. To this purpose, he founded and edited [SUNRISE](#) magazine as a bridge between theosophy and the public, each issue offering theosophic perspectives on relevant trends in science, philosophy, and religion, as well as studies in ancient and modern theosophy. Mr. Long died on July 19, 1971.

## Expanding Horizons

By [James A. Long](#)

Widely used as an introduction to theosophy, this book features short essays and roundtable talks with varying age-groups. Here in refreshingly simple language is a re-presentation of "primeval spiritual ideas" distilled from the treasury of ancient tradition, the "god-wisdom" or theosophia inspiring every great religion.

Rather than presenting ready-made answers to the problems of life, *Expanding Horizons* presents practical insights on those basic questions which go to the root of the human predicament.

"Once we recognize that each man's concept of God is different, but that the quality of Deity is the same and that the Divine essence resides in the core of all that lives, then we have laid the foundation upon which to build a bridge of brotherhood over which man can travel from the darkness of past ages to the light of the future." — p. 58

## THE PATH

by **Reginald W. Machell**

This symbolic painting hangs in the administration building at the International Headquarters of The Theosophical Society, Pasadena, California. It is in oil and gesso, measuring 6'2" x 7'5". In the artist's words, "THE PATH is the way by which the human soul must pass in its evolution to full spiritual self-consciousness."

The full-color reproduction, suitable for framing, is printed on acid-free heavy paper. Enclosed with it is the artist's interpretation of its symbolism.

- 14" x 17" print, mailing container \$10.00

**Reginald W. Machell** (1854-1927), a member of the Royal Society of British Artists, exhibited at the Royal Academy in the late 19th century. After having met [H. P. Blavatsky](#) in London in 1888, he joined [The Theosophical Society](#). In 1900 he was invited by [Katherine Tingley](#) to the Society's International Headquarters, then at Point Loma, California, where he gave fully of his considerable talents in art, drama, and literature.

## **Book of the Three Dragons**

**Kenneth Morris**

This imaginative reworking of the Welsh *Mabinogion* and other legends tells the story of Manawyddan, who is given the choice between immortality with the gods or preventing a new evil from destroying the Island of the Mighty. " *Book of the Three Dragons* is perhaps the single best fantasy adaptation from a real-world mythology, and the best of his tales" (John Rateliff, Wizards.com). Features the author's never-before-published ending amounting to one-third of the book's length.

*Morris is an inspired, original writer in touch with the mythic wellsprings of the fantastic imagination . . . the greater achievement of his writing is the wedding of this lilting, varied prose with philosophical depth and an active share of wonder woven from the history, myth and legends. — SFRA Review*

*Published by Cold Spring Press*

## The Chalchihuite Dragon

By **Kenneth Morris**

"This newfound book is a treat, a welcome change from the standard fantasy settings, with engaging characters, a wealth of wonders, and an inner wisdom as rare as it is profound." —  
*Kirkus Reviews*, Feb. 1, 1992

The *Chalchihuite* (pronounced chal'-chih-wee'-tay) is a precious green stone or jewel, carved in the shape of a dragon, whose mysterious appearance in ancient Mesoamerica signals the coming birth of the legendary god-king, Quetzalcoatl. Written at [Katherine Tingley](#)'s request, this movingly poetic tale is rich in theosophic insight and certain to become a classic.

[Book Review](#)

## Gottfried de Purucker

Gottfried de Purucker was born on January 15, 1874, at Suffern, New York, son of an Anglican minister who for some years served as chaplain of the American Church in Geneva, Switzerland. In preparation for the ministry he specialized in Hebrew, Latin, Greek, and the writings of the early Church Fathers. However, study of Eastern philosophies and Sanskrit literature led him to theosophy with its broad comprehension of religion, philosophy, and science. After working closely with Katherine Tingley, he succeeded her as head of [The Theosophical Society](#) from 1929 until his death in Covina, California, on September 27, 1942. Perhaps his greatest contribution to the theosophical movement was his elucidation of the writings of [H. P. Blavatsky](#), particularly her [Secret Doctrine](#). (Link to [Biographical Sketch](#).)

## The Dialogues of G. De Purucker

Edited by [Arthur L. Conger](#)

In 1929 [G. de Purucker](#) gathered together a group of students at the [Theosophical Society's](#) headquarters, answering questions which range from practical human problems to the most profound themes of the theosophic philosophy. These volumes comprise the record of those meetings

In the words of the editor, the *Dialogues* "will be considered in retrospect as the most important publication since [The Mahatma Letters](#), for it will offer the world at large the opportunity to know the true occult doctrine in simple understandable language, and will act as a guide through the maze of pseudo-occult and theosophical plagiarisms which have led astray the unwary."

From [Theosophical University Press](#)

## The Esoteric Tradition

By [G. de Purucker](#)

[H. P. Blavatsky](#) pointed to the fundamental concepts of [The Secret Doctrine](#) as comprising the principles of an ancient wisdom which far antedates the Vedas. *The Esoteric Tradition* unfolds the broad panorama of this enduring wisdom, allowing the reader to see universes, worlds, and men as different aspects of one cosmic pattern. Chapter headings include:

Allegory and Mystical Symbolism — The Secret Doctrine of Gautama the Buddha — Evolutionary Pathway to the Gods — Worlds Visible and Invisible — Reimbodiment as Taught through the Ages — Death and After: A Study of Consciousness — Some Misunderstood Teachings of the Mysteries

## **The Four Sacred Seasons**

By [G. de Purucker](#)

The winter and summer solstices and the spring and autumn equinoxes have been held sacred in many cultures. G. de Purucker explains the cosmic and human symbolism associated with the earth's annual cycling round the sun, and links it with the great initiatory events which take place at these seasons. Key teachings on buddhas and avatars, death and initiation, and the two paths of growth — for oneself and for others — illumine not only the traditions of mankind, but also the road which the aspirant daily seeks to tread.

## Fundamentals of the Esoteric Philosophy

By [G. de Purucker](#)

From 1924 to 1927 [Katherine Tingley](#) sponsored a series of private studies in [The Secret Doctrine](#), with Dr. de Purucker as lecturer. This record of the meetings provides an excellent introduction to [H. P. Blavatsky's](#) masterwork, yet it stands on its own as a clear restatement of the philosophy expounded by all great thinkers and sages.

Beginning with the three fundamental postulates of the *SD*, the presentation moves to cosmic and human evolution, with emphasis on the interconnectedness of all beings. Other topics include man's nature and destiny; avatars and buddhas; initiation, the Mysteries, and ethical values.

## Golden Precepts of Esotericism

By [G. de Purucker](#)

Drawn from the author's talks with students, *Golden Precepts* covers a variety of subjects: the inner god; thoughts, their influence on character and how they can be controlled; how to meet suffering, old age and death; the need for selfless love; buddhas of compassion; and the path of spiritual growth.

"In proportion as you ally yourself with your own inner god, with the fountain of divinity which is constantly pouring through your own inner being, does your consciousness ascend and expand in power and reach, so that with inner growth comes expanding vision on the one hand and the expanding consciousness to interpret that vision on the other hand." — p. 16

## Occult Glossary:

### A Compendium of Oriental and Theosophical Terms

By [G. de Purucker](#)

Every branch of study has its special terminology, and theosophy is no exception. Originally published in London in 1933, this *Glossary* defines some 300 terms most frequently found in the field of metaphysics and explains them in the light of theosophy. An invaluable textbook for the student, the *Occult Glossary* is a succinct and reliable aid in discerning the occult or "hidden" meaning of many Sanskrit, Greek, and technical terms used in theosophical literature.

## The Path of Compassion

By [G. de Purucker](#)

Time-honored rules of ethical and spiritual conduct are presented along with warnings against pitfalls of psychic development. There is no shortcut to wisdom, no instant enlightenment, for inner unfolding cannot be induced artificially. While the path toward conscious union with our inner divinity demands the utmost devotion, fidelity, and perseverance, it is also "bright with joy, and lighted with the fires of the spirit."

An Ariadne's thread out of today's psychic and mental confusion, this booklet reproduces the first two sections of [Fountain-Source of Occultism](#), so that the seeker may have readily to hand an inspired vision of the path before him.

## Wind of the Spirit

By [G. de Purucker](#)

*Wind of the Spirit* makes a powerful appeal to each of us to seek our own inspired vision to live by. The author shows how the winds of change are coursing through world consciousness, tearing away deadwood and making room for new growth. Nearly a hundred articles examine such topics as the secret of human conflict, guarding our thoughts, common sense in the home, prayer and aspiration, soul loss and insincerity, predestination, help from the gods, and three stages of visioning truth. This is a practical book, helpful for the beginner, while the longtime student will benefit from a fresh view of basic principles.

## H. P. Blavatsky and the Theosophical Movement

By **Charles J. Ryan**

"... some day, if not at once, the loftiness and purity of her aims, the wisdom and scope of her teachings, will be recognized more fully, and her memory will be accorded the honor to which it is justly entitled." — Editorial, *New York Daily Tribune*, May 10, 1891

This well-researched portrayal of [Blavatsky's](#) life and work also covers the years following her death on May 8, 1891, and the efforts of theosophists to carry the movement into the twentieth century. Combining primary source material with concise narrative, Professor Ryan has crafted a penetrating synthesis of [theosophical history](#) and philosophy which reveals the impact of spiritual truths on humanity's thought-life.

## **Evolution & Creation: A Theosophic Synthesis**

**By W. T. S. Thackara**

A Sunrise Library Publication

Addressing the controversial question, "Is the universe intelligently designed?", this introductory booklet surveys critical problems in both Darwinian theory and creationist theology: organic complexity and the origin of life; the relationship of consciousness and matter; who or what is God; design, disparity, and imperfection; and the origin and evolution of man. The discussion reexamines these issues in light of modern scientific research and basic theosophic concepts underlying the world's religious traditions – suggesting there is a common middle ground reconciling spiritual intuition and scientific knowledge. Useful for group study.

& CREATION

A Theosophic Synthesis

W. T. S. THACKARA

A SUNRISE LIBRARY PUBLICATION

## Katherine Tingley

Katherine Tingley was born July 6, 1847, in Newbury, Massachusetts. She felt a profound sympathy for the victims of poverty, misery, and war, and worked all her life to alleviate suffering. In 1893 she met [William Q. Judge](#) who introduced her to theosophy. Soon she knew that here was a philosophy which, if practiced, could lighten the burdens of humanity. Mrs. Tingley and Judge became co-workers, and upon his death in March 1896 she succeeded him as head of [The Theosophical Society](#). In 1900 she moved its international headquarters to Point Loma, California, where she continued her humanitarian efforts and founded the Raja-Yoga School, Academy, and College, and later, in 1919, Theosophical University. She lectured extensively in the United States and abroad until shortly before her death at Visingsö, Sweden, on July 11, 1929. (Link to a [Biographical Sketch](#).)

## The Gods Await

By [Katherine Tingley](#)

Thought-provoking and inspiring, *The Gods Await* applies theosophic principles to human life, emphasizing remedies for "man's inhumanity to man." It discusses freedom of thought, world peace, and reformation of the criminal justice system — setting forth the problems with their root-causes and possible solutions.

Speaking to the intuition as well as the mind, the author encourages us to recognize our duality and look to the spiritual center within, then act fearlessly — for "there is always another chance," no matter what our apparent failures. Here is a plea for social action and individual renewal based on self-knowledge, compassion, and the innate divinity of mankind.

"In that inner consciousness in which we all share there is an unsilenceable voice calling to us to render help. . . . in truth it is utterly impossible for any fragment of humanity to be secure and in peace and untroubled while any other fragment is in peril or oppressed, because inwardly and in reality we are one." — p.22

"he who would enter upon the path that leads to truth must put new interpretations on the failings and mistakes of his fellow men. He must come to understand the law of eternal justice . . . and to know the necessity it implies for an unconquerable compassion . . ." — p. 61

## Theosophy: The Path of the Mystic

By [Katherine Tingley](#)

Katherine Tingley appeals to the heart in simple, direct language, emphasizing the dignity of the individual and the power within each person to shape his own character and life. To her, theosophy was a practical and inspirational philosophy for daily living.

This book is compiled from talks and writings on theosophy and its applicability to living the mystic life, to education, prison reform, and the problems of society and human relationships. KT's great objective throughout the many varied activities she undertook was to make theosophy "immensely serviceable" to all.

"Never can we reach that point of spiritual discernment until we have found within our own hearts something new: a larger sympathy for all that lives, and a broader, deeper, grander conception of human life and the superb laws that govern it." — p. 22

**Special Katherine Tingley Issue 1998 - SUNRISE Special Issue:**

## **Katherine Tingley (1847-1929)**

During her leadership of the Theosophical Society (1896-1929), Katherine Tingley made universal brotherhood the focus of her wide-ranging activities. These included the School for the Revival of the Lost Mysteries of Antiquity; the Raja-yoga system of education from preschool through university level; performance of Shakespearean and ancient Greek plays in the first open-air Greek theater in America; international peace conferences; prison reform efforts emphasizing the abolition of capital punishment -- all are presented here, with biographical sketches and selections from Mrs. Tingley's addresses and books.

- 6 x 9, 120 pages, 26 photographs
- \$7.00 paper

## **The Masks of Odin:**

### **Wisdom of the Ancient Norse**

**By Elsa-Brita Titchenell**

This fresh translation and commentary on the principal lays of the Elder Edda opens a time capsule which has been sealed since remote antiquity when science, philosophy, and religion were one. It decodes the tales of gods, heroes, elves, and dwarfs, yielding an overview of the cosmic cycles of life on the many levels of the World Tree. "The myths live on. This is the eternal mystery: the indestructible core of truth, garbed in a hundred guises, which has inspired mankind through all ages."

**Elsa-Brita Titchenell** (1915-2002) was born in Uppsala, Sweden, educated in Stockholm, Shanghai, and England, and served on the Theosophical Society's international headquarters staff from 1948.

- 5 1/2 x 8 1/4, 316 pages, glossary, index

## Once Round the Sun

By Elsa-Brita Titchenell

Illustrated by Justin C. Gruelle and Elizabeth A. Russell

Now you see him — now you don't. As our earth orbits our star, Uncle Peppercorn is Peter's constant (though not constantly visible) companion, always at hand to help satisfy a little boy's curiosity. When Uncle Peppercorn gives Peter the Big Year, Peter's eyes and ears are opened to the magic of nature, and he can talk with the wild creatures of field and forest, air and earth, and learn how they live through the changing seasons. Combining science with fun, the story draws on a child's natural sense of wonder at everyday things and events, stressing values without moralizing.

*Black and white drawings and 5 full color plate*

## Children's Booklist

Compiled by **The Children's Committee of The Theosophical Society**

Over 750 classic and current books reflecting many cultures and traditions, selected in response to requests for an annotated listing of quality children's literature. Chosen for artistic and literary merit and their contribution to the child's inner growth, these books address universal themes, stimulate the imagination, share great sentiments, and build respect for all living things. Includes picture books, fiction, myths and tales, world religions, poetry, science and nature, and general nonfiction; also resource books for parents.

"Parents are always looking for guides to children's reading matter. I was so impressed with the value of this publication I bought copies for myself and friends, and recommend it to everyone." — Pauli Dutton, research librarian

- \$5.00 booklet, 64 pages ISBN 978-1-55700-176-4
- Postage: \$1.50 first copy / 50¢ each additional copy

## The "Secret Doctrine Reference Series" -- from *Wizards Bookshelf*

About this series: "[Access to Great Ideas](#)" by Richard I. Robb

An abbreviated list of available publications:

- ***The Anugita***, translated by K. T. Telang. A nearly forgotten adjunct to the *Bhagavad-Gita*, referenced frequently in [The Secret Doctrine](#). 176 pages, cloth \$17.00
- ***The Book of Enoch the Prophet***, translated by Richard Laurence. Cited by early Church Fathers as a sacred text. Introduction and index. 235 pages, paper \$11.00
- ***Chaldean Account of Genesis***, translated by George Smith. From cuneiform tablets predating the Hebrew Pentateuch; includes Babylonian-Assyrian stories of the Creation, the Fall, the Ark and Deluge, and of Izdubar (Gilgamesh). 340 pages, cloth \$18.00
- ***The Divine Pymander of Hermes Trismegistus***, translated by John Everard. An ancient text on cycles of creation and destruction, nature of man's soul, rules for liberation. 140 pages, cloth \$17.00
- ***The Eleusinian and Baccus Mysteries***, by Thomas Taylor. An illumined interpretation by the noted Platonist; annotated by Alexander Wilder, M.D., with pertinent references from *The Secret Doctrine*. 192 pages, cloth \$17.00
- ***Iamblichus: On the Mysteries***, translated by Thomas Taylor. The Mysteries of the Egyptians, Chaldeans, and Assyrians, in ten sections, with additional notes. 400 pages, cloth \$25.00
- ***The Life and Teachings of Paracelsus***, by Franz Hartmann. Teachings on alchemy, magic, cosmogony, and theosophy. 250 pages, cloth \$17.00
- ***The Lost Fragments of Proclus***, translation by Thomas Taylor. Includes "Defence of the *Timaeus* of Plato . . ." and 18 "Arguments in Proof of the Eternity of the World." Reprint of 1825 edition; bibliographical notes added. 128 pages, cloth \$15.00
- ***Mythical Monsters***, by Charles Gould. An investigation of extinct life, accounts of unicorns and dragons, flood myths, including rare material from ancient Chinese annals. Illustrated. 412 pages, cloth \$17.00
- ***Sacred Mysteries among the Mayas and Quiches***, by Augustus Le Plongeon. Contains insights of his 12 years of archaeological study in Yucatan. 200 pages, cloth \$17.00

Available through [Theosophical University Press](#)

## **Books from Other Publishers -- on Theosophy**

The following titles are not ordinarily stocked by overseas TUP agencies, but may be ordered direct from TUP Pasadena. No "hurt" copies available.

***Theosophical Classics CD-Rom*** Edited by Vic Hao-chin. Electronic book containing *Isis, Secret Doctrine, Key, Voice, Transactions, Theosophical Glossary, Collected Writings, Mahatma Letters to Sinnett, Letters from Masters of Wisdom, Light on the Path*, and *Esoteric Buddhism*. Includes viewer and fast search engine. Windows CD-Rom \$24.95.

***H. P. Blavatsky: Collected Writings*** compiled by Boris de Zirkoff. Contains virtually all known articles and notes, chronologically arranged with biographical data on many persons cited. Indexed, avg 600 pages, 14 volumes, cloth, each \$29.95; Cumulative Index, vol. 15, cloth \$29.95

***The Letters of H. P. Blavatsky: Volume 1, 1861-1879*** Edited by John Algeo. Part of the Collected Writings series, this volume contains all known personal correspondence of HPB for the period. Most letters are introduced with relevant historical information. Indexed, 643 pages, hardcover \$29.95

***From the Caves and Jungles of Hindostan*** by [H. P. Blavatsky](#). Colorful narratives of travels and personal experiences in India written for Russian newspapers. 725 pages, paper \$27.95

***Theosophical Glossary*** by H. P. Blavatsky et al., edited by G. R. S. Mead. Posthumously published (1892), this work defines and/or comments on approximately 3,000 terms, persons, and places mentioned in HPB's writings. 396 pages, cloth \$17.00

***Blavatsky Reference Books*** compiled and annotated by H. J. Spierenburg. Each volume collates HPB's statements and perspectives on a specific theme from her books, articles, and esoteric teachings; includes bibliography and index.

- The Buddhism of H. P. Blavatsky. 349 pages, paper \$16.95
- H. P. Blavatsky on the Gnostics. 322 pages, paper \$16.95
- The New Testament Commentaries of H. P. Blavatsky. 357 pages, paper \$19.95
- The Veda Commentaries of H. P. Blavatsky. 115 pages, paper \$14.95
- The Vedanta Commentaries of H. P. Blavatsky. 260 pages, paper \$19.95
- Astrology of a Living Universe, 70 pages, paper \$12.00
- The Inner Group Teachings of H. P. Blavatsky. 290 pages, paper \$15.95

***Rebirth of the Occult Tradition: How The Secret Doctrine of H. P. Blavatsky Was Written*** by Boris de

Zirkoff. Well researched; discusses also the mystery of the unpublished Volumes III and IV mentioned by HPB. 78 pages, paper \$7.95

***The Mahatma Letters to A. P. Sinnett in Chronological Sequence*** arranged and edited by Vicente Hao Chin, Jr. Based on A. T. Barker's transcription and the Linton/Hanson *Reader's Guide* chronology, this edition includes brief notes by Virginia Hanson regarding the circumstances of each letter. (no discount) 626 pages, cloth \$35.00

***Reader's Guide to the Mahatma Letters to A. P. Sinnett*** Compiled and edited by George E. Linton and Virginia Hanson. Contains a chronology of the letters, each with a description of its physical appearance, the historical circumstances, and explanations of many terms and phrases. 9 appendices, 450 pages, paper \$11.50

***Esoteric Buddhism*** by A. P. Sinnett. Based on teachings of the Mahatmas; one of the first presentations of modern theosophic philosophy. 240 pages, paper \$12.00

***The Theosophist*** edited by H. P. Blavatsky. A photographic facsimile of the first magazine issued by The Theosophical Society. Vol. 1 (1879-1880). 322 pages, paper \$14.00 (Text of Volume 1 is [Online](#))

***The Dawning of The Theosophical Movement*** by Michael Gomes. A study in [theosophic history](#) covering the key events which gave birth to The Theosophical Society, from H. P. Blavatsky's meeting with H. S. Olcott in 1874 to their departure for India in 1878. 264 pages, paper \$8.95

***The Esoteric World of Madame Blavatsky*** collected by Daniel H. Caldwell. Revised and expanded edition (2001). The story of HPB in the words of more than sixty contemporaries who knew her. Includes biographical sketches, 44 illustrations, references, index. 464 pages, cloth \$28.95

***Reminiscences of H. P. Blavatsky and The Secret Doctrine*** by Countess Constance Wachtmeister, et al. An intimate personal account of HPB while writing the [The Secret Doctrine](#) in Europe (1885-1887). 160 pages, paper \$8.50

***T. Subba Row: Collected Writings*** Compiled and annotated by Henk J. Spierenburg. Articles, published lectures, notes, esoteric writings, and biography of Subba Row, Indian scholar, theosophist, and a chela of HPB's teacher, are collected in two volumes. Vol I, 288 pages, paper \$18.50; Vol. II, index, 376 pages, paper \$18.50

***Damodar and the Pioneers of the Theosophical Movement*** compiled by Sven Eek. Biography of one of the best-know Indian chelas, enhanced by "A Hindu Chela's Diary," private letters, articles, plus biographical sketches of early theosophists. 736 pages, cloth \$19.95

***Wading into the Ocean: A Companion to "The Ocean of Theosophy"*** by Ann Forsyth Danno. Consists

of references quoted from numerous sources to clarify and enlarge the ideas presented by Judge. Features answers to commonly asked questions and a Sanskrit glossary. 220 pages, paper \$12.95

[Echoes of the Orient: The Writings of William Quan Judge](#) Compiled by Dara Eklund, 3 vols and index vol.

***The Judge Case: A Conspiracy Which Ruined the Theosophical Cause*** by Ernest E. Pelletier. A detailed, well-documented examination of the controversy centering on William Q. Judge which led to the division of the Theosophical Society in 1895. Chronology, 40 biographical sketches, 71 photographs, hardcover, 1,007 pages, hardcover \$95.00

***The Wisdom of the Heart: Katherine Tingley Speaks*** compiled and edited by W. Emmett Small. Extracts from [Tingley's](#) lectures, including instructions to students. 163 pages, softcover \$11.00

### [Theosophical Manuals](#)

***Messages to Conventions and Other Writings*** by [G. de Purucker](#). Addresses, editorials, and extracts from letters on the policies, work, and purposes of the Theosophical Society. Of historical and contemporary value. 259 pages, paper \$10.00 ([Full-text online](#) edition)

***Does Chance Or Justice Rule Our Lives?*** by Nils Amneus. Written the author of [Life's Riddle](#), this booklet discusses fundamental questions about life's meaning and the problem of injustice. 103 pages, paper \$6.50 ([Full-text online](#) edition)

***Sanskrit Keys to the Wisdom Religion*** by Judith Tyberg. Definitions of key Sanskrit terms used in theosophical literature. 181 pages, softcover \$14.00

***Continuum: The Immortality Principle*** by Kay Croissant and Catherine Dees. Based on the original exhibit at the California Museum of Science and Industry, Los Angeles. 124 pages, paper \$8.25

***Theosophical Presentations*** at the [1993 Parliament of the World's Religions](#) Video Cassettes

Available through [Theosophical University Press](#)

## Books from Other Publishers -- on Science, Religion, Philosophy, and Myth

The following titles are not ordinarily stocked by overseas TUP agencies, but may be ordered direct from TUP Pasadena. No "hurt" copies available.

- ***Evolution: A Theory in Crisis*** by Michael Denton. A molecular biologist surveys evidence showing inadequacies of Darwinian theory. Explains why a growing number of scientists are seeking alternative solutions to the great evolution mystery. 368 pages, cloth \$19.95
- ***Darwin's Black Box: The Biochemical Challenge to Evolution*** by Michael J. Behe. Offers powerful evidence of design in nature's "irreducibly complex" molecular structures and systems, such as cilia, blood-clotting, cellular protein transport, and the biochemistry of vision. 307 pages, paper \$15.00
- ***The Bhagavad-Gita*** translated by Winthrop Sargeant. Interlinear word-for-word translation along with Devanagari characters and their transliteration. Includes page-by-page vocabularies and complete prose translation of each verse. 763 pages, paper \$38.95
- ***Classical Hindu Mythology: A Reader in the Sanskrit Puranas*** edited and translated by Comelia Dimmitt & J. A. B. van Buitenen. A comprehensive anthology elucidating Hindu cosmogony, chief gods, avatars, rishis, kings, and pitris; includes explanatory introduction, glossary, and index. 388 pages, paper \$33.95
- ***The Crest-Jewel of Wisdom*** by Sankaracharya. Translations and Commentaries by Charles Johnston. A brilliant synthesis of the spiritual teachings of the Upanishads, explaining the ancient laws by which we may come to know the universal kinship of the Divine within us. 171 pages, paper \$14.00 (TUP [Full-text online](#) edition)
- ***The Egyptian Book of the Dead: The Book of Going Forth by Day*** translated by Dr. Raymond Faulkner; Introduction and Commentaries by Dr. Ogden Goelet. The first authentic presentation of the Papyrus of Ani, featuring 80 full color reproductions of the complete scroll accompanied by modern text translation. 9 1/2 x 14, 174 pages, softcover \$29.95
- ***The Ancient Mysteries: A Sourcebook*** edited by Marvin W. Meyer. Translation of forty sacred texts of the Mystery religions of the ancient Mediterranean world. Introduction explores parallels to Judaism, Christianity, and Gnosticism. 290 pages, paper \$19.95
- ***Kabbalah*** by Gershom Scholem. A lucid survey of the history, basic ideas, literature, and principal figures of Jewish mystical tradition by one of its leading scholars in the 20th century. 508 pages, paper \$18.00
- ***The Nag Hammadi Library in English*** edited by James M. Robinson. 3rd revised edition. Corrected translations of the fifty-two Gnostic gospels, secret books, and treatises discovered in 1945, each with a new and expanded introduction. Illumines early Christian esotericism. 566 pages, paper \$21.95
- ***The Pythagorean Sourcebook and Library***, compiled and translated by Kenneth Sylvan Guthrie. The largest collection of Pythagorean writings to appear in English. 361 pages, paper \$22.00

- ***Plotinus: The Enneads*** translated by Stephen MacKenna. This unabridged version of MacKenna's inspired rendering (4th edition) includes Porphyry's Life of Plotinus. Also a foreword, notes comparing variant translations with earlier editions and other translators, and an appendix outlining Plotinus's metaphysics. 768 pages, cloth \$65.00
- ***Mystical Dimensions of Islam*** by Annemarie Schimmel. A scholarly treatment of Sufism from its beginnings through the 19th century. Chapters include: The Path; Man and his Perfection; Sufi Orders and Fraternities; and Theosophical Sufism. 528 pages, paper \$24.95
- ***The Glorious Quest of Chief Washakie***, by Ralph H. and Mary Tillman. Biography of the Shoshone chief (1798-1900) whose dedication to brotherhood and the Way of Truth contrasts the ideals and realities of native America's tragic century. 95 pages, paper \$8.95
- [Sourcebook of the World's Religions](#)
- ***Hamlet's Mill*** by Giorgio de Santillana and Hertha von Dechend. A journey through myths to the origins of human knowledge in the preliterate world. Explores myth as the language of a vast body of astronomical knowledge. 530 pages, paper \$21.95
- ***The Power of Myth*** by Joseph Campbell with Bill Moyers. Based on the acclaimed PBS television series, these interviews explore mythic imagination and metaphor, from ancient folklore to modern cinema, revealing the universal mythos that belongs to us all. 252 pages, illustrated, paper \$29.95
- ***Transformations of Myth Through Time*** by Joseph Campbell. Illustrated transcription of 13 lectures covering mythological development around the world. 269 pages, paper \$21.95

## Theosophical Correspondence Courses

For those wishing individual attention and guided study, this series of graduated courses examines such topics as the purpose of life, afterdeath states, ethics, the rationale of rebirth and karma, evolution, and the path of spiritual unfolding. Available via email or regular mail, each course is composed of lessons with questions to be answered and returned for review. Some questions require answers that summarize the author's explanation; others seek the student's ideas. When we reply we send succeeding lessons. Students are free to go at their own pace. Textbooks include standard works by H. P. Blavatsky, William Q. Judge, G. de Purucker, and James A. Long.

### REQUIREMENTS

Students new to theosophy are advised to begin with the Introductory Courses and proceed through the Intermediate and Ad-vanced Courses. In this way they will gradually become acquainted with theosophic terms and concepts. Students with a back-ground of theosophical study may begin with the course of their choice.

Email: [theoscorr@theosociety.org](mailto:theoscorr@theosociety.org)

### INTRODUCTORY COURSES:

#### *Life's Riddle* — 18 lessons

The text is filled with explanations and examples of the relevance of the ancient wisdom. This presentation of timeless principles is ideal for beginners. Text: [Life's Riddle](#) by Nils A. Amneus.

#### *Expanding Horizons* — 16 lessons

A non-technical overview of theosophical teachings that give reason and perspective to daily living. Short chapters offer practical insights into the spiritual truths which inspire human endeavor. Text: [Expanding Horizons](#) by James A. Long.

### INTERMEDIATE COURSES:

#### *To Light a Thousand Lamps* — 18 lessons

A fresh and meaningful vision of spiritual values, one that offers philosophical and practical guidance to serious students, addressing both Eastern and Western Occultism. Text: [To Light a Thousand Lamps](#) by Grace F. Knoche.

### ***The Key to Theosophy* — 14 lessons**

Examines H. P. Blavatsky's views on the origin and destiny of man and cosmos, karma, reincarnation, and the nature and dangers of psychism. Text: [The Key to Theosophy](#) by H. P. Blavatsky.

### ***The Ocean of Theosophy* — 17 lessons**

Short chapters packed with information concerning the nature of spirit, soul, and body, afterdeath states, psychic powers, and terrestrial and cosmic cycles — with definitions from the Occult Glossary. Texts: [The Ocean of Theosophy](#) by William Q. Judge and [Occult Glossary](#) by G. de Purucker.

### ***Invitation to The Secret Doctrine* — 9 lessons**

Provides a helpful method for studying *The Secret Doctrine* by H. P. Blavatsky and introduces its devotional companion, *The Voice of the Silence* — a book which offers guidance for seekers on the Path. Texts: [An Invitation to The Secret Doctrine](#) and [The Voice of the Silence](#) by H. P. Blavatsky.

## **ADVANCED COURSES:**

For students who have a grasp of basic theosophical terms and concepts we offer the following courses. Please inquire for details.

### ***The Esoteric Tradition***

An in-depth study of the esoteric teachings and fundamental principles that have influenced philosophical, religious, and scientific thought through the ages. The title is explained as being “esoteric because few have as yet understood it; it is traditional because it has been handed down from immemorial time.” Text: [The Esoteric Tradition](#) by G. de Purucker.

### ***Fundamentals of the Esoteric Philosophy***

Examines the universal principles presented in *The Secret Doctrine*, and deals with each of the “seven keys” that lead to wisdom. This provides an excellent introduction to HPB’s masterwork, yet stands on its own as a clear restatement of the ancient wisdom. Text: [Fundamentals of the Esoteric Philosophy](#) by G. de Purucker.

## ***The Path of Compassion***

This course uses a booklet which reproduces the first two sections of *Fountain-Source of Occultism*. It offers an inspired vision of the path of attainment along with time-honored rules of ethical and spiritual conduct, and warnings against the pitfalls of psychic development. Text: [The Path of Compassion](#) by G. de Purucker.

## History of Theosophical University Press

In April 1886, eleven years after the founding of [The Theosophical Society](#) in New York City, [William Q. Judge](#) began publication of *The Path* magazine. Three years later a printing press was purchased for the production of additional magazines, books, and pamphlets and, shortly before he died in March 1896, Judge renamed the facility Theosophical Publishing Company. In 1900, his successor, [Katherine Tingley](#), transferred the Society's world headquarters and its publishing operations from New York to Point Loma, California, where a school, academy, and college were established. New printing equipment was purchased and, under the guidance of European and American printers and artists, high quality books, monographs, and magazines in English and other languages were issued.

In 1919 Katherine Tingley founded Theosophical University and ten years later, under [G. de Purucker's](#) direction, the Society's publishing activity acquired its present name. During World War II, the International Headquarters of the Theosophical Society and its publishing facility were moved to Covina, California and in 1950-51 were moved to the Pasadena area. Today, modernly equipped, TUP maintains the objectives and standards of production established over one hundred years ago: publication of quality theosophical literature.

# SUNRISE: Theosophic Perspectives

For better understanding among all peoples

---

Fall 2007 (Volume 56, Number 4)

**Announcement:** After a continuous run of 56 years, *Sunrise* has ceased publication with this issue.

*"Everything you see has its roots in the unseen world. The forms may change, yet the essence remains the same. Every wonderful sight will vanish; every sweet word will fade. But do not be disheartened, the source they come from is eternal, growing, branching out, giving new life and new joy. Why do you weep? The source is within you, and this whole world is springing up from it." — Jalaluddin Rumi*

- 

**I have heard what the talkers were talking, the talk of the beginning and the end;  
But I do not talk of the beginning or the end.  
There was never any more inception than there is now,  
Nor any more youth or age than there is now;  
And will never be any more perfection than there is now,**

Nor any more heaven or hell than there is now. . . .

The clock indicates the moment — but what does eternity indicate?  
We have thus far exhausted trillions of winters and summers;  
There are trillions ahead, and trillions ahead of them.  
Births have brought us richness and variety,  
And other births will bring us richness and variety.  
I do not call one greater and one smaller;  
That which fills its period and place is equal to any.

Dazzling and tremendous, how quick the sun-rise would kill me,  
If I could not now and always send sun-rise out of me.  
We also ascend, dazzling and tremendous as the sun;  
We found our own, O my Soul, in the calm and cool of the daybreak.

This day before dawn I ascended a hill, and look'd at the crowded heaven,  
And I said to my Spirit, *When we become the enfolders of those orbs, and the pleasure and knowledge of everything in them, shall we be fill'd and satisfied then?*  
And my Spirit said, *No, we but level that lift, to pass and continue beyond.* — Walt Whitman

## Back Issues: Indexed by Subject, Author, and Date

A selection of articles from back issues of SUNRISE magazine (further articles to be added in future). Copyrighted material in this site may be downloaded for off-line viewing without charge, but may not be reproduced or transmitted in whole or in part for commercial or other use in any form or by any means -- electronic, mechanical, photocopying, recording, or otherwise -- without prior permission from Theosophical University Press. Because of current limitations in the ASCII character font, diacritical marks have very often been removed from online editions of these articles. Footnotes in the original editions have been incorporated into the text where practical.

### Articles listed by subject:

The majority of SUNRISE articles from back issues available online are included under the subject headings in the [Topics in Depth](#) section of the Theosophy Northwest site.
